SEVENTH-DAY, NINTH MONTH 6, 1862.

NO. 1.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Selected.

Some Account of John Spaulding.

(Continued from vol. xxxv, page 410.)

A few months after, I also wrote a few reasons why we could not illuminate our houses on any occasion; as Friends, in some places had suffered considerably on that account.

"Whereas we, the religious Society of people called Quakers, are accused by some of being disaffected to government, because we do not illuminate our houses, as our neighbours do, on particular occasions; this is for the information of any who may be desirous of knowing why we thus differ; that it is not from any political motives, or to express any disapprobation of those who are in authority; but as Christians, professing to walk in the fear of the Lord, in a holy life and conversation, we believe such superficial demonstrations of inconsistency with this our profession, on any occasion whatever; but as it sometimes happens at such customs are in consequence of a supposed advantage gained in war, we cannot believe Christians uninfluenced by any political considerations, that there can be any real cause of rejoicing, but rather of mourning, for the destruction of our fellow creatures, and to lament the prevalence of those "lusts, from whence," as the apostle says, "come wars and fightings." Professing also to be followers of Christ, who is the Prince of Peace, of whose kingdom it was prophesied, "that they shall beat their swords into ploughshares, and their spears into pruning hooks, that nation shall not lift up sword against nation, neither shall they learn war any more;" we believe, wherever his kingdom is established in the heart of any individual, the warring, fighting nature will be subdued by the peaceable righteous sceptre of Christ; he enjoined his followers not to resist evil, but to love even their enemies: therefore we cannot, without subjecting ourselves to the displeasure of the most High, conform to any custom, which countenances or upholds such practices.

"But though we differ from the rest of our countrymen, we are not enemies to our country: at our prayers are to the God of the spirits of all flesh, that he "may please to break the bow, and snap the spear in sunder, to cause wars to cease to the ends of the earth;" that the people may turn every one from the evil of their ways, and serve him alone from whom every blessing is received: thus would righteousness and peace meet together,

and abound in the earth to his praise, and to our present and eternal felicity."

I had for some months, at different times, as I apprehended the concern revive, wrote an address to the professors of religion, particularly those who attended the place I had left. Feeling a concern to have it printed, I waited from time to time to feel it clearly, as appearing in public in any manner of such a nature, was to me a most weighty consideration; I was fearful of moving in mine own will, but at length I apprehended the time came for its publicly appearing, and submitted it to the inspection of several Friends of our meeting, for their approbation of its being laid before the Morning Meeting in London; being unwilling to move without the full concurrence of Friends. It met with their approbation and consent, and it was going to be sent to London, when a member of that meeting happened to come to our town. Friends advised it to be shown to him, who expressed a fear, that as I was so lately come among Friends, if it was not quite approved of, it might be a discouragement to me, and recommended, if I was easy, to let it rest a little longer. I seemed willing to find an excuse, and to get rid of the burden without its publicly appearing; and laid it by, not feeling the concern again revive with sufficient power: but I had at times to fear whether I had not too hastily got rid of it, and let the right time pass by. May the great Master not impute rebellion to me, but have in this matter, as I have at other times experienced, a gracious condescending regard to my weakness; for I have desired to be made willing to be completely given up to his service, and follow him wheresoever and howsoever he may require; the frequent breathing of my spirit is, that the inward ear may be so opened that I may be able to distinguish between the Master's voice, and every appearance of the adversary, and all willings and runnings of the creature.

In the year 1794, I was at the Yearly Meeting in London, which held, I think, nine days, and notwithstanding the nature of my business, I was made willing to give up the time, and have with thankfulness to acknowledge I found no loss, but the invaluable reward of peace. Surely the Lord is not a hard master, but whatever is given up under a sense of his requiring, is abundantly restored, yea as an hundred fold.

A little time after, being at an appointed meeting where no regular one is held, under an apprehension of duty, I spoke a few words. And here I would observe, I had long a sense as though I should have to appear in this service, and often felt a word arise in meetings, but was fearful of moving in my own will, of running before I was sent; remembering the command of old, "He that hath my word let him speak my word faithfully; what is the chaff to the wheat?" I desired that there might be no mixture, nothing of the creature, but that the Master might prepare the offering wholly; yet I often found a similar testimony to what I felt arise, delivered by another Friend. I would willingly have been excused the service, the prospect being far from pleasant, at least to that which

would prefer ease, yet I was desirous that I might be willing and able to give up to whatever the Master required. I seemed only to wish to know quite clearly, beyond the least doubt when and what to speak. Perhaps I expected a clearer evidence than was met, or made it an excuse to refrain, till after one first day meeting, not giving up to speak a word, I felt the reproofs of the Most High so sharply, till next meeting, that though very unwillingly, and after much inward wrestling against it, I found it safest to give up, and was in a degree sensible, that it is better to appear as a fool unto men, than bear the indignation of the Lord.

Some little time after, I felt the concern of publishing the little piece before mentioned revive with increased weight; and after a time I believed it my duty to send it up to the Morning Meeting of Friends in London, for their inspection and judgment respecting printing it; which I did, under the title of "Reasons for leaving the national established mode of worship; more particularly addressed to those who attend at the place called St. Giles' Church, Reading;" accompanied with a few lines to the meeting, from Friends of our own, which the meeting with a few alterations approved of, and left me at liberty to print it. As soon as I received the pamphlets, I sent one to the priest, with the following letter: I also sent one to each of the principal professors with whom I had been acquainted.

To * * * * *

Respected Friend,

"The little piece which this accompanieth, I think I can truly say, I wrote under an apprehension of duty, uninfluenced by any personal motives whatever. I submit it to thy candid perusal, and can assure thee, that notwithstanding the apparent difference, I still retain an affectionate regard and a real respect for thee: nor can I suppose thou wilt impute to a want thereof my omitting thy usual titles, being persuaded thou art sensible that true honour and respect do not consist in words, or any superficial expressions. I was constrained to drop them, from a belief of the inconsistency thereof with the simplicity of true christianity, and of the unlawfulness of feeding the vain mind in man, by giving him flattering titles. I have desired to follow nothing by imitation, but from conviction, and I hope these desires have been mercifully answered.

I remain respectfully, Thy Friend,
JOHN SPAULDING."

Reading, Eleventh mo, 1794

Postscript,

"There is a little matter I have for some time felt a desire to call thy serious attention to. Not long since, part of the goods of some of thy peaceable neighbours were taken away by force, for their repairing. I apprehend, the place where thy congregation meet to worship. I have been led to consider the inconsistency of this practice with the spirit of the gospel, of which thou art esteemed a minister. I have examined the scriptures of truth, and do not find that either Christ or his apostles ever used, or taught such a practice, to oblige

those to support them, or their places of worship, who did not receive them. 'As ye would that men should do unto you,' said our Lord, 'do ye even so unto them,' for this 'is the law and the prophets.' Now I am much inclined to think, if we will calmly and weightily consider this matter, a deviation from this important injunction will appear. If this people had the powers of the earth on their side (as thou hast in these matters,) and insisted upon thy helping to support their place of worship, where thou hadst a conscientious objection to go, wouldst not thou think it unreasonable; and is rather that every society should support its own ministers and places of worship? And truly there are those who from a real conscientious scruple, cannot willingly uphold those called parish churches. I have felt it myself, and expect I can if thou require it, advance some weighty reasons for so doing; I present my regard for thee induces me to press a serious examination of this matter; and I feel a desire that customs originating in the times of ignorance and superstition, and the more powerful motives of interest itself, may not induce thee to condemn the simple, yet I hope sincere, representations of the mean and despised.

As this I do not write from any desire to annoy suffering, for praised be the Lord, there is a remnant at this day, who are enabled to take joyfully the spoiling of their goods for a good conscience' sake, in supporting their testimonies against what they believe to be repugnant to the spirit of the gospel dispensation.

(To be continued.)

The Landslip at Goldau. For "The Friend." (Continued from vol. XXXV., page 412.)

"There were strange stories of escape in this awful catastrophe. In almost the highest house below the Spitzenhull, lived at that time, Blassi Mettler with his young wife Agatha, nineteen years old. At the sight of the spectacle on the Gemeinde-Märcht, 'the peasant, fully believing in ghosts and witches, thought that evil spirits were at work. He fancied the shrieks of owls were the yells of demons, that the whistling and roaring were the cries of condemned spirits, and that the descent of the mountain was the work of Satan, or the commencement of the day of judgment. To save himself, his wife and child, from the attacks of the evil one, he ran full speed to the house of the priest at Arth, and begged him with tears to come and bless his house. Whilst still lamenting and telling his story, the final catastrophe took place; then as one possessed, he took off his shoes and ran to his house. The doubt whether his beloved wife and his child, four weeks old, had perished in the landslip, nearly upset his understanding. Meanwhile, how had things gone on above, at his house? The poor young wife, in terrible anxiety at the awful and constantly increasing noise, and the shaking of the hut, passed the hour in anguish. The time came at which, according to the country custom, she used to boil porridge for her child. She had already mixed the milk and meal, and lighted the fire on the hearth to begin cooking, when the thunderlike roar, and the rocking of the foundation-walls of the house startled her; undecided whether to go or stay, she ran into the room, determining to escape into the open air with her child if it was awake, if not, to remain where she was. The child was awake in its cradle and not crying. She hastily snatched it up, took her husband's small property out of the cupboard, and hastened over the threshold, where the ground seemed to be alive under her feet. She reached their stable, and turned round for a moment, when the house she had just left was dashed in ruins down to the

depths below, and a raging sea of desolation swept before her stupefied sight. There Blassi found her, as he hurried up, streaming with perspiration. The poor man looking on the destruction of his earthly possessions, thanked God for saving his family.

"Some five hundred feet below, lived his brother Basteau, who, at the time of the landslip, was with his cattle on the common meadow on the Rigi. His wife, with two small children, was in the house when it was swept away by the fall. When the catastrophe was past, and people crept shyly back to its theatre, the parents and family of Mettler's wife, hastened up to see what had happened to her and her children. Not a trace of the house was to be seen. All lay in the vast grave of ruins. At some distance from the place where the house had stood, in the midst of the mass of mud, lay a mattress stuffed with withered beech leaves, and sleeping on it, lay the smallest child in its shirt. The uncle climbed down at the risk of his life, through the yielding avalanche of slime mixed with blocks of stone, and saved the little sleeper. A little mud had been splashed over his face, but he was otherwise, quite uninjured. What wonderful accident had saved the child in the midst of such danger!—how the ruins of the falling house, and the heavy roof-beams could have fallen without touching the child, while it was borne upon the mattress on which it was sleeping, and laid upon the heap of ruins, is perfectly inexplicable. The child is now a man of fifty-eight, Sebastian Meinrad Mettler, who lives below in Goldau.

"The most wonderful of the numerous escapes, occurred in Busingen, near the lake of Lowertz. There dwelt Joseph Lienhard Wiget, a strong, hearty man of thirty-two, with wife and five children, in a handsome peasant's house. He was a happy, contented man. When the landslip began, Wiget was employed with his family, in picking up fruit in his orchard, which had been beaten down by wind and rains. When he saw the mountain coming down, with great presence of mind he seized his two eldest children and ran with them to one of the heights opposite the Rosberg, calling his wife to follow with the smaller children. The mother would not abandon a child eleven months old sleeping in the house, and rushed back for it. The maid Franciska, and a little daughter, Marianne, five years old, followed her through another door. As they entered the room, all become dark. Utter night enveloped the shattered house, and all in it were buried alive. Franciska felt herself swayed to and fro, thrown down, and feeling as if she was falling into an endless abyss, she lost her consciousness. When she came to herself, she could not move or stir, and felt that she was immured head downwards in cold wet mud. Only her face was free so she could breathe. She thought the end of the world was come, that every thing living was destroyed, and that she was left alone in her grave, the only being still alive. She was praying in great anguish when she heard a weeping voice. She called out, and found from the answer, that it was the little Marianne who was groaning. Notwithstanding her awful position, she was glad that a living being, and one she loved, was near her. They began to converse and compare their positions. Marianne told her she was lying between beams and straw on her back, and could not move, but that she could see something green through a narrow strip of darkness. Franciska thought this was a look into Paradise. A long time passed, and they both heard the sound of a bell. It was the pleasant evening sound of the curfew from the Steuburg, which sounds at eight. Franciska was then convinced that the end of the world had not come, and a slight hope of deliverance encouraged her. Both

cried aloud for help, but in vain. The appalling thought, 'buried alive,' rose in Franciska's mind. But she fought against it, and concealed it from the poor child. They afterward heard the 'night bell' in Steinen, and again prayed for deliverance, but no help appeared. The child felt torturing pain in her body, and also gnawing hunger; and Franciska suffered because she could give but words of comfort to her favourite, instead of food and help. She tried in every way by her words, to soothe the sufferer. The child's complaints became more weak, broken, inarticulate, and at last, quite ceased. Franciska said, 'Thank God, it is over,' and prepared for her own death. Her suffering became great and a deadly chill, with feverish changes, passed over her. After long efforts, she succeeding partly freeing her feet from the mud surrounding them, so that she could move them, and produce thereby some circulation of the blood.

"The whole long night was passed in this death like waiting. The morning bell sounded on the Steuburg, and then at Steinen. It brought her hope into her heart. Once more she uttered her prayers, and the conviction came to her that she would yet be saved. Then, wonderful to say, the voice of the child she had thought dead, sounded again. A swoon-like sleep had shortened the night for her. She complained of hunger and violent pain, and called on Franciska to help her.

"At the break of day, the comfortless father and husband, had hastened to the scene of terror, with his two boys, where he had worked the evening before, to find the bodies of his beloved family. The past night had been the most painful of his life. A day break he began his search anew, with his friends. After an hour's work he saw a foot, the clothes. It was his wife; with hasty care he worked on and at last cleared the whole body. There lay his dead wife, a victim to maternal love, and two children with her. He threw himself on the dead body with a loud cry of grief, and his voice of grief penetrated to those buried beneath. The renewed their cries for help and were heard by those above. Marianne was first found, freed and drawn out. Her ankle-bone was broken. Afterwards they found Franciska. Both recovered. They had been buried full fourteen hours.

"Most of those entombed must have died a sudden death, crushed at once. But many may have waited for days in the masses of mud and slime with broken limbs, hoping for an escape, and yet a last, dying of hunger. The number of those saved directly by help, indirectly by flight, or from a sense from home, was two hundred and twenty; about half the number of those killed.

"Sad was the fate of a party of travellers. It consisted of members of old, noble families,—Heinrich von Dresbach and his wife, Fri. von Dresbach, Colonel V. von Sleiger, the brothers May, Jena von Prestenberg, some boys and their tutor, a Herr Jahn, of Gotha. Late in the afternoon they left Arth, and were going on foot to Schwyz. He von Dresbach, the brothers May, and the tutor were some hundred paces behind the rest of the party, and saw them enter Goldau, laughing and chatting. They were following, when the thunder of the fall startled them. Looking up, and seeing the masses in wild madness rushing to the valley they hurried back, confident that their friends would do the same. Close to the spot at which they were obliged from exhaustion to stop, a hail storm of stones and rock fragments rattled down. When the uproar was over, they hastened to the buried village. As far as they could see, there was nothing but desolation,—walls of mud and waste chaos: without sign, or the slightest indication of their late friends and companions. The

ruined field of Goldan is still visited by travellers on the Rigi and Lake of Lucerne.

"For many years the whole country in which Goldan formerly lay, looked desolate, in strange ruin, like a place blasted by a crime. Fragments of rock reminded travellers at every step of the second of September, 1806. Time has softened, and the beautifying hand of vegetation has somewhat wiped out these mournful memorials. Those rocky ruins are clothed with moss and saxifrages, violet coloured campanulas grow wearily and fragrant, white clover springs from the debris; between the meadow grasses and thistles, thickets of bushes and groves of fir overshadow the blocks of stone; and when coming generations begin a new century, only vague outlines will indicate the vast grave."

The following address, which is taken from the last number of the British Friend, is accompanied with this note:

The above bears date 1818, and was originally designed for Friends of London and its vicinity. Its excellence and present general applicability are, however, such as to render it worthy of serious consideration, and to justify reprinting, there being reason to believe that a very large portion of Friends in the metropolis and elsewhere are strangers to the work.

We commend the excellent sentiments contained in it to the serious consideration of the readers of The Friend."

An Affectionate Address to Friends.

Dear Christian Friends.—In beholding the vast mass of business which occupies and burdens, for the most part, the inhabitants of this great city and its vicinity; in witnessing the busy, bustling scenes which everywhere present themselves, my soul has been many times greatly concerned on your account, who profess to be a self-denying, spiritually-minded people.

I have read your history, your origin, your progress, and have somewhat narrowly looked at our present state and condition as a religious body. I have been led into feelings of gratitude and much admiration, at the eminent display of mercy and condescension manifested in the raising up of such a people; and have longed for them, that they might still cleave to that Arm of Power, which out of weakness hath made them strong; out of poverty hath made them rich in goodness; out of holiness hath made them wise in the wisdom from above; the pure, the peaceable, the gentle wisdom.

I have often been deeply instructed by a view of your first rising, as it were out of the dust; who were now seen, and acknowledged by many, to have been in some sense "the salt of the earth;" a fish, an ornament to every nation, has tolerated you. How mean, how despicable ye then were, in the sight of those around you! What a fume, what a loathsome set were you esteemed; how passed by to be trodden under foot of every one at liberty; to be reviled, to be contemned, to be cruelly treated, even to imprisonment and death! that ye may never forget those days, nor the and that was over all these things to turn them to blessings. And truly ye were in such a state made all things blessings to you; in such a tender spot, so sweetly grafted into, and growing out of Him who was your root, and stem, and strength, at every rude blast, every trying tempest, from that cause or from that quarter soever, seemed it to make you cling more closely and confidently to Him who "changeth the times and the seasons," and is over them all.

Well, dear Friends, with whom my spirit is and is been very nearly bound in tender sympathy,

and sincerely affectionate interest, ever since I knew you as a people, my concern has been weighty on your behalf generally, and especially on the behalf of those to whom this is addressed (such, indeed, that it seemed best for me to have some communication in this way)—the earnest breathing of all that is lively within me, having been that ye may continue such a favoured people as ye have been; such burning and shining lights, in doctrine, in conduct, in appearance, as ye have been; that in everything ye do or say, wherever ye are, or in whatever circumstances ye may be placed, your right to discipleship may never be questioned, but may be fully manifested and evinced by the sincerity, the purity, the loveliness, the lowliness which was in Him, and is of Him, whose servants ye say that ye are. In looking at these great attainments, wherewith the early christians were so conspicuously clothed, and whereby also your ancestors in profession were so remarkably distinguished, I have believed that there is no other way for any to come to the like experience, but by listening to the same Counsellor that instructed them in their day. By abiding under the silent teachings of the Witness in their own minds, the sincere in heart, who seek in patience to be clothed and covered with the preciously purifying influence of the Spirit of Christ, shall find those evil inclinations, on account of which it may be they have long mourned, gradually weakened, broken, and destroyed; whilst they shall see in the Lord's time another and a better principle of action raised up and quickened within them, which is of, and from, and for Him and his cause. This root, as it comes to gain vigour, will put forth its buds, and branches, and blossoms, and in due season will show by its fruit of what kind it is. It was this taking root downwards, and that previously to any appearance above the surface, which, if I mistake not, was a striking feature in your religious Society in the infancy of its growth. This it was which enabled it to bear with unresisting patience, with unwearied fortitude, the inclemencies of that sharp season. This also it was which enlivened and invigorated its whole frame, causing it to put forth strength, and beauty, and fruitfulness, to the astonishment of those that had but little root in themselves, and so when the heat of persecution arose, stood not their ground, but (in some sense) withered away. And, as I remarked before, I see no other way for any among you to arise out of your present attainments into such as so proverbially characterized your early members, but by aid and counsel, obtained from that Divine source, to which those worthies unremittently resorted, day by day, in all their undertakings, pursuits, designs, and doings. This principle or root in them was that from whence everything great and good naturally flowed, upon which, whatever in them is worthy our esteem or example, was founded; and if their successors have in any respect fallen short, it is attributable to less frequent, less earnest recourse to that flowing Fountain and Well of Life, which is more wholesome and refreshing than the stagnant pools which man's wisdom dams up, or the broken cisterns which his foolishness hath formed.

I desire not at this time to enter much into particulars on any subject, that is, so as to specify anything wherein, according to my view, ye have at all fallen short of that degree of blamelessness to which, through assisting grace, the silent converts to your religious persuasion arrived, and in which they were very generally in a good degree preserved; yet it seems as if it would be right for me a little to strike upon one subject, which I had somewhat strongly on my mind, when taking up

my pen.

A looker-on during intervals for some years, at the extended scene of traffic which presents itself in this large and populous city, I have not been slow at noticing, even from my youth, the peculiar danger to which the sincere-hearted followers of a self-denying Lord are exposed, when placed in the midst of much business; but have been more especially quick to remark, since I became acquainted with your religious community, and the high profession it makes of great self-denial, how its members conduct themselves, so as to keep their several stations in civil society, and at the same time preserve their minds pure and clean from the noxious influence which exhales from anything more than a moderate engagement in worldly matters, as far as the true ends thereof require.

In the course, then, of something more than a slight attention to this subject, as it respects those under your name, it has been matter of thankfulness as well as of lively interest to me, to read of those among you who have in their generation, both by example and by exhortation, shown as beacons on this rocky coast, whose exertions and whose exercise every way to guard against this insinuating evil (too great engrossment in temporal affairs) have been unwearied. They are gone to their resting-place, and a remnant of their posterity still retain a faint resemblance of the brightness of their day, still talk of their simplicity, their sweetness, their self-denial, their strength; and hope for better times. Meanwhile, the vacant seats of their forefathers do remain a silent but expressive testimony to the puny stature of the race; and female warriors mostly walk alone, and labour on the walls. And now having, some of you (for I speak not of all,) in good measure relinquished the arduous post of honest zeal and earnest watchfulness, and patient travail for the great cause, and betaken yourselves more heartily to your outward concerns, one would think that these would the better prosper, as having more of your time and attention than hitherto. However this may be, never perhaps were the failures among you so numerous, or so lamentable, as of late years; never, it is likely, was your credit for punctuality and uprightiness of dealing at so low an ebb. So truly does the blessing attach to such, in their baskets and in their store, and in all they set their hands unto, whose chief desire is to seek and to serve the Lord. This was remarkably the case with you in times past, when (according to George Fox's account, if I mistake not,) many people, when they wanted any article, were in the practice of inquiring after a Quaker-tradesman, because they knew that he would serve them well; the consequence of which was that the Quakers prospered greatly in their trades and callings, even so as to cause some apprehensions of loss in the minds of others.

But, my dear fellow-christians, allow me a little further to speak with you; and bear with me in a little of that love which I have in my heart for you, if I say that you have, many of you, (even such as make a plain outward appearance, and keep to the letter of your law,) shaken hands with the world; have assimilated yourselves to its maxims, customs, and opinions; have (however imperceptibly to that eye in you, which is not on the watch) become in degree leavened into the mass, and in that measure may fairly be reckoned as a part of it, notwithstanding any notions ye may entertain about a peculiar people. And the world sees this, and acknowledges it, and is pleased to see your severe simplicity slackening into elegance and taste, to observe the modern professing Quaker somewhat more conformed to its own likeness, a little less rigid in his principles, a little more careful for the

morrow, a little more thoughtful about what he shall eat, and drink, and put on. Some of you may be ready to reply that times are greatly changed, and that some slight variations in unessential minutiae might naturally be expected by slow degrees to take place. But, my Friends, let times be allowed to have ever so much changed, yet times after not principles, nor the effects of right principles upon daily and hourly conduct and conversation; these should be the same in all seasons, and under every variety of circumstance, and should be as immutable as the Rock of Ages, upon which alone good principles can be safely founded. Excuse my freedom and boldness—I desire nothing else but to see you who account yourselves members of this Society, building on the same basis, every one of you, as those did who have gone before you, and who have in some sense purchased by their sufferings the prosperity which ye lie at ease in the enjoyment of. My friends, I blush for you oftentimes: I am truly "jealous over you with godly jealousy." I fear there is but little meaning or applicableness left in some old proverbs which have been handed down respecting you to this purport—"as stiff," or "as strict," or "as silent as a Quaker." I see but little remaining propriety in the very name which the fervent zeal of your forefathers procured you, which railing calumny at first conceived, and ignorant abuse hath ever since cast upon you—ye are (many of you) unworthy to partake of the scorn which this appellation still secures to its professed advocates; being in a measure wedded to the world, and your demeanor and deportment too generally indicating but a slight and shallow acquaintance with that baptizing power by which your predecessors were "crucified unto the world, and the world unto them," and by which they were often brought into great tenderness of heart, and preserved in a continually watchful, weighty frame of mind.

I read of, and do notice, the guarded education which is afforded to your youth of both sexes, and admire at the many foolish, hurtful, and useless things out of which they are generally, in a good degree, preserved in their tender years; but then, I see a large majority of these launching with eagerness into the vanities of the world, as soon as ever they escape (and some before they have escaped) the clutches of those that are placed over them. I attribute this growing evil very principally to the want of that *weighty sense of Truth*, and unreserved subjection of the whole heart thereto, which would render the parents (but especially do I allude to the father,) more earnestly and unceasingly exercised on behalf of those that are committed unto them. Oh! this hearty labour and patient travail of spirit is sadly needed among you that are fathers, for the little flocks over which the Lord may have set you as shepherds. For it is not merely the committing of children to the care of some indifferent person, of tolerable talents and repute, and taking little more availing abiding concern about them, which fully answers to that beautiful scripture recommendation, to "bring them up in the nurture and admonition" which is "of the Lord;" neither does this easy kind of conduct fully embrace all that is intended by those sweet advices on this subject, from time to time issued by your Yearly Meeting, to which I refer such as may have inclination to look over them again. But how is it likely that anything better than money should be laid out in the training up of a child in the way he should go, whilst the father burdens himself with more business than he can rightly manage with calmness and comfort, and much more than he stands in need of? and this to the disadvantage of his children, who have

far greater need of his counsel, society, and example to lead them into the path of true peace, than of his exertions to lift them out of the sphere in which they were born (and in which true safety and comfort are mostly found), into a condition which he calls more *respectable*. Your ancestors, my friends, owned another kind of respectability than that which many of you aspire after, and that obtained equal esteem among them wherever it was found, from the plough-boy Parnell to the governor of Pennsylvania.

I do not wish by anything herein offered to be understood as intending to set you down very much below the standard sterling worth of those that have gone before you, fully believing that there still remain here and there "gleaning grapes," as it were "two or three berries in the top of the uppermost bough, four or five in the outmost fruitful branches thereof." Yet would it, I am ready to think, be well for each one, even of these that are scattered up and down among you, and who may be inclined in humility of heart to think he yet "standeth" in a measure of that strength wherein his fathers by profession stood, to "take heed lest he fall."

This, however, have I to believe, and in conclusion to express, concerning you as a religious body; namely—That there was a great and gracious design in the eye of that Power which raised up such a people; and that unless they persist, as well through good report as evil report, as well in the summer sun, as "in the cloudy and dark day," to serve the Lord their God with an undivided heart, and "with the *unleavened* bread of sincerity and truth," unless they persevere in looking with a single eye unto the Rock whence they were hewn, thus manifesting their unabated desire to answer his design respecting them, and to be moulded according to his will, even He who begat and hath blessed them will be unmindful of them, and will graft in some other branch that shall partake, instead of them, "of the root and fatness of the olive-tree." In such an event, the barren bough may yet retain for a long season the form of that comeliness and beauty, the freshness, and life, and verdure of which has faded; though even this must ultimately rot away.

That this may never be the lot of your favoured flock and family, is the desire of my soul, who am your affectionate friend and well-wisher.

The Boa Constrictor.—The Columbus, (Ohio), Statesman, relates an interesting incident which occurred recently in Van Amburg's menagerie in that city. A boa constrictor and an anaconda are kept in one case with a glass top, opening at the side, and the keeper was engaged in the act of feeding them when the event occurred. The longer of the snakes, the boa constrictor, which is some thirty feet long and as large around the middle as a man's thigh, had just swallowed two rabbits, when the keeper introduced his arm and body into the cage for the purpose of reaching a third to the anaconda, at the opposite corner. While in this position, the boa, not satisfied with his share of the rations, made a spring, probably with the intention of securing the remaining rabbit, but instead, fastened his jaws upon the keeper's hand, and, with the rapidity of lightning, threw three coils around the poor fellow, thus rendering him entirely helpless. His shouts of distress at once brought several men to his assistance, and among them, fortunately, was a well known showman, named Townsend, a man of great muscular power, and what was of more importance, one who had been familiar with the habits of these repulsive monsters, having owned some of the largest ones ever brought

to this country. The situation of the keeper was now perilous in the extreme. The first thing to be done was to uncoil the snake from around him, but if in attempting this, the reptile should become in the least irritated, he would, in an instant, contract his coils with a power sufficient to crush out life. A single quick convulsion of the creature and the keeper's soul would be in eternity! This Townsend fully understood; so, without attempting to disturb the boa's hold upon the keeper's hand, he managed by powerful, yet extremely cautious movements, to uncoil the snake without exciting him, after which by the united exertions of two men, the jaws were pried open and the man released in a completely exhausted condition. The bite of the boa constrictor is not poisonous, and although the bitten hand was much swollen the next day, no serious results were apprehended. A more narrow escape from a most horrible death it would be difficult to imagine.

Selected.

"Whom have I in heaven but Thee? and there is none upon earth that I desire beside Thee."—PSALM, lxxiii. 25.

I love, (and have some cause to love,) the earth;
She is my Maker's creature, therefore good;
She is my mother, for she gave me birth;
She is my tender nurse; she gives me food;
But what's a creature, Lord, compar'd with Thee?
Or what's my mother, or my nurse, to me?

I love the air; her dainty sweets refresh
My drooping soul, and to new sweets invite me;
Her shrill-mouth'd choir sustain me with their flesh,
And with their Polyphonic notes delight me:
But what's the air, or all the sweets, that she
Can bless my soul withal, compar'd to Thee?

I love the sea; she is my fellow-creature,
My careful purveyor; she provides me store;
She walls me round; she makes my diet greater;
She walls my treasure from a foreign shore;
But what's a creature, Lord, compar'd with Thee,
What is the ocean, or her wealth to me?

Without Thy presence, earth gives no refection;
Without Thy presence, sea affords no treasure;
Without Thy presence, air's a rank infection;
Without Thy presence, heav'n itself's no pleasure;
If not possess'd, if not enjoy'd in Thee,
What's earth, or sea, or air, or heav'n, to me?

Without Thy presence, wealth are bags of cares;
Wisdom but folly; joy, disquiet, sadness;
Friendship is treason, and delights are snares;
Pleasure's but pain, and mirth but pleasing madness;
Without Thee, Lord, things be not what they be,
Nor have their being, when compar'd with Thee.

In having all things, and not Thee, what have I?
Not having Thee, what have my labours got?
Let me enjoy but Thee, what farther crave I?
And have I Thee alone, what have I more?
I wish nor sea, nor land; nor would I be
Possess'd of heav'n, heav'n's unpossess'd of Thee.
Quarles.

The Shepherd's Dog and Child.—One day a shepherd, on going to his flock, which were feeding on the higher parts of the Grampian Mountains took his little boy with him, as well as his dog. The child was only three years old. The father left him alone while he looked after some sheep when suddenly a thick fog came on. The anxious father instantly hastened back to find his child; but it was so dark that he could not see him, and unfortunately, he missed his way. After a search of many hours among the caverns and holes in the mountains, he was at length overtaken by night. Still wandering on, he discovered by the light of the moon that he had reached the bottom of the valley, and was within a short distance of his cottage. He hoped that the child had gone home

but when he inquired, he found his wife had not seen him.

To renew the search that night was equally fruitless and dangerous. He was therefore obliged to remain where he was, having lost both his child and his dog, which had attended him faithfully for years. Next morning, by daybreak, the shepherd, accompanied by a band of his neighbours, set out in search of his child; but, after a day spent in fruitless fatigue, they were at last compelled, by the approach of night, to descend from the mountain. On returning to his cottage, the shepherd found that the dog, which he had lost the day before, had been home, and, on receiving a piece of cake, had instantly gone off again. For several days the shepherd renewed the search for his child, and still, on returning at evening disappointed to his cottage, he found that the dog had been home, and on receiving his usual allowance of cake had instantly disappeared. Struck with this singular circumstance he remained at home one day, and when the dog, as usual, departed with his piece of cake, he resolved to follow him, and find out the cause of this strange conduct. The dog led the way to a waterfall, at some distance from the spot where the shepherd had left his child. The shepherd, stepping from craig to craig, crossed the roaring stream. The dog at last disappeared into a cave, the mouth of which was almost upon a level with the torrent. The shepherd with difficulty followed; but, on entering the cave, what were his emotions when he beheld his little boy eating with much satisfaction the cake which the dog had just brought him, while the faithful animal stood by, watching his young master with love and pleasure in his looks!

From the situation in which the child was found, it appears that he had wandered to the brink of the precipice, and then either fallen or scrambled down till he reached the cave, which the dread of the torrent had afterwards prevented him from quitting. The dog, by means of his scent, had traced him to the spot, and afterwards prevented him from starving, by giving up to him his own daily allowance. He appears never to have quitted the child by night or day, except when it was necessary to go for his food, and then he was always seen running at full speed to and from the cottage.

For "The Friend."

Suffering for the Testimony against War.

Many are the instances on record, in which the faithful members of our religious Society suffered in person and property, from the ruling powers, rather than violate their testimony to the peaceable nature of the Messiah's reign. One of these mentioned by Thomas Story in his journal, has interested me, and I will offer an abstract of it for the columns of "The Friend."

During a journey in New England in the service of the Gospel in 1702, he remarks: This being in the time when Queen Anne was at war with Louis XIV. of France, the government of New England was preparing to invade Canada, and there being many Friends in New England, who could not bear arms on any account, it being contrary to our consciences, and the end and nature of the christian religion, which teacheth not to destroy, but to love our enemies, the people of New England made a law, that such, as being qualified and able to bear arms, and summoned, should refuse, were to be fined, and refused to pay the fine, should be imprisoned and sold, or bound to some of the Queen's subjects in the colony, until their wages should pay the fines and charges.

Two young men, John Smith and Thomas Macomber, were imprisoned under this act, in the town of Bristol, Rhode Island. Thomas Story had a meeting with them in the prison, which several other persons attended, and he encouraged them to faithfulness. Visiting them again about two weeks after, they had another meeting in the prison, and "were favoured with a good time in the presence and love of God."

He proceeds, "Thomas Cornwall and I went to the house of colonel Nathaniel Byfield next morning. When we went in he was very boisterous, reproaching Friends as a sort of people not worthy to live: particularly those of Rhode Island and New England, who would not go out, or pay their money to others, to fight against a common enemy so barbarous as are the Indians; wishing us all in the front of the battle until we had learned better; charging us with many errors and heresies in religion; instancing only our refusing to fight, and believing a sinless perfection in this life.

"When he had a little vented his fury, being over him in the truth, I said, 'I was sorry we should find him in that temper, when we were come only to request a reasonable favour of him, he being judge of the court; and that was, to desire him to consider the case of our friends as a matter of conscience towards God, and not of cowardice, or of obstinacy against rulers or their laws.'" Upon which he flounced again, with repeated charges.

"I called for his Bible, and offered to prove that war and fighting are contrary both to the doctrine of Christ, the end of his coming, and nature of his kingdom, and that it was upon his, (this judge's) principles, that the Jewish state crucified the Saviour of the world.

"Then he said, 'he could not stay, for there were a hundred men waiting for him, and he must be going: Yet, soon after, growing a little calm, he asked us if we had eaten any thing that morning? And we confessing we had not, he called for victuals and drink, and would have us eat with him.

"When we had done, he walked to the town with us; and, notwithstanding his former passion, being now much altered, he took us kindly by the hands in the street, before many people, when we parted.

"After this we went to the prison to see the young men, and acquainted them, that we could find little ground to expect any favour; at which they seemed altogether unconcerned, being much resigned to the will of God at that time; and we staid with them in the prison most of that day, they not being called into court till the next afternoon.

"The prisoners being brought into court, Thomas Cornwall and I, and many other Friends, went in with them; and though we had our hats on, the judge was so far indulgent, as to order us seats, but that our hats should be taken off in a civil manner by an officer.

"The prisoners being at the bar, the judge asked them the reason of their obstinacy, as he called it, running again into several high charges against us as a people? The young men modestly replied, it was not obstinacy, but duty to God, according to their consciences and religious persuasions, which prevailed with them to refuse to bear arms, or learn war. But the judge would not, by any means, seem to admit there was any conscience in it, but ignorance, and a perverse nature; accounting it very irreligious in any who were personally able, to refuse their help in time of war; with repeated false charges against us as a people, saying, 'since we could pay public taxes, which we knew were to be applied to the uses of war, why

could we not pay those which were by law required of us, instead of our personal service.'

"I desired leave of the court to speak, which was granted, and said, if the judge pleased to keep to the business of the court concerning the prisoners, I would, with leave, speak to the point of law in the case; but if he thought fit to continue to charge us as a people with errors in matters of religion, not properly before him, I should think it mine to answer him in the face of the court; adding, that I could give the court a full distinction and reason why we could pay the one tax, and yet not the other. Which the whole court, except the judge was desirous to hear, and he too was silent.

"I began with the example of Christ himself, for the payment of a tax, though applied by Caesar to the uses of war and other exigencies of his government, and was going on to show a difference between a law that directly and principally affects the person in war, requiring personal service, and a law which only requires a general tax, to be applied by rulers as they see cause, and affects not the person. For though we, as a people, readily pay such taxes, impartially assessed; yet, as the kingdom of Christ is not of this world, his servants will not fight, though they may and ought to pay taxes, according to the example of Christ their head.

"The judge interrupted me, saying, I would preach them a sermon two hours long, if they had time to hear me.

"Then Thomas Cornwall desired them to be careful what precedent they made upon this law, since neither he, nor any of us knew what might be the effects of it, or how soon it might be any of our cases; and that it would be very hard upon us to be sold for servants.

"Truth came gradually over them, and grew very heavy upon them, though they still persisted in their own way; and John Smith, one of the prisoners, said to judge Byfield, that he also must come one day to judgment, before a greater judicature, and therefore desired him to be careful what he did.

"Some time being spent in this manner, the court adjourned till towards the evening; and at our departure, I acknowledged the civilities we had met with from the judge and court, and our hats being delivered us, we accompanied the young men back to the prison; where, being set down together, the presence of the Lord was sensibly with us, and I had some things to say concerning faithfulness unto God, and the great reward of it here and hereafter; and one of the prisoners, and some others, were tendered. Having likewise prayed, and being about to depart, we found the prison door was locked, by which we were detained a short time; for the jailer having been reproved for suffering us to have meetings in the prison, and had injunctions that no more should be allowed of, was fearful, and therefore had locked the door and left us. The prisoners were ordered to be confined until their fines were paid."

Proceeding in his religious engagement, Thomas Story came to Boston, and makes the following record, viz:—

"On the first of the Third month, being the third of the week, Daniel Zachary, Samuel Collins of Lynn, and I went to the governor, Colonel Dudley, and requested him to release our friends. He received us respectfully, and seemed to lament that we should expose ourselves to such sufferings. I answered, 'that it was not in our own wills, but in obedience to the doctrine of Christ, who said unto his disciples, 'Except your righteousness shall exceed the righteousness of the Scribes and Pharisees, ye shall in no case enter into the kingdom of heaven.' 'Ye have heard, that it was said by them of

old time thou shalt not kill; and whosoever shall kill, shall be in danger of the judgment: But I say unto you, that whosoever is angry with his brother without a cause, shall be in danger of the judgment.' Again; 'Ye have heard that it hath been said, 'Thou shalt love thy neighbour, and hate thine enemy; but I say unto you, love your enemies.' Now, seeing anger without a cause, and hatred to enemies, are the causes of killing, and both condemned; and love, which is contrary thereto, recommended and commanded, then they, who believe and obey this doctrine, cannot kill any; not even enemies. It is not therefore lawful to us, who believe in the Lord Jesus Christ, and obey his doctrine, in hopes of eternal life in his kingdom, which is not of this world, to go to war, lest we should forfeit our portion in him, and become unworthy of life in him, by disobedience to his manifest will under the dispensation of his gospel.'

'The governor answered, 'That he was no disputant about religion; but to tell you the truth,' said he, 'seeing the judges have given such a judgment, I cannot tell how to dispense with it; especially now in the time of war, when every body thinks there is so much need of help, and just cause of war.'

'I urged again the prophecy, 'They shall beat their swords into plough-shares,' &c. 'That day,' said he, 'is not come; for you see many nations are at war at this time.'

'I replied, 'That proves, that though the dispensation of peace is come in point of time, yet those who are in wars are not in the life or doctrine of Christ, but in the first and fallen nature; but this dispensation is effectually begun in some, and will go on, and over all in time, and whatever it may be to you who have not embraced it, though offered unto you, it is not lawful for us to whom it is come, to fight. We desire, therefore, we may not be required to fight, but left to our christian liberty, to do, or forbear, as we are persuaded in our consciences is best, and most suitable to the doctrine and practice of our great Lord, Master and Example, the Captain of our salvation, who came into the world not to destroy the lives of mankind, but to save them.'

'Then said the governor, 'It would be better if all were so; but if I should release your friends, I should be much blamed by the country, who have formerly been very hard upon me as well as upon you; but I endeavour to forget it, and so would I have you.'

'I answered 'We have no enmity against that people for any thing they have formerly done or now do to us; but rather desire they might be brought into a condition of forgiveness by amendment.' And added, that since the judges had given judgment otherwise than the law directs, and execution was already performed further than their own law reaches, or can support them in, it was in the governor's power, as I apprehended, to release the young men.

'Then said he, 'You may have remedy by law if you are wronged.' 'But,' said I, 'we sue for favour and justice at the fountain-head in this country, and not to be at the trouble, delay, and expense to send to England about it; and the justices were told at the same time, and Colonel Byfield, chief justice, in particular, before sentence, that this was more than the law could justify them in, he having told us what he intended; and these being poor men, had not wherewithal to appeal from court to court, in a legal procedure, which would be very chargeable; and besides that remedy could be expected from men, who had acted arbitrarily and contrary to their own laws already. We therefore desire their release.'

'The governor replied to the like effect as before, 'that the country would be with his ears if he should do that; but,' said he, 'it is a harmless thing to work at the castle; they need not fight there.'

'But,' said I, 'that is an erection for war, and we cannot be active in such works as may be thought necessary there.' And so, finding nothing could be done at that time, we fell into some discourse on other subjects, and he invited me to dinner with him, which I excused, and so we parted; and we returned to Daniel Zachary's house, and there I wrote to the governor, inclosing a copy of the judgment of the court, with some remarks thereon.

'To this letter we had no answer whilst I staid, but we heard that the governor had given an order the day before, that the young men should be taken to the castle, though himself had told us he had not given any order at all for bringing them from Bristol; but the captain who brought them from thence would not have any hand in taking them to the castle, nor any thing more to do with them. So that they were at Boston when I went thence, on the fifth-day following, and at liberty, on their own words to be ready upon call.'

Thus the steady faithfulness of these young men, in maintaining the christian testimony against war and warlike measures, carried them safely through the sufferings inflicted on them, without any compromise or concession; and a similarly upright and consistent course will ever be found to be the best.

Commissioners.

We are informed that the following persons have been appointed to superintend the drafting in the several counties of Pennsylvania, to whom application for exemption must be made, viz:

Beaver Co.,	James Patterson,	New Brighton.
Berks Co.,	Henry S. Kupp,	Reading.
Bucks Co.,	Joseph S. Ely,	Doylestown.
Chester Co.,	Francis C. Hooton,	West Chester.
Columbia Co.,	J. C. Harrison,	
Delaware Co.,	Abel Lodge,	
Lancaster Co.,	James L. Reynolds,	
Lycming Co.,	Charles L. Lyon,	Montoursville.
Montgomery Co.,	James Boyd,	Norristown.
Philada. City,	Benjamin Gerhard,	
Philada. Co.,	William H. Allen,	

For "The Friend."

Present and Coming Trials—Manifest Duty.

The remarks in a late number of "The Friend," on the trials of the present and coming time, with the salutary suggestions and counsel contained therein, have doubtless proved a relief to many exercised minds, who feel their need of christian sympathy and Divine protection and support; such as result from an individual and united travail of spirit for one another's welfare and preservation, with the eye of the mind turned inward to the Source of all availing help.

The present threatening condition of things has long been predicted and fearfully fore-shadowed, by solemn warnings, which have been too little regarded, and by sorrowful departures which have not been retraced; and now it behoves us to inquire within ourselves, what is our individual duty in order to secure the favour and blessing of Divine Providence, that his wrath may be turned from us, and the plague which he has permitted for our chastisement and correction, effectually stayed.

We are not called to renewed, increased inwardness and abasement, desiring of the Lord for those in authority the wisdom and preservation of Truth, and that he would increase and strengthen our faith, enabling us to discover and perform our various

duties, and to bear up under the weight of trial and sorrow that may be permitted to come upon us for the proving of our faith and allegiance? Let us seriously consider this, seeking to bring tithes and offerings into his store-house, that he may pour us out a blessing and spare us according to his gracious promise; heeding the exhortation, "Watch ye, therefore, and pray always; that ye may be accounted worthy to escape all these things that shall come to pass, and to stand before the Son of man."

May a sense of our blessings and privileges, and an appreciation of the cause and purpose of our chastisement, tend to our humiliation, and lead to a fuller acknowledgment of our dependence upon Divine direction and aid, that the power of the Lord may be exalted, and his praise celebrated to the peace of our souls. He who is every moment watching over us for good, and waiting to be gracious, will not suffer any confiding, exercised soul to be tempted beyond its ability to bear, however greatly it may have to suffer for the cause and testimony of Truth; but he will provide a way where there may seem to be none for its escape, as in meekness and patience he is engaged to endure whatever may be permitted or dispensed.

With this confidence and the view of our deficiencies and accountability, how can we be so unthoughtful and ungrateful as to neglect our high and holy calling. The enemy of happiness and peace has been permitted to sow and nourish the seed of strife and discord in the hearts of the people, until both church and state have become sorrowfully divided in our land. But wherein, may we inquire, is the remedy for this? to which it may be answered; by a faithful return to the first principle of christian profession—to the law of the Spirit written in every heart, which teaches the denying of all ungodliness and those lusts for fleshly dominion, praise and power, which separate from the love of God, and the fellowship with Christ and his disciples.

The desire for self-aggrandizement and gratification, and the praise and honour of men, has led away from the love, fear, and praise of God, until creaturely wisdom and policy have too far usurped the place of the Divine government, designed to be established in every heart, if implicitly obeyed. Wherefore a return to the law and government of the Spirit of Christ, is that unto which all are individually called, praying unto God that he will deliver us from the spirit of enmity, and unite our hearts together in love, causing a return of peace and good-will in the church and in the nation, and that all glory and honour, dominion and power may be ascribed unto Him.

The Oil Exports.—The shipments of Pennsylvania rock oil, or petroleum, from this country to Europe, during the first six months of the present year, amounted to considerably more than one million of dollars. This, for a trade that is in its infancy, is a large business; for it is only within a few months that this oil has attracted attention in Europe, and shippers have only recently been making energetic efforts to forward it.—*Late Paper.*

THE FRIEND.

NINTH MONTH 6, 1862.

The thirty-fifth volume of "The Friend," was completed with our last number. To those who have been connected with the Journal, as its conductors, from its commencement, it seems hardly

possible that so many years have rolled away since they first engaged in the labour of supplying its columns with matter adapted to the varied tastes of the readers, to inform, instruct and entertain them. One half the years allotted to the life of man, has been added to the time gone forever, since those labours began, and of the millions who then mingled in the busy scenes of life, how large a portion has gone to receive the reward of their actions, whether they had been good or evil.

The retrospect is well calculated to impress the mind with considerations of the uncertain duration of this probationary state, and the incalculable importance of rightly improving the time bestowed, as it rapidly passes away. How few, comparatively, give evidence that they are fully aware of the responsibilities resting upon them, and of being anxious, above all things else, to be found vigilant and faithful at the post assigned them. The Conductors of "The Friend," cannot boast of exemption from the common fallibility, and with all their desire to keep upon the watch, and be prompt in the performance of their duty, they are aware that others may have seen, where they may have missed or fallen short. They have not been unmindful that all are responsible for the influence for good or for evil they exert, and hence, that those who conduct a journal which speaks every week to thousands, should feel deeply the grave duty they have undertaken, and the need they have to observe unceasing care, to supply nothing that will hurt the Truth in others, while they strive to keep for themselves a conscience void of offence towards God and towards man.

It is a very serious thing to implant in the minds of others that which is evil in its tendency, or to nurture and strengthen it where it has been already sown, thus being in measure, responsible for the guilt and unhappiness that must result therefrom; and in a periodical that addresses itself principally to the members of our religious Society, especially agitated as the society has been at different times during the last thirty-five years, respecting its faith and practices—the duty has been felt to be an onerous one, as far as there was ability, to point out departures from the one, and encroachments upon the other; to warn the members against adopting or sanctioning erroneous opinions, and to set forth and defend correct views of the doctrines and testimonies of Friends. "The Friend" laboured faithfully on that ground during the Hiekkite controversy, and did battle vigorously to preserve the Society from being overwhelmed by the Unitarianism which then assailed it.

Those days have long since passed by, but the reaction that succeeded that malign assault has not yet spent its force. Greatly as we must rejoice that the cold and blinding principles of unbelief promulgated by E. Hicks and his coadjutors were so determinedly rejected by the Society, and that it has since been enabled, measurably, to recover from the grievous wound then inflicted on it, still, we must confess that Friends, as a religious body, are far from being what they ought to be, or what their forefathers were. Some have repudiated the principles of primitive Quakerism, while others have departed widely from a practical explication of the principles they profess to hold. There are few we apprehend, but who will acknowledge that the members very generally want *deepening* in true religious experience, but the many causes operating to draw them away from a firm reliance on, and observance of the cardinal principle in our profession, that all good in man must result from the crucifying and renovating power of the Holy Spirit revealed in the secret of the heart, by which alone that deepening can be effected, causes many

to fear that under the circumstances, that necessary change may not be generally experienced. In our dislike to the humiliating process of regeneration, many are seeking to substitute something else; some intellectual means for acquiring a knowledge of the truths of the gospel; some external work of service by which they may persuade themselves and others into a belief that they are engaged in promoting the spread of the kingdom of Christ. We may thus devise ways for filling the mind with a certain amount of ready made knowledge of Divine things, and inspire a love for acquiring and dispensing this high sounding erudition; but unless redeemed from our fallen lusts and affections, and the spiritual senses unfolded and disciplined by use, the head will mislead the heart, self will maintain its supremacy, and our knowledge will be only that which puffeth up.

It has been objected to plainness of speech, behaviour and apparel, that they were often an external sign of what did not exist within; but is there not reason to fear that the various outside performances in which it has of late become so fashionable in the Society to elicit its members, may go no deeper than the coat or the speech do in the cases alluded to; while owing to our proneness to take the more lasting impressions from outward objects, they may be more likely to betray into an ignorance or disregard of the requisitions of the law of the Spirit of life, inwardly revealed; obedience to which is the only mode of making true Quakers.

Supposing, as is alleged, that the earnest, aggressive religion of our early Friends has in many places degenerated into traditional habits, conventional modes of expression, and routine performances; or in the caustic description of Coleridge, the godly tree of Quakerism was kept up by the bark, the inside being decayed—which however we do not believe—and that a revival of religious interest has taken place among the younger members, stimulating them to reform and reanimate the lifeless body; it is a question of most momentous importance, whether the actors and advocates of the new order of things in the Society, in rejecting the long tried practices and principles which they pronounce obsolete, have succeeded in introducing others which bear the marks of springing from Divine wisdom, exhibiting the ancient virtue and vigor in a new dress; whether they are bringing back the departed spirit which gave force and virtue to the system established by the founders of the Society, and embodying it in their various "machinery for producing a religious revival?" We have no hesitation in saying they have not; but we think there is strong ground for maintaining that in courting a closer alliance with the world, and giving up some of the precious testimonies which sorely chafed the worldly spirit, and for the maintenance of which Friends in the beginning suffered not only scorn and contumely but the loss of liberty and life, they have no substitute to offer but manners and means, which have been proved in other societies to be productive of little or no substantial good.

We refer to these things now, because we think they in measure illustrate the reasons for the course which "The Friend" has heretofore taken in reference to them, and the course will continue to pursue. There is no doubt that the want of a steady adherence to the well-known principles of the Society, has entailed sad consequences upon it. The most deeply experienced among those who in its different parts, are striving to stand in their allotments of service or suffering, bear uniform testimony, notwithstanding the report of mighty works done, to prevailing weakness and degeneracy; but

yet they are far from being hopeless of a change for the better. The glory of man's works passes away, but the Spirit of our religion has triumphed over those powers that destroy the works of man; and that Spirit is operating in the hearts of thousands, to bring them to a knowledge of the same blessed truths which the Society was raised up to exemplify and promulgate; and from among these, we doubt not, in the Lord's own time, an army will be raised up again to exalt the lowered standard, and magnanimously confess and uphold pure Quakerism before the world.

We are aware that the views on these subjects held out in "The Friend," are considered by many as behind the times, and sectarian; but we want nothing new in the religious faith of Friends. Our aim and desire are to encourage all to "stand in the way, and see, and ask for the old paths, where is the good way, and walk therein and ye shall find rest for your souls." We would rejoice to see Friends everywhere become an united body, labouring harmoniously to build each other up on our most holy faith, and to make its power felt upon the community around them. In our own country the awful scourge that is afflicting it ought to drive us nearer together, and teach us the necessity for having every root of bitterness plucked up, and the bonds of love and unity drawn more closely around us.

To effect this, we must come into the unity of the faith and speak the truth in love; we must be willing to bear and forbear, to "Let all bitterness and wrath, and anger and clamour, and evil speaking be put away, with all malice, and be kind one to another, tender-hearted, forgiving one another, even as God for Christ's sake hath forgiven us."

Eagerly desiring as far as our influence may be felt, that it may tend to bring about this blessed state, and cordially inviting our friends to give us their aid thereto, we enter hopefully upon our labours for another year.

Not having the edition of J. Barclay's Letters referred to, we are unable to decide which letters our correspondent desires republished; if designated by reference to the London edition or that in Friends' Library, we will willingly comply.

We have been kindly furnished by a Friend in Ireland, with a copy of a little work entitled, "Divine Protection through Extraordinary Danes, experienced by Jacob and Elizabeth Goff, &c.," with a proposal to have some of its interesting contents transferred to the columns of "The Friend." It has already been given to our readers in a former volume, but we may find occasion to repeat some extracts.

SUMMARY OF EVENTS.

UNITED STATES.—*The War in Virginia*.—It was the general impression during the last week, that momentous events were transpiring in Virginia; but little beyond vague rumors could be obtained from the field of action until the close of the week. The order excluding correspondents of the press from the army lines, and forbidding the transmission of intelligence respecting military operations, was then withdrawn, and several despatches from Gen. Pope were published. As nearly as can be gathered from the rather excited and confused accounts, it appears that Gen. Pope's arrangements to prevent the passing of the Rappahannock by the rebels, were foiled by the strategy of Generals Jackson and Ewell, who effected a crossing with a large force, about six miles south of the Blue Ridge, thus turning Gen. Pope's right flank, and getting between his army and Washington. Gen. Pope's baggage train was captured, together with all his papers, including the plans of the campaign. The rebels also captured or destroyed a large amount of public property at Manassas Junction and other points, and took a large number of prisoners, whom they subsequently paroled. A considerable num-

ber of the U. S. troops were killed and wounded in the several encounters. As soon as Gen. Pope discovered this movement of the rebel commanders, he broke up his army at Warrenton and Warrenton, and marched rapidly northward in three columns. The division of Gen. Hooker marching toward Manassas, came upon a part of the rebel army on the afternoon of the 27th, when an engagement took place, in which the rebels were routed with a loss of 8,000 men, and about 1,000 prisoners. The divisions of McDowell and Sigel were engaged with other divisions of the rebel army until night came on. On the morning of the 28th, Manassas Junction was occupied by the U. S. forces, Jackson having abandoned it a few hours previously. On the 30th, the rebel army was defeated at the battle of Haymarket, a station on the Manassas Gap railroad, about eight miles west of Manassas Junction. The battle continued throughout the entire day, and was attended with frightful carnage. Gen. Pope in his despatch says, "we have lost not less than 8,000 men killed and wounded, and the appearance of the field, the enemy lost at least two to one." Other accounts say that the estimate of 8,000, as the loss of the U. S. troops, is much too small. In this terrible struggle, the rebels were driven from the field, which proved to be identical with the field of Bull Run, and the Federal army was defeated last year. On the following day, (the 30th,) the battle was renewed, the rebels, who since the previous day had been largely reinforced, being now the assailants. Gen. Pope's expected reinforcements having failed to arrive, and his army being exhausted by the march, and the weather, it was unable to withstand the violent onset of the rebel forces, and gave way before them. A retreat to Centreville was effected, it is said, in good order, where the U. S. army, on the 1st inst., occupied a strong position, and had been largely reinforced. No reliable statements have yet been published of the number killed and wounded on both sides during these successive sanguinary encounters. It is doubtless very large, perhaps exceeding that in the battles near Richmond, and probably about equally divided between the opposing armies. The fact of the rebel leaders having massed their numbers in this manner, and their determination to force their way into Maryland, and take possession of Washington at all hazards. Rebel scouts have already been seen near the Potomac above Washington. Gen. McClellan's head-quarters are near Annapolis. A large part of the army heretofore commanded by him, are now at Centreville. It was reported in Washington on the 1st inst., that the command of the troops in and around that city, including the defence of the neighbouring fortifications, had been assigned to Gen. McClellan. There seemed to be little apprehension in the Capital that it would fall into the hands of the rebels. It is believed that thousands of men have gone to the aid of the rebels from Maryland. An entire company of cavalry left Montgomery county on the upper Potomac last week, and small parties are said to be continually moving into Virginia.

Kentucky.—In addition to the continued incursions of guerrilla bands, the State has been invaded from Tennessee by an army of 15,000 to 20,000 men. A body of 8,000 Union troops near Rogersville, was attacked by the rebels and driven into Lexington. On the 1st inst., Lexington was captured by the rebels, and the towns of Covington, and the city was surrendered to the rebels. The Legislature of Kentucky has adjourned from Frankfort to Louisville. The people of the latter city were greatly excited at the near approach of the Confederate army, and all the able-bodied men of the city and adjoining county had been ordered by the Governor to take the field.

Tennessee.—The reported retreat of the Federal forces from Cumberland Gap is not confirmed. An attack from the rebels had been repulsed, and it was supposed by the U. S. troops that the position until they were reinforced. A large rebel army, however, was reinforced. The U. S. troops at Bolivar were attacked by about 4,000 rebels on the 25th ult. They were repulsed with considerable loss. All the railroad bridges between Bolivar and Jackson, had been destroyed by the rebels. General Smith's army was recently moving towards Chattanooga.

Missouri.—The latest advices indicate the partial success of the efforts to put down the roving bands of guerrillas. Many of them had been dispersed and others seized. A proclamation has issued an order assessing \$500,000, on the secessionists, and on the sympathizers in St. Louis county, the money to be collected without delay and used in clothing, arming and subsisting the enrolled militia white in active service,

and in providing for the support of such families of the militiamen as may be left destitute.

Mississippi.—A combined military and naval expedition, planned by Gen. Curtis and Com. Davis, lately proceeded up the Yazoo river. The result was the capture of a rebel transport, containing a large amount of fire arms, ammunition, &c., destined for the rebel army in Arkansas. Some batteries of heavy guns upon the river, were also captured or destroyed.

Louisiana.—At the latest dates, New Orleans continued healthy. The search for arms discovered quantities of them secreted in various places, but there were no owners to claim them. A large Union meeting was held on the 20th ult.

Port Royal.—The health of the troops at Port Royal is said to be good. The rebels had surprised a company of Federal troops doing duty on Pinckney Island, as a picket guard, and killed or captured nearly all of them.

Minnesota.—The Indian massacre does not seem to be confined to one locality but spread over a large extent of territory, and the reported destruction of life is said to be less than the reality. Troops were moving against the Indians.

Philadelphia.—Mortality last week, 396. The usual mortality is increased by the numerous deaths among the wounded in the hospitals.

New York.—The money market is firm, the rate for prime paper being $4\frac{1}{2}$ per cent. Specie in the New York banks at last weekly report \$35,640,984.

FOREIGN.—Liverpool dates to the 21st ult. The stock of gold in Liverpool had been reduced to 82,000 pounds including only 20,000 American. The market was excited, with a large advance. Orleans fair, was quoted at 27d. The market for breadstuffs was firm, with a slight advance in prices. The London Herald says it would be the salvation of the Northern States, if Europe would immediately forbid the continuation of the war. The embarkation of troops for Mexico has been suspended until after the arrival of the next mail from Vera Cruz.

The Paris *Pays* says that the harvest is the best of the last ten years, and that we will not be compelled to have recourse to foreign wheat and other cereals. The correspondent of the London *Times* says that the Emperor recently expressed condemnation of Garibaldi's movements, and was even of the opinion that the Italian Government was not quite blameless in the matter. It is confirmed that Garibaldi had entered Catania and Palermo, and that he had been received by the Senate on the 20th, an explanation of events in Sicily was asked for. Rattazzi replied that the Government considered Garibaldi in a state of rebellion, and the situation of Italy a grave one, but he hoped that they would be straggled.

RECEIPTS.

Received from Jos. Winder, O., \$2, vol. 35; from E. C. Gause, Pa., \$2, vol. 35; from Wm. Wright, O., \$2, vol. 36; from Stephen Hobson, Agt., O., \$2, vol. 36, and \$4 for —; from Joseph Snell, Pa., and C. R. Ellwood, Joshua Battin and Gideon Wilcox, \$2 each, vol. 36.

NOTICE TO SUBSCRIBERS IN ENGLAND.

In consequence of the loss of a statement of our Agent, Geo. Harrison, of Manchester, England, rendering it difficult to appropriate the money remitted to us, by him, to the proper accounts, we have to request that subscribers for "The Friend," in England, Ireland and Scotland, who have made any payments on account, for the 34th, 25th or 26th number, by the people who have been released from the agency,) will hand to our agents, Joseph Armfield, No. 1 South Place, Finsbury Pavement, London, or John C. Sargent, Cockermouth, Cumberland, England, statements of money paid, and the volumes for which it was paid by them.

FRIENDS' SCHOOL, GERMANTOWN.

Since the opening of this School, in Ninth month, 1858, the buildings have been enlarged and improved, for the accommodation of Friends' children, and others who conform to the regulations of the School. The present and adjoining buildings, and the rooms released from the agency,) will hand to our agents, Joseph Armfield, No. 1 South Place, Finsbury Pavement, London, or John C. Sargent, Cockermouth, Cumberland, England, statements of money paid, and the volumes for which it was paid by them.

TERMS FOR TEACHERS.—From \$8 to \$20 per Session of five months, according to the accommodation and the number of the branches taught.—French and Latin, \$5 each per Term.—Application may be made to Alfred Coe; Ezra Comfort; John S. Haines; Lloyd Millin; Samuel Morris;

George Jones; Elliston P. Morris,—or to Amy and Sarah H. Albertson, at the School.

Eight months, 1861.
A limited number of scholars can be accommodated with board at the dwelling on the premises. Access may also be had by the Scholars to a valuable Library, belonging to the Preparative Meeting.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)
Physician and Superintendent,—JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to ISAAC MORGAN, Jr., 622 Noble street, SAMUEL ALLEN, 524 Pine street, GEORGE S. SCATTERGOOD, Fifth and Callowhill streets.

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable Friend as Governess at West-Town Boarding School. Application may be made to Sidney Coates, 1116 Arch St., Philadelphia; Abigail W. Hall, Frazer P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 36th and Ridge Sts., Philadelphia.

TEACHER WANTED.

A teacher competent to give instruction in reading and other branches, is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Arch St.; Deborah M. Williamson, 1024 Arch St., or Rebecca S. Allen, 353 S. Fifth Street.

DEAD, at the residence of his parents, Thomas and Mary Simmons, Blawie, D. Fessenden, in the twenty-first year of his age, a member of Plymouth Monthly Meeting, Particular Meeting, in Washington County, Ohio. He had sustained a good moral character; but when brought to a bed of sickness, he found that not sufficient to justify him in the Divine sight, and that the great work of the soul's redemption had been neglected. He spent the latter part of his life in attending our religious meetings, and that in time past he had not been as careful when there, to endeavour to have the mind gathered, and centred, in reverent, silent waiting, on the Father of Mercies, for the renewal of strength, and peace. On taking a retrospective view in truth, as he ought to have been. His sickness was protracted, and his sufferings at times great; during which time he passed through much mental conflict and exercise, but was eventually, through redeeming love, enabled to experience forgiveness, and his mind to be clothed with peace. On taking a retrospective view, he said, he "had been travelling on in the broad way to destruction, but through mercy he had been brought to see the exceeding sinfulness of sin, and to experience the mercy and forgiveness of God, through Jesus Christ our Lord, and that he desired to praise Him as long as he had breath left, or to express the thankfulness of his had not been taken away in the early part of his sickness in an unprepared state. He said he had been permitted to have a view of that glorious, heavenly kingdom, where holy angels were praising God. He once desired that his parents, brothers and sisters, and all, might endeavour so to live, as to be prepared to meet him in that holy, happy home, where there is no more sickness, sorrow, nor pain; where the wicked cease from troubling, and the weary are at rest."
—on the 2nd of Seventh month, at the house of Milton and Mary C. Pa., Josia W. Hiron, a member of Providence Monthly and Sewickly Particular Meeting, in the fifty-second year of his age.

—on the 14th of Eighth month, 1862, at the residence of her brother-in-law, Solomon Horney, near Rich Hill, Pa., Indiana, SARAH ROBERTS, formerly of Philadelphia, Pennsylvania, in the seventy-third year of her age.

—on the 22nd of Eighth month, 1862, EVAN ROBERTS, in the seventy-sixth year of his age; an exemplar member of Falls Monthly Meeting. He bore his illness with christian patience, and retained the comforting belief that his loss is his eternal gain.

WM. H. PILE, PRINTER,
Lodge street, opposite the Pennsylvania Bank.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, NINTH MONTH 13, 1862.

NO. 2.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

[It is one of the favourite criticisms of English journalists, to portray the state of society in this country, as but little above barbarism, and the revolting scenes which are sometimes enacted in border life, are often detailed as exhibits of the low condition of morals prevailing among our citizens; and, we apprehend, such a state of universal degradation and numerous malvolence among a large body of mechanics, as is depicted in the following paper from the "Leisure Hour," has never been approached by any class of workmen in any of our manufacturing towns, and yet, we would be far from presenting it as exemplifying the character of English society.]

Whatever good there may be about trades unions, their bad side is very perceptible in Sheffield, where the tyranny resulting from them is carried to an extent scarcely to be credited by a stranger. Strikes are not very frequent in Sheffield, simply because the combinations of workman are so strong that the masters are usually compelled to submit to them without a struggle. One great cause of this is the peculiar character of the workmen, resulting from the nature of their employment. There probably exists nowhere else in the kingdom, a race of artisans so thoroughly independent and self-willed as the workers in cutlery ware. The excellence of the work, in every department, more or less depends upon the skill of the labourer; and in many cases it takes years of persevering toil to secure the manual dexterity necessary to turn out cutlery in a high state of finish. The workmen in each branch jealously restrict the number of youths who are brought into apprenticeship, which is the only avenue to the trade; and thus the trade, except in periods of great depression, never becomes overstocked with labourers. Unlike the cotton masters of Lancashire, who in an emergency can sufficiently man their machinery with agricultural labourers, the Sheffield manufacturers know that they cannot in any way supply the place of their own trained workpeople; and hence they avoid conflicts with them. The workmen, on the other hand, knowing this equally well, feel the security of their position, and unite in trade societies to make it still stronger. The determination of character which marks the labourers in the staple trade of Sheffield, seems to spread to those who obtain livelihood by other occupations; and trade disputes generally, in this town, are marked by an asperity and settled duration of purpose which are

scarcely seen elsewhere. Persons who make themselves obnoxious to the unions are pursued with a deadliness of aim and a fixity of determination that seem perfectly relentless.

Take a comparatively recent case. A brick manufacturer, who lives on the outskirts of the town, made up his mind some time ago to get rid of the dictation of the union belonging to the trade, and to employ whatever workmen he liked, whether they were members of that union or not. On getting up one morning, he found that six or seven yards of calico had been carefully fastened, by means of pegs, to a hayrick close to his stables. This calico had been saturated with turpentine and naphtha. Three large bottles, which had contained these liquids, were found lying side by side with a lot of matches, on the ground close to the rick. Of course, the object had been to set fire to the hayrick and the premises; but the intending incendiaries had no doubt been disturbed by some one approaching. Within little more than twelve months, the same manufacturer has had a cow killed in the field, a sow mercilessly mutilated, a donkey hanged, several lots of bricks destroyed, and three bottles of combustible materials thrown through his bedroom window.

This latter method of procedure is rather a favourite way of "rattening," (as the process of persecuting obnoxious persons is called in Sheffield.) A can or a bottle is filled with gunpowder, a fuse which will burn for a minute or two is attached to the mouth, and, with the fuse lighted, it is hurled through the window of the room where the victim, perhaps with his wife and children, is sleeping. On one occasion a large quantity of gunpowder was thrown in this way into the lower part of a house in Bramber Street, and one side of the building was completely blown down, as though by an earthquake.

Not many years since, there lived in the neighbourhood of Sheffield, a man who was greatly hated by the union, he having for a long time set them completely at defiance. They had "rattened" him in all manner of ways, and he had escaped unharmed. In fact, he was prepared for all ordinary attacks. His door was strongly barred; his windows were iron grated, like a prison; and the top of the chimney even had bars of iron across it, to prevent combustibles from being thrown down into the fire. One night he was sitting in the house, when he heard a knock at the door; he went with a candle to see who it was, and no sooner had he opened the door than he was shot to the ground. He was conveyed to the infirmary, where he lay for some months; but he escaped with his life. The knock at the door was to decoy him to open it; the person who knocked immediately slunk away; and another at a distance shot the victim with a gun.

Another similar outrage ended more tragically. A man who persisted in working independently of the union, was shot at from the street, as he was sitting in a house. The bullet missed him. A bottle of gunpowder was exploded in his dwelling, and again he escaped unhurt. A third and more successful attempt was made upon him. A pistol

was fired at him while he was in the parlor of a public-house, and the bullet lodged in his skull between the eyes. He lay for some time between life and death, but gradually recovered his health, to some degree at least, the bullet remaining in his head. Shattered in health, and with an enfeebled mind, the poor fellow gave up his independence. He made a bargain with the union. He sold them his tools, and undertook not to work again at his trade, on their agreeing to pay him a certain sum weekly for his support. The union got the best of it. He sunk and died in some eleven or twelve months, from the effects of the bullet wound.

On one occasion it was contrived that half a dozen people should be "rattened" almost simultaneously, at as many different places, and by an ingenious self-acting process. It arose out of a dispute in the table fork grinding trade. In the process of grinding, the sparks fly off freely, and in each manufactory, during the night, a quantity of gunpowder was placed near the machinery of each obnoxious person, on a spot where it was not likely to be observed, but where the sparks were sure to fall on it. The consequence was, that each person, as soon as he began to work, caused the powder to explode, and they were all more or less injured, some being badly burnt and some partially losing their eye-sight.

The dispute out of which this outrage arose curiously illustrates the working of the trades unions, and the aboriginal notions of Sheffield workmen respecting political economy and the division of labour. The table fork grinders devised the following singularly capricious system for the management of their trade. They appointed ten or twelve of their number, as a sort of middlemen, to receive the work from the masters, arrange for its execution, give it out to the workmen, receive the money for it from the masters, and pay the workmen their wages. Thus the masters had no communication with the men who actually did the work, and the curious anomaly has arisen that a master, in order to get work executed by men on his own premises, has had to send to one of the middlemen in another part of the town to have the arrangements made. It is no wonder that branches of the Sheffield trades should be leaving the town, considering that the masters have to labour under such extravagantly absurd restrictions.

In one of the most recent of the outrages, the trade union came off completely triumphant. A local firm introduced a new piece of machinery for manufacturing saws. One night, about ten o'clock, while some of the men were at work, an explosion took place in one of the shops, which it was discovered was caused by a charge of gunpowder thrust into a pipe under the room. As, however the shop was on the ground floor, and the pipe was several feet underneath, with solid earth between, the shock was deadened, and no great damage was done. The firm determined to proceed with their machinery, and they put forth an offer of a hundred pounds reward for the discovery of the persons who had done the mischief. The authorities also proceeded with vigor, and obtained from the Secretary of State the promise of an additional

fifty pounds reward. But in the meantime a letter, of course anonymous, had been received by the wife of each of the members of the firm, containing such threats as to what would be done, if the offer of the reward was not withdrawn, that these ladies, thoroughly alarmed, persuaded their husbands not to pursue the matter further. They consented; the hundred pounds reward was withdrawn; the government reward was not issued; the firm wrote to the secretary of the union, stating that the machinery should be abandoned; and it was abandoned accordingly. To complete the affair, a cry was got up that the union had not committed the outrage, but that it was done by the firm themselves, who had also concocted the threatening letters; and this, in face of the fact that they had to abandon the costly machinery which they were putting up. It was explained very clearly at the time by the firm, that if they were not allowed to use the machinery, they should be unable to compete with firms in other towns, who were employing it, and that they should be compelled to give up large orders which they had been accustomed to receive. All such arguments, however, seem to have no effect upon the supporters of the union system, who cannot see beyond the immediate benefit obtained in the keeping up of the rate of wages.

The question naturally arises, how is it that such atrocities are permitted, and that they go on without the offenders being detected and punished? Vast as is the number of trade outrages, small and great, there are very few instances on record of persons having been convicted of the crime. This arises principally from the peculiar strength of the combinations, and the tenacity with which they hang together. The only associations with which they can be compared are the secret Ribbon societies of Ireland, or the murderous Thugs of India. The members seem to consider it a sort of religion not to betray each other; and there is scarcely an instance of such a circumstance occurring. Indeed, it is astonishing how these trade combinations blind men's moral nature to the atrocity of the acts that are committed. Conceiving that what is done is for the general good of the trade, the destruction of life and property is pursued with a fixedness of purpose which would never exist if the object to be attained were merely an individual one. As regards the difficulties of detection, they are increased by the great caution and cunning with which the outrages are committed, and by the fact that, when persons not interested in the unions are able to give evidence which might tend to fix the crime on some one, they are deterred by a fear lest they also should incur the hatred of the union and fall victims to similar lawless acts. All these causes combined go to make up a state of things in this community which is deplored by right-minded persons of every class, but for which there does not appear to be any effectual remedy except that gradual yet certain one arising from the spread of sound education amongst the artisan classes.

Some Account of John Spalding.

(Concluded from page 2.)

This I sent with one of my pamphlets before-mentioned; the next evening I received the following.

"Mr. Spalding.

"As I am willing to hope that your pamphlet and letter were well meant, I thank you for them; but as they are replete with most wicked errors, and as the author of them is a schismatic and heretic, I must reject both you and them. As you once gave hope that you might walk in the ordi-

nances of the Lord blameless, and continue with us in a church which God is still filling with his glory, I cannot but feel a regard for you, and pity you the more for your departure and apostasy from the faith. I would advise you to search God's word and your own heart, with prayer, for the teaching of his spirit, that you may discover the sound doctrine of the one, and the sore plague of the other. Peradventure God will give you repentance to the acknowledging the truth, and you may be restored to a sound and sober mind, out of the snare of the devil, by whom you are now taken captive at his will. Should an event so desirable to yourself and your family ever take place, I shall rejoice to salute and embrace you in Christ Jesus, but till then I must beg to decline all correspondence with you.

I am, your sincere friend and well-wisher."
Reading, Nov. 28, 1794.

A little while after, he desired my brother to tell me to send in his account, and also to know if he should stop his tithes out of it, which amounted to three pounds. I in consequence wrote his account, and sent it in the following letter, with a little piece called "Reasons why the people called Quakers do not pay Tithes."

"Respected Friend,

"I should not at this time thus communicate with thee, but for thy inquiring of my brother somewhat respecting my paying tithes. It appears to me thereby, that thou art unacquainted with our reasons for not paying tithes, &c, & yet, as I suppose from thy letter, thou may not be willing to receive my reasons on that subject, I will only observe, that it is not from any personal disregard to thee, nor in imitation of others, that I refuse to pay them, but from a full conviction of the inconsistency thereof with the dispensation of the gospel; and that if I did in any manner contribute to support such a practice, it would be a denying that Christ is come, who by his coming, put an end to, and totally abrogated or disannulled, that law or dispensation to which tithes belonged. I send thee a small piece on this subject. Shouldst thou be disposed to be more fully informed respecting it, I have other authors who have confuted every argument in favour of tithes, &c., in this last and more glorious dispensation.

I remain respectfully, thy friend,
JOHN SPALDING."

Reading, Twelfth mo. 23d, 1794.

"P. S. As thou desired, I send thy account; and here it may be proper to remark, that I cannot suffer thy demand to be paid thereby. Thou, perhaps, wilt think me troublesome and impertinent, but the Lord knoweth my heart in this matter, that it is from a persuasion of duty towards him, and not from a perverseness of disposition, as men may suppose it is."

I found a spirit generally prevail among them, both preachers and hearers, confident in their own opinion, and condemning without hearing the sentiments of others. Oh! how doth my spirit mourn for them, under a sense of the danger of their situation, and a persuasion of the applicableness of an ancient language, "The prophets prophesy falsely, the priests bear rule by their means, and the people love to have it so; but what will they do in the end thereof!"

Being appointed by the parish, overseer this year, I had frequent opportunities of observing the difficulties many of the poor laboured under, and was favoured to sympathise with them therein, and I had often to consider the manner of living among those in superior situations as to outward things, and it appeared to me inconsistent with the

gracious designs of our heavenly Father, that some should live luxuriously, and expend much upon superfluities, while so many fellow creatures were in the want of the comforts and necessities of life.

It seemed to me a great evil, and my spirit was often bowed in consideration thereof; for I thought that the oppression of the poor, and the extravagant living of others, was one cause of the judgments of the Most High being at this time so awfully executed in the neighbouring kingdoms. And it was often the secret breathing of my spirit, that of the people of this land instead of applying to carnal weapons, which was now pretty general throughout the kingdom, and trusting to the multitude of their hosts, might endeavour to avert the threatened indignation before it came home, by turning every one from the evil of their ways, to serve the Lord with their whole hearts, to relieve the distressed of the poor, and content themselves with a moderate way of living, as becomes the followers of him, who said, "My kingdom is not of this world."

The following was prepared by Dr. J. Leidy, of the University of Pennsylvania, at the request of the Councils of Philadelphia, in order to lead to the abatement of the nuisance produced by the worms preying on the shade trees along the streets and in the squares and park. Its information and suggestions may be of service to many of our readers in the country.

PHILADELPHIA, July 22, 1862.

To the Select Council of Philadelphia:

Gentlemen—You have done me the honour to invite me to give to the Councils of the city such information as I may possess in regard to the insects which injure our shade trees.

I shall be most happy to communicate to our respected Councils any knowledge I may have on this or other subjects which may be considered to be of utility to my fellow-citizens.

The shade trees of the city contribute to its beauty, its health, and apparent cleanliness; and no reasonable pains nor expense should be spared to preserve them. The silver maple is cultivated too much to the exclusion of other trees, as it is one of the most liable to the depredations of insects. The sugar maple, red maple, sycamore, horse chestnut, American linden, silver poplar, &c., should be more frequently employed. The ailanthus, notwithstanding its offensive odor during the flowering season, is an important shade tree, on account of its comparative freedom from the attack of insects. Introduced here and there, to break the series of maples along the streets, it would tend to retard the distribution, and in a measure to restrict the ravages of the canker-worm and other insects.

Naturally, birds are the most important agents in preventing an undue increase of insect life. In cities, the conditions in general are unfavourable to their existence, though for a limited extent they might be induced to take up their abode with us. A friend, who has devoted much observation to their habits, informs me that the want of easy and undisturbed access to water in some degree prevents them from living in our public squares. To remedy the defect, he proposes to introduce into the latter, in convenient positions, shallow basins, supplied with water from a hydrant, the whole to be enclosed in groups of shrubbery. This is an excellent suggestion, easy of accomplishment and worthy of trial. The groups of shrubbery would present an additional advantage; by breaking the monotony and restricting the view of even grounds they would enhance the beauty, and increase the apparent extent of the squares.

The squirrels have been accused of indirectly favouring the increase of insects by driving away birds. This is a mistake, as the canker-worms were just as bad upon the lindens, before the introduction of the squirrels into the squares, as they are now upon the maples.

As a general measure, to moderate the depredations of insects, I would recommend an occasional examination of the trees. The trunks and larger branches should be swept with a stiff brush, so as to remove adherent insects, cocoons, and eggs. Places on the trunk where the bark has been destroyed and the wood exposed, form convenient concealment to insects, and should be cleaned. The surroundings of the trees, also, as the tree-boxes, fences, &c., should be swept, and the collected debris should be destroyed. Dead and curled-up leaves, often spun together with the webs of insects, should be shaken from the trees by means of poles.

I would further recommend the introduction into our public squares of a few turkeys, guinea fowls, and chickens, which destroy all insects which come within their reach.

The more destructive insects of our shade trees which I have noticed, are the canker-worm, the scale-bug, the tufted caterpillar, the sack-bearer, and the borer.

1. The common canker-worm, span-worm, or measurer, I apprehend will prove to be a nuisance difficult to remove. The insect belongs to the same family as the canker worms which have proved very destructive to the fruit and shade trees in New England, but it is a member of a different genus. It is figured by the German entomologist Fabner, under the name of *Eudalimia Subsignaria*.

The young worms appear shortly after the cutting forth of the leaves of the silver maple, which appears to be the favourite food of the insect, though it does not despise other trees. The worms grow until about the middle of June, when they enclose themselves in a cocoon of coarse lace-work, which they construct among the debris of the leaves which served them as food at the ends of the branches, in the interstices of the bark on the trunk, or upon the tree-boxes, neighbouring billings, fences, &c. Within the cocoons, the worms undergo transformation into a grayish pupa, about half an inch in length. The pupa remains quiescent until the end of June or the beginning of July, when a white moth, or miller, emerges, which may be seen in the dusk of the evening, flickering actively among the boughs of the trees. The female deposits her eggs, which at first are of a green colour, but subsequently assume an olive brown hue, in patches on the limbs and twigs, where they remain until the succeeding spring, to enrich new colonies of worms.

Of the many canker-worms produced, the greater number are destroyed in various ways. Cold weather and rains kill a great many. As they wester themselves down by a silken thread, upon any slight disturbance many fall to the ground, and are liable to be crushed. They suffer most, however, from the attack of several species of ichneumon. This is a genus of active, wasp-like insects, which pierce the canker-worms, and deposit in their interior an egg. From the latter is hatched a maggot, which feeds on the internal parts of the canker-worm. Many of these survive the pupa condition, but instead of the moth there emerges a flight ichneumon, ready to pursue the career of its art in destroying noxious insects.

In regard to the means of destroying our canker-worms, several of those which have been reported for the destruction of others of the family, will prove equally effectual. Infusion of tobacco

stems, or a solution of whale-oil soap squirted on the trees, will kill the worms without injuring the foliage, especially in May, while the worms are young and tender. As these articles may be too expensive for general application, it would be worth while to try a weak solution of mineral poison, as I have been informed by an acquaintance that in this manner he succeeded in getting rid of insects upon his trees without injuring the foliage in the slightest degree.

Shaking the boughs with a pole will dislodge many of the worms, which then let themselves down by a thread, when they may be knocked off and crushed; or they may be prevented from regaining their position among the foliage by means of a tar-collar, or an oil-trough collar encircling the trunk.

After the worms have passed into the pupa condition, the webs and debris of leaves spun together, and often concealing many insects, should be shaken from the trees, collected together and destroyed. During this period, also, from about the second week to the end of June, the trunks of the trees, and the neighbouring tree-boxes, railings, and fences, should be industriously cleaned of all adherent cocoons, pupae, and webs, and the material collected should be burned or scalded. Turkeys, guinea-fowls, and chickens are very useful in destroying insects. They not only eat the canker-worms, but search industriously after their pupae and moths. A few of these fowls introduced into the public squares would prove of great service. Even the squirrels would be useful by disturbing and dislodging the worms, and thus bring them within reach of the fowls.

2. The scale-bug, *coccus aceris*, though not a nuisance, like the canker-worm, is nevertheless an injurious insect to the silver maple. It belongs to the same genus as the cochineal, so well known for its valuable red-colouring matter. The scale-insects are conspicuously noticed, in May and June, adherent to the under sides of the branches of the maples, as white masses almost the size of peas, each surmounted with a brown scale. The latter is the female, with her proboscis inserted into the bark, and her abdomen tilted up by a mass of eggs enveloped in a cottony substance. The young emerge from the eggs during the summer, and wander among the branches. They finally fix themselves upon the latter, insert their proboscis through the bark, and thus remain without changing their position, until the following year, when they develop the masses of eggs as above mentioned. When numerous, these insects exhaust the tree by depriving it of its juices. They are readily removed by means of a stiff brush attached to a pole. This should be done in May or June, and is easily accomplished, for the insects congregate mainly on the under side of the larger branches, where they can be readily reached.

3. The tufted caterpillar, or vapor moth, belonging to the genus *Orygia*, is observed on most shade trees, fruit trees, and rose bushes during the summer months. The caterpillar is yellow and hairy, with two long black pencils diverging from the first ring back of the head, and a single brownish pencil projecting from the eleventh ring. The fourth to the seventh rings are furnished on the back, each with a short, dense, yellow tuft. The head is red, and there are two bright-red spots on the ninth and tenth rings.

This caterpillar formerly proved quite destructive to the foliage of many of our shade trees, but in later years its numbers have been comparatively small. After reaching its full growth it descends upon the trunk, where it remains, or it proceeds to some neighbouring fence, tree-box, &c., and con-

structs its cocoon. This it does by detaching the hairs of its body, and spinning them together with silk. The moth escapes from the cocoon in about ten days or two weeks. The female is wingless, and lays her eggs upon her cocoon, protecting them with a white frothy substance.

The cocoons of this insect observed in the crevices of the bark, or on neighbouring fences, walls, railings, tree-boxes, &c., should be brushed off and crushed. This may be done any time after midsummer.

4. The sack-bearer, drop-worm, or basket-worm, a species of *cabeana*, is among the most curious of insects. It is common on our shade trees, but especially infests the maples, larches, and arbutives. Just at this period—July—the writer observes a large number on the cypress trees in front of the United States Mint, on Chestnut street.

The worms, after escaping from the eggs, immediately compose for themselves cases composed of silk interwoven with fragments of their food, resembling in this respect the *Tineas*, or carpet and clothes moths. As the worms grow they enlarge their silken and leafy habitations, until they reach an inch or two in length. In the latter part of summer, these insects are often noticed dangling from the trees of our side-walks, suspended from their silken and leafy thread, and enclosed in a dark, rough, spindle-shaped sack. They never leave the latter, but when they have reached their full growth, they fasten their silken case securely to a branch of the tree, and within it undergo transformation into a pupa. From the latter is produced the moth, the male of which awaits the night to leave his habitation in search of a mate. The female never leaves her silken dwelling, nor does she even throw aside her pupa garment; it is her nuptial dress and her shroud. Within it she deposits her eggs, enveloped in the down stripped from her body. The eggs, thus protected and enclosed within the mother's habitation, remain suspended from the branches of the tree, secure from storms and the cold of winter, until the following season.

As in the case of the canker-worms, many of the sack-bearers are destroyed by ichneumons. The sack-bearers if uncollected, might become a serious scourge to our shade trees. They are easily destroyed; all that is required to get rid of them is to remove their silken cases when the trees are trimmed in the spring. With the cases the accumulation of eggs is destroyed, which otherwise would give origin to new colonies of worms.

5. The Borer of the maple is a transparent winged moth of the genus *Agoria*, the same to which belongs the injurious borer of the peach tree. The larva, or insect, in its early stage of existence, is a grub, which lives within the trunk and larger branches of the silver maple, upon the sap-wood and inner bark of which it feeds. Old maple trees are not unfrequently observed with their trunks completely riddled by this insect. The larva is transformed into a brown pupa, which, after remaining in a quiescent state for some time, finally works itself along its burrow, and protrudes half way from its aperture, so as to allow of the escape of the perfect insect.

The Borer is injurious to the maple by impairing the strength of its trunk; the insect, however, has not committed such injury as to prove serious, or require special attention.

With respect, I remain, at the further service of the Councils of our city,

JOSEPH LEIDY.

A sanctified heart generally manifests itself in meekness and a sensibility of its own unworthiness.

For "The Friend."

Musings and Memories.

AN AWAKENING ENQUIRY.

It is narrated that a young man of good natural talents, and very ambitious to become of eminence and distinction in the world, had after long crav- ing, obtained permission of his parents to study law, through the means of which he hoped and expected to win fame and fortune. Flushed with enthusiasm and eager to commence the studies which were the necessary stepping stones in the path he had determined to tread, he entered one of the Italian universities, at which, at that time resided Filippo Neri, a man noted for his piety and wisdom. The young man had when a boy, known Filippo, and he now eagerly sought an opportunity of telling him his hopes, and his expectations. He spoke of his intentions to spare no pains or labour in his studies, that he might thoroughly qualify himself for becoming an eminent lawyer. The old man listened with kindly interest, as the young one poured out his thoughts and intentions, and when the fluent, buoyant-hearted har- angue was ended, quietly enquired what he intended to do after his studies were finished?

"Then I shall take my doctor's degree."

"And then?" said his aged friend.

"Then, I shall have a number of difficult and knotty cases to manage; shall catch people's notice by my eloquence, my zeal, my learning, my acuteness; and gain a great reputation."

"And then?"

"Why then, there cannot be a question I shall be promoted to some high office or other; besides, I shall make money and grow rich."

"And then?"

"Then I shall live comfortably and honourably, in health and dignity, and shall be able to look forward quietly to a happy old age."

"And then?"

"Then," said the young man, "why then,—then,—then I shall die."

Once more the old man uttered the query, "And then?"

The youthful aspirant after earthly honour and riches, cast down his eyes, and made no answer. The question sent home to his heart by the awaken- ing visitations of the Holy Spirit, produced a great change there. The pomp and glories of this fleeting world, lost their lustre and attractive force to him. Soon he forsook the study of the law, and sought by devoting himself to the Lord's service to become humble and useful rather than ex- alted and popular. He wished to be a faithful ser- vant of Christ and of his church, rather than through riches, qualifications, and station, to be a ruler, a commander, and controller of mankind.

How many of us there are, who if we would follow out the query, "and then," to the end, would find, if we allowed the unfaltering witness to speak, that our pursuits and intentions are not such as would be desirable, in the prospect of a certain and speedy death.

WE WOULD DO RIGHT,—BUT!

Conversing a short time since with a Friend, on one of the many marks of degeneracy in our religious Society, he enquired what a person whose name he mentioned, thought of it, my reply was, "I believe he is opposed to it,—but!" At the word "but," I paused, and as thoughts of probable domestic difficulties in the way of faithfulness, and a similar influence exerted by those with whom he most associated, came into my mind, I did not proceed. My friend understood my pause, and smiling said, "There are many such." Yes, there are many whose minds are convinced of the Truth, and who

would make confession thereof, but—there are painful crosses which must be borne if they openly espouse it. Friends dear to them would be offended,—the particular circle of intelligent men and women, in whose company they delight, would prob- ably look coldly upon them, and find fault with what they might call their narrow, restricted views. Thus, although these do indeed think the strait, self-denying, unmodish way in which our fathers walked, is the way into which the Truth led them, and would lead the faithful in this day,— though they know that every departure therefrom, tends back again towards the weak and beggarly elements,—the stated and lifeless forms out of which our forefathers were gathered,—they fear to make an open confession of their feelings,—they shrink from hearing an honest testimony against preva- lent errors.

There are many reasons why we should be tender of harshly judging the motives of others. Every true-hearted christian can look back on his own manifold misstepings, and the remembrance of these should teach him charity for his feeble, fal- tering fellow travellers in the path-way of life. He should be kind to their weaknesses, and pity them for their failings, but he has no right to withhold his condemnation of error, which is likely to evilly affect others, even whilst anxious to seek after alleviating circumstances, which may somewhat pal- liate the conduct of those who support it. The utmost extent of true charity, although it lead the tender hearted to forbear severely judging the motives of individuals, who are supporting departures from the line of honest-hearted faithfulness, never would close the mouth of the Lords truly devoted ser- vants from advocating His truth, and from bearing an unflinching testimony against any error in doctrine or practice, or from condemning actions which he conscientiously believes to be calculated to cause the weak in faith to stumble, and to lead astray those whose spiritual eyesight is faint and dim.

In this day of great creatively activity, many little conversant with the openings and limitations of the Truth, and some, whom we may judge from their conduct and conversation, without any breach of true charity, scarcely to be classed among the regenerate, are engaged in apparently religious performances, ostensibly intended to promote the spiritual welfare of others, and to administer a knowledge of Divine things, of which they themselves have not attained a true understanding. Some of those who encourage such as these in their work, are no doubt thinking to do God service thereby, yet we doubt not but true charity, which seeks the real welfare of all, will lead the faithful in the spirit of love, yet firmly, to condemn such unhal- lowed interference with the prerogative of the Most High, such a laying on of unclean hands, to support, or carry forward unbidden, the ark of his covenant.

Honest-hearted lover of the Truth!—dost thou not feel the necessity of showing that thou art fearful of all innovations in the pure principles, the circumscribed walking, the consistent testimonies, the spiritual doctrines, of our forefathers? If thou art not faithful, what is the "but" in thy way? Consider it well. Will it be a sufficient excuse for thee in the hour when thy actions are brought to remembrance for judgment by the Lord's Holy Spirit? A beloved wife may have had too great a fondness for the world, its honours, its fashions, its customs,—a loving husband may have pressed to see no harm in a conformity with the world's max- ims and manners,—some beloved friends may have lost their testimony against outward forms, and a rival religion, and others may have been earnest in applauding the self-appointed labours for the

instruction and salvation of sinners, of those who are unlearned themselves in the school of Christ. But my dear friend, what will the weaknesses of others, how dear sever those persons may be to thee, avail in answer to the solemn enquiry, when it is put to thee in the hour of extremity and death, "Why wast thou not faithful for the Truth as it was made known to thee?"

Discoveries in Palestine.

A correspondent of the *Presbyterian*, in an inter- esting discovery, dated May 26th, relates some interest- ing discoveries which seem likely to facilitate travel in the East:

A fact that has occasioned some surprise was recently brought to light by the soundings of the English coast survey expedition, that has been en- gaged for some years in making a hydrographic chart of the coast of Palestine. I allude to the discovery of an unfathomable abyss of the sea along the base of Mount Lebanon, where least of all it was to be expected.

But, instead of dealing in any speculations sug- gested by this unlooked-for fact, I will just refer to a discovery made some years down the coast by Dr. Barclay, to whose explorations sacred chorography is already largely indebted. About ten miles be- low Jaffa, precisely at the point where the ocean makes its nearest approach to the Holy City, (just below the mouth of the river Reubin,) he has dis- covered the ruins of quite a large city, called by the Fellahin, Ed Dubbeh, I think, and all along, in front of it, an excellent little rock-bound har- bour fully adequate to the secure accommodation of vessels of even larger draft than the "Messenger Imperials," and other liners. The expenditure necessary to render it a safer retreat than an- port between Alexandria and Antioch is repre- sented as being comparatively small. And who very greatly enhances the interest of the fact is that there exists a very gradual ascent from the point all the way up to Jerusalem, without cross- ing a single valley, mountain, or hill, approaching this city by way of the plain of Rephaim. The present miserable camel-road, you are no doubt aware, for the intricacies of travellers, several times mount almost as high as the Holy City itself, and des- cends again almost as low as the sea-coast. It scarcely need add that it is proposed forthwith to take advantage of this discovery for the construc- tion of a fine pilgrim highway to the City of the Great King.

Since writing the foregoing,—Meredith, this engineer sent out by some English capitalists to make reconnoissances, and otherwise examine into the practicability of constructing a railroad for the seaboard of Jerusalem, has arrived in this city en route to Bagdad, via the projected Chesne Euphrate Railway; and he reports altogether favourably upon the subject. And inasmuch as a large sum is already subscribed in London, and there necessary firm and speedy, forthcoming, there every reason to believe that the work will reall be commenced in two months, as alleged, and will be vigorously prosecuted to a speedy completion under such favourable auspices. Among other shareholders of influence and eminence, are the amiable, elegant, and far-sighted Lord Dufferin the benevolent and zealous Sir Moses Montefiore and divers other notabilities in high places, among whom I think many will rejoice to find enroll the name of Dr. Cunningham, tending to give rather greater stability to this globe of ours than he generally supposed to be in such an entitled, to accord- ing to estimates based upon prophetic periods. If we are aware, however, that the views of this ex- pounder of prophecy have been much misrep-

sented, as he certainly dates the final catastrophe a whole century after the introduction of the intervening millennium; and all that can be justly inferred from his heavy subscription is that, in his estimation, the time has at length arrived when christians should give substantial "aid and comfort" to the cause of Israel, in special reference to what ever has for its object the re-establishment of this much-injured race, in the immunities and privileges of their dearly-loved fatherland: a conclusion, I am quite sure from the justice of which you will not dissent.

That the great inter-oceanic Suez canal will be in successful operation in less than a year there can now be no question whatever to doubt, British vaccination in high quarters to the contrary notwithstanding. And that the great Euphratean highway, so long on the tapis, will speedily be put under contract, is just as certain as that England loves the almighty penny, is jealous of France, and wishes still to retain her grasp on India. Do not these enterprises invest with special interest the concluding verses of the eleventh chapter of Isaiah, as well as many other passages from the pen of the fervid seer?

By-the-by, the haven to which I have alluded has been duly christened as "Port Salem;" and as it will doubtless soon figure upon the maps in the capacity of a flourishing city, as well as the terminus of the Jerusalem railroad, it may not be without interest to relate the history of its discovery, for it was not stumbled upon by accident, but was regularly sought out upon the principle of inductive reasoning, if you will allow the expression. Our fellow-countryman, alluded to as its discoverer, justly inferred the existence of a safe and capacious haven near Jebah, Jannia, or Jabneh, (as the present Yebna was variously called,) from the following considerations, as recorded in the twelfth chapter of the second book of Maccabees. When it is related that Judas Maccabees burnt the haven of Joppa or Jaffa, no ships are mentioned, but only boats; nor is a word said about a great light being seen at a distance, for the simple reason that this little haven is altogether inaccessible to ships, and too small to furnish materials for such an illumination; but in describing the conflagration of the haven of Jannia, he especially mentions the "navy," and remarks that the light was seen even at Jerusalem, two hundred and forty furlongs off, just the distance of this port. Thus convinced that there must have been at one time a much better haven somewhere in the vicinity of Jannia (which is clearly identified with the present Yebna) than at Jaffa, he determined, in view of the great interest and importance attaching to the subject, to make diligent search for it. But so much have the sands of the sea encroached upon the land at this point, as indeed everywhere else on the coast of Syria, that it was not until the third visit, and then only by the assistance of some fishermen, that he was enabled to find it. He says there are considerable remains of an old fort projecting into the sea, with here and there a broken column; and that the vestiges of the walls of no inconsiderable city (its mina or marina,) are discernable throughout their entire extent. What greatly adds to the interest of the discovery is, that along the road leading thence by very gradual ascent to the Holy City, are interminable ledges of stratified rocks of all sizes, regularly squared to the hand of the mason by the hand of the Great Architect of the universe, for rebuilding the waste places of Israel in the shortest space of time imaginable.

No man ever did a designed injury to another without doing a greater to himself.

For "The Friend."

Government—Taxes—Bounty Fund.

The blessings and benefits which the people of these United States have been permitted to enjoy under the excellent form of government which, in the ordering of Divine Providence, has been set up over us, have not been surpassed in any nation, and loudly demand our grateful acknowledgment. When we contemplate the free exercise of the great right of liberty of conscience, (with some slight exception on the subject of bearing arms,) the assembling for Divine worship unmolested and unrestrained; the freedom of speech and the press; the entire protection of person and property, the security of civil, social, and religious rights; the long reign of peace and prosperity, and the absence of a large standing army, of titled nobility, and proud aristocratic distinctions; we have surely great cause to love our country, to render a cheerful allegiance to the government, and to be humbly grateful to our heavenly Father, that he has allotted our habitation in so favoured a land.

The Society of Friends has always held civil government to be of God's ordering; that it is a christian duty to live peaceably under it, and readily to obey all the laws, where they do not require anything contrary to the Divine law, agreeably to the apostolic injunction, "submit yourselves to every ordinance of man, for the Lord's sake." The submission here commanded, may be active or passive. Active obedience, with cheerful readiness, where what is required does not violate a good conscience, and passive submission, by meekly and patiently bearing the penalty, when it would. That this is the Apostle's meaning, must be obvious from his own example, when he refused to forbear preaching Jesus, though commanded to do so by the magistrates, saying, "whether it be right in the sight of God, to hearken unto you more than unto God, judge ye," and we are informed that he peaceably suffered death rather than renounce his religion at the bidding of the rulers.

Friends have also, ever been ready and willing to bear their just proportion of the public burdens, in the payment of taxes; according to the example of our Saviour, who wrought a miracle to furnish Peter with the money to pay tribute to Cæsar; and also in conformity to the command of the Apostle, "Render, therefore, to all their dues—tribute to whom tribute is due, custom to whom custom." The Roman government was military and warlike. The tribute and customs went into the treasury for its support, and a part of it, no doubt, was used to defray the expenses of war. But the appropriation of any part of it for this purpose, rested with the rulers, not with the payers of tribute or custom, and on them was the responsibility. Our Saviour and his disciples, fulfilled their duty by paying their money for the support of government, a proper and necessary purpose, and for the application of it after it ceased to be theirs, they were not accountable.

William Penn, Thomas Story, Anthony Sharp and George Rook, in a paper signed by them, entitled Gospel Truths, dated at Dublin in 1695, say, "We honour government, for we believe it to be an ordinance of God, and that we ought in all things to submit, by doing or suffering." And in his "Key," W. Penn has the following viz:

"Perversion. The Quakers will not support civil government, and so are useless, if not dangerous to government.

"Principle. This is also untrue, upon experience: for what people are more industrious, under government, or pay their taxes better to it, than they do? And, tribute from the people, and justice from

the rulers, are the support of government in all countries."

Nearly all the governments under which Friends have lived, have been warlike; and yet Friends have ever paid taxes for their support, knowing that government is necessary to the well-being of society.

Where, however, the taxes are declared to be exclusively for war, or warlike purposes, the Society has decided that its members cannot pay them consistently with its well known testimony to the peaceable reign of the Messiah. So, also, as respects military fines and penalties. Believing that liberty of conscience is the natural right of man, the gift of his Creator, over which no human government has control, Friends object to the voluntary payment of any penalty, where the free exercise of conscience conflicts with the demands of government for military service; because it would be an acknowledgment of the right of the government to punish for the exercise of a good conscience, and the fine would go directly for military purposes.

The act passed at the last session of Congress to impose direct taxes, is entitled "An act to provide internal revenue to support the government and to pay interest on the public debt." There is nothing, we believe, in any part of it, which appropriates the money raised, to warlike purposes, and there seems no good ground why Friends should not as readily pay it as they paid duties and direct taxes in the last war with Great Britain, or duties on imported goods, or used imported articles, at any period since, when military preparations and works were constantly going on, paid for out of the revenue so raised, as well as during the Mexican, and numerous Indian wars.

But some, who are desirous to justify their own course, say, if Friends pay the taxes, I do not see why I may not subscribe to the Bounty Fund. The mind must be clouded in its vision by secret or open defection in principle, which does not detect a wide difference. The direct, professed object of the Bounty Fund, is to hire men to fight. It is applicable to that, and to nothing else. A man who gives his money to it, so far as it will go, pays another to do battle, and thus makes himself a participant in the act, and involved in the accountability for all its fearful consequences. It is a settled axiom in moral and civil law, that the principal is as guilty as his agent. He may, in some sense, be even more so, for the agent might never have committed the act, but for the lure and temptation, by which his principal overcame his good resolution against it.

Should a time come when men cannot be hired to enlist, or go to war as substitutes, and a contributor to the bounty fund be called upon to enter the army, could he, with any claim to consistency, plead conscientious scruple as an excuse for not going? Might he not be told with truth, that if he was willing to induce others, by the offer of money, to engage in the murderous employ, he could have no valid ground for objecting to fight himself.

An upright and faithful support of the christian testimony against all wars and fightings must preserve a Friend from contributing to a bounty fund, or to any other fund, the direct object or purpose of which, is to procure, or to fit, men for the army, and send them forth to maim or kill their fellow creatures.

The safety of individuals or of nations does not depend upon military strength and preparations; but upon Divine protection. If this is withdrawn, fleets and armies will avail little. This was strikingly exemplified in the message which the Lord sent by the prophet Jeremiah to the king and ru-

ers of the Jews, when Jerusalem was besieged by Nebuchadnezzar: "Though ye had smitten," said he, "the whole army of the Chaldeans that fight against you, and there remained but wounded men among them, yet should they rise up, every man in his tent, and burn this city with fire."

Wise indeed will it be, if in this day of sore affliction and peril, each of us, and the nation collectively, are willing to hear and follow the exhortation of the Lord's prophet: "Wherefore let my counsel be acceptable unto thee, O King, and break off thy sins by righteousness, and thine iniquities by showing mercy unto the poor; if it may be a lengthening of thy tranquillity."

The fervent prayers of the righteous avail much. We are instructed in the Holy Scriptures that the ear of the Most High is ever open to their supplications; and surely the call is loud, to each one, to humble ourselves in the dust under his mighty hand, and confessing our own sins and the sins of our people, to cry mightily unto Him; if so be he may condescend to spare our land and pity its inhabitants, and in the midst of deserved wrath and just judgment, remember mercy.

From "the Leisure Hour."

Maize, or Indian Corn.

Among the plants supplying the food of man, maize (*Zea mays* of botanists) is one of the most important. Its cultivation is far more extensive than any of the other *gramineæ*, or grasses, to which natural family it belongs. In the south of Europe, in large regions of Africa and Asia, and almost the whole of North America, it forms the staple article of food, as rice does in the hotter countries of the East.* Humboldt thought that it was first introduced from the New World; but this has been disproved by the discovery of the seeds in cellars of houses of ancient Greece, and also by the pictures of the plant in old Chinese books. The name of "Indian corn," however did originate with the early settlers in America, who found the plant cultivated by the Indians. In this country it used to be commonly known as Turkey wheat, being an article of commerce in the busy times of the Levant trade. It is probable that the "corn" of scripture generally denotes maize.

In the Food Museum at South Kensington, (where specimens of substances in common use in all countries are displayed in a most instructive and interesting manner,) we find the component parts of maize exhibited, in comparison with those of many other cereals or grain-bearing plants. It appears from the analysis of chemists, that maize stands high in its nutritive properties. In 1 lb. of the grain there are about 2½ ounces of gluten and of a fatty substance, and between 9 and 10 ounces of starch. The remaining components are water, lignine, gum, sugar, and calcareous ashes, (chiefly phosphate of lime.)

Many and various are the modes of using the maize for food. In America, the green ears are eaten, roasted at the fire, or boiled and shelled like peas, with melted butter. Among the southern planters, hominy is an indispensable dish, morning, noon, and night. The corn is pounded to a greater or less fineness, and is then boiled soft like rice, and eaten with meat. "Indian bread," made of corn meal, is at every table. The meal of maize from Southern Europe is the *Poenta* of commerce. Having less gluten than wheat flour, it is especially good for biscuit baking. The consumption of Indian corn or meal in its natural state is not large in this country, wheat being abundant, and cheap even for the labouring classes. Under the name of "corn flour," however, a preparation of Indian

corn, to be presently described, has of late years been coming into extensive use.

Talking with a learned and ingenious chemist about Indian corn, and about the strong recommendation of it by the celebrated William Cobbett, we asked our friend's opinion upon the real worth of this grain. He gave us not only his opinion, but also his reasons, which we did not ask, but of which we give our readers the benefit, under the writer's own heading of "Animal Combustion."

Let no person (says our chemical friend) at the sight or sound of the above words, begin to picture some old lady or gentleman burnt or burning to cinder from combustion spontaneously set up. That phenomenon may have occurred—I believe it *has* occurred; but it is no part of my intention to enter upon the notice of it now. Therefore, any shrugging of the shoulders or bracing up the nerves to bear with something horrible is needless, and would be out of place. By *animal combustion* I simply mean to signify the chemical action, whatever it may be, which evolves heat in your body and mine; yielding a temperature so regular and equitable, that it differs to a trifling extent only, whether our dwelling place be hot or cold, whether you and I are surrounded by icebergs in the far north, or baked under the pitiless rays of a tropical sun.

Animal combustion! "but there is no burning, no fire, no smoke"—why, no; we should have been displeasing members of society had we been doomed to wander about glowing hot like a cinder, and breathing flame and smoke like a chimney. Combustion, however, may be of many degrees of intensity, and, as for smoke, there are many examples of combustion without visible smoke; witness for example, the combustion of charcoal. And the word "charcoal" brings me immediately to the theme of animal combustion. It has seemed fitting to the Almighty that you and I, and other animals shall generate our respective amounts of animal heat by the slow combustion within us of carbon, or the matter of charcoal. Up to this point, then, one may say that furnace fuel and animal heat fuel are the same thing, seeing that in either case it is carbon that gives the heat; but now comes a difference. The fact is, that animals require for their furnace supply, carbon which has assumed some organic condition. All the common articles of food eaten by animals hold carbon in some shape or other, and thus the generation of bodily heat is always provided for. Some articles of food contain flesh-making materials mingled with combustion materials, whilst other articles of food hold combustion materials alone, supplying fuel so to speak, to the internal fire or warming apparatus of the human body.

There was a time—within the memory of some of us, perhaps—when exaggerated notions were prevalent concerning the nutritive power of such things as sugar, arrowroot, sago and the like. The progress of chemistry has rudely disturbed these notions. Since Liebig pointed out the difference between heat-formers and blood or flesh-formers, it has been the fashion among chemists to deny that such things as sugar, sago, tapioca, arrowroot and the like are nutrient matters at all. Maintaining that fat is not nourishment, but only a lot of animal fuel conveniently generated, stored up, and set aside for use upon occasion, the philosophers have right on their side when they affirm that sugar, sago, and the like—matters which, when not burned outright, can only be deposited as fat—are not directly nutritive matters. But we could no more continue to exist without heat-making food than we could without blood and flesh-making food, and little logic is needed to prove the

self-evident fact that without existence there could be no nutrition. Put the case as we will, the combustible or heat-giving articles of animal food are very important; and to say, as lecturers do when they wish to make people stare, that sugar, arrowroot, tapioca, sago, and the like, are not nutritive bodies at all, is to be over strenuous in setting forth a new conviction.

Firstly, in regard to sugar. There are several varieties of it: such as cane sugar, grape sugar, sugar of milk, and glycerine, or the sweet principle of fats and oils; to which may be added manna, or sugar of manna, and some few other varieties. But produce sugar whence you like, whether from the sugar cane or from the date tree, or beet root, or the sugar maple, the various samples would be identical in every respect of composition, and the generic name "sugar" is, in chemical language, given to all.

Among starches,* or amyloseous matters, there is far more diversity than among "sugars." The starch derived from one source is so different from starch obtained from any other source, that the microscope will always discriminate between them. Moreover, though the chemical composition of all starches is the same, the taste of different starches varies, so that great difference exists as to the relative adaptability of different starches as articles of human food. Thus, very curiously it is, that though wheat be the best of all cereal grains for bread-making, the starch of wheat is disagreeable, almost repulsive, when cooked after the manner of tapioca or arrowroot. It is a curious fact in regard to starches, that, innocent themselves, they are sometimes discovered in very dangerous society. To cite an example: tapioca is nothing else than a starch torrefied, or somewhat altered by baking. Nobody is afraid of eating tapioca, the most delicate eat it, the confirmed invalids partake of it; yet tapioca comes from one of the most venomous botanical tribes in nature—the Euphorbium tribe. Nor is the companionship of potato starch quite unexceptionable. The potato really belongs to the Night-hade tribe—a very poisonous tribe taken all in all: nor is the potato itself wholly harmless. Potato apples are so noxious, that they may be even termed poisonous; and water in which potatoes have been boiled is not unexceptionable. From these poisonous associates, or poisonous associates of any kind, starch, as it exists in the grain-bearing group, is exempt. Only two or three out of the almost countless number of grasses are endowed with poisonous qualities, and these do not contribute to the grain supply of the world.

It has just been stated that the starch, or amyloseous matter of wheat, is not agreeable when cooked in the manner of arrowroot. Perhaps, however, that circumstance is in some degree attributable to the method of preparing wheat starch, namely, by setting up fermentation, which dissipates the gluten, and thus leaves the starch behind. At any rate, wheat starch is next to useless as a substitute for arrowroot. The very best of all cereal grains for yielding an amyloseous matter, better in various ways than arrowroot, is the *Zea mays*, or Indian corn; though the hopes once entertained by that over-anguine and very impetuous man, William Cobbett, of quiet memory, in regard to Indian corn, have never been realized.

Cobbett was quite enthusiastic on the merits of Indian corn, probably from his familiar experience of its use in North America. He hoped that at

*This is a mistake as regards North America.

*The word "starch" is of course here understood in its chemical not its familiar household sense.

some time, not long distant, the growth of Indian corn, by British farmers and British labourers, might drive out of cultivation what he called the "lazy root," "the demoralizing potato." Well, W. Cobbett, you made a mistake; of that there is no doubt.

The Indian corn crop has been tried here in England, again and again, by no prejudiced people. Sometimes it will come to perfection, at other times it will not; which state of uncertainty is not quite the suitable thing for the British farmers to make money out of. Indian corn will not even grow as a moderately certain farm crop in New Zealand, though the climate is a trifle more genial than in our native British islands. Nor, W. Cobbett, does the refusal of Indian corn to grow here in these isles signify so much as you may have imagined in your day. Since the stirring line of your "Political Register," we Englishmen have come to look upon the world more in the sense of a brotherly community than was our custom of yore. We have come to feel that the fact of one and not being able to grow some particular crop, necessary to human existence or comfort, may directly ordained by the Almighty, to the end of promoting useful commerce and international intercourse, from the increase of which many peaceful good fruits will yet spring.

From one source or another we Britons and Irish have, ever since the potato famine in 1846, imported very large quantities of maize, and the amount is still increasing; this is chiefly referable to an ingenious and very successful method of extracting the starch out of it, without fermentation, discovered now some years ago, and conducted at Paisley by Messrs. Brown and Polson. Here can be no doubt that the amylose material prepared and sold by them, has all the advantages which they claim for it, under the name of patent corn-flour." Call it what we will, Indian corn farina is nutritive in the sense that arrow-root, sago, and tapioca are nutritive, and it is sold for less than half the price of good arrow-root. To most palates it is also more agreeable. Concerning tastes, however, there is proverbially no disputing; the proof of the pudding is in the eating, it is said; and Indian corn farina, to my appreciation, makes a pudding which will come victoriously at of any proof one may choose to require of it. It is less acceptable is the patent corn-flour in the forms of custard, blanc-mange, pancake, and other delicate arrangements.

The Benefit of Adversity.—It is good for man suffer the adversity of this earthly life; for it turns him back to the sacred retirement of the hart, where only he finds, that he is an exile from his native home, and ought not to place his trust in any worldly enjoyment. It is good for him also meet with contradiction and reproach; and to evil thought of, and evil spoken of, even when his intentions are upright, and his actions blameless; for this keeps him humble, and is a powerful antidote to the poison of vain glory; and then testify it is, that we have recourse to the witness spirit of us, which is God, when we are outwardly spurned, and held in no degree of esteem and favour among men. Our dependence upon God never think it necessary, in any kind of distress, to recur to human consolations. When a derelict man is sinking under adversity, or distressed and tempted by evil thoughts, he then feels the necessity of the power and presence of God in his soul, without which he certainly knows, that he neither bear evil, nor do good; then he grieves and prays, and "groans to be delivered from the bondage of corruption;" then weary of living in

vanity, he wishes that he may be dissolved and be with Christ; and then he is fully convinced, that absolute security, and perfect rest, are not compatible with his present state of life.—*Thomas A. Kempis.*

Eyes which are full of beams have an unaccountable clearness in detecting motes in other eyes.

THE FRIEND.

NINTH MONTH 13, 1862.

Friends participate with their fellow-citizens in the affliction which our beloved country is now plunged into by the civil war, and though not exposed to the dangers of the battle-field, they have trials to bear peculiar to those who are conscientiously restrained from engaging in or countenancing war. While fully acknowledging the evil motives and passions from which the rebellion originated, and maintaining their allegiance to the excellent government under which they have enjoyed so many blessings, all of them who are true to their principles, feel that they cannot go counter to the express commands of Christ and his apostles, by using the sword to destroy men's lives in its defence.

For two hundred years the Society has borne uniform testimony to the peaceable spirit and nature of the gospel dispensation, and the obligation resting upon all its members to maintain that spirit under all circumstances; striving to lead blameless and harmless lives wherever their lot might be cast. The faithfulness with which they have adhered to their convictions on this point, often under suffering well calculated to test their sincerity, has convinced their fellow countrymen that their claims to exemption from military service, are not put forth for the purpose of eluding duties, which though repugnant to their feelings, they could rightly be compelled to perform; and though, in some places, fines are extorted as the price for the free enjoyment of their christian belief and practice, they are, by almost universal consent, acknowledged to be conscientious non-combatants.

An honest devotion to the principles of peace must necessarily preserve Friends from participating in anything calculated to disturb or injure the government under which they live, and ensures their active or passive submission to the laws, either by compliance or suffering; while their industry and thrift, together with their general willingness to contribute freely of their substance to objects of benevolence and improvement, prove their value as citizens, their high appreciation of the protection they enjoy, and their strong interest in the welfare of the community of which they form a part. They are thus rescued from any just charge of receiving benefits for which they do not render a proper equivalent.

The value to our country, and to the world at large, of the pacific principles and spirit of the gospel, and of a faithful, unflinching support of them by all who have been enlightened to comprehend their obligation, their power and their application, is inestimable. Had they generally prevailed among the professors of the christian name within our borders, what an incalculable amount of misery and crime would they have saved us as a nation! Who can sum up the loss in life, happiness, material wealth and moral standing which has been precipitated upon the people of the United States by the war carried on during the last eighteen months? *all, or great part of which, might have been avoided, had the commands of Christ, pro-*

hibiting his servants to fight, been received and carried out by all those who profess his name, in the spirit and manner in which Friends believe they are bound to obey and uphold them. Should not this latter consideration convince the most determined warrior of the vast importance to the public weal that the principles of peace should triumph? Let then a sense of these deplorable and accumulating evils, which are now pressing with such grievous weight upon all classes in our beloved country, warn and stimulate every one of us to seek for strength from the invincible Prince of Peace, to stand immovably at the post He has assigned us, and in his lamb-like spirit, to show to all around that, while we can do nothing towards destroying men's lives or inflicting pain and wretchedness upon our fellow creatures, we can forgive those who misunderstand or traduce us, and bear with meekness and patience whatsoever suffering may be permitted to come upon us on account of our religion.

We have the heart-cheering assurance, from the Almighty himself, that these principles of peace shall finally prevail over all opposition; that his blessed Spirit will overcome those lusts in the hearts of men, from which come wars and fightings, until nation shall not lift up sword against nation, neither shall they learn war any more. If we would be instrumental in hastening the coming of that day, so unspcakably desirable, we can do nothing which promotes or sanctions war, for while war exists, that glorious day cannot have fully beamed upon the world. There is therefore, no way in which we can more effectually labour for our country's good, than by so living and acting in the spirit and power of the Gospel, as to forward the spread and general acceptance of feelings and scruples, which, if fully acted up to, would forever prevent the repetition of the dreadful evils it is now groaning under, and secure to it the uninterrupted protection and blessing of Him, who doth not afflict the children of men willingly.

Many members of our religious Society, at different times, and in different places, have had to suffer severely on account of their testimony against war, but as they have borne meekness, imprisonment or loss of goods, with christian meekness and gentleness, they have been enabled to triumph over all the persecution heaped upon them, and in many instances their oppressors have had to confess that their principles and practices were truly becoming the disciples of the Prince of Peace. A time of close trial is now upon us, and many of our younger members may have to prove the foundation upon which they stand, and give practical evidence of their estimation of the religious principles they profess. We sincerely sympathize with them in their trials, and earnestly desire their preservation from doing anything that may bring present or future grief upon them, on account of having violated the discipline of the Society, and the secret motions of Divine Grace in their hearts. A religion that is not worth suffering for is not worth having, and they, who, notwithstanding the agitation and excitements which are around them, strive to listen to the still small voice in the secret of the soul, and so conduct themselves as to keep a conscience void of offence, may rest under the assurance that, notwithstanding present doubts and troubles, all things will finally work together for their good.

Where things of doubtful propriety are presented, or circumstances occur which tempt to a course that may compromise the principles ever held by the Society, it is far better for our young men to pause, and before compliance or acting, to consult with some who are older and more experienced than themselves, that so existing danger may be pointed

out, and feeble, but good intentions, strengthened. Free, affectionate intercourse between the older and younger members will tend to strengthen the sympathy and fellowship which should always subsist among the members of the same religious society, and if all are induced to rally renewedly to the support of our faith, and mutually to encourage each other to resort to Him who knows our wants and how to supply them, the present national affliction may prove a means of great good to our poor backslidden Society.

SUMMARY OF EVENTS.

UNITED STATES.—The Rebellion.—The hopes, which a few months since were indulged, that the desolating city of Vicksburg, which has suffered more than any other approaching a termination, has been completely dispelled. In every quarter the rebels have of late, shown renewed energy and daring, and the success which has attended their military operations, has been as great as it was unexpected. They declare their future war policy to be an offensive one, and to carry despatch to the homes of the northern people, and make them feel a portion of the horrors of war, from which the south has already suffered so much. According to the estimates of the southern papers, "the Confederacy" has now in the field about 450,000 effective men, no less than 100,000 of whom are in the hands of the Potomac. The rebel press insist that their present military plans cannot fail, unless through the fault of the subordinate generals. The ability of the principal commanders, Lee, Johnson and Jackson, is generally admitted. The divided divisions of the rebel army, east and west, are pushing their way northward. The Potomac has been crossed by a rebel force, variously estimated at from eighty to one hundred thousand. A large army is moving toward Ohio, through the centre of Kentucky, and both that State and Tennessee seem about to be made the theatre of a sanguinary campaign. No opinion appears, however, to be general in the North, that this sudden energy of the rebels is the result of desperation, that it will soon exhaust itself, and that the rebellion must finally succumb to the power of the United States.

Virginia.—The city of Frederick was occupied on the 6th inst. by a rebel force of 5000 men, under Gen. Hill. The rebels issued a proclamation, promising protection to private property. They were making purchases of horses, cattle and provisions, and paying for them in the Confederate currency. The Potomac is now very low, and reports from the Potomac, that 40,000 rebels, it is stated, crossed the river near Point of Rocks and Nolan's Ford. Some crossed at other places, making, it is supposed, an aggregate of at least 80,000 men, including 8,000 cavalry and 150 guns. Despatches of the 8th inst. from Harrisburg, state that the rebel forces appeared to be about entering Pennsylvania. Their pickets on that day were within twelve miles of Hanover, York County. The rebel army has attained a position from which it can threaten either Harrisburg or Baltimore, the distance to the latter city being only fifty miles. The rebel army is now marching rapidly to this desperate movement by their necessities. All accounts represent that they are bad off for certain supplies necessary to their comfort, and their sudden advance upon the well stocked farms of Pennsylvania and the pastures of Kentucky, is with a view of running off sufficient supplies to meet the necessities of the army.

Virginia.—An engagement took place on the 1st inst., near Chantilly, about ten miles north of Fairfax Court House, between a portion of Gen. Pope's Army and Jackson's forces, in which Generals Kearney and Stevens of the Federal army, were killed. The movements of the rebel army were not ascertained. Gen. Pope's command should retire from Centreville and fall back upon Washington. This was done early in the last week. Gen. Pope, whose military reputation has not been fully sustained by the events of the late campaign, is now retiring to the command of the army in Virginia, and has been assigned to command of the West. Gen. McClellan is again in command of all the U. S. forces near Washington. Fredericksburg, Aquia Creek, Winchester, and other points, which were occupied by Federal troops, have been abandoned. The troops on their departure were accompanied by many of the Union citizens, who feared to remain under rebel authority. The loss of the United States troops is killed, wounded and missing, during the recent battles, is estimated to be so heavy as was at first supposed. It is estimated to not exceeding 15,000 men. The rebels marched

from Richmond with very small supplies of provisions, &c., subsisting chiefly upon corn gathered by the troops. The extensive capture of the articles most needed by them, after crossing the Rappahannock, and also took a large number of valuable pieces of artillery in the several engagements. Gen. Ewell was severely wounded, and is reported to have since died. They took fewer prisoners than the Federal army, but the number of men killed on the rebel side is reported to be very large. The rebel prisoners, officers and men, say that the feeling is general in the Southern army, that the war will soon be ended, and all express the determination to capture Washington or perish in the attempt. There is some probability that the position is stated to be in excellent condition, and to be maintained by experienced artillerists.

The West.—The near approach of a large rebel army in Kentucky, caused great alarm and excitement in Cincinnati for some days, and business was generally suspended, while the whole attention of the people was turned to preparations for defence. On the 6th inst. the panic had considerably abated. The rebels, under Gen. Heath of South Carolina, were reported to have passed by the station, on the Lexington and Covington Railroad, and were probably about fifteen miles from Covington in the morning. At the latter place, which is opposite Cincinnati, on the Kentucky side, preparations for defence had been made. The rebels have burned all the bridges on the Louisville and Frankfort Railroad, between Paducah and Frankfort. They are now in a low in the neighbourhood of Paducah. Most of the government river gun boats and rammers are in the neighbourhood of Vicksburg. A strong rebel army under Gen. Bragg, having proceeded in the direction of Nashville, Gen. Buell has ordered the city to be evacuated by the Union forces. Huntsville, Alabama, was a few days since reported to have been evacuated. The Federal troops have left Baton Rouge, and gone to assist in the defence of New Orleans. Collisions, attended with bloodshed, are reported to have occurred at various places in the West.

At various places.—The fortifications built by the rebels, which have been reported to exist in a state of defence. An attack from the Confederates was daily expected. Guerilla parties were occasionally seen near the city, and up the river on both sides. The First Louisiana regiment, raised by Gen. Butler, has been completed, and is now in the process of organizing rapidly. The regiment of free coloured men was organized at New Orleans.

The War in Minnesota.—The hostilities with the Sioux Indians are of a serious character. The Indians attacked Forest City on the 3rd, but were repulsed. A few days previously, the Indians in a large body moved toward Redwood. They had a long train of wagons, horses and cattle, and were reported to also have about 2,000 captives, women and children.

South Carolina.—Port Royal dates to the 2nd inst., state that the health of the troops and the fleet remained satisfactory. Intelligence had been received of the total destruction of the American frigate "Albatross." She was wrecked on Abaco Island, about 100 miles north of Nassau. A large English steamer had been captured off Charleston; she was freighted with saltpetre, arms and ammunition.

New York.—Mortality last week, 530. Of the deceased, 337 were children under five, of age.

Philadelphia.—The mean temperature of the Eighth month at the Pennsylvania Hospital, was 76.75 deg. The highest during the month, was 96 deg, and the lowest 56.50. The average of the mean temperature of the Eighth month for the past seventy-three years, is stated to be 72.76 deg. The amount of rain which fell in the last month, was only 0.92 inch.

FOREIGN.—Liverpool dates to the 31st ult. The cotton market was still advancing. Fair Orleans was quoted at 28½d., and uplands at 27½d. There were but 18,000 bales of American first and second quality, offered for breadstuffs was dull, with a small decline in all qualities. The London Times reiterates its arguments that the North cannot conquer the South, and says that the time for compromise of some kind has arrived, and that the worst settlement of the dispute cannot be so long as the continuance of the war. The Standard draws an analogy between the position of England during the revolutionary war and the present position of the North, and says it is time the North followed the example of England. The English journals anxiously anxious to see affairs settled in Italy, and London Daily News urges that the Emperor Napoleon cannot be allowed to assume exclusive control in Italian affairs, and urges the British Government to speak out. There were vague rumors that England had protested against any French occupation of Neapolitan territory, and that Eng-

land even threatened a corresponding movement in Sicily, if France resorted to such a step.

The insurrection of Garibaldi has been suppressed. After a sharp contest with the royal troops he was compelled to surrender. Garibaldi was wounded and taken prisoner. An Italian frigate had been ordered to convey him to Spezia.

RECEIPTS.

Received from J. B. Farr, 0. for Job Haests, £2, vol. 35, and for Job Almonde, £2, vol. 36; from Lydia Ann Hendrickson, N. J., \$2, vol. 36; from Mrs. Garrettsen, Agt., O., \$1, and for David Lupton, \$2, vol. 35, and Mary Hall, \$2, vol. 33; from Geo. S. Passmore, Pa., \$2, vol. 35.

NOTICE TO SUBSCRIBERS IN ENGLAND.

In consequence of the loss of a statement of our Agent, G. Harrison, of Manchester, £2, £6, rendering it difficult to appropriate the money remitted to us, by him, to the proper accounts, we have to request that subscribers for "The Friend," in England, Ireland and Scotland, who have made any payments on account, for the 34th, 35th or 36th volumes, to G. H., (who desires to be released from the agency,) will hand to our agents, Joseph Arnfield, No. 1 South Place, Finsbury Pavement, London, or John G. Sargeant, Cockermouth, Cumberland, England, statements of money paid, and the volumes for which it was paid by them.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to ISAAC MORGAN, JR., 622 Noble street, SAMUEL ALLEN, 524 Pine street, GEO. J. SCATTERGOOD, Fifth and Callowhill streets.

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable FRIED as Governess at West-Town Boarding School. Application may be made to Sidney Coates, 1116 Arch St., Philadelphia; Abigail W. Hall, Frazer P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 36th and Bridge Sts., Philadelphia.

TEACHER WANTED.

A teacher competent to give instruction in reading and other branches, is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Arch St.; Deborah M. Williamson, 1024 Arch St.; or Rebecca S. Allen, 355 S. Fifth Street.

Died, on the 3rd of Eighth month last, in the fortieth year of her age, ELIZABETH, relict of Jesse Kirk, and daughter of John and Tacey Hall, a member of Upper Springfield Monthly Meeting, Columbiana Co., Ohio. This dear Friend was concerned through life, that her day's work should keep pace with the day, desiring that her sins might go before her to judgment. She uttered divers comfortable expressions during a protracted and painful illness, which she bore with an uncommon degree of patience, often saying, "I have comfort in the midst of affliction, and have nothing to recount but my blessings, far more than I deserve; I have not one pain remaining." I have a comfortable hope of being admitted into one of the many mansions prepared for the faithful; but how far should I have fallen short had it not been for the pardoning love and mercy of God through Jesus Christ our Lord." At another time, "I feel a longing to be gone, where there is no more pain or affliction where all is peace and joy, and I can use in singing praises and hallelujahs to Him who has redeemed my spirit: Oh, what a glorious change it will be." Her end was quiet and peaceful, and her friends have the comforting belief, that she is gathered as a shock of corn due season. Her remains were deposited in the interment at the residence of her son, in Shrewsbury, N. J., on Sixth day, the 29th of Eighth month, 1862, PHEA C. PARKER, a member of Shrewsbury Meeting.

WM. H. PILE, PRINTER,
Lodge street, opposite the Pennsylvania Ins. Bank.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, NINTH MONTH 20, 1862.

NO. 3.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

The Explorers of Australia.

From an interesting article in the last number of the Edinburgh Review, entitled "The Explorers of Australia," we take the following extracts:

"Some fifty years ago, a thriving English town had grown up on the shores of Port Jackson. The governor's house was of stone. The judge and a few government officers had brick; but the main portion of the inhabitants were content with plastered logs and shingled roofs. Yet the people of the town felt no small pride in their town. They had like a little more land for their few sheep and cows. But the flocks on which they relied roamed through far different pastures. When a season came round, they sailed away down the east Southern Ocean, and came back laden with sack oil and sperm. Their harbour was the finest in the world, sending its arms in among their cottages and town gardens, and capable of containing the whole British navy; their log butts were studded in everlasting sunshine, and business was good. From the sparkling waters of the bay to the Blue Mountains behind, all was bustle and activity—whalers from Europe and America retreating, immigrants landing, new houses building, and vineyards and orange-groves creeping round the bay. Such as it was, it comprehended all the English in Australia. Through those Blue Mountains no man could find a way to the boundless regions which lay beyond. Rewards were offered for the discovery of a more sheep-track. The more venturesome citizens risked life and limb—not to win without fatal results—in climbing up and down their craggy sides, and peeping into their black fissures. At length, the long-sought pass was discovered. In 1813, — Evans a government surveyor, found himself, after repeated attempts, on the other side of the Blue Mountains, and with care and great labour, retraced his steps to Sidney. Immediately the pent-up flocks and herds of the colonists poured themselves out over the vast Plains and the western districts of New South Wales; and the people of Sidney began to set their town gardens for sheep-feeding and wool-growing.

"But a new impediment arose. Land was to be sold for the taking of it, but there was scarcely any water. Ruin hung over the head of the flock-ner who was not within reach of a permanent stream. An unusually dry summer left him a

beggar. In vain he hurried his flocks to the nearest watering place. They strewed the way with their carcasses. All the permanent streams were quickly occupied. New South Wales was not to be a great wool-growing country after all, unless more rivers could be discovered. To little purpose they had searched Europe for the sheep most famous for their wools, if these priceless animals were now to die of thirst. The government surveyors were instructed to be always on the look-out for rivers. Rivers promised to be the death of the government surveyors. Such rivers no man ever heard of before. They all ran inland. They stopped when least expected, leaving no visible channel or watercourse. Sometimes they were as salt as the waters of the ocean; at another period of the year they contained excellent drinking water. Now they formed merely a chain of ponds; and now, in a perfectly dry season, they boiled over their banks, filling whole valleys with crashing timber, and sweeping away the apparently secure homesteads which had sprung up on their shores. In 1818, Oxley, the surveyor-general, on a river exploration, was surprised to find the Lachlan and the Macquarie, the most important rivers then known, ending in vast reedy marshes. What did become of the rivers had already been repeatedly discussed. The records of Cook, and the Dutch and French maritime discoverers, had been searched; but they contained no notice of any considerable stream finding its way to the ocean—certainly none within thousands of miles along the sea-coast from Sidney. Oxley's discovery now appeared to bring the discussion to an end. It was now laid down, as beyond all doubt, that the interior was an immense sea, into which all the rivers emptied themselves, either by ordinary channels or by underground passages.

"In 1825, Captain Sturt, an officer of the 39th regiment, then stationed at Sidney, set out, with the approval of the colonial government, to explore Oxley's inland sea. But, on sailing down the Macquarie to the point marked on Oxley's chart, all trace of sea or lake had disappeared. 'The channel, which had promised so well, without any change in its breadth or depth, ceased altogether, and, while we were yet lost in astonishment at so abrupt a termination, the boat grounded.' The reeds were still there, but the whole country beyond, as far as his party could travel, contained not a drop of water. Abandoning all hopes of taking up the Macquarie again, Captain Sturt struck into a more northern course, and came upon the Darling—a river far exceeding in size the Lachlan or the Macquarie. From a sloping bank on which his party stood, stretched, some forty feet below them, a magnificent stream, seventy or eighty yards broad, 'evidently very deep and literally covered with pelicans and other wild fowl.' Eagerly the men, parched under an almost tropical sun, and after several days' toil, rushed down the green bank to taste its waters. 'Nor shall I ever forget the cry of amazement that followed their doing so, or the looks of terror and disappointment with which they called out to inform me that the water was so salt as to be unfit to drink.'

Further search was now impossible, and a hasty retreat was made to Sidney.

"It was not quite so certain now that there was an inland sea. Many abandoned the theory altogether. Yet how was a district, larger than Spain and Portugal put together, drained? Every settler could tell of the mighty floods which had swept away his sheep, his cattle, his farmyards, and, not seldom, his farm servants and shepherds. Where did these mighty floods go to, or how were they carried off? The freshwater streams had been found to disappear altogether, after a short course inland. The Darling, which was quite large enough for a main drain, was salt. Yet whole seas went somewhere, for Oxley's sea had disappeared before Captain Sturt could overtake it. Nothing was to be discovered by following the course of the ordinary sluggish freshwater streams. Creeping through a vast extent of level country, more like canals than rivers, they were stopped by the first impediment that came in their way. Captain Sturt, whose arguments we are repeating, could trace their cessation to nothing stronger than a bank of more than ordinarily stiff soil. To solve the mystery, it was necessary to follow the course of some more impetuous stream. The Australian Alps, lying to the south of the settlement, supplied such a stream. A thousand fells, fed by its snows, joined themselves into one impetuous torrent, and dashed down a steep and rocky channel. No ordinary impediment was likely to stop the Murrumbidgee, and Captain Sturt determined to trace its stream whither it might lead. The settlers who had already secured its green banks reported that it made directly for the interior, and showed no signs of abated strength. They would have followed its course themselves, but that it exhibited unmistakable symptoms of leaving behind it the rich fertility which marked its early progress. In 1829, Captain Sturt started on a journey with which may be said to commence the history of the Australian colonies.

"Striking the Murrumbidgee at Yass Plains, about 300 miles from Sidney, he proceeded along its banks with a large and well-equipped party. The stream continued to gain in breadth and body of water, but all appearance of fertility was fast disappearing from its course. In little more than a week after its departure from Yass Plains, the expedition found itself in an absolute desert. The drays loaded with provisions and other necessities, had caused immense labour to the men from the shifting sandy nature of the soil and the dense patches of 'scrub' which grew down to the water's edge; but now neither horses nor men could bring them any further. Yet a stream so impetuous in its course was not to be abandoned. A friend, who still held fast to the theory of an inland sea, had prevailed on the leader of the expedition to add the timbers of an old whaleboat, which had already seen service at the South Pole, to his already seen service at leaving Sydney. They were nailed together, and a small raft, capable of carrying a few bags of flour, was constructed from the fallen timber on the river's bank. Half a dozen picked men were retained. The remainder, with the drays,

were sent back to Sidney. And, next morning, at break of day, this small boat's crew dropped down the stream, bound for that mysterious and unknown interior, which, alike, the European and the savage of the coast, regarded with curiosity and awe.

The Murrumbidgee is composed of alternate deep and broad reaches of water, and steep rapids. In these rapids, the stream, contracted within a narrow channel, hurries through a dark and gloomy gorge, deep down between frowning and precipitous rocks. Successive ages had almost choked up these sunless chasms with fallen trees, whose branches, pointing up stream, threatened to rip up the boat. On the seventh day of the voyage, from one of these sunless rapids the boat unexpectedly shot out into a broad and noble river, running at right angles to its tributary, the Murrumbidgee. In a country singularly deficient and uncertain in its means of communication by water, they had discovered a river not unworthy to be classed with the great watercourses of Europe, and doubtless owing its broad stream to the unfalling snows of the Australian Alps. Wherever the Murray might lead them, at least it solved a very important portion of their inquiry. It was certainly the main artery of New South Wales. "I directed," says Captain Sturt, "the Union Jack to be hoisted, and, giving way to our satisfaction, we all stood up in the boat, and gave three distinct cheers.

More safely the whaleboat now drooped down the even tide of the Murray, and on the thirty-third day of the voyage on its stream, the banks retired on each side, and then were lost in the distance. The explorers found themselves floating on the bosom of an extensive lake, becoming slightly brackish as they advanced, while over its waters was borne the distant thunder of the great Southern Ocean. To this was given the name of Lake Alexandrina, and Sturt's observations showed him that he had cut off the south-eastern corner of the continent. Indeed, Lake Alexandrina is separated from the Southern Ocean merely by a narrow bar of shifting sand. The shores of the lake were clothed with green pastures, and the whole surrounding country seemed excellently adapted for agriculture—a way beginning to be severely felt by the colonists of New South Wales, who were already getting their wheat and potatoes from Van Diemen's Land, and even from New Zealand. It is almost unnecessary to say that the Adelaide district has since become the granary of Australia, producing the finest wheat in the world, and supplying the early goldminers of New South Wales and Victoria with the necessities of life.

"But time permitted only a hasty view of these new discoveries. Our explorers had a long and weary row, up stream, before them. They were already on famine allowance, and even famine allowance would last them only on condition that they rowed up the stream in the same number of days in which they had rowed down. This they accomplished after great exertion and suffering, prolonging their journey into each night until they had reached their former camping ground. When relieved from Sidney, they had divided their last morsel of food, and, owing to privation and incessant toil at the oar, symptoms of insanity had already appeared among the men.

"Wheat-lands and fresh waters had been the two wants of New South Wales. If they were not now brought to the very door, they were, at all events, near enough to relieve the colonists from serious apprehensions. Flocks and herds had increased with extraordinary rapidity, and all the available districts had already been taken posses-

sion of. Whether flocks and herds could be driven to the shores of the Southern Ocean was indeed questioned, for Captain Sturt reported portions of the banks of the Murray to be little better than a desert. But a new class of men, known as 'overlanders,' now appeared. The loud stock-whip of the overlander, and not seldom the sharp crack of his rifle, as some Murray tribe attempted to steal his cattle, now resounded through these dark woods. Many thousands of horned hoofs daily thundered over its bank, or plunged into its tide to cut off some tedious bend of the river. Down the Murray poured the overflowing flocks and herds of New South Wales, and spread themselves over the new pastures round Lake Alexandrina. The fame of the new settlement reached Europe, and the English and German emigrant were soon sowing their wheat-fields and tending their vines on the shores of Spencer Gulf. In a few years more, the district was erected into an independent colony under the title of South Australia, and the foundations laid of the present city of Adelaide."

(To be concluded.)

For "The Friend."

Suffering for Christian Principle.

It is not a difficult thing to make a profession of religion in times of ease and prosperity, especially when the current of opinion in influential circles is favourable to it. To be really a possessor of the life and virtue of Godliness, and to walk daily under the constraining and re-training power of Christ's cross, is much more difficult; though even this is made comparatively easy where the will of man is wholly given up to the Divine Will. True faith in the internal teachings and operations of the Holy Spirit, which is always accompanied by humble submission and obedience, is all powerful in removing obstacles, and conquering spiritual enemies; giving its possessors the victory in every combat with temptation, where it is implicitly adhered to.

Steadily and meekly to persevere in the path of christian duty, in the face of derision, scorn, and persecution; where the general voice of the community is adverse to our course, and loud in its condemnation; requires a strength and firmness which are not at our command, but which will be freely given to all who renounce self; and, under a sense of their needs, earnestly seek them from on high.

The true follower of Christ seldom, if ever, finds his path identical with that trodden by the multitude. He realizes oftentimes, in his associations with the world, that antagonism to its spirit and ways, of which his Lord and Master forewarned him, when he said to his disciples; "Ye shall be hated of all men for my name sake." "If ye were of the world, the world would love his own;—but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you."

But the christian has no cause to be dismayed or discouraged at this. It was the lot of his Omnipotent Lord; whose promises are, "Behold I give you power . . . over all the power of the enemy, and nothing shall by any means hurt you."—"I will give you a mouth and wisdom which all your adversaries shall not be able to gainsay or resist;" and his apostle says; "Ye are of God, little children, and have overcome them; because greater is He that is in you, than he that is in the world."

Perhaps some who feel their own weakness and shortcomings, may be disposed to doubt the application of these precious words to the present times; but it is well to remember that the divine promises

are yea and amen forever: They are not annulled or diminished because human infirmities exist, but are put forth to counteract them, and to encourage the sincere-hearted not to yield to their depressing influences. If, in an honest and good heart, we earnestly strive to exercise faith in them, and to walk in conformity to the Divine will in all things, we may calmly and humbly repose in the blessed assurance that not one of them will fail, but be realized in our experience in the full measure which our Heavenly Father sees to be necessary for us.

A day of close proving is upon us; in which the foundation of each one is likely to be tried. But there is no cause of alarm or discouragement. It is nothing new. The Lord's power is unchanged. Our immediate ancestors had much the same scene, to pass through; and as they endeavoured in all things, through the assistance of the Spirit of Truth in their hearts, faithfully to live up to their religious principles and practices, He whose power is over all, enabled them to maintain a blameless and consistent walk; sustained them under all their sufferings, and made way for them in the minds of the rulers, even to the acknowledgement of the rectitude of their course. It would be culpable distrust to doubt his willingness and power to do the same for us, if we humbly endeavour to serve him, and to walk in the footsteps of those holy men who have gone before us.

We feel especially for our younger Friends in the new and trying position in which they are placed; but are fully persuaded that as they are faithful, He who was the stay and strength of our forefathers, in prisons, and under the loss of their property, for their testimony against war, will preserve and support them also, whatever they may have to endure.

In time of war, when men are called upon to leave their business, and their domestic ties and comforts, to encounter the hardships and exposure of camp-life, as well as the risk of death on the battle-field; it is no marvel that those who do not see the inconsistency of war with christianity should look with jealous eyes upon such as escape these dangers and privations, because they conscientiously scruple to bear arms; and, if not redeemed from the fierceness of the fallen nature, should pursue a course toward such which savours of persecution.

While we thankfully rejoice that we have been educated in the principles of peace, and are brought into the spirit which seeks to save men's lives, rather than to destroy them; it behoves us to consider what would be our feelings, if we changed places and circumstances with those differently brought up, and who approve of, and go to, war; and to beware that we do not judge them in a wrong spirit or cherish feelings of anger or harshness toward them.

They will doubtless watch Friends narrowly, to see whether those claiming exemption from the perils and privations of military life on conscientious ground, act consistently in other respects with their high religious profession; and if they behold these balking other christian testimonies of the Society, and manifesting a spirit which is little removed from fighting, save as regards a participation in actual combat, what a shade will it bring over the Truth and over our religious Society!

The value of suffering in support of principle, to ourselves, and the precious cause of Christ, and its influence over others, depends very much on its being borne in a right spirit, and accompanied by a consistent example. We feel an earnest and affectionate desire that as Friends are likely to have their peaceable principles tried, in a manner heretofore unknown to most now living, all may be led

to close self-examination how far we are living up to our religious profession, and are made experimental witnesses of the life and power of godliness; that by a daily upright and consistent walk, we may, in the fear of the Lord and through the aid of his spirit, let our light shine before all, and know our hands made strong, and our hearts Divinely repaired to endure whatever afflictions may yet be emitted.

The following account, from John Woolman's journal, seems peculiarly adapted to the present times, viz:

"9th of Eighth month, 1757. Orders came to night to the military officers in our county, (Burlington), directing them to draft the militia, and prepare a number of men to go off as soldiers, to the relief of the English at Fort William Henry; in New York government; a few days after which there was a general review of the militia at Mount Holly, and a number of men were chosen and sent off under some officers. Shortly after, there came orders to draft three times as many, who were to lead themselves in readiness to march when fresh riders came. On the 17th there was a meeting of military officers at Mount Holly, who agreed on to draft; orders were sent to the men so chosen, to meet their respective captains at set times and places; those in our township to meet at Mount Holly, amongst whom were a considerable number of our Society.

"My mind being affected herewith, I had fresh opportunity to see and consider the advantage of living in the real substance of religion, where practice doth harmonize with principle. Amongst the officers are men of understanding, who have some regard to sincerity where they see it; and when such in the execution of their office, have men to deal with, whom they believe to be upright-hearted, it is a painful task to put them to trouble on account of scruples of conscience, and they will be likely to avoid it as much as easily may be. But when men profess to be so meek and heavenly-minded, and to have their trust so firmly settled in God, that they cannot join in war; and yet, by their spirit and conduct in common life, manifest a contrary disposition, their difficulties are great at such a time.

"When officers who are anxiously endeavouring to get troops to answer the demands of their superiors, see men who are insincere, pretend scruples of conscience in hopes of being excused from a dangerous employment; it is likely they will be roughly handled. In this time of commotion, some of our young men left these parts, and tarried abroad till it was over; some came and proposed to go as soldiers; others appeared to have a real tender scruple in their minds against joining in wars, and were much humbled under the apprehension of a trial so near. I had conversation with several of these to my satisfaction.

"When the captain came to town, some of the last mentioned went and told him in substance as follows:—That they could not bear arms for conscience sake; nor could they hire any to go in their places, being resigned as to the event. At length the captain acquainted them all, that they might return home for the present; but he required them to provide themselves as soldiers, and be in readiness to march when called upon.

"This was such a time as I had not seen before; and yet, I may say, with thankfulness to the Lord, that I believed the trial was intended for our good; and I was favoured with resignation to him. The French army having taken the fort they were besieging, destroyed it and went away: the company of men who were first drafted, after some days march, had orders to return home; and those on

the second draft were no more called upon on that occasion."

Recent African Discoveries.

The Secretary of the American Geographical and Statistical Society has received the following letter from Dr. Livingstone:—

RYER SHIRE, JANUARY 6, 1862.

Having lately returned from the exploration of about two hundred miles of Lake Nyassa, a few notes respecting this part of the lake region of inter-tropical Africa may not be unacceptable to my fellow members of the American Geographical and Statistical Society.

We carried a boat past the Murchison cataracts of this river in August last, a distance of thirty-five or forty miles. In that space we have five considerable cataracts, of one hundred to one hundred and fifty feet each; but the intermediate spaces are very rapid too, as may be inferred by the total descent being twelve hundred feet. When we launched the boat on the Upper Shire we were virtually on the lake, though sixty miles distant, for that part of the river partakes much of the character of a lake. It spreads out in one spot to a lakelet, ten or twelve miles long and five or six broad.

On the 2d of September we sailed in Lake Nyassa, and found it to be very deep. Our means of sounding were very imperfect; we had brought a lead line of thirty five fathoms. Failing to reach the bottom at a mile from the shore, we employed a fishing line and found bottom in a bay at one hundred fathoms, or six hundred feet; but a mile outside of the bay we felt none within one hundred and sixteen fathoms, or six hundred and ninety-six feet. The water is cool in consequence of its large volume, and alligators (which, well fed on fish, seldom molest men,) allowed us to bathe in its waters whenever we chose. This great luxury can be enjoyed in but few African rivers, and palisades are often made by the natives to protect women in drawing water, against these dangerous reptiles.

The shape of the lake is, with the help perhaps of a little imagination, somewhat like Italy on the map. The ankle of the boat is in the narrowest part about eighteen or twenty miles—that is, if we exclude the arms of its southern end. One of these thirty miles long and ten or twelve broad, is prolonged into the Shire. The other about the same breadth, is eighteen miles long, and if we reject the boat shape, we may say that the southern end has a forked appearance. It expands up towards the north to fifty or sixty miles; the length is over two hundred miles, probably two hundred and twenty-five, but we failed to reach above the two hundred. It begins in latitude fourteen degrees twenty-five minutes south, and extends into the southern borders of the tenth degree of south latitude. It lies between the thirty-fifth and thirty-sixth degrees east longitude, and is very straight.

We sailed along the western shore, and found it to be a succession of bays, all open to the east. We were there during the prevalence of equinoctial gales, and found that furious storms came down with great suddenness from the mountains and highlands with which Lake Nyassa is surrounded. Heavy seas, in which no open boat could live, often get up in fifteen or twenty minutes. There are several small, rounded, rocky islands, covered with forests, which are uninhabited. These would afford no shelter to a ship, for many rocks put out from deep water near them; and an anchorage is to be found only near the shore. Five rivers of fifteen to thirty yards flow into it from the west; possibly another of larger size flows from the north, but we did not see.

The lake rises and falls about three feet between the wet and dry seasons; the water is fresh but somewhat earthy-tasted and hard. The population on its shores is prodigiously large; all engaged in catching fish by nets, hooks, creels, torques or poison. Slavery is the only trade they know. An Arab vessel called a dhow had lately been built on the lake to carry slaves across, and we daily expect to see a steamer, in parts, out from England, to be carried past the cataracts and launched on its waters for a very different purpose. The nations had never seen Europeans before, and we had to bear to be stared at to any amount. They were upon the whole civil; no fires were levied or dues demanded. We were, however, robbed in the sphere of the slave operations: the first time we had suffered loss by thieves in Africa. The people are much less honest where slaving goes on than elsewhere, and there they place little value on human life.

We went up to show a mission (sent out by the Oxford and Cambridge Universities) a healthy locality on the island south of Mount Zomba, and in trying to induce a tribe, called Ajawa, to desist from slave-hunting, were attacked with poisoned arrows and guns, and but for recourse to fire-arms in self-defence, would soon have been made food for the vultures; they were the first who had attacked us in Africa, and seemed maddened by continued successes in forays against their fellow countrymen.

Africa is a continent of the future. It is impossible to recite its capabilities. It is pre-eminently a cotton country, for here the plant is perennial, and requires little of that heart-breaking toil necessary where it is an exotic; no frosts endanger crops, and the best qualities yield largely. Slave-hunting is the greatest drawback known—it depopulates the country so much that labour becomes dead in proportion to its prevalence. The Portuguese possessions on the Zambesi are valueless, because all the labour is deported to Bourbon.

In addition to the missions of the English Universities, two other missions in this region are contemplated. Healthy localities can be secured in the highlands, which arise on our east, to the height of some seven or eight thousand feet above the sea.

I am, &c,

DAVID LIVINGSTONE.

To the Youth of Both Sexes. Dearly Beloved Youth.—Ye flowers and plants of the Lord's right hand planting! Ye joy of the present and hope of the future generations—for whom my soul travails, till Christ be formed in you—remember now your Creator, offer unto him the morning sacrifice of youth, health, and strength, by dedicating your hearts unto him. "Kiss, (i.e. obey) the Son, lest he be angry, and (so) ye perish from the (right) way." Be not ashamed, or in any matter deny Him before men, lest "He also be ashamed of and deny you before his Father and the holy angels." Fear not man, but fear God; reverence, obey, and acknowledge him in all your ways; in public and in private; in company and alone; remembering that he is ever present, and sees all things; that there is nothing done in secret which will not be proclaimed upon the house-tops.

Bring, therefore, all your deeds to the Light, that is, to Christ the true Light; see that they will bear the light, and, if necessary, the just inspection of all men; that no thought may be encouraged in your hearts, no words escape from your lips, nor any, the most secret act, be committed, for which you would have just cause to blush, were they seen written on you foreheads. So will you indeed become children of the Light, sons and daughters

of the Most High, instruments prepared forever to inhabit the new Jerusalem, to join the morning stars, which sing together, and all the sons of God, who shout for joy.—*John Koper. 1768.*

For "The Friend."

Petroleum or Rock Oil.

Different opinions exist respecting the source of petroleum. Prof. Silliman states that it is of vegetable origin, and was produced by the agency of subterranean heat. This is a very general but unsatisfactory opinion. Geologists most generally believe it to be derived from bituminous shales situated below the coal formations. It is commonly found in the American rocks called the Portage and Chemung group. This group of rocks is of immense thickness on some parts of our continent. It is said the bituminous shales, called Utica shales, have yielded large quantities of oil in Canada, by distillation, and the spouting petroleum wells of Eufiskillen are in this formation. But petroleum is not always found in this class of rocks, as no oil has been discovered in the various parts of New York State, where these rocks have been bored to a great depth.

Facts would appear to favour the theory that petroleum wells have two sources of supply, namely, coal-beds and bituminous shales. In western Pennsylvania, Ohio, Michigan, Virginia and Kentucky, petroleum is usually found in the vicinity of coal seams, and it was a petroleum well in England, situated close to a coal-bed, which suggested to James Young the idea of distilling coal at a low heat, and obtaining oil therefrom.

The commercial success of his efforts led to the very extended use of such oil, and finally to the very general application of petroleum for light.

Many practical men in the Alleghany and Ohio valleys believe that petroleum has its origin in coal beds. They assert that a low heat in the coal-seams drives off hydrocarbon vapour, which is condensed in the pores of the rocks and the soil, and is washed by rains into subterranean recesses, situated at various depths in the rocky strata.

Coal is found in all the hills adjacent to the petroleum wells in Pennsylvania, Ohio and Virginia. Cannel coal is abundant in the hills within one mile of Oil Creek, Pennsylvania.

Is it not reasonable to suppose that reservoirs of petroleum must be situated at a considerable height above the level of the ground, since all the overflowing wells are pouring out their oily fluids at the surface?

A vast amount of the petroleum is exported either in its crude state or after distillation. The following are the exports for the first six months of the year, most of which is from the oil-wells of Pennsylvania.

To Africa, 345 gallons; Antwerp, 165,394; Argentine Republic, 3,040; Australia, 243,675; Barbados, 1,090; Bombay, 300; Bordeaux, 200; Brazil, 19,105; Bremen, 117,465; British East Indies, 740; British Guiana, 7,193; Buenos Ayres, 1,000; Calcutta, 1,400; Canary Islands, 160; Cape Good Hope, 2,000; Central America, 2,059; Cetti, 2,700; Chili, 16,880; China, 1,000; Cisplatine Republic, 3,859; Cork, 170,411; Cuba, 210,491; Genoa, 80; Gibraltar, 117; Glasgow, 18,206; Hamburg, 118,997; Havre, 392,028; Hayti, 3,452; Liverpool, 2,291,244; London, 742,877; Marseilles, 51,735; Martinique, 60; Mexico, 4,938; New Grenada, 14,232; North American Colonies, 3,092; Otago, New Zealand, 7,850; Palermo, 3,990; Peru, 2,651; Porto Rico, 18,184; Provinces, 5,914; Queenstown, 126,450; Rio Janeiro, 4,100; Rotterdam, 13,091; Saint Thomas, 400; Sandwich Islands, 2,400; South

Amounting to 4,570,180 gallons.
Total receipts for the same, 51,127,739.

For "The Friend."

In the Memoirs of George Whitehead he says, "According to a belief that God would reveal this mystery of Christ in us, I was made tenderly concerned to wait for the same, that I might witness and feel the power and coming of Christ in spirit, both to sanctify my heart, and give me understanding to do his will. And when He called me to bear testimony for his Name and Power, and also for his inward and spiritual work in man, I was engaged to wait for his Power and Spirit to move and work in me; and that I might labour in his service according to his working in me; and not otherwise run, strive, or strain, in my own will, wisdom, or strength, as knowing that without Christ, his power and presence, help and counsel, I could, of myself, do nothing, nor any one else. And when my ability was but small, and I in much weakness, fear and trembling many times, the Lord helped me, and increased strength and ability in my labours beyond expectation; this care still resting upon me even in my early travels, to minister only according to the ability given me of my Heavenly Father, and to keep within compass of my own gift; and when the Spirit of the Lord opened and moved but in a few words, I must not exceed, but sit down in silence when that ceased. Many times in waiting upon the Lord, and secretly breathing to him in silence, the Spring of Life would arise, and open counsel afford to my own and others' refreshment and consolation; many times hath my soul been brought low, and the Lord hath helped me, and renewed my strength to persevere in his service; being sensible the more low I was in myself, and the more in fear toward God, though but weak and simple of myself, the more he would manifest his power, and bless my endeavours and service. Let Him have the praise of all, who is forever worthy."

THE SEEN AND THE UNSEEN.

On the Great Exhibition, 1851.

BY H. BOXER.

Ha! yon barst of crystal splendour,
Sunlight, starlight, blent in one;
Starlight set in Arctic azure,
Sunlight from the burning zone!
Gold and silver, gems and marble,
All creation's jewelry!
Earth's unnumbered wares of riches,
Treasures of the ancient sea.

Heir of glory,

What is that to thee and me?

Iris and Aurora braided—
How the woven colours shine!
Snow-glens from an Alpine summit,
Torch-light from a spar-roofed mine.
Like Arabia's matchless palace,
Child of magic's strong decree,
One vast globe of living sapphire,
Floors, walls, columns, canopy.

Heir of glory,

What is that to thee and me?

Forns of beauty, shapes of wonder,
Trophies of triumphant toil;
Never Athens, Rome, Palmyra,
Gazed on such a costly spoil,
Dazzling the bewildered vision,
More than princely pomp we see;
What the blaze of the Alhambra,
Dome of emerald to thee.

Heir of glory,

What is that to thee and me?

Farthest cities pour their riches,
Farthest empires muster here,
Art her jubilee proclaiming
To the nations for an ear,
From the crowd in wonder gazing,
Science claims the prostrate knee;
This her temple diamond blazing,
Shrine of her industry.

Heir of glory,

What is that to thee and me?

Listen to her tale of wonder,
Of her plastic potent spell;
'Tis a big and braggart story,
Yet she tells it fair and well.
She the gifted gay magician,
Mistress of earth, air, and sea;
This majestic apparition,
Offspring of her sorcery.

Heir of glory,

What is that to thee and me?

What to that for which we're waiting
Is this glittering earthly toy?
Heavenly glory, holy splendor,
Sum of grandeur, sum of joy.
Not the gems that time can tarnish,
Not the hues that dim and die,
Not the glow that sheds the lover,
Shaded with mortality.

Heir of glory,

That shall be for thee and me!

Not the light that leaves us darker,
Not the gleams that come and go,
Not the mirth whose end is madness,
Not the joy whose fruit is woe;
Not the notes that die at sunset,
Not the fashion of a day;
But the everlasting beauty,
And the endless melody.

Heir of glory,

That shall be for thee and me.

City of the pearl-bright portal;
City of the Jasper wall;
City of the golden pavement;
Seat of endless festival,
City of Jehovah, Salem,
City of eternity,
To thy bridal hall of gladness,
From this prison would I flee:

Heir of glory,

That shall be for thee and me!

Ah! with such strange spells around me,
Fairest of what earth calls fair,
How I need thy fairer image,
To undo the syres snare?
Lest the subtle serpent-tempter
Lure me with his radiant lie;
As if sin were sin no longer,
Life were no more vanity.

Heir of glory,

What is that to thee and me?

Yes, I need thee, heavenly city,
My low spirit to uphold;
Yes, I need thee—earth's enchantments
So beguile me by their glare.
Let me see thee, then these letters
Break asunder; I am free;
Then this pomp no longer chains me;
Faith has won the victory.

Heir of glory,

That shall be for thee and me!

Soon where earthly beauty blinds not,
No excess of brilliance palls,
Salem, city of the holy,
We shall be within thy walls!
There, beside yon crystal river,
There, beneath life's wondrous tree;
Ever, with nought to cloud or sever—
Ever with the Lamb to be!

Heir of glory,

That shall be for thee and me!

Descendants of the Bounty Mutineers.—The descendants of the mutineers of the Bounty have just been visited at their Norfolk Island settlement by Sir John Young. They number two hundred and sixty-eight persons, and very favourable reports of their condition are given.

From "Once a Week."
Ocean Horticulture.

The visitor strolling along the shingly bays of Cornwall, kicking the drift weeds as they lie in a long black line upon the shore, now and then chances upon a worn and shattered piece of bamboo, or upon the bright seeds of some tropical climber. If these weather-beaten travellers could tell of their long journeying ere they were finally cast ashore, his attention would be instantly arrested, for these worthless pieces of drift are the "tallies" the Almighty has placed upon the ocean, which prove that what we term the great waste of waters, circulate in their ocean-depths as regularly and unerringly as the blood in our own veins.

By slow degrees the great maritime nations of the earth are building up a new science—the physical geography of the sea. We are discovering the laws which cause and regulate those once mysterious currents, which seemed to be urging the ancient mariner who ventured into unknown seas, towards the dreadful verge of the world. Of these currents, we are most fully acquainted with that known as the "Gulf Stream" of the Atlantic. The traffic between ourselves and America has become so great, that if every keel could plough an enduring mark upon the "hering pond," there would perhaps be scarcely a part left on its vast surface between the latitudes of 20° and 45° unmarked. This sea being thus brought within the vision of countless eyes trained to watch the changes of the deep, it is not surprising that we should have ascertained its circulating system with tolerable accuracy. Yet no further back than the time of Franklin, we were in entire ignorance of the Gulf Stream, and of its effects upon navigation. Vessels bound for New York in the winter, were astonished to find themselves one day sailing along a summer sea, and the next day, when within sight of land perhaps, blown off the shore by an Arctic gale, which dressed in icicles the spars and ropes. By degrees, however, it came to be understood that there was a constant set of the ocean into the Gulf of Mexico from the south-east and north, and a flow onwards towards the north-east. Since the year 1808, the direction of these currents has by degrees been most carefully mapped by the practice introduced into our navy of casting bottles into the ocean, containing papers accurately marking the position of the ship at the time these fragile messengers were sent forth. The surface drift after many days casts these ashore, if they go in a shoreward direction; and the records of the passages made by them for the last half century have been collected by the hydrographer of the Admiralty into what is termed "the Current Bottle Chart." This singular map clearly shows that all the bottles thrown into the ocean near the Canaries, or the Cape de Verd Islands, make directly for the west, and touch land among the West India Islands, some even penetrating to the bays of the Gulf of Mexico. Those, again, which are cast into the ocean on the western side of the Atlantic, from about the latitude of New York, make off in a north-eastern direction, and voyage until they are cast on the western shores of Europe. Frazil as these bottles may seem, some of them must have made extraordinary voyages ere they finally reached their haven. Thus, a bottle thrown overboard from the Prima Donna off Cape Coast Castle, on the west coast of Africa, after voyaging for two years, was finally found on the coast of Cornwall. Now, it is evident that this little messenger, before it could have reached this shore, must have been carried by the Guinea current eastward until it met the African current coming from the southward, with which it would

recross the equator, and travel with the equatorial current through the West India Islands until it got within the influence of the Gulf Stream, which finally carried it to the north-east, and cast it on the shores of Cornwall, after a journey of many thousand miles. Other bottles, again, that have been cast into the sea from sister ships, making for the Arctic ocean, although at seven hundred miles' distance, have been known, after traversing the Atlantic from north to south-west, to finish their journey within thirty miles of each other!

And now having shown the direction of the currents to and from the Gulf of Mexico, let us follow the Gulf Stream. If we look at a map of the Gulf of Mexico, we find that it is a land-locked sea on the north, south, and west; it is shaped, indeed, like a vast cauldron, the ascertained average depth of which is one mile; for heating this cauldron we have the fierce sun of the equator, which sends its temperature up to eighty-five degrees. The sea-water thus heated expands, and pours out of the Gulf, in one immense stream, the centre of which is found to be about two inches higher than its edges in the surrounding ocean. This stream, which, in consequence of its intense saltness, is tinged a deep indigo colour, immediately it clears the Straits of Florida makes away in a north-east direction for the western shores of the Old World. The extraordinary nature of the flow is, that it is a warm river in the ocean, its banks on either side, and its bottom, being in the winter composed of icy cold water. This tremendous issue from the Gulf must however find some supply to fill up the vacuum that otherwise would arise, and we find it mainly coming from the Arctic sea, the current pushing its way down between the coast of North America, and the Gulf Stream flowing up across the Atlantic, in a north-east direction. The Arctic downward current, however, expands and contracts with the seasons; at one time shrouding the hot current more to the east, and then again giving way on the coming of winter. By reason of this agency, the Gulf Stream is continually waving about in mid-ocean, as Lieut. Maury poetically says, "like a pannon in the breeze."

But there is also the flow into the Gulf, termed the Equatorial Current, which sweeps through the West India Islands, and enters the cauldron from the eastward. Thus we have a great horse-shoe bend, as it were, in the currents of the Atlantic Ocean, in the centre of which there is a region of comparatively still water, situated midway between the Azores, the Canaries, and the Cape de Verd Islands. Here, in the centre of the great whirl, the whole surface of the sea is covered with thickly matted Gulf weeds, and with all the drift-wood and other matters sloughed off by the southern edge of the Gulf Stream. This extraordinary floating surface, termed the Sargassoa Sea, is the same that Columbus met with in his great voyage of discovery, which terrified his sailors into the belief that they had reached the limits of navigation. This singular marine phenomenon is an example on a large scale of what we may see occurring every day in a pan of water to which a rotatory motion has been given—all the light floating particles, such as bits of straw, cork, &c., collecting in the centre, and there remaining, in consequence of its being the spot least disturbed by the surrounding motion. Into this great "bend" of the Atlantic, we behold the gathering place and final tomb of those mighty icebergs which, every spring, issue forth in such majestic procession from their birth-place in the Arctic ocean, sucked southward by the current flowing towards the Gulf. When, after their long march, they reach these still waters, their dissolution rapidly commences, the warm air above and the hot

water beneath assault and undermine their glittering pinnacles, and with thundering crashes they split and subside into their ocean bed.

Lieut. Maury, in his charmingly-suggestive volume, "The Physical Geography of the Sea," has ingeniously and truly likened the grand mechanism of the Gulf Stream to the artificial methods by which we produce warmth in our houses. Weeks, the great hot-house builder, might have taken a hint from the currents of the Atlantic as to the best method of producing a summer atmosphere in the depths of the winter. In the downward flow of the Arctic current would be found the counter-part of the feed-pipe of the hot water apparatus; in the Caribbean Sea and the Gulf of Mexico, the vast boiler which elevates the temperature of the water to eighty-five and sometimes ninety degrees; and in the Gulf Stream, the hot-water pipes, which, as they floor themselves out over the ocean for thousands of miles, present a vast amount of cooling surface, which gives off to the western breeze a moist hot-house temperature in the cold seasons of the year. It must have often struck the reader as a remarkable fact, that even as late as June many of the ports in our North American provinces are closed with ice, whilst we are reveling in bright summer weather—yet Labrador is situated in a more southerly parallel of latitude than England. The explanation of this is, that the Gulf Stream is pushed off the North American seaboard by the descending cold current, the difference of temperature between the two streams running side by side being in the depth of winter not less than thirty degrees. We may here state, *en passant*, that the tremendous fogs, which in the winter season are always found hanging over the Grand Banks of Newfoundland, are attributable to the condensation of the warm and humid air of the edge of the Gulf Stream by the cold air of the adjacent current.

If we follow the Gulf Stream across the ocean, we perceive how fully it fulfils the purpose for which it was designed. Sir Walter Scott tells us that the pools in the Orkneys are never frozen, the effects of the grand hot-water warming apparatus of a far-distant shore being sensibly felt even in these islands, which are situated in latitude nearly ten degrees further north than the ice-bound coast of Labrador. We all know that in Great Britain there is an extraordinary difference between the eastern and western coasts, so great indeed as to induce completely different systems of agriculture. The Emerald Isle owes her splendid grazing-land to the soft west breezes born of the Gulf Stream which strikes full upon her shores; the western shores of England are robbed in bright green pastures, nourished with the warmth and moisture issuing from the same tropical source. The dairy produce of Great Britain has its root and issue in this steadfast hot-water river in the ocean, the limits of which modern science has so accurately mapped; nay, the florid, plump looks of our people, and the large size of our domestic animals, are but effects of that moist and genial atmosphere which finds its birthplace in the beneficent Gulf Stream.

And, in order to bring the effects of this extraordinary marine phenomenon closer home to the stomach of our reader, we may perhaps be permitted to ask him, how it is that of late years he has purchased peas, potatoes, and broccoli, so many weeks before their season in Covent Garden market? Peas in May were once thought to be an extravagance only allowable to a duke. Now, any moderate man may indulge in them to his heart's content. Well, these vegetables are forced—but in a hot-house atmosphere of nature's own contriv-

ing. Where the tail of the British dolphin dips into the Atlantic, there the effects of the Gulf Stream are most felt; it is bathed with the warm, moist air, heated by the far off Gulf cauldron, and we may say with exactness, that the majority of our early vegetables sold in the open market are forced in hot-houses in Cornwall and Portugal, (the seaboard of the more southerly promontory,) by means of a boiler situated beyond the West Indian Archipelago, the conducting hot water pipe of which runs for nearly four thousand miles between the cold walls of the surrounding ocean. Had the ancients been aware of this property of the ocean, it would have modified the representations of the Pagan Olympus, and we should have been familiar with the spectacle of — turned gardener.

From "The British Friend."
On Silent Worship.

On the 1st of Seventh month, 1858, a stranger from London attended our week-day meeting at ———. It being the day after our Monthly Meeting, the congregation was particularly small. After two short communications, the individual above mentioned rose and said—'I have felt such a solemnity in this time of *silence* that I could almost fancy I heard Jacob, when he saw the ladder and the angels ascending and descending on it, exclaim, 'How awful is this place; surely this is none other than the house of God, and this is the gate of heaven;' and I could almost fancy I heard the prophet say, 'Then they that feared the Lord spake often one to another, and the Lord hearkened and heard it, and a book of remembrance was written before him for them that feared the Lord and that thought upon his name; and they shall be mine, saith the Lord, in the day that I make up my jewels (or my crown), and I will spare them, as a man spareth his own son that serveth him.' 'Then shall ye return (when ye have ceased from your own actions, reasonings, and desires), and discern between the righteous and the wicked, between him that serveth God, and him that serveth him not.' I hope I shall be excused speaking among you, being a stranger, and not a member of your Society; but I believe I shall feel remorse on leaving this place if I do not acknowledge among you what God hath done for my soul. It is now twelve months since I came to this place. I had heard of your mode of worship, but I wondered how the Lord's people could be profited by sitting in silence, and sometimes not a word spoken among them. I sat down in this house hoping and waiting to hear something that might cheer and encourage my soul; and as I sat in this expectant state, such an influence, such a feeling of solemnity covered my mind as I had never experienced before in all my life, and which I shall never forget whilst memory holds her seat, and which I believe to be from the divine favour; and I then understood what our Saviour says in John—'If any man love me he will keep my words, and my Father will love him, and we will come into him, and make our abode with him.' And in Rev. iii. 20, 'I will come into him and sup with him, and he with me.' And I felt that there is a communion between God and the souls of his people; and though I have felt reluctant to speak among you, I could not leave this place with an easy mind without acknowledging what I felt in this house twelve months ago, and once since, when sitting in silence in my own house. And I think it is the duty of every one who has received any special communication from the Spirit, to endeavour to encourage his brethren in Christ to seek this communion with God. And I wish to encourage you, my friends, to greater devotedness

in waiting upon God. And I wish to stir up my own soul also to be faithful in confessing our Saviour Jesus Christ!'

The Japanese at Home.—Japan is a feudal empire, governed by a military aristocracy. There are nine classes of Japanese; with very rare exceptions, no one can rise above the class in which he was born. Every attempt of the kind is unfavourably regarded, and is adverse to the public opinion. The absence of ambition and of luxury is the probable cause of the quiet air, the complete satisfaction, the expansive gaiety, which mark the Japanese character. No where else do you meet with people so contented, and so devoid of anxious thought.

The princes or daimio, the nobles, the priests, and the military, constitute the first four classes of the nation, and enjoy the privilege of wearing two sabres. The subaltern officials and the medical men form the fifth class and may wear one sabre. The merchants and wholesale dealers, the retail dealers and artisans, the peasants and the coolies, the tanners and the leather carriers, make the last four classes of the population, and may not in any case, wear any sabre. All who deal in skins are reckoned impure; they are not allowed to reside in towns, but dwell in villages especially allotted to them in the open country. They supply the state with executioners, who do not lead an idle life; for the penal laws of Japan are exceedingly rigorous, and inflict the punishment of death for very trifling offences. Whosoever causes his neighbour's death through imprudence, or conceals a criminal is immediately beheaded. It is to be hoped that further intercourse with Europe may temper the severity of Japanese legislation.

The only sciences cultivated in the empire are medicine and astronomy. There are two observatories in the island of Nippon—one at Jeddo, the other at Meako. The great comet of October, 1858, did not cause the slightest signs of astonishment or uneasiness in the natives' countenances. At Shanghai, during an eclipse of the moon, very different manifestations were made. The military mandarins shot their arrows to kill the dragon who was devouring the moon; from every junk and every pagoda there resounded a deafening din of gongs, intended to frighten the monster away. The Japanese physicians read Dutch medical books, and seriously studied their art. Two of them assiduously frequented the embassy, for the sake of consulting the navy surgeons respecting the cholera.

In religious matters the Japanese are tolerant, or rather very indifferent. In the Archipelago, for ages past, several worships have co-existed in peace. Buddhism and the religion of Confucius, foreign importations, share the public favour with the Sinto worship of the Kamis, the primitive religion of the country. Thanks to this tolerance, the Spanish and Portuguese missionaries had not been many years in Japan before two hundred thousand natives of the highest classes had received baptism and become christian converts. Such a religious movement was unexampled. But times are changed. For the last two hundred years there has not been a single christian in Japan. They were all exterminated by the Emperors Taiko and Yeyas.

There is no standing army in Japan. All the two-sabred gentry, who form the suite of the princes and governors in time of peace, act as soldiers in time of war. Individually, they are very brave; but their swords and spears will hardly enable them to resist European tactics. It is asserted, however, that, conscious of their weakness, they carefully read strategical works. Japan feels that Europe has made the first breach in her exclusiveness, and

is tormented just now by a touch of anxious uncertainty respecting the future. She understands fully that, with bows and arrows, she can make no head against Kinnie rifles, and she endeavours to acquire a knowledge of the actual state of naval science and military art. To have soldiers worthy of the name, she must at once renounce sandals, puffy trousers, and long robes trailing behind; but she is ready to make the sacrifice. The Japanese have not, like the Chinese, the stupid prejudice to believe and to boast themselves superior to every other people. They set themselves above the Chinese and the Coreans, but they estimate the Western powers at their real value.—*All the Year Round.*

Purver the Quaker, and his Translation of the Bible.—Anthony Purver was a Quaker, poorer and less educated than most of his brethren; by trade a shoemaker. Can any one assign a reason why so many shoemakers have become eminent for their genius or their enthusiasm? The employment is still, often solitary, and allows a man to be meditative. Anthony Purver, as he worked with his awl, was over-mastered with an idea that he was called and commanded to translate the scriptures. His faith attributed the impulse, whose origin he could not trace in his own will or in the concatenation of his human thoughts, to the Divine Spirit. But, if he was an enthusiast, he was an enthusiast of much sanity; for he sought the accomplishment of his end by the necessary means, and he did not begin to translate till he had mastered the original tongues. We know not what assistance he received in this great undertaking, which was commenced when he had long outlived the years of physical docility; but if it be true, as stated, that he began with the Hebrew first, (and it was the natural course to occur to his mind,) he must have had some, for there was then no Hebrew and English lexicon or grammar. However he did acquire a competent knowledge of the Hebrew Chaldee, and Syriac. He afterwards learned Greek, and Latin last of all. But still he could not have accomplished his purpose without pecuniary aid, and that aid was liberally afforded by Dr Fothergill, at whose sole expense Purver's translation of the Old and New Testament, with notes critical and explanatory, in two volumes folio, was printed, and appeared in 1765. The cost of the work is stated at not less than £200. A short account of this extraordinary effort of faith and perseverance may be found in Southey's *Omissana*. It is said to be remarkable for a close adherence to the Hebrew idiom. It has not apparently attracted as much notice among biblical scholars as the courtesy, to say no more, of its production would seem to challenge. We never saw it but once, and that was in the library of a *Friend*. We doubt indeed, whether any new translation, however learned, exact, or truly orthodox, will ever appear to English-speaking Christians to be the real bible. The language of the authorized version is the perfection of English, and it can never be written again for the language of prose is one of the few things in which the English have really degenerated. Our tongue has lost its holiness.—*Harley Colridge.*

Scandal is the bane of the social and domestic circle, withering to the best impulses of our nature and hostile to the happiness of all who indulge in it.

Engratitude is no business inconsistent with the strictest morality, none in which you cannot daily seek the blessing of the Most High.

For "The Friend."

When John Richardson visited the Island of Barbadoes in the year 1702, he had an interview with the Governor, when the following conversation occurred:

The governor said, "I want to know the reasons why you as a people do not assist the king and country with men and arms, for their and your own defence and safety, against all that may attempt your hurt. I replied, the most convincing reasons I have to offer to the governor are; we have neither precept nor example from Christ or his apostles, to use the sword to hurt one another with. No! said he, what then means that saying of our Saviour, when he bade him that had no sword, sell his cloak or coat and buy one? I replied, one of his disciples answered and said, Lord here are two; Christ said, it is enough. Now how two swords can be enough to answer for a general precept, I leave the governor and all these men to judge. So after a little pause he said, in case you were assaulted by robbers, that would break your house and take what they could get from you; or upon the highway, and would take your purse or horse, what would you do in that case? I replied, I could not directly answer what I should do in such a case, because through the Lord's mercy I was never yet so assaulted; but it appears most likely, that I should endeavour to keep my house from being broken up, and yet without the aid of men's lives; and as to the other assault, inasmuch as it is well known I do not provide any outward weapon for my own defence, neither sword, pistol, nor any such like weapon, therefore I must rely upon the Lord for protection and help, who is able to rescue me out of the hands of all such ungodly men; or if he does not, I must endeavour to bear what the Lord suffers such to do to me. The governor said, You say well, for inasmuch as you have not provided anything for your own defence, you have nothing to fly to but the Lord; you say very well, and said he hoped what he had offered had not given any offence. I replied, it was so far from that, we were glad he was so free with us."

New use for graves.—When the troops dismantled the rebel batteries at Cockpit and Shipping Points, on the Potomac, the soldiers of the Massachusetts First came across numbers of graves. They were laid out in the streets, carefully labelled, and contained pathetic remonstrances against disturbing the repose of the dead, and violating the sanctity of the tomb, so that suspicious were engendered that the sacred dead might be brought to life again, and made to see a little more service under the sun. Spades and shovels were accordingly brought into requisition, and speedily were exhumed, not the bodies of the departed confederates, but numbers of nice new tents, packages of clothing, mess chests furnished with all the appliances of modern cookery, trunks of various articles, tools, &c. The grave-diggers were complimented for the success of their sacrilegious experiment and recommended to try again.

Artesian Wells in Algeria.—M. Kind, the engineer of the artesian wells of Passy, has obtained new successes in Algeria. In a well sunk at Jaouch-Baraki, in the plain of Metidje, at about 37 yards, a jet of water was met, giving 120 gallons a minute. The boring being continued to 54 yards, the supply of water was increased, and one above the soil; its temperature was 77 degrees Fahrenheit. In another boring, made at Haouch-en-Tallah, in the same plain, carried to about 220 yards, a fountain of water was likewise met with. —*London Review.*

The Honest Hour.—She repeatedly expressed in very satisfactory terms, her resignation and acquiescence with the will of the Almighty, often saying, "I am not afraid to die." At one time she spoke to her father thus: "Dear father, thou hast been a tender, affectionate father to me. Have I not been a dutiful daughter to thee?" He answered fully in the affirmative; and she went on, "Oh, I would not have been otherwise for all the world!" There was at that time some little article of her apparel, which by some means had been introduced, and which her father thought not consistent. He gently remarked it to her; and she freely acknowledged it was wrong; saying, that it proceeded from pride, and that those who kept near to the principle, [the Spirit of Truth,] would be preserved out of such things.—*From a memorial of Ann Nisish, in her fifteenth year.—Pietty Promoted.*

If there are any that slight the offers of a merciful Saviour, how deplorable must be their condition.

THE FRIEND.

NINTH MONTH 20, 1862.

If we believe that the present war had its origin in wickedness, and that He who has a controversy with sin, has permitted it to come upon the country for the purpose of correcting our evil ways, by bringing the people to ponder on the cause they have been pursuing, awakening in them a more just sense of the duty they owe to their Creator, and a more earnest endeavour to perform it, we ought to be more desirous to do our part in the necessary work of reformation, than to escape whatever portion of suffering may fall to our lot in the general calamity.

A succession of political events during many years which preceded the present rebellion, and the avowed motives and designs of its originators and abettors, leave but little doubt that slavery is the immediate cause of the war, and its unlimited continuation the chief object for which it is waged. But we do not believe that had the portion of our fellow countrymen who are not connected with that great evil, not been more or less generally and grievously implicated in the transgression of the Divine law in other ways, the present scourge would have overtaken the whole nation. There is doubtless, in both sections, guilt enough to render it unbecoming in the people of either to say to those of the other, we are holier than you, or to claim exemption from correction because of its being undeserved. Far better would it be for each to look to their own sins, and strive to turn away the infliction of continued chastisement, by repentance and amendment of life.

Scripture testimony and scripture history equally show that, where a nation, suffering under calamity, has been brought to hearken to the voice of instruction; to forsake its wrong doing, and walk in the way of justice and truth, the omniscient One sees the change wrought, and in his pity removes the chastisement He has seen meet to inflict for their recovery. Here then is the main thing that all true christians ought to hope for, to pray for and to strive for; far more than for the success of armies, or the defeat and destruction of their fellow beings.

How far this desirable change for the better may be going on secretly in the hearts of very many, preparing the way for the restoration of peace and its blessings, is known only to Him who seeth in secret and rewardeth openly. Though there is so

much to be witnessed which betrays the evil in the hearts of the people, we doubt not the presence of thousands of righteous men and women in the community, who are the salt which preserves it; and who amid the convulsions and distress which surround and afflict them, are the objects of Divine regard and care, whose supplications He will hear, and in his own time, answer. So likewise we think there is reason to believe that a work of reformation is going on in many, whose hearts have been softened and contrited by the afflictions of the times, who are learning more fully to estimate their responsibility, and the necessity for them to acknowledge it before men, by a more guarded life and conversation; and here also is ground for hope of a termination of our present national calamity. Would that this reformation may prove to be the case among all the members of the religious Society of Friends!

Those who approve of war, and place their dependence on the sword, may take pride and comfort in the magnitude of their armies, the perfection and deadly potency of their murderous enginery; and they may rejoice in victory, though purchased at the cost of thousands of human lives; but they must also feel deeply every failure of the power in which they trust, and be cast down when defeat breaks the reed upon which they lean for support. But Friends while declaring themselves conscientiously scrupulous against bearing arms, and servants of the Prince of Peace, restrained from engaging in offensive or defensive war, renounce dependence upon the arm of flesh through the sacrifice of human life, for their protection, and confess that they look for deliverance and safety to the superintending care and mercy of Him without whose knowledge a sparrow cannot fall to the ground. "There is no king saved by the multitude of an host: a mighty man is not delivered by much strength." "Behold the eye of the Lord is upon them that fear him, upon them that hope in his mercy." While, therefore, we see that so long as men yield themselves to "the lusts which war in their members," contests and bloodshed will ensue, and we must leave those who take the sword to settle their disputes, to its bloody and bitter arbitration; though we may hope for and rejoice at the triumph of right and justice, we cannot consistently give way to or in any wise encourage the martial and sanguinary spirit which so generally prevails in the community, nor, by word or act, show that we are relying upon others doing for us, what we profess to be religiously restrained from doing for ourselves.

Where we become leavened with the spirit of war, and the ear is kept constantly listening for the accounts of the size and efficiency of armies, or for the reports of battles fought or expected to be fought; and we allow ourselves to give way to the hopes or the fears expressed in regard to the danger or safety of this or that section of the country, depending upon victory or defeat, it is impossible to have the spirit stayed in quiet confidence upon the protecting care of Him who alone can give peace and safety.

It is true, that while we are in the world, we must partake of the vicissitudes and trials that abound in it. Our connection with our kind, and our influence in the community in which we live, will naturally link our sympathies more or less closely with the joys and sorrows which exalt or depress those around us; we may often find cause to mourn with those who mourn; and we may rejoice with those who rejoice, when it can be done in innocence of heart, but we think a little reflection may convince every Friend how much the agitation, the alarm and the clamor which so rapidly

succeed each other in the public mind, are altogether out of harmony with the spirit of the religion that he professes, and the mental condition he should cultivate.

SUMMARY OF EVENTS.

UNITED STATES.—*The Invasion of Maryland.*—As soon as the rebel occupation of Frederick and adjacent counties was known in Washington, the Federal authorities, after adequate force, proceeded in that direction, his army moving through Maryland at no great distance from the Potomac. The advance of the U. S. army was made with caution, on account of the want of reliable information in regard to the position of the rebels. It was not until the 10th inst. also out of the retreat of the Confederate army into Maryland by the lower fords, at which it entered Maryland. In the mean time the rebels sent forward one of the divisions of their army to Hagerstown, and evacuated Frederick City, on the approach of the Federal forces, after holding it five days. Gen. Jackson, with 15,000 men and 70 pieces of artillery, is reported to have proceeded simultaneously to Williamsport, and there crossed into Virginia. This movement placed him above Harper's Ferry, where a considerable Union force was stationed, and it was not doubted that a strong effort would be made by Jackson to effect its recapture. Heavy cannonading had been heard in that direction on the 13th and 14th inst. Gen. Barnside's division of the Federal army passed through Frederick City on the 13th, the advance guard having entered the previous evening. A rebel train of 100 ammunition and subsistence wagons was captured, and 1,000 prisoners taken. A large number of wagons to prevent their capture. About 450 of the Southern troops were left sick in Frederick. The Federal forces continued to press upon the retreating columns of the rebels, and several engagements occurred. On the 15th inst. the rebels were defeated by McClellan as a very severe battle, resulting in a decisive victory over the rebels. It was fought on the Middle-town Heights, with Longstreet's division of the Southern army. General Lee, of the U. S. army, was killed. Gen. McClellan was uncertain whether the rebels would continue to retreat, or to renew the contest at day. The mail communication between Washington and Frederick has been resumed. On the 15th, all apprehension of an invasion of Pennsylvania had passed away.

Later despatches from Gen. McClellan show that a large portion of his forces, and the rebels took part in the battle of the 14th inst., the several divisions of the two hostile armies extending through a line of many miles, from Harper's Ferry, in the direction of Hagerstown. The defeat and rout of the rebels is said to have been complete in all quarters. Many thousands of them were killed and wounded, and great numbers taken prisoners. Those who escaped fled toward the river, closely pursued by the U. S. troops. The loss of the Federal army is said not to be very severe.

The Condition of the Rebel Army.—All accounts concur as to the wretched appearance of the Confederate troops, and to the fact that they are generally barefooted and in tatters, with matted beard and hair, and complexions darkened by exposure to the sun. They were, however, well armed, mostly in good health, and seemed indured to hardship and suffering. It appears also that the rebel soldiers conducted themselves regularly, and without Federal complaints. No one was interfered with or questioned with regard to his political sentiments, and no soldier was permitted even to address a woman in the streets, unless first spoken to. At one place a large body of troops was encamped between a peach orchard and a corn field, yet this was the strict discipline enforced, that not a peach or a kernel of corn was taken. They usually offered Confederate notes in payment for their purchases, and when this was refused, would give other money, or quietly leave. Gen. Lee, on the 6th inst., issued a proclamation at Frederick, requiring the rebels to lay down their arms, and that the Confederate army had come to liberate them from the yoke of the United States government. It is said the rebels expected the people of Maryland would flock to their standard, but this hope was disappointed, scarcely one hundred men before they joined their army. The few days which elapsed before the rebels were completely routed, were diligently employed by the rebels in collecting supplies, large quantities of which were sent over to Virginia.

Virginia.—The rebels have recently obtained some advantages in the western part of the State. After several engagements of the U. S. army, the rebels were stationed in the Kanawha Valley, and were compelled to evacuate Gauley, and retreat down the Kanawha. Before leaving, they destroyed the salt works as far as

practicable. Gov. Letcher, of Virginia, has issued a proclamation calling for a State force of ten thousand men to form a division for Gen. Floyd, to be employed against the rebels in Western Virginia. The men are to be raised by draft, and the utmost activity is urged upon the officers engaged in the work.

Kentucky.—The threatened attack upon Cincinnati appears to have been abandoned for the present. The rebel army on the 15th, had fallen back to Florence, where it was reported to have been encamped. It is said that Gen. Buckner, with 10,000 men, was about entering Kentucky from Tennessee. Maysville, a city of seven thousand inhabitants, situated on the Ohio river, sixty miles above Cincinnati, has been visited by the rebels. On the 15th inst. the Ohio river, for forty miles from Cincinnati, but were routed. The whole State appears to be in a ferment, and in nearly all sections, guerrilla bands are being organized, and enlistments going on for the rebel army. It is stated that many men who have heretofore professed Union sentiments, are now joining the rebel ranks.

Tennessee.—Clarksville, Tenn., has been recaptured from the rebels by a detachment of the U. S. troops sent from Fort Donelson. The rebels captured and burnt the U. S. steamer Terry, in consequence of her having grounded on a shoal in the Tennessee river. Major-General Sherman, on the 15th inst., reported to have received 7,000 men. The attack was repulsed. The Union loss is said to have been only 35 men; that of the rebels more than 500.

Missouri.—In compliance with orders from the Secretary of War, Gen. Schofield has ordered the Provost Marshal General to issue warrants for the arrest of persons without delay, to carry into effect the Confiscation Act, so far as the provisions of the said act are subject to be carried into effect by the military authorities of the United States in this District. The property liable to confiscation in the District, is estimated at fifty millions of dollars.

North Carolina.—Washington, N. C., was attacked on the 6th by 12,000 rebels. They were repulsed with severe loss.

Louisiana.—The health of New Orleans, up to the 15th inst., was unprecedentedly good. The city has, however, great suffering, owing to the loss of nearly 8,000 families requiring public assistance. The city was still threatened by the rebels, but it was believed to be entirely secure against attack. The Union feeling in the city is represented to be on the increase.

New York.—The specie in the New York city banks, is still on the increase. At the latest weekly statement, it amounted to \$37,125,245. The money market is amply supplied, the rate on call being 4 1/2 per cent. The following were the quotations on the 15th inst. Uplands cotton, 56 cts. a 57 cts.; Chicago spring wheat, \$1.06 a \$1.15; red winter wheat, \$1.21 a \$1.24; soy, 75 cts. a 83 cts.; mixed Western corn, 57 cts. a 59 cts.

Philadelphia.—Mortality last week, 276. *The Colonization Scheme.*—It is stated from Washington, that about 8,000 of the more desirable class of colored persons have already given information of their desire to leave the country, and to emigrate to Liberia. The first expedition for Central America, which is stated to go out early next month, under the care of Senator Pomeroy. It will consist of 500 emigrants, provided with implements of husbandry, and everything necessary to their comfort and industry.

South Carolina.—The rebel newspapers sometimes contain items which throw light on the state of affairs. The Richmond Despatch of the 5th and 6th insts., that the Confederate force operating against Washington, is 150,000 men. Jefferson Davis has appointed the 18th of the present month as a day of fasting and prayer, in honor of the late General Sherman. It is also a day for worship, and to render praise to the Almighty for the late successes of the Confederate arms. Richmond papers of the 8th contain General Lee's report of the battles at Bull Run and Manassas. According to his account, Pope was defeated in every engagement. The following named rebel generals were wounded, some of them severely viz: Ewell, Trimble, Talafiero, Fields, Jenkins, and Mohone. Gen. Lee says, "About 7,000 prisoners have been already paroled, about the same number of small arms collected from the field, and thirty pieces of heavy artillery, and 100,000 lbs. of ammunition, and blankets, etc. A large number of arms still remain on the ground. For want of transportation, valuable stores had to be destroyed as captured, while the enemy, at their various depots, are reported to have burned many millions of property in their retreat." The Richmond Despatch also contains the following interesting particulars: "It is utterly impossible to subsist a large army in Northern Virginia during the coming winter. The ravages of war for the last

eighteen months have made the country almost a desert, reducing it nearly to the condition of Middle Germany, after the thirty years' war. Hence it contends, the army must attempt to be made to arrest the destructive conflict that is being carried on. It deprecates any interference with American affairs, but such as would prove acceptable to Americans, but says, "surely the idea of friendly mediation may be entertained without any derogation of national dignity." It argues that there are only two alternatives, to issue out of the war—either the utter extermination of one of the parties to it, or some form of accommodation and compromise between the contending sides. It asks, "Is it not better to have recourse to the latter at once, before the feelings of the North and South become hopelessly inflamed with the most bitter animosity and vengeance?"

FOREIGN.—Liverpool dates to the 6th inst. The Peace Society of London has issued an address to the people of the United States, urging that the time has come when an attempt should be made to arrest the destructive conflict that is being carried on. It deprecates any interference with American affairs, but such as would prove acceptable to Americans, but says, "surely the idea of friendly mediation may be entertained without any derogation of national dignity." It argues that there are only two alternatives, to issue out of the war—either the utter extermination of one of the parties to it, or some form of accommodation and compromise between the contending sides. It asks, "Is it not better to have recourse to the latter at once, before the feelings of the North and South become hopelessly inflamed with the most bitter animosity and vengeance?"

The stock of cotton in Liverpool was almost exhausted. Uplands were quoted at 30d., and Orleans, 31d. Breadstuffs dull, with a downward tendency.

The trial of Garibaldi and his followers was to take place immediately. He had requested permission to exile himself.

RECEIPTS.

Received from R. Townsend, N. J., per C. E. Cause, \$2, vol. 36; from R. Woodward, N. Y., \$6, vols. 28, 29, and 36; from Joseph Walton, O., per Jesse Hall, act, \$2, vol. 36.

NOTICE TO SUBSCRIBERS IN ENGLAND.

In consequence of the loss of a statement of our Agent, Geo. Harrison, of Manchester, England, rendering it difficult to appropriate the money remitted to us, by him, to the proper accounts, we have to request that subscribers for "The Friend," in England, Ireland and Scotland, who have made any payments on account, for the 34th, 35th or 36th volumes, to G. H., (who desires to be released from the agency,) will hand to our agents, Joseph Arnfield, No. 1 South Place, Fishmarket Lane, London, or John G. Sergeant, Cockermarket, Cumberland, England, statements of money paid, and the volumes for which it was paid by them.

FRIENDS ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent,—JUSTUS H. WORTHINGTON.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to ISAAC MORGAN, JR., 622 1/2 Pine Street, SAMUEL ALLEN, 524 Pine Street, GEO. J. SCATTERGOOD, Fifth and Callowhill streets.

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable Friend as Governess at West-Town Boarding School. Application may be made to Sidney Costes, 1115 Arch St., Philadelphia: Abigail W. Hall, Frazer, P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 36th and Bridge Sts., Philadelphia.

TEACHER WANTED.

A teacher competent to give instruction in reading and other branches, is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Arch St.; Deborah M. Williamson, 1024 Arch St., or Rebecca S. Allen, 353 S. Fifth Street.

Died, on the 29th ult., EDWARD BONSAAL; an esteemed member of Salem Meeting, Ohio, in the eighty-seventh year of his age.

—, at her residence in this city, on Sixth-day, the 6th inst., MARY DIBBON, widow of Benjamin Hornor, in the eighty-seventh year of her age.

WM. H. FILE, PRINTER, Lodge street, opposite the Pennsylvania Bank.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, NINTH MONTH 27, 1862.

NO. 4.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT No. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

The Explorers of Australia.

(Continued from page 18.)

Of the expedition for discovery undertaken by Eyre, we have the following notice:

"The South Coast, from Fowler's Bay to King George's Sound, lay as Captain Flinders had sketched it from his ship. Indeed, down to the present time, Eyre himself is the solitary white man who has trod its desolate wilds. From the summit of the cliffs, which had frowned down on the topmasters of H. M. S. 'Investigator,' stretched inland a table-land without rise or fall, until a sense and impenetrable skirting of scrub hid it from our sight. This table-land Eyre had now ascertained to be an unbroken sheet of limestone. At the bottom of the cliffs the action of the current ad hollowed out immense caverns; and, occasionally, huge portions of the rock became detached and tumbled into the ocean, showing by the rapidity with which they were engulfed, the hopelessness of finding any path by the margin of the sea. Inland, the country seemed equally unpromising, and the only portion capable of sustaining animal existence was a narrow strip extending along the edge of the table-land, overlooking the sea. Here the action of the wind had collected some scattered heaps of sand, on which grew a few tufts of sour raps and salsalaceous herbs. But already from Fowler's Bay to the head of the Great Bight, neither lake, pond, nor stream had been discovered; and we may now say that from Fowler's Bay to King George's Sound, a distance of upwards of 500 miles, no vestige of a water-course, nor any surface-lake, or pond was met. During the day, a strong wind blows from the interior, sometimes scorching in its heat, and loaded with fine sand, towards evening, this is met by a chilling breeze, coming up from the great Southern Ocean; and oblivious to the action of these two winds is to be attributed the deposition of sand on the limestone surface along the edge of this exposed table-land. Occasionally, at intervals of 150 and 200 miles, we had been formed into a cluster of hills, and on digging down to the limestone, at these places, a little brackish water was found to ooze out between the sand and the rock. Strange as it may seem, this was the only water at all approaching fresh, which could be discovered along the whole course of this terrible journey.

"In undertaking this most forbidding task, Eyre

had determined to risk the life of no European save himself. The men composing the North Exploring Expedition had, therefore, been sent back to Adelaide. But the overseer of the party, a servant long in the employment of Eyre, and a man of great energy and courage, refused to leave his master, and Eyre at length consented to accept his assistance. In addition, he retained two aboriginal young men, who had been some time in his service on his farm, and a third aboriginal, named Wylie, a native of King George's Sound, who lately arrived in Adelaide in a vessel which had touched there. With these, Eyre commenced making some necessary preparations, and giving his horses rest before finally leaving Fowler's Bay. He had informed the Governor, by letter, of the resolution which he had formed, but, in addition, the officers and men of the disbanded expedition made known, on their return to Adelaide, the great difficulties which Eyre had already experienced in his several efforts to round the Great Bight, and the singularly unpromising nature of the country beyond its head. From these it appeared that Eyre was advancing on certain destruction, and a Government sloop was immediately despatched to Fowler's Bay with a strong recommendation from the Governor to return, accompanied by an official approval of his conduct as leader of the late Northern Exploring Expedition. But Eyre's resolution was not to be changed, and the sloop returned to Adelaide without him. 'We were now alone,' he writes, 'myself, my overseer, and the three native boys, with a fearful task before us. The bridge was broken down behind us, and we must succeed in reaching King George's Sound, or perish. No middle course remained.' Having constructed bags to hold water, and having given the cattle sufficient rest, Eyre commenced his journey. His stock of provisions then consisted of some sheep remaining over from the disbanded expedition, and a few bags of flour. The head of the Great Bight was again rounded, and the same forbidding nature of country was found to extend along its western arm—the only vegetation being a few scattered tufts of grass, and the only water being procured from beneath the sandhills, occurring at intervals of 100 and 200 miles.

"That man or beast should travel through a succession of such intervals, extending over upwards of 1500 miles, is indeed wonderful, and, we believe, wholly without parallel. Sometimes a group of sandhills occurred at the end of one or two days' march; more frequently, scarcely a blade of grass, and not a drop of water, was met for a whole week, and human endurance, taxed beyond what it might be believed possible for human endurance to sustain, was no longer supported by the hope that another group was yet in advance, or that retreat was possible. Eyre's progress during one of these long intervals between water and water, may be thus sketched. After a halt of three or four days at one of these groups of sandhills to recruit, the horses were again loaded for a fresh start, the bags were filled with water, and the sheep were led out of their pen. For two or three days the horses were able to carry the few bags of flour, water, and

other necessary baggage. On the fourth day their strength began to fail, and it became necessary to lighten their loads—the rejected articles being left on the wayside. On the fifth and sixth days the horses became totally exhausted, and no exertions could force them to proceed further. Leaving them also stretched on the wayside, Eyre and his men, with the empty water-bags, hurried forward until the next group of sandhills appeared above the horizon. Arriving at these, they immediately proceeded to scoop out a well, considerable labour and delay being occasioned by the repeated falling in of the sand. Reaching the surface of the limestone, they quenched their thirst, and took a few hours' rest while the water-bags were filling. The whole party then shouldered their bags, and proceeded back to the horses; and these they generally succeeded in bringing on by easy stages to the sandhills; though occasionally they found one of the wretched and worn-out animals in its last struggles. Having brought everything living to the water, the most laborious task yet remained. Their provisions and a few indispensable articles were still strewn along their track; and, while the horses were taking some rest, it was necessary to go back and collect them, Eyre and his men carrying them on their backs a distance of sometimes forty or fifty miles. In addition to these immense labours, a further task devolved on Eyre and the overseer. The horses, though found unable to endure the same privation as the men, were, nevertheless, essential to the preservation of the party. Notwithstanding their fatigue, the want of water made them restless during the night, and, when not closely watched, they seized every opportunity to return to the last watering-place—the scattered position of the few tufts of herbage rendering it impossible to tether them. Nor could so important a task be safely entrusted to aborigines. Eyre and the overseer, therefore, agreed to divide each night between them, so as by strict watch, to ensure the possession of the horses in the morning.

"In this manner Eyre and his small party had toiled on for a couple of months, and had now accomplished more than half their journey, when an appalling act of treachery plunged him in fresh difficulties, and seemed to render his ultimate escape hopeless. In the midst of one of these long stages between water and water, they had encamped for the night, and Eyre had taken the first watch over the horses. It was approaching towards midnight, when Eyre's watch would expire, and he would be relieved by the overseer. The horses in their restlessness had led him some distance from the camp, when the report of a gun interrupted the sighing of the breeze over these desolate wilds. Startled by so unusual an occurrence, Eyre immediately hastened back to camp.

"I met the King George's Sound native, Wylie, running towards me, and in great alarm, crying, 'Oh, Massa, oh, Massa! come here!' but could gain no information from him, as to what had occurred. Upon reaching the encampment, which I did in about five minutes after the shot was fired, I was horror-struck to find my poor overseer weltering in his blood, and in the last agonies of death.

Glancing hastily around the camp, I found it deserted by the two younger native boys; whilst the scattered fragments of our baggage, which I left carefully piled up under the oil-skin, lay thrown about in wild disorder, and at once revealed the cause of the harrowing scene before me. Upon raising the body of my faithful but ill-fated follower, I found that he was beyond all human aid. He had been shot through the left breast with a ball. The last convulsions of death were upon him, and he expired almost immediately after our arrival.

"The frightful, the appalling truth now burst upon me, that I was alone in the desert. He who had faithfully served me for many years, who had followed my fortunes in adversity and in prosperity, who had accompanied me in all my wanderings, and whose attachment to me had been his sole inducement to remain with me in this last and, to him, alas! fatal journey, was now no more. For an instant, I was almost tempted to wish that it had been my own fate, instead of his. The horrors of my situation glared upon me with such startling reality, as, for an instant, almost to paralyse the mind. At the dead hour of night, in the wildest and most inhospitable wastes of Australia, with a fierce wind raging in unison with the scene of violence before me, I was left with a single native, whose fidelity I could not rely upon, and who, for ought I knew, might be in league with the other two, who, perhaps, were even now lurking about, with a view of taking away my own life, as they had done that of the overseer. Three days had passed away since we left the last water, and it was very doubtful when we might find any more. Six hundred miles of country had to be traversed before I could hope to obtain the slightest aid or assistance of any kind, whilst I knew not that a single drop of water or an ounce of flour had been left by these murderers from a stock that had previously been so small."

"Their small store of flour had indeed been the incentive to this horrible deed. The two natives had taken with them all the flour and water they could carry, and the double-barrelled guns of Eyre and the overseer, leaving behind them only a brace of pistols and a rifle which had a ball fast in the breech, and was useless for the time. The encampment showed that they had laid their plan for murdering the overseer over night; but, as the country around was entirely destitute of food, it is most probable that they perished as soon as their stock of flour was exhausted.

"After obtaining possession," continued Eyre, "of all the remaining arms, useless as they were at the moment, with some ammunition, I made no examination then, but hurried away from the fearful scene, accompanied by the King George's Sound native, to search for the horses, knowing that, if they got away now, no chance whatever would remain of saving our lives. Already the wretched animals had wandered to a considerable distance; and although the night was moonlight, yet the belts of scrub, intersecting the plains, were so numerous and dense that, for a long time, we could not find them. Having succeeded in doing so at last, Wylie and I remained with them watching them during the remainder of the night; but they were very restless, and gave us a deal of trouble. With an aching heart, and in most painful reflection, I passed this dreadful night, every moment appearing to be protracted to an hour, and it seemed as if the daylight would never appear. About midnight the wind ceased, and it became bitterly cold and frosty. I had nothing on but a shirt and a pair of trowsers, and suffered most acutely from the cold. To mental anguish was now added intense bodily pain.

Suffering and distress had well-nigh overwhelmed me, and life seemed hardly worth the effort necessary to prolong it. Ages can never efface the horrors of this single night, nor would the wealth of the world tempt me to go through similar ones again."

"With daylight, Eyre and Wylie prepared to hasten from this dreadful scene. There was not sufficient sand on the surface of the limestone to bury the body of the overseer, and nothing remained but to wrap his blanket around it. The sheep had all been consumed, or perished on the journey. Forty pounds of flour was now their only stock of provisions; and, abandoning everything else, save his charts and papers, Eyre hurried from the spot with his solitary attendant, Wylie. The two natives again appeared before starting, and made efforts to gain over Eyre, but they could not be induced to speak to Wylie, and, after a short time, they disappeared in the desert.

"The two travellers were now obliged to live chiefly on their horses, curing the flesh in the sun, and carrying on a sufficient quantity for some days' consumption. On these occasions, Eyre, in the midst of such overwhelming troubles, records in his note-book the strange appetite of Wylie for horse-flesh. When a horse was killed, he ate several pounds before lying down. During the night he got up almost hourly to resume his feast. He lay on the ground. He roared in agonies of indigestion. He begged to be allowed to rest a day. He was very bad; too much walk had made him bad; he was curing himself with horse-flesh. In the morning he loaded himself, notwithstanding his illness, with choice pieces, and, with tears in his eyes, left behind him all he could not carry. The singular wall of cliffs, too, retired inland, and they were enabled to gain access to the sea-shore, where they occasionally caught a stinging ray-fish. At length, when human nature threatened to sink under such long-continued fatigue and exposure, and to reach the settlement at King George's Sound, now close at hand, appeared beyond their strength, a whaling barque was sighted off the coast. On perceiving their signals, the commander—Captain Kossiter, of the French whaling-ship 'Mississippi'—sent a boat for them, and they were received on board with much hospitality. After recruiting themselves here for some weeks, they were again landed, within easy reach of the settlement, where they arrived in July, 1841, after an absence of over twelve months from Adelaide."

(To be concluded.)

From "Half Hours."

Mental Stimulus Necessary to Exercise.

That exercise should always spring from, and be continued under, the influence of an active and harmonious nervous and mental stimulus, will scarcely require any additional evidence; but as the principle is not sufficiently appreciated or acted upon, a few remarks seem still to be called for to enforce its observance. The simple fact that the muscles are expressly constructed for the purpose of fulfilling the commands of the will, might of itself lead to the inference that a healthy mental stimulus ought to be considered an essential condition or accompaniment of exercise; and, accordingly, the muscular action becomes easy and pleasant under the influence of mental excitement, and a vigorous nervous impulse is useful in sustaining and directing it. On the other hand, how difficult, wearisome, and inefficient, muscular contraction becomes when the mind, which directs it, is languid or absorbed by other employments! Hence the superiority, as exercises for the young, of social and inspiring games, which, by their joyous and

boisterous mirth, call forth the requisite nervous stimulus to put the muscles into vigorous and varied action; and hence the utter inefficiency of the dull and monotonous daily walk which sets a physiological condition of defiance, and which, in so many schools, is made to supersede the exercise which it only counterfeits. Even the playful gambolling and varied movements which are so characteristic of the young of all animals, man not excepted, and which are at once so pleasing and so attractive, might have taught us that activity of feeling and affection, and sprightliness of mind, are intended by nature to be the sources and accompaniments of healthful and invigorating muscular exercise; and that the system of bodily confinement and mental cultivation now so much in vogue, calculated to inflict lasting injury on all who are subjected to its restraints. The buoyancy of spirit and comparative independence enjoyed by boys when out of school prevent them from suffering under it so much as girls do; but the mischief done to both is the more unpardonable when done occur, because it might so easily have been entirely avoided. Even in some infant school where properly conducted exercise ought to be considered as a necessary of life, the principle on which I am insisting is so little understood or valued that no play-grounds have been provided, and the very best means of moral as well as physical training—play with companions—has, to the great injury of the poor children, been wholly omitted. Under judicious direction the play-ground affords the most valuable and effective aid to the parent and teacher, not only in eliciting the highest degree of physical health, but in developing the general character by the practical inculcation of moral principle, kindness, and affection, in the daily and hourly conduct of the children committed to the charge. A double evil is thus incurred in its neglect or omission.

Facts, illustrative of the beneficial influence of a mental stimulus as the only legitimate source of muscular activity, abound every where, and must be familiar to every reflecting mind; but as the practical influences deducible from them have, to great extent, escaped the notice of parents and teachers, I shall add a few remarks in their farther elucidation.

Every body knows how wearisome and disagreeable it is to saunter along, without having some object to attain; and how listless and unprofitable a walk taken against the inclination, and mere for exercise, is, compared to the same exertion made in pursuit of an object on which we are intent. The difference is, simply, that in the former case the muscles are obliged to work without the full nervous impulse which nature has decreed to be essential to their healthy and energetic action and that, in the latter, the nervous impulse is full and harmonious operation. The great superiority of active sports, botanical and geological excursions, gardening and turning, as means of exercise, over mere monotonous movements, is referable to the same principle. Every kind of youthful play and mechanical operation interests and excites the mind, as well as occupies the body and, by thus placing the muscles in the best position for wholesome and beneficial exertion, enables them to act without fatigue, for a length of time which, if occupied in mere walking for exercise, would utterly exhaust their powers.

The elastic spring, the bright eye, the cheerful glow of beings thus excited, form a perfect contrast to the spiritless and inanimate aspect of man of our boarding-school professions; and the results, in point of health and activity, are not less different. So influential, indeed, is the nervous

stimulus, that examples have occurred of strong mental emotions having instantaneously given life and vigor to paralytic limbs. This has happened in cases of shipwrecks, fires, and sea-fights, and shows how indispensable it is to have the mind engaged and interested along with the muscles.

The amount of bodily exertion of which soldiers are capable is well known to be prodigiously increased by the mental stimulus of pursuit, of fighting, or of victory. In the retreat of the French from Moscow, for example, when no enemy was near, the soldiers became depressed in courage and enfeebled in body, and nearly sank to the earth through exhaustion and cold; but no sooner did the report of the Russian guns sound in their ears, or the gleam of hostile bayonets flash in their eyes, than new life seemed to pervade them, and they yielded powerfully the arms which, a few moments before, they could scarcely drag along the ground. No sooner, however, was the enemy repulsed, and the nervous stimulus which animated their muscles withdrawn, than their feebleness re-appeared.

The same important principle was implied in the advice which the spectator tells us was given by a physician to one of the eastern kings, when he brought him a racket, and told him that the remedy was concealed in the handle, and could be taken upon him only by passing it into the palms of his hands when engaged in playing with it—and that, as soon as perspiration was induced, he might persist for the time, as that would be a proof of the medicine being received into the general system. In effect, we are told, was marvellous: and, looking to the principle just stated, to the cheerful nervous stimulus arising from the confident expectation of a cure, and to the consequent advantages of exercise thus judiciously managed, we have no reason to doubt that the fable is in perfect accordance with nature.

The story of an Englishman who conceived himself so ill as to be unable to stir, but who was prevailed upon by his medical advisers to go down on London to consult an eminent physician at Ipswich, who did not exist, may serve as another illustration. The stimulus of expecting the means of cure from the northern luminary was sufficient to enable the patient not only to bear, but to reap benefit from, the exertion of making the journey; and his wrath at finding no such person at Ipswich, and perceiving that he had been tricked, sustained him in returning, so that on his arrival home he was nearly cured. Hence also the superiority of battledoor and shuttlecock, and similar games, which require society and some mental stimulus, over listless exercise. It is, in fact, a positive misnomer to call a solemn procession *exercise*. Nature will not be cheated; and the faithful results of complete cheerful exertion will never be obtained where the nervous impulse which vivifies the muscles is denied.

It must not, however, be supposed, that a walk only for the sake of exercise can never be beneficial. If a person be thoroughly satisfied that exercise is requisite, and perfectly willing or rather desirous to obey the call which demands it, he will, from that very circumstance, in a fit state for deriving benefit from it, because the *desire* then becomes a sufficient nervous impulse, and one in perfect harmony with the muscular action. It is only where a person goes to walk, either from a sense of duty, or at the command of another, but against his own inclination, that exercise is comparatively less.

This constitution of nature, whereby a mental impulse is required to direct and excite muscular point points to the propriety of teaching the young

to observe and examine the qualities and arrangements of external objects. The most pleasing and healthful exercise may be thus secured, and every step be made to add to useful knowledge and to individual enjoyment. The botanist, the geologist, and the natural historian, experience pleasures in their walks and rambles, of which, from disuse of their eyes and observing powers, the multitude is deprived. This truth is acted upon by many teachers in Germany. In our own country, too, it is beginning to be felt, and one of the professed objects of infant education is to correct the omission. It must not, however, be supposed that any kind of mental activity will give the necessary stimulus to muscular action, and that in walking, it will do equally well to read a book or carry on a train of abstract thinking, as to seek the necessary nervous stimulus in picking up plants, hammering rocks, or engaging in games. This was a great mistake; for in such cases the nervous impulse is opposed rather than favourable to muscular action. Ready and pleasant mental activity, like that which accompanies easy conversation with a friend, is indeed beneficial by diffusing a gentle stimulus over the nervous system; and it may be laid down as a general rule that any agreeable employment of an inspiring and active kind, which does not absorb the mind, adds to the advantages of muscular exercise; but wherever the mind is engaged in reading, or in abstract speculation, the muscles are drained, as it were, of their nervous energy, by reason of the great exhaustion of it by the brain; the active will to set them in motion is proportionally weakened, and their action is reduced to that inanimate kind I have already condemned as almost useless. From this exposition the reader will be able to appreciate the hurtfulness of the practice in many boarding-schools, of sending out the girls to walk with a book in their hands, and even obliging them to learn by heart while in the act of walking. It would be difficult, indeed, to invent a method by which the ends in view could be more completely defeated, as regards both mind and body. The very effort of fixing the mind on the printed page when in motion, strains the attention, impedes the act of breathing, distracts the nervous influence, and thus deprives the exercise of all its advantages. For true and beneficial exercise there must, in cases where the mind is seriously occupied, be harmony of action between the mind which impels, and the part which obeys and acts. The will and the muscles must be both directed to the same end, and at the same time, otherwise the effect will be imperfect. But in reading during exercise, this can never be the case. The force exerted by strong muscles, animated by strong nervous impulse or will, is prodigiously greater than when the impulse is weak or discordant; and as man was made not to do two things at once, but to direct his whole powers to one thing at a time, he has ever excelled most when he has followed this law of his nature.

A. COMBE.

Brunel's Mishaps.—The following is from an article on the Brunels in the Quarterly Review:

"Although Brunel died at the comparatively early age of fifty-three, it is even a matter of surprise that he lived so long. He had more perilous escapes from violent death than fall to the lot of most men. We have seen that at the outset of his career, when acting as assistant engineer to his father in the Thames tunnel, he had two narrow escapes from drowning by the river suddenly bursting in upon the works. Some time after, when inspecting the shafts of the railway tunnel under Box Hill, he was one day riding a shaggy pony at

a rapid pace down the hill, when the animal stumbled and fell, pitching the engineer on his head with great violence. He was taken up for dead, but eventually recovered. When the Great Western line was finished and at work, he used frequently to ride upon the engine with the driver, and occasionally he drove it himself. One day, when passing through the Box tunnel upon the engine at considerable speed, Brunel thought he discerned between him and the light some object standing on the same line of road along which his engine was travelling. He instantly turned on the full steam, and dashed at the object, which was driven into a thousand pieces. It afterwards turned out to be a contractor's truck which had broken loose from a ballast train on its way through the tunnel. Another narrow escape he had was on board the Great Eastern steamship, where he fell down the hatchway into the hold, and was nearly killed. But the most extraordinary accident which befell him was that which occurred while one day playing with his children. Like his father, Sir Marc, he was fond of astonishing them with sleight of hand tricks, in which he displayed considerable dexterity; and the feat which he proposed to them on this occasion was the passing of a half sovereign through his mouth out at his ear. Unfortunately, he swallowed the coin, which dropped into his windpipe. The accident occurred on the 3d of April, 1843, and it was followed by frequent fits of coughing, and occasional uneasiness in the right side of the chest; but so slight was the disturbance of breathing, that it was some time doubted whether the coin had really fallen into the windpipe. After the lapse of fifteen days, Sir B. Brodie met—Key in consultation, and they concurred in the opinion that most probably the half sovereign was lodged at the bottom of the right bronchus. The day after, Brunel placed himself in a prone position on his face upon some chairs, and, bending his head and neck downwards, he distinctly felt the coin drop toward the glottis. A violent cough ensued, and on resuming the erect posture, he felt as if the object again moved downward into the chest. Here was an engineering difficulty, the like of which Brunel had never before encountered. The mischief was purely mechanical; a foreign body had gone into his breathing apparatus, and must be removed, if at all, by some mechanical expedient. Brunel was, however, equal to the occasion. He had an apparatus constructed, consisting of a platform, which moved upon a hinge in the centre. Upon this he had himself strapped, and his body was then inverted, in order that the coin might drop downward by its own weight, and so be expelled. At the first experiment the coin again slipped towards the glottis, but it caused such an alarming fit of convulsive coughing and appearances of choking, that danger was apprehended, and the experiment was discontinued. Two days after, on the 25th, the operation of tracheotomy was performed by Sir Benjamin Brodie, assisted by Key, with the intention of extracting the coin by the forceps, if possible. Two attempts to do so were made without success. The introduction of the forceps into the windpipe on the second occasion was attended with so excessive a degree of irritation, that it was felt the experiment could not be continued without imminent danger to life. The incision in the windpipe was, however, kept open, by means of a quill or tube, until the 13th of May, by which time Brunel's strength had sufficiently recovered to enable the original experiment to be repeated. He was again strapped to his apparatus, his body was inverted, his back was struck gently, and he distinctly felt the coin quit its place on the right side of his chest. The opening in the wind-

pipe allowed him to breathe while the throat was stopped by the coin, and it thus had the effect of preventing the spasmodic action of the glottis. After a few coughs, the coin dropped into his mouth. Brunel used afterward to say that the moment when he heard the gold piece strike against his upper front teeth, was, perhaps, the most exquisite in his whole life. The half sovereign had been in his windpipe for not less than six weeks."

For "The Friend."

Misings and Memories.

LOVE YOUR ENEMIES.

This command of our Blessed Saviour is obligatory on every one of his followers. They can have no unity with a world which lieth in wickedness,—they can have no fellowship with those who do not love the Lord Jesus, or who are labouring to overthrow the Truth as it is in Him,—yet they are bound to feel earnest desires for the everlasting well-being even of such, and to manifest that they are the disciples of him, who came into the world to save sinners, and who died for all.

An anecdote is told of Peter Miller, very characteristic of true christian love for an enemy. Peter was a leading man amongst that community of German Baptists in Lancaster county, Pennsylvania, called there Menece, a corruption of the word menonist. For a neighbour, he had a man who manifested great ill will towards Peter and the religious society of which he was a member. This person, who was wicked in himself, and a troubler of his innocent neighbours, during the Revolutionary war, having been caught in some treasonable actions, was sentenced to be executed at Chester, on the Delaware river. When Peter Miller heard of the fact, he felt within him the stirring of that christian love for his man, which incited him, if possible, to save his life. He had not much of this world's goods, and perhaps had no horse which he could command the service of, so he walked the sixty miles to Philadelphia, on a mission of mercy, to plead with General Washington for the condemned man.

He was received with kindness by the General, who listened to his petition that the man's life might be spared, but then respectfully, yet decidedly told him, that his request on behalf of his "unfortunate friend," could not be granted. On this, Peter exclaimed, "my friend! why I have not a worse enemy living than this same man." The General was much struck with this. He said kindly, "what! you have walked sixty miles to save the life of your enemy! That, in my judgment, places the matter in a different light, I will grant you my pardon." The grace which was an arbiter of life and death, he refused to grant to what might appear as the interested petition of a personal friend, he promptly accorded to the request of one, to whom the criminal had proved himself an enemy.

Taking the pardon in his hand, Peter started on foot for Chester, where the execution was to take place on the afternoon of that very day. This walk of fifteen miles was no doubt cheered by the feeling that he had performed a christian duty, and that his old enemy would yet have a further portion of time allotted him before entering that awful eternity, for which he was so little prepared. He arrived seasonably at his journey's end, and when the condemned man, from the scaffold beheld the tall figure of the person he had so often evilly entreated, in his well known white robe, and with his long staff, standing amid the crowd, he said to one near him, "There is old Peter Miller! He has walked all the way from Ephrata to have his revenge on me, by seeing me hung."

He did not comprehend the only revenge allowed to christians—returning good for evil. Soon he learned what brought old Peter in sight of his scaffold, and without doubt, he must have felt, as he heard his pardon read, and found that it had been obtained through the exertions of him he had wronged, how noble, how heavenly that religion was, which could enable one to labour and to pray for the good of an enemy. We know not what effect this christian act of Peter Miller had on the man relieved from a disgraceful death;—but without doubt, the venerable missionary of love, returned joyfully on his weary journey, with thanksgiving and praise in his heart to the Lord of every mercy, who had made his work and way prosperous.

An incident in the life of Samuel Hick, a religious blacksmith, of England, who often laboured as a class leader, and an antinear preacher amongst the Methodists, has come to my remembrance in connection with the above anecdote, as setting forth a good example of faithfulness in loving enemies, praying for persecutors, and doing good to them that despitely use you.

Samuel had experienced so much of the Lord's saving mercy himself, that he was anxious that all others might come, taste and see that the Lord was good. This led him to watch for an opportunity of speaking a word in season to those whom he feared were not anxiously concerned for the salvation of their souls. On one occasion, a young woman calling at his shop to have a shoe put on her horse, in place of one just lost, attracted his attention by her delicate appearance, which he thought indicated ill-health. After eyeing her for a time with great compassion, he said to her, "Dost thou know whether thou hast a soul?" Without waiting long for a reply, he continued, "Thou hast one, whether thou knowest it or not; and it will live in happiness or misery forever." The young woman had not been accustomed to hear, or think of such matters, and the blacksmith's brief address, awakened in her a train of serious reflection. On her return home she was sad and thoughtful, and to the enquiry of her father as to the cause, told him what had passed at the blacksmith shop. Her father in anger said, "What, has that old blacksmith been at thee, to turn thy head? but I will whack him." He immediately armed himself with a thick stick, and finding Samuel at the anvil, he struck him so heavy a blow on the side of the head, as nearly prostrated him to the ground, although he was a very powerful man. The injured man comprehending the cause of the assault, with much composure turned the other side of his head to the furious assailant, and said, "Here, man, hit that too." This meekness manifested by one so well qualified by physical strength, to have defended himself, and punished his aggressor, at once quelled the heart of the enraged father. He retired, wondering at the nature-subduing power of true religion. The arrow of unresisting meekness from the blacksmith, entered as deeply in him, as the arrow of the words of Truth did in his daughter. Both of them pondered over what they had heard and seen. After a time, the father was taken dangerously ill. He sent for the blacksmith and entreated his forgiveness. Samuel told him he had nothing against him, or any other person living. After some further conversation, he prayed by the bed-side of the dying man. Religious convictions, growing out of Samuel's meek and christian bearing of his abuse, had taken deep hold of the sick man. The Holy Spirit had operated thereby in awakening him to a sense of his own need of such a religion, and had drawn him to the blessed Saviour, through

whom, by the washing of regeneration and the renewing of the Holy Ghost, he was prepared to put off his earthly tabernacle in hope. His daughter became a truly pious and devoted christian, and Samuel lived to see some of her children walking in the ways of Truth, and manifesting the good effects of christian education and restraint. His christian temper, his holy conversation, his longing for the spiritual welfare of others, appeared in this case, to have been remarkably blessed.

Samuel Hick was a man of small natural ability, and little education, but having great energy of will, and being thoroughly given up to the Lord's service, he was very useful in his way. At one time being in London, he was invited to visit a rich man, who was distressingly nervous and suffered much from low spirits. This was a disease which Samuel could not understand. His was a happy, active, trustful spirit; confiding everything to the Lord, and believing that his wisdom would order all things aright, left him no cause for mourning or depression of mind. After spending some hours with the sick man, in which he had occasion to set forth his experience of the goodness and mercy of the Most High, and the fulness and humble confidence of his own faith, he left, the rich man saying "I would freely give all I possess to be as happy as you are."

As death drew near, very happy indeed was Samuel at the thought of "going home." His last days were passed in exhortation, in prayer, and thanksgiving, and nearly his last words were, "peace, joy, and love."

The Sick in Bed.—With a proper supply of windows, and a proper supply of fuel in open fire-places, fresh air is comparatively easy to secure when your patient or patients are in bed. Never be afraid of open windows, then. People do not catch cold in bed. With proper bed-clothes, and hot bottles, if necessary, you can always keep a patient warm in bed, and well ventilate him in bed. Never to allow a patient to be waked intentionally or accidentally, is a *sine qua non* of all good nursing. If he is roused out of his first sleep, he is almost certain to have no more sleep. It is a curious but quite intelligible fact that, if a patient is waked after a few hours' instead of a few minutes' sleep, he is much more likely to sleep again; because pain, like irritability of brain, perpetuates and intensifies itself. If you have gained a respite of either in sleep, you have gained more than the mere respite. Both the probability of recurrence and the same intensity will be diminished, whereas both will be terribly increased by want of sleep. This is the reason why a patient waked in the early part of his sleep, loses not only his sleep, but his power to sleep. The more the sick sleep, the better they will be able to sleep. A good nurse will always make sure that no door or window in her patient's room shall either rattle or creak; that a blind or curtain shall, by any change of wind through the open window, be made to flap; especially will she be careful of all this before she leaves her patient for the night. If you wait till your patient tells you or reminds you of these things where is the use of his having a nurse?

Pins Fifty Years Ago.—Pins were worth a dollar a paper in 1812, and were poor at that. Then it took fourteen processes to make a pin now only one, by a machine which finishes six sticks then into the paper. Saving pins, a half century ago, was as important as saving cents, and hence the habit thus formed sticks to many elderly gentlemen whose coat sleeves are ornamented with rows of them, rescued from loss.

For "The Friend."

It is probable that most of the readers of "The Friend," have heard of Emanuel Swedenborg, who was the founder of what is designated "The New Jerusalem Church." It may be interesting to them to peruse the following condensed biographical notice of that singular man, taken from a recent number of "The Methodist."

"Swedenborg was born in Stockholm, in the year 1688, and died in London, in 1772, thus reaching the extreme age of eighty-four years. He was never married. His life-time divides itself into two distinct periods—the first, ending with his fifty-fifth year, was given to business, science and philosophy; the second, of nearly thirty years, was exclusively consecrated to theology and spiritualism.

"He was educated at Upsal, and having graduated as Doctor of Philosophy, travelled for four years in England, Holland, France and Germany. In his absence, his father plied the government of Charles XII. for some office into which he might at once step on his return, with a pertinacity which would take no repulse. After many delays and some temporary employment, the father was rejoiced by his son's appointment to the assessorship of the mines.

"With Charles XII. Swedenborg had much intercourse, and they talked over many mathematical and arithmetical questions together. One day Charles remarked that 'he who knew nothing of mathematics did not deserve to be considered a rational man,' a sentiment, thought Swedenborg, 'truly worthy of a king.' In the prosecution of the siege of Fredericksahl, he was of service to Charles in carrying two galleys, five large boats and a sloop overland for fourteen miles, on rolling machines of his own contrivance. The cannon ball from Fredericksahl, which, on the 11th December, 1718, killed Charles, and gave peace to Scandinavia, dissolved a connection in which Swedenborg's engineering skill would have had many chances of display.

"His brain at this time was teeming with mechanical and economical designs. He published short works on algebra, giving the first account in Sweden of the differential and integral calculus; on a way of finding the longitude by means of the moon; on decimal money and measures; on the motion and position of the earth and planets; on the depth of the sea, and greater force of the tides in the ancient world, proved from appearances in Sweden; and on docks, sluices and salt works. He was very anxious to set up an observatory, and to commence salt making, and had plans for a machine by which a man might go under the sea, and do great damage to the fleets of the enemy; an air-gun, from which a thousand balls might be discharged from one tube in a moment; a musical instrument, on which the inexperienced musician might play any tune; an aquatic clock, showing the motions of the heavenly bodies; a flying chariot; a chariot full of tools, set in motion by the movement of the horses; and so on.

"In 1721, he went to Amsterdam, and there printed in Latin some treatises on chemistry, iron and fire, docks and dykes, and on his method of finding the longitude by the moon. At Leipzig, in 1722, he published a volume of miscellaneous observations on geology, vitrification or the change of particles into glass, on stoves, fire-places, wind and draught furnaces, on chemistry as atomic geometry, and many other matters. On his return to Sweden, he issued a pamphlet on the Swedish currency. From this occasion we may conceive he range and versatility of Swedenborg's mind.

"He now betook himself to the duties of his as-

essorship, and for eleven years staid at home and published nothing. Living among mines and miners, he set himself the task of their systematic description; and not content with the narration of the technical details of mining and smelting, he struggled with the insoluble problem, how copper, and iron, and matter, and Nature herself came to exist and subsist. Having accumulated a great mass of manuscript, he went to Leipzig in 1733, and commenced printing, and in 1734 completed, in three massive folios, adorned with his portrait and many plates, his "Opera Philosophica et Mineralia;" the Duke of Brunswick paying the whole cost of the publication. The second and third volumes of the work are given up to a description of the manufacture of copper, iron and brass, and contain an exhaustive record of the best methods in use last century. The first volume, entitled "Principia, or the first Principles of Natural Things, being New Attempts towards a Philosophical Explanation of the Elementary World," has alone any general interest. It is an elaborate theory of the origin of the universe from what he defines as "points of pure motion produced immediately from the infinite."

"We have now reached the close of the first part of Swedenborg's life. Had he died at this time, it is not likely that any except a librarian who had to catalogue his works, would ever have heard of his name. His writings do not appear to have obtained for him any marked recognition among the *littérati* of that day; and they have been brought to light, and translated into English in our own time, solely through the interest which attaches to his later career. His writings evidence a mind of singular clearness, grasp, and constructive power; he delighted in theory and generalization, but contributed no new facts to science; and theories akin to his are very ancient, and continue to be produced with varied success in confirmation or refutation from positive science. It is not uncommon to find Swedenborg complimented for his service to science, but we are never told wherein that service consisted. No truth bears his name as its discoverer, and the works we have enumerated were utterly neglected by himself during the remainder of his life-time, and were similarly dealt with by the world.

"A great change now came over Swedenborg. In 1744, he was in Holland, and entered into a series of dreams, visions and waking fantasies, plunging him at one time into cruel perplexity and torment, and at another elevating him into ecstasies of bliss. This part of Swedenborg's life was, until 1858, hid in obscurity, when M. Klemming, the royal librarian in Stockholm, discovered a diary kept by him in 1744, giving minute relations of his mental states. This diary is of inestimable value to the biographer of Swedenborg, for 1744, was the pivot of his life, and it sheds a light upon points in his past career which explain some in his future. On the evidence of this diary, Swedenborg was unquestionably in a state which, rightly or wrongly, we should pronounce insane, and which at this day would justify a physician in consigning a patient to Hanwell or Colney Hatch. From Holland he passed over to London, and lodged in Fetter lane."

"It was in this same Fetter lane that Wesley formed his first societies. How singular that those two men of commanding talents, one practical, the other purely visionary, yet both destined to leave followers after them, should have been thrown into so close a juxtaposition!

"It is related, but not on the best evidence, that in London he lived for a time under the care of a Dr. Smith and a keeper, as a lunatic. It is cer-

tain, however, that he returned to Sweden at the end of 1745, and in 1747 resigned his assessorship, that he might give himself up without reserve to the new duties to which he believed himself divinely appointed. In consideration of his thirty years' service, his salary was continued to him in full. In 1749 he made his appearance in London as a theologian, in the publication of the first volume of his *Arcana Cælestia*, completed in 1756, in eight solid quartos. His life henceforward was spent at home in Stockholm, and in voyages to London and Amsterdam, with shorter or longer residences in these cities, in order to supervise the printing and distribution of the products of his prolific pen. With the exception of two or three of his last, all his theological publications were issued anonymously.

"He now openly professed himself a companion of angels, seeing spirits and demons daily, and holding converse with them as a man with men. His books are replete with instances of his experience with spirits, with interviews with saints, sages, and sinners of all times and nations, and with descriptions of scenery celestial and infernal.

"Swedenborg wrote all his books in Latin, and printed them at his own expense. They were well advertised, but they did not sell, and he therefore gave them away freely among the clergy. Judged by success, Swedenborg was among the most unlucky of men. He testified that the christian church had come to an end, and that a new church, signified by the New Jerusalem in the Revelation, was about to begin, and that his writings were for its use. A very small circle of friends and disciples was all he had. In England, the Rev. Thomas Hartley, rector of Winwick, Northamptonshire; William Corkworth, a Quaker preacher of Plymouth; and Dr. Messier, a London physician, received his doctrines, and translated and published some of his books. In Sweden, a few clergymen and noblemen, Dr. Oettinger, of Wuertemberg, and Lavater, in Switzerland, read his writings, and believed.

"Of Swedenborg personally we find nothing but the pleasantest memories. All who knew him, speak of him as kind, affable and discreet. Those who expected to meet a dreamer or an enthusiast, found a gentleman wide awake, and as self-possessed as themselves. His years were spent in study and retirement; yet he was readily drawn into society, which he frankly met and enjoyed. He was quite willing to talk on theology and spiritualism, if invited, and held his own with the readiest; jesting or scoffing never ventured to break into his serious and serene presence. His evident sincerity impressed all listeners; and whilst he spoke, he won their belief sometimes against their will.

"His habits were very simple; he disliked giving trouble; he lit his own fire and made his own coffee, of which he drank freely, made sweet and without milk. Animal food he seldom or never tasted, living on almonds, raisins, biscuits, bread and butter, cakes, milk and vegetables. One day when William Corkworth called to see him, he found him making his dinner of bread and milk. Of money he had always abundance, which he spent in travelling and printing; he lent none, for that, he used to say, was the way to lose it; and gave none to beggars, for that he thought encouraged rascality and laziness.

"In person, Swedenborg was about five feet nine inches high, erect, rather thin, and of a brown complexion. His eyes were of a brownish gray, nearly hazel, and rather small. He had always a cheerful smile on his countenance, and a kindly sparkle in his eyes. His manners and dress were

those of a gentleman of the last century; he wore a wig, a suit of black velvet and long ruffles, a sword, and carried a gold-headed cane.

"His last lodging was with Shearsmith, a puke-maker, at 26 Great Bath Street, Cold Bath-fields, Clerkenwell; the house has, within the last twenty-years, been taken down and rebuilt. In the area of Cold Bath Square, now covered with houses, he used to sit and walk, and distribute gingerbread and fruit among the children who played there. His body, after death, was interred in the vault of the Swedish Chapel, in Prince's square, to the east of the Tower, near London Dock.

"The number of the followers of Swedenborg in the United States is not very large. According to their own statistics, they have 38 societies, and several thousand members. Many of them are persons of the highest intelligence; among some of our literary men and artists, there is a singular inclination to Swedenborgianism."

The English Language.—Its Progress.—In the year 700 the Lord's Prayer began thus:—"Ure fader this are in heofnas, so gokahud this noma, to smyth this rick, sic thin willa sue is in heofnas, and in etco."

Two hundred years after, thus:—"Thee ura fader the heofsum si thin narnagehal God. Com thin ric. Si thin willa on eamænswa, or heafum."

About two hundred years after this, in the reign of Henry II, it was rendered thus, and sent over by Pope Adrian, an Englishman:

"Fader thou art in heaven blisse
Thine Hoyle name it wurt the blisse
Cumen and moti thy kingdom,
Thine holy will it be all done,
In heaven and in earth also,
So it shall be in full well le-tro," &c.

The following was the form of the Lord's Prayer in the year 1300:

"Ure Fader in heaven, rich,
Thine name be hailed ever lich,
Thou brings us to michell blisse;
His bit in heaven do,
That in the earth been it also," &c.

About one hundred years after, in the reign of Henry III, it ran thus:—"Fader our in heaven, Halawed be thy name, Come the kingdom, Thy will be done as in heavene and in earth. Our ueh dayes bred give us to day, and forgive us our dettes, as we forgive our debtors, and lede us not into temptation, Bote deliver us from evil. Amen."

In the reign of Henry VI, it began thus:—"Our fader that art in heaven, hallowed be thy name, the kingdom come, to thee, be the will done in earth as in heaven," &c.

In 1537, it began thus:—"O our father who art in heaven! hallowed be thy name. Let thy kingdom come. Thy will be done as well in earth as it is in heaven!"

A touching event lately occurred in England, on the banks of the Thames, near London, which illustrates the faithfulness and sagacity of the dog. A young gentleman, possessed of a fine dog, but for some unexplained cause, wishing to get rid of him, took a punt into which he put the animal, rowed to the middle of the stream, and threw the dog into it with the intention of drowning him. The poor animal tried several times, till almost wearied, to climb up the perpendicular sides of the boat, but was as often pushed back, when overbalancing himself, the man fell overboard; as soon as the faithful dog saw his master in the water, he ceased his efforts to save him-self, seized him by the clothes, and in that position held him till assistance was rendered, by means of which the life of the unrelenting master was saved.

From "The British Friend."

On Friendship.

A SALUTATION TO FRIENDS BY MARTHA SMITH.

Dearly Beloved Friends,—Having, according to my apprehension, experienced much of the constraining power and love of Christ Jesus our Lord drawing my spirit into inexpressible sympathy with the self immortal, and pointing out a way whereby relief might be obtained, by communicating something of what my "hands have handled" during my travels in the weighty work wherein I have exercised in my day as a watchword to those who may be called to blow the trumpet on the holy hill, and to whom an awful responsibility attaches; it is under an humbling persuasion that the Lion of the tribe of Judah has prevailed to open the way, that I attempt to convey it in writing; the openings being clearly unfolded in my view, I dare not withhold them, lest I should commit sacrilege, and rob the church of its right, which would be high ingratitude in me, seeing how much I owe unto my Lord for all the blessings, "ancient and new," showered down upon me without measure.

For a series of years, particularly during the protracted illness with which I have been visited, my mind hath often been introduced into deep and weighty exercise, respecting the most important vocation in which the children of men can be employed on this side the grave, that of "having the everlasting gospel to preach unto them that dwell on the earth"—even to become mouth to the people. The extraordinary care and caution absolutely requisite herein, is memorably exhibited in the account on record, concerning Moses, when he lifted up his hand, and with his rod smote the rock twice, and the waters gushed out abundantly; yet how deep must have been his agony on discovering that through unwatchfulness to the word of command, he had offended the Lord Almighty, although described to be very much "above all the men which were on the face of the earth," emphatically pointing out the imperious necessity of waiting to receive a clear commission, lest we touch the ark unbidden, and the anger of the Lord be kindled against us as in the case of Uzza, when "He smote him because he put his hand to the ark, and there he died before God," for it is written, "The prophet who shall presume to speak a word in my name, which I have not commanded him to speak, even that prophet shall die."

On weightily pondering the solemn truths contained in holy writ, great is my solicitude that all who minister in the assemblies of the Lord's people, may offer offerings in righteousness, such as will find acceptance with Him. A pure ministry is a blessing from heaven; as this is perfectly maintained, they who minister, and those who are ministered unto, rejoice together; if otherwise, words are uttered in our religious meetings without the spirit and power of the Highest, it tends to afflict and disturb those who are communing with Christ their Saviour, and doth not profit the church, as nothing gathers to God except that which proceeds from his all-bountiful hand. As there is an abiding in the safe pavilion, words are few and savoury, neither is there any danger of incurring Divine displeasure, by standing in the way of those who are livingly sensible of the fire burning upon the altar, kindled by the mighty hand of the Lord God of Hosts. As this is witnessed, the impressive language on holy record will go forth, "How beautiful on the mountains are the feet of him that bringeth good tidings of good, that publisheth salvation." Deep attention to the pointings of the holy finger is also impressively exemplified, as it regards the father of the faithful, when he was

about to offer up his son Isaac. At that awfully important period, how gathered must have been the state of his mind, when his beloved child made the deeply interesting inquiry, "Behold the fire and the wood, but where is the lamb for a burnt-offering?" Fraught with resignation and faith is the reply of Abraham, our father—"My son, God will provide himself a lamb for a burnt offering." Solemnly have I been impressed and instructed in contemplating this truly moving and instructive narrative, as it hath been, I fully believe opened by the key of David, forcibly pointing out to the messengers of the gospel the great caution required even when, according to their apprehension, all is fully prepared for the oblation, how deeply incumbent still to wait, to hear the all-powerful word of command, for peradventure a ram may be unexpectedly caught in the thicket out of our sight, and be made ready for the sacrifice. Therefore, to obey the injunction, "Be silent, O all flesh, before the Lord, for he is raised up out of his holy habitation," is of vast importance, and our indispensable duty, until we distinctly hear the voice of our Almighty Father. Oh! the patient waiting that is necessary at this all-important crisis, previous to the great Head of the Church revealing his sacred word to his dependent children; yet forever praised be his adorable name, indisputable certainty, and soul-satisfying assurance are the blessed result of deep introversion of soul, in these solemn seasons of awful prostration; and there are those who, through unmerited mercy, are joyful witnesses that previous to the sacrifice being called for, they are permitted to feel a trembling somewhat similar to Moses, when he said, "I exceedingly fear and quake"—a certain token that the Most High is near at hand, comparable to the whirlwind and the fire that Elijah heard and saw, when he wrapt his face in his mantle, which *must pass by before* the still small voice is fully comprehended, which is truth indeed, altogether powerful; and whatsoever is unfolded by this light, after passing through these essential baptisms, may with entire safety be relied upon, as proceeding from the holy of holies.

Moreover, I feel engaged to bear testimony that important in the highest degree is a state of close and inward watchfulness before we put up our petitions, or offer the tribute of thanksgiving and praise, in the presence of the Lord and his gathered church. Well may we as a people, reverently acknowledge that prayer and supplication are especial parts of worship, and must be performed in spirit and in truth, with a right understanding, seasoned with grace. Very great is the danger of being misled in this solemn act of devotion, as well as of taking *another's exercise*, unless we try the fleece both wet and dry; because when the spirit of supplication overshadows an assembly, those who are united in solemn worship are dipped into one and the same baptism, which circulates from vessel to vessel, as is set forth by the lip of truth; "The Lord sent a word into Jacob, and it lighted upon Israel." At this critical juncture, it is absolutely needful to attain to "the silence of all flesh" before we are enabled to discern the mind of Truth, or witness the sacrifice to be completely prepared, so as to pray with acceptance; yet, if preserved in holy stillness, the sound of the trumpet waxeth louder and louder, until the evidence is indisputably clear and certain that the Lord speaketh from heaven, and the Most High uttereth his voice; we are then constrained implicitly to obey and "lift up a banner on the high mountain;" and "our heart with our hands unto God in the heavens," that with David we may declare, "Blessed be thou Lord God of Israel, our Father, for ever and ever. Thine, O Lord, is the greatness, and the

power, and the glory, and the victory, and the mastery, for all that is in the heaven and in the earth is thine; thine is the kingdom, O Lord! and thou art exalted as head over all."

By the foregoing salutation, I am now relieved from a heavy burden, and have great occasion reverently to acknowledge that the day is arrived, when in serenity and peace, a retreat from the arduous field of labour is mercifully sounded, and that like Isaac, I am favoured to rejoice in my tent. I fervent is the breathing of my heart, that all who believe themselves called of God, as was Aaron, may so attend to the leadings of Christ within, the hope of glory, as to build upon the foundation of the apostles and prophets, Jesus Christ himself being the chief corner-stone, which I am enabled thankfully to testify is a safe hiding-place in the day of trouble, and has supported me during many years of deep mental and bodily conflict. On retrospect, my heart is gladdened within me, under Divine impression, that the hand of Omnipotence hath been eminently stretched forth to sustain and carry, through, in, and over all. Then fear not, ye remnant of Jacob, however baptism may succeed baptism; remember that "unto the upright there ariseth light in the darkness, for the Lord is our judge, the Lord is our lawgiver, the Lord is our king, he will save us."

With love unfeigned I bid you dearly farewell, and remain, in the consolations of the gospel of life and salvation, your sympathizing and affectionate sister in the Truth,

MARTHA SMITH.

Doncaster, Eighth month 29th, 1828.

Wonders of the Atmosphere.—The atmospheres above us with its cathedral dome, arching tower heaven, of which it is the most perfect synonym and symbol. It floats around us like that grand object which the Apostle John saw in his vision, "a sea of glass like unto a crystal." So massive is it that when it begins to stir, it tosses about great ships like playthings, and sweeps cities and forests like snow-flakes to destruction before it.

And yet it is so gentle that we have lived years in it before we can be persuaded that it exists at all, and the great bulk of mankind never realize the truth that they are bathed in an ocean of air, its weight is so enormous that iron shelves before it like glass; and yet a soap ball sails through it with impunity, and the tiniest insect waves it aside with its wing. It ministers lavishly to all the senses. We touch it, not, it touches us. Its warm south wind brings back colour to the pale face of the invalid; its cool west winds refresh the fevered brow, and make the blood mantle on our cheeks; even its north blasts brace into new vigor the hardened children of our rugged climate. The eye is indebted to it for all the magnificence of sunrise, the all brightness of mid-day, the chastened radiance of the morning, and the clouds that cradle near the setting sun. But for it the rainbow would not send the feeble messengers on errands around the heavens; the cold ether would not shed snow others on the earth, nor would drops of dew gather on the flowers. The kindly rain would never fall, nor hail-storm nor fog diversify the face of the sky; our naked globe would turn its tanned and unshaded forehead to the sun, and one weary monotonous blaze of light and heat dazzle and burn up all things.

Were there no atmosphere, the evening sun would a moment set, and without warning plunge the earth in darkness. But the air keeps in her hand shield of her rays, and lets them slip out slowly rough her fingers, so that the shadows of evening

are gathered by degrees, and the flowers have time to place their heads, and each creature time to find a bow of rest, and to nestle to repose. In the morning the garish sun would at one bound burst from the bosom of night, and blaze above the horizon; but the air watches for his coming, and sends but first one little ray to announce his approach, and then another, and then a handful, and so gently draws aside the curtain of night, and slowly lets the light fall upon the face of the sleeping earth, till her eyelids open, like man, she goes forth again to her labour until the evening.—

Quarterly Review.

For "The Friend."

How many of the members of our religious Society lightly esteem, or altogether disregard, the privilege, which they are invited to enjoy, of constant attendance at its religious meetings. This is one of the visible evidences of the lack of true religion amongst us, and, unless the result of inability, must be attended by worldly-mindedness and indifference to the great work of preparation for another state of existence.

In the early days of the Society, when Friends had often to suffer deeply for being found at their meetings, they allowed neither difficulty nor danger to prevent them from assembling at the regular times and places for divine worship. The obligation to thus meet in order publicly to show our sense of dependence upon God, and of our duty to wait upon and worship him, has ever been enjoined by the Society, and acknowledged and observed by all its consistent members. We give the following extract, in the hope that it may incite all who read it, to diligence, and a due appreciation of the privileges placed within their reach, and for which, whether improved or unimproved, they are accountable:

"Not long after, John (Ashton) was thrown into prison for his christian testimony against the oppressive and anti-christian yoke of tithes. Being used to work without doors, he was at a loss how to employ his time; but soon learned to make gartering and laces. When at liberty, he with his wife constantly, twice a week, attended the meeting at Bin, generally walking on foot thither, being about seven English miles, and a very bad road, wading through a river in the way, both going and returning. In winter, in crossing this river, they sometimes had the ice to break; and John said he had wept to see the blood on his wife's legs in coming through it. In those days, Truth was precious to its professors, who also possessed it, and no difficulties or dangers could prevent them from going to their religious meetings, to enjoy the renewings of divine love and life, with their brethren."

—*Friends' Library*, vol. ix., page 18.

The Darien Ship Canal.—The preparations are nearly completed for the consummation of that grand enterprise for the connecting of the waters of the two great oceans by a canal across the Isthmus of Panama. The present expedition is under the auspices of the Emperor Louis Napoleon. Several French engineers under direction of M. Bonardil, having previously made a partial exploration, are operating in Darien upon a detailed survey of the line for a ship canal between the Atlantic and Pacific oceans. There is thus, at length, a prospect of this grand project being carried into execution. The land about to be surveyed extends from the Gulf of San Miguel, on the Pacific, in a direction N. E. $\frac{1}{2}$ E. by compass, to Caledonia Harbour and Fort Escoces on the Atlantic. The Gulf of San Miguel receives

numerous rivers, the largest of which are the Tuyra and the Savana, which unite together just before falling into it. The Savana is navigable for the largest ships up to the confluence of the Lara with it, that is, for fourteen miles toward the Atlantic. From the confluence of the Lara with the Savana, at which point the future canal will commence, the line extends to the Chiquanaqua, a distance of twelve miles. From the Chiquanaqua the line follows the bed of the Sautauti a distance of nine miles, and then continues along the bed of the same river Sautauti to a point nine miles higher up. From that point to the Atlantic the distance is six miles. The whole length of the projected canal will therefore be thirty-five nautical or nearly forty-one English miles.—*Herald and Mirror.*

Pride and the World.—On one occasion, he said to one of his brothers, "Heed not the world, nor the things thereof: I wish I had heeded it less;" and once when in great bodily extremity, he exclaimed, "Here is the end of pride."—*From a Memorial of Charles Wheeler.*

THE FRIEND.

NINTH MONTH 27, 1862.

On many former occasions, we have invited the co-operation of our friends in rendering the columns of "The Friend," entertaining and instructive, and the aid received encourages us to renew the invitation. We believe there are many capable of lending a helping hand, who do not rightly appreciate the good they might bestow upon others, by employing their talents, and a portion of their time, in contributing to such a periodical as this, and thus placing their thoughts and feelings before so many of their fellow-members. There are various subjects, connected with trade and business, with science and art, with agriculture and rural economy, with home enjoyments, and the pleasures and experiences of travel, beside the intricacies of religion, and the acquisitions from literature, any of which would afford ample scope for the employment of ability to write well, which is too generally permitted to lie idle, to the loss of all parties. We wish our many friends and well-wishers, both male and female, would think more seriously what might be effected for good, were they to exert themselves to do, what they could so readily accomplish, in this way; and then we apprehend it would be felt more like a duty to occupy diligently the talents committed to them. We would at the same time remind our friends in different neighbourhoods, that the commencement of a new volume is the best time for adding new subscribers to our list. We hope they will be willing to give us their aid in this way, that so the interest in and the benefit derived from the Journal, may be extended. We have had good reason to be well pleased with the support and encouragement given us by Friends, and as we have no other incentive than the desire to be really useful to our fellow-members, we feel the more emboldened to ask the continuance and extension of their patronage.

SUMMARY OF EVENTS.

UNITED STATES.—*The Capture of Harper's Ferry.*—The advance of the great rebel army into Western Maryland, exposed this post to danger, but it was judged expedient to hold it, if possible, for the protection of the Baltimore and Ohio railroad, and for other purposes. It was occupied by 14,000 Federal troops, Col. Miles having the chief command. Gen. Jackson commenced the attack from the Maryland heights on the 13th, and on the 14th, a large rebel force took possession of the Lou-

don (Va.) heights, and placed batteries so as to command the town. The firing of the rebels had not caused any very serious loss, but Col. Miles came to the conclusion that the position was untenable, and permitted the cavalry, 2300 in number, to cut their way out and escape. On the 16th, he surrendered to the rebels, with 11,583 troops. Fifty pieces of artillery, and valuable supplies, fell into their hands. At the time of the surrender, Gen. Barnside was for his relief, and was within a few miles of Harper's Ferry. The advantage given to the rebels by this hasty surrender, was of great importance at a most critical juncture, and probably averted serious disaster to them in Maryland.

The Invasion of Maryland.—After the defeat of the Confederate forces in the battles of the 14th inst., they continued their retreat to the south-west, and on the 16th, rallied the various divisions of the army at Antietam Creek near Sharpsburg, a few miles north of Harper's Ferry. They were here joined by Gen. Jackson, with a reinforcement of 40,000 men. On the capture of Harper's Ferry the previous day, he immediately paroled the prisoners, secured such arms, ammunition, and supplies as were needed, and hastened to take part in the conflict. The rebel army of 60,000 consisted of the regulars, and a large range of considerable extent, and the Federal forces, in perhaps equal numbers, were drawn up on sloping plains of lower elevation. A partial engagement took place on the afternoon of the 16th, and a fierce and sanguinary conflict ensued on the following day, which lasted until day broke. The fighting was not very hard, but about a mile during the day, but the contest was regarded as indecisive. The U. S. troops are said to have lost about ten thousand men, in killed and wounded, in this battle. The loss of officers was very heavy, no fewer than ten generals having been either killed or wounded. The loss of the rebel army is supposed to be not less, greater, and to amount to at least fifteen thousand. On the 18th, the rebel commander asked an armistice for one day, for the purpose of burying the dead, and removing the wounded, which was granted by General McClellan. It was expected the battle would be renewed on the 19th, but it was found in the morning when the Federal forces advanced upon the rebel lines, that their troops had been withdrawn during the night, the pickets only being left at their posts. They were followed to the Potomac, but only a few hundred stragglers were secured, and the remainder safely to Virginia. The rebels left 2500 of their dead unburied; many of their wounded were also left in houses on the route to the river. A number of the rebel generals are reported killed or wounded, but there is no reliable information on that point. It is now believed that the rebels will be driven from the Treasury during Buchanan's presidency, was wounded and taken prisoner in the retreat from Middleton heights.

Virginia.—The rebel troops appear to have been withdrawn from the vicinity of Washington. A reconnaissance in force made on the 15th, showed that there were none remaining between Washington and Ball Run. The rebels abandoned Harper's Ferry on the 18th, having previously destroyed the substantial iron bridge of the Baltimore and Ohio railroad, and burned the pontoon bridge across the Potomac. Coffee was selling in Baltimore at a few cents since. Sugar, 16 cts. per lb.; tea, \$1.62 sugar, 60 cts. a \$1.00; salt, 60 cts. per quart; molasses, \$1.00 per gallon; butter, \$1.00 per lb.; potatoes, \$1.00 per peck; callio pipes, \$1.50 per yard; pins, \$1.50 per paper. These prices were payable in treasury notes, or Confederate currency, and were 25 per cent. above the value of the U. S. treasury currency. In exchange for gold, the depreciation or difference was as 2 1/2 to one; that is \$40 in gold was equal to \$100, Confederate notes.

New Mexico.—Another rebel expedition from Texas against New Mexico, which had been intended, and defeated, near Fort Fillmore by the California troops, and utterly routed. Most of the Texans were captured, only 150 escaping.

Mississippi.—A rebel force of 15,000 men was attacked by Gen. Rosecrans near Iuka, on the 19th inst., and defeated. Gen. Little, of Mississippi, was killed, and Gen. Whitefield wounded and taken prisoner. About 2500 other rebels were taken prisoners. Between 400 and 500 of the U. S. troops were killed and wounded. The loss of the rebels is supposed to be greater. General Price is in Northern Mississippi, and is said to have an army of 30,000 men.

Kentucky.—The rebels still make progress in this State. The U. S. troops at Munfordsville, which recently repelled an attack from the rebels, have since been compelled to surrender to Gen. Bragg, who surrounded their position with a large army. The garri-

son, who were all taken prisoners, numbered between 4000 and 5000, with ten pieces of artillery. The people of Louisville are greatly alarmed at the progress of the rebels, and were fortifying the approaches to the city. On the 22d, an order was issued, directing the women and children to prepare to leave the city forthwith.

Minnesota.—The hostile Indians have expressed their willingness to give up their captives, and make peace. Gov. Ramsey, in his message to the Legislature, estimates the number of whites killed by the Indians to be five hundred persons. Much property has been destroyed, and the Government suggests that the United States government be requested to appropriate the annuities due the Minnesotians Indians, amounting to \$2,000,000 for the benefit of those who have suffered from their outrages.

Explosion at Pittsburg.—On the 17th, a terrible explosion occurred in the United States Arsenal grounds, in the vicinity of Pittsburg, by which eighty persons lost their lives, and many more were severely injured.

The Finances of the "Confederacy."—The Richmond Examiner of the 12th says, "It is ascertained from official data furnished by the Treasury department, that the Confederacy has received from the Government, from commencement to the first of August last, amount to \$347,272,958." This represents nearly the amount of debt, but little of which bears interest. The funds have been derived nearly altogether from the issue of Treasury notes to circulate as currency, a proposition which has not been very successful, in order to check the constant tendency to depreciation.

New York.—Mortality last week, 408.

Philadelphia.—Mortality last week, 248.

The Slaves of Rebels proclaimed Free.—An important proclamation has been issued by the President of the United States. Its object is exhibited in the following extracts. It is declared, "That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State, or designated part of a State, the people of which, at that time, were in rebellion against the United States, shall be then, thenceforth and forever free; and the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of such persons; and will do no act or acts to oppress such persons, or any of them, and that any relations to their actual freedom. That the Executive will, on the first day of January aforesaid, by proclamation, designate the States or parts of States, if any, in which the people thereof respectively shall then be in rebellion against the United States, and the fact that any State or States thereof are in rebellion, and that they are in good faith represented in the Congress of the United States by members chosen thereto at elections wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State and the people thereof are not then in rebellion against the United States."

FOREIGN.—European dates to the 12th. The Liverpool market for breadstuffs was dull, and prices declining. Cotton had fallen 2d. per lb. Sales of the market were small. Small profits were being made in Wiltshire, was making further progress. An official order from the councils prohibits the removal of any sheep from the infected districts, and makes other provisions to check the disease.

The affairs of Italy are freely discussed by the British press, and the London Standard has published an article signed "La Guerrierne," argues against the total abandonment of Rome by France, and endeavours to demonstrate the possibility of Italy definitely constituting herself without Rome for her capital.

RECEIPTS.

Received from Ann Kaighn, N. J., \$2, vol. 35; from Joel Evans, Pa., for Jno. Lewis, \$2, vol. 35; and for Elizabeth Lowmes, \$2, vol. 35; from R. W. Miller, \$2, vol. 35; from Small, \$2, vol. 35; from Wm. Hill, \$2, vol. 36; and for Talitha A. Wharton, \$2, vol. 35; from Jos. H. Satterthwaite, Pa., \$2, vol. 36; from Nathan Kite, Pa., for Wm. S. Kirk, \$2, vol. 36; from Geo. Gilbert, Pa., \$2, vol. 36; and for Benj. Walker, \$2, vol. 36; from Jehu Fawcett, agt. O., for Dan. Watson, \$2, vol. 36; and for Sarah Hole, \$2, vol. 35; for Rebecca

Woolman, \$2, vol. 36; for Jno. Oliphant, \$2, vol. 36; and for Wm. Fisher, \$4, vols. 35 and 36; from Susannah Marriot, N. Y., \$2, vol. 36; from Jas. Austin, Mass., for Elizabeth F. Gardner, \$2, vol. 36; and for Edward Mitchell, \$2, vol. 36; from Jos. Battery, N. Y., \$2, vol. 36; and for Alfred King, Saml. Simkin, Jr., Nicholas D. Trip, and Francis Adams, \$2 each, vol. 36; for Hannah Nickerson, \$2, to 52, vol. 36.

NOTICE TO SUBSCRIBERS IN ENGLAND.

In consequence of the loss of a statement of our Agent, Geo. Harrison, of Manchester, England, rendering it difficult to appropriate the money remitted to us, by him, to the proper accounts, we have to request that subscribers for "The Friend," in England, Ireland and Scotland, who have made any account for the 34th, 35th or 36th volumes, to G. H., (who desires to be released from the agency,) will hand to our agents, Joseph Armfield, No. 1 South Place, Finsbury Pavement, London, or John G. Sargent, Cockermouth, Cumberland, England, statements of money paid, and the volumes for which it was paid by them.

WEST-TOWN SCHOOL.

The Committee to superintend the Boarding-School at West-Town, will meet in Philadelphia on Sixth-day, the 10th of next month, at 2 o'clock, P. M.

The Committee on Instruction, and that on Admissions, meet on the same day; the former, at 10 o'clock, and the latter, at 11 o'clock, A. M.

The Visiting Committee attend the semi-annual examination of the school, commencing on Third-day morning, and closing on Fifth-day afternoon of the same week.

JOEL EVANS, Clerk.

Ninth month 25th, 1862.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSEPH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's classes. Applications may be made to ISAAC MORGAN, Jr., 622 Noble street, SAMUEL ALLEN, 524 Pine street, GEO. J. SCATTERGOOD, Fifth and Callowhill streets

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable Friend as Governor at West-Town Boarding-School. Application may be made to Sidon Coates, 1116 Arch St., Philadelphia; Abigail W. Hal Frazer P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 36th and Bradd Sts., Philadelphia.

TEACHER WANTED.

A teacher competent to give instruction in reading and other branches, is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Arch St., Deborah M. Wilkinson, 1024 Arch St., or Rebecca Allen, 335 S. Fifth Street.

DIED, at his residence near Barnesville, Ohio, on 11 13th of Eighth month, in the seventy-sixth year of his age, WILLIAM KENNAUD; a minister of the gospel, and member of Stillwater Monthly Meeting. His last illness was of several months' duration, in which though lit with respecting the state of his mind, yet, on several different occasions, remarked that "all was peace within." At one time adding, "the work is going right under the direction of the All-seeing Eye." Another time he said to a friend, "My mind is kept much inward, and centred on heavenly things." On the 15th of the month he was taken with great exhaustion when it seemed his dissolution was near, he said, "blessed change it will be to me. My peace is made in Christ Jesus." In solemn supplication, near his close, he manifested that his only hope of salvation continued to be the mercy of God.

WM. H. FILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, TENTH MONTH 4, 1862.

NO. 5.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Instances of Divine Preservation in Danger.

To be redeemed from all dependence upon military defenses and strength, and to have the whole just placed upon the Lord's preserving and protecting power, while it is clearly a christian duty, nevertheless, not an easy attainment. It requires Divine help, and constant watchfulness against that spirit which looks to man; which takes pleasure in the skill and prowess of warriors who espouse the cause we approve, and which is gratified when victory is on the side we espouse, without thinking, perhaps, that it is purchased at the sacrifice of human life, and the wounding and maiming of many of our fellow men.

War is a dreadful and wicked business, wholly at variance with the meek, lowly, and loving Spirit of the unresisting Lamb of God; and the closer his disciples walk with him, doing his will, the further are they removed from those cruel lusts and passion in which it is conducted.

Those who have entirely renounced it, and faithfully upheld the non-resisting peace principles of the gospel, have often experienced remarkable preservation in imminent danger, and had cause to admire the gracious interference of Divine Providence in their behalf. The Irish rebellion, in 1798, furnished many memorable instances of this kind, and illustrated forcibly the benefits of a steady adherence to the principles of Friends, in times of great danger. Having lately met with a manuscript account drawn up by Joseph Haughton, of Ferns, in Leinster, relating scenes of which he was an eye-witness, I have thought it would be interesting and encouraging at the present difficult time.

It is entitled, "God's protecting Providence our surest help, exemplified in the preservation of many of the Society of Friends during the rebellion in Ireland, in 1798. Committed to writing by Joseph Haughton, from his own observation, and from the information of others personally concerned."

"A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee." "Because thou hast made the Lord, which is my refuge, even the Most High, thy habitation."—Psalm xci.

The writer says: "Having often meditated on the merciful preservation which I, with others of the Society of Friends, experienced during the

awful commotions that prevailed in this land, in and about the year 1798; I have been desirous that they may not pass away as matters of only common occurrence. I write this memorial that succeeding generations may see how such 'better it is to trust in the Lord than to put confidence in princes'; and that to keep faithful to the truth as revealed to us, is a far more sure defence than all the efforts human policy can make or procure.

"In the year 1795, the Quarterly Meeting of Leinster Province, and afterwards the Yearly Meeting of Ireland, were concerned that all Friends who had guns in their houses, for domestic purposes, or any other weapons, might destroy them, in order to prevent their being taken and used for the injury of any of our fellow creatures, it being then a frequent practice for parties of men to assault houses in search of arms. In unison with this concern, our Monthly Meeting for the county of Wexford appointed a committee to go from family to family among its members, and endeavour to prevail on them to comply with the concern of the Society. I was with this committee, feeling my mind nearly interested in the engagement; but seeing the necessity of first clearing my own hands, I took a fowling piece I had in my possession, and broke it up, in the street opposite my house, which was matter of wonder amongst my neighbours.

"It was a time of serious thoughtfulness, and in many families the committee had little more to do than to communicate their business; for the concern of the Superior meetings had made its way in most minds, who, being convinced of its propriety, had destroyed all such instruments, and others gave full expectation of having it speedily done. There were a few who could not be prevailed upon to make this sacrifice, but the conduct of most of them, in other respects, was such as to occasion their disowment.

"A short time after the government ordered all arms to be given up to the magistrates, and it was then a very comfortable reflection, that, in general, Friends were found clear of having any such thing in their possession. Some of the neighbouring magistrates, with the clergyman, came to my house, and I being from home, expostulated with my wife on the supposed impropriety of my destroying my gun, instead of delivering it to the government, for the purpose of defending the Royalists against the fomenters of rebellion, and for the preservation of myself and family; to which the clergyman voluntarily replied that 'he believed I put my trust in a higher power.' This man was afterward murdered at Enniscorthy on the day that town was burned, and his body, with those of many others, exposed in the streets, until some Friends were emboldened to go and bury them. One of the above magistrates named Turner, was also murdered, and his house burned over him.

"The state of things becoming more alarming, a part of the militia was stationed in Ferns. The Earl of Mount Norris came to me, and desired I would give up part of my house then used as a store, for a guard house for the soldiers. The requisition was sudden, and I was put to a stand,

considering what to answer. Although I might have refused him on account of its being used as a store, yet I knew this inconvenience might be obviated, and therefore declined offering so mean a reason for refusal. Considering this an opportunity afforded me to lift up the standard of peace, and of bearing my testimony against war; I told him the apartment was occupied as a store; but that the purpose he wanted it for, was such as I could not unite with, having a conscientious scruple against war and everything connected therewith.

"He grew very angry, and desired the soldiers to afford me no protection in case any disturbance should arise; to which I replied that 'I hoped I would neither apply for, nor trust to, any military protection.' He went away greatly displeased, marking me out as a disqualified person; so that I did not know how soon a prison might be my lot, especially as one of the militia, who was quartered at my house, propagated such false reports of me, with respect to political matters, that it increased the peril of my situation. I was well compensated, however, for this little act of faithfulness, by the income of peace, which filled my heart to the degree, that I was made willing to suffer the hardships of a prison, if this should be allotted me.

"Some months after this, the militia began to act with great vigour against such as were suspected to be United Irishmen, (or rebels;) burning their houses and stacks of corn, and fastening pitched caps on their heads. They were preparing to burn a house of this description in our village. I felt much pity for the man's wife and children, who would thereby be deprived of a habitation; and I undertook to intercede for them with the commanding officer. I remarked to him, that I did not come to meddle between him and the suspected person; but pitying his poor wife and children, thought it would be hard to bereave them of a shelter and the means of subsistence, when he had the man fully in his power; that if he was guilty, probably they were innocent of his crime. The officer got very warm in his temper; and charged the Quakers with meddling in cases, while they would give no assistance to government. A little time after this, when the rebel party got dominion here, I rendered this office some services; and had the satisfaction of believing that his prejudices were removed, from the grateful acknowledgments and thanks he expressed for my friendship.

"About this time the military were preparing to hang some suspected persons, for not delivering up their weapons, and to fasten pitched caps on the heads of others. I was fearful of being applied to for ropes, which I kept for sale; but which I could not be easy to sell for that purpose, and yet a refusal might involve me in danger. Martial law being proclaimed, I was at a loss to know what to do; but when some of the military came to buy, I refused to sell ropes, and also linen, [probably to make the pitched caps,] intended to torment and destroy my fellow creatures. They took them by force, offering me payment, which I refused to accept. This was but a day or two before the general rising of the United Irishmen in this county; and was, I believe, through the direction of Divine Providence,

made instrumental to the preservation of myself and family.

"The next day a melancholy silence prevailed. I inquired of a person if anything more than usual was in prospect. I was told the country people were collecting in large bodies. A cloud of darkness overspread my mind in such an awful manner that it is not possible to describe it. Like Egyptian darkness, it could be felt; and the feeling was exceedingly grievous. At midnight all was alarm. Guards were placed in different parts of the town, and the protestants were in continual terror. I got my family to bed, but we could not rest; yet endeavoured after a state of quietude, and retirement of mind, not knowing how soon our lives might be taken by the hands of violent men.

"Early in the morning, being in much anxiety as to the event; a person, whom I supposed to be one of the United Irishmen, came in and said, 'Let who will be killed, the Quakers will be spared.' I considered this like the intimation given to Gideon, in the camp of the Midianites, while listening to the soldier's dream; and which tended to dispel his fears, and fix his confidence. I felt encouraged to hope our lives might be spared. The scenes that morning were exceedingly awful. The houses and stacks of grain were in flames in every direction around us, some set on fire by the yeomanry, and some by their enemies; so that between the two total devastation seemed at hand. The protestant inhabitants were running into the towns and villages for safety; the military guards all under arms; and, in every direction, persons flying for protection, escaping wounded from the hands of murderers, in the country, and bringing news that others were slain. Property was then of little account; every one's care was to escape with life.

"Being informed that some of the fugitive protestants were much in want of something to eat, I got victuals prepared and sent to invite such to partake, but none came. In the evening, the military left and marched to Emisborough; and, with them, the protestants, and all who came in for safety, as well as those who lived in our village. We knew not of their going away, until the place seemed almost depopulated; and we were favoured to have a little time of peaceful quiet from the alarms of war.

"We remained in doubtful suspense of what would follow, until next morning, when the town and neighbourhood were filled with an undisciplined and ungovernable crowd, consisting of many thousands of the United Irish, (the rebels,) following the army to Emisborough, and demolishing the houses of the Loyalists, Orangemen, &c.; for the inhabitants of them had fled.

"My house was soon filled with them; when, to our astonishment and humble admiration, instead of the massacre we dreaded, we were met with marks of friendship. They declared that they intended us no injury, but would fight for us; adding that they required nothing from us but some provisions. They appeared in extreme want, and the food which had been prepared for those they called enemies, was now ready for them.

(To be continued.)

The Explorers of Australia.

(Continued from page 25.)

Captain Sturt was engaged to explore the interior.

"In 1814, he started from Adelaide with a strong and well-equipped party, consisting of sixteen men, the officers of the expedition being—Poole, as second in command and surveyor,—Stuart, (now so well known for his late exploits in exploration,) as draughtsman, and—Brown, as

"Desirous to escape altogether from the meshes of Lake Torrens, which had already entangled Eyre, he left that district on his left hand, and passed up the Murray and the Darling, merely making a descent, at intervals, on the Torrens basin, to ascertain the existence of an eastern arm. On each of these occasions a shore was seen, similar in many respects to the shore described by Eyre on the western arm; and hence we have Lake Torrens, with its horse-shoe shape, on our maps.

"Leaving the Darling, which was taking him too much out of his northern course, at its junction with a small tributary, called by the natives the Williorara (the Menindee of the late expedition under Burke and Wills,) he endeavoured to pass up the Williorara. But its waters quickly failed him, and pasture was becoming daily more scarce. The expedition had started in winter, so as by help of the spring showers to push to the north. The sun was now beginning to dry up the pools, and no time was to be lost. By means of forced marches, Captain Sturt and his men passed over a very inhospitable tract of country, and reached as high as lat. 29½, when they unexpectedly came upon a picturesque spot, well watered and supplied with food for the cattle. To this was given the name of the Rocky Glen Depot; and here Captain Sturt determined to allow both men and horses to recruit for some time, while he explored the country beyond, for the purpose of selecting the most safe northern route. With dismay he gradually ascertained that no northern route was to be found. The Rocky Glen ceased as suddenly towards the north as it had opened, and the country beyond became an absolute desert. In vain Captain Sturt and the officers under his command followed the course of every creek—now a cracked, baked channel—and made long and harassing excursions into the district around. Neither water nor pasture was to be found beyond the Rocky Glen. Retreat, too, was cut off. The summer's sun had now dried up every pond and creek which had supplied them on their line of march, and six months' imprisonment in the Rocky Glen Depot became certain.

"For six months no rain fell. The violence of the sun became insupportable. To escape from its rays, a large underground chamber was excavated, to which the men retired during the heat of the day. Gradually the surrounding desert closed in on them. The whole vegetation of Rocky Glen became mere snuff, and was carried away by the hot blast. Nothing was left but the naked rocks, and the pool of water on which their lives depended. Day by day, it too yielded to the fury of the sun. "Under its effects, every screw in our boxes had been drawn, and the horn handles of our instruments, as well as our combs, were split in fine laminae. The lead dropped out of our pencils; our signal rockets were entirely spoiled; our hair, as well as the wool on the sheep, ceased to grow, and our nails had become as brittle as glass. Scurvy now attacked the whole party. Some of the men would be unable to proceed with the expedition, and—Poole was dying. In this condition, the winter months came slowly round, and the first refreshing shower fell. The way was again open, and it might be possible to save Poole. A litter of boughs and dried leaves was already prepared; and with Poole six of the men endeavoured to make a retreat on Adelaide. But the winter had been too long in coming. Poole died a few hours after his attendants had quitted the camp, and his body was brought back just as Captain Sturt and the remainder of the expedition were about to start on their northern course. His companions raised a rude pyramid of stones on a neighbouring hill to mark the place of his inter-

ment, and Mount Poole is all that is left to tell of the weary days spent in the Rocky Glen Depot. "That rude structure," writes Captain Sturt, "looks over his lonely grave, and will stand for ages, as a record of all we suffered in the dreary regions to which we were so long confined."

"About fifty miles further on, a fresh halting-place was discovered, called Park Depot. And from Park Depot, Captain Sturt made two sustained efforts to reach the centre of the continent, passing each time through districts of a most singular nature. And now, for the first time, we approach the great interior,—that region from which the Murray had formerly borne Captain Sturt aside, and from which the gloomy prospect seen from Mount Hopeless had, more recently, compelled Eyre to turn. Doubtless, to the results of these two efforts it was to be mainly attributed the opinion, up to a late period so almost universal, that all Central Australia would be found of a very worthless character. How strong were the grounds for this opinion we shall the better judge when we have followed our explorers on these two excursions from Park Depot.

"Accompanied by Brown and three men, Captain Sturt started from Park Depot, maintaining a course 25 degrees west of north, or, in other words, bearing right down on the centre of the continent. In a short time, the country assumed all the appearance of a desert. Neither grass nor water was any longer visible, and the eye rested on nothing, to the brink of the horizon, but reddish-brown sand. Gradually, as they advanced, this sand swelled into long parallel ridges, running from east to west, and rising higher and higher, until at length our explorers found themselves toiling over a very ocean of solid billows, some 50 or 60 feet high, and succeeding each other in endless uniformity. This formation bore no traces of the action of water, and must have been the slow result of a prevailing wind accumulating its solid wave in the gradual course of ages. At the distance of about two hundred miles from Park Depot, this singular country came to an abrupt termination and our explorers stood before what is now known as Sturt's Stony Desert. The parallel sand ridges running from east to west, were suddenly chopped off at right angles, and, in their stead, stretched an immense level plain, uninterrupted all round the horizon from south to north, and thickly strewn with small fragments of quartz, firmly packed to gether, and rounded as if water-worn. Still ad-hering to their course, 25 degrees west of north, our party descended into this singular plain, and proceeded on their way over its natural pavement. Neither herb nor shrub protruded through this finer-wedged quartz fragments. No sound movement could be heard or seen all around them and the dray-wheels and hoofs of the horses left not the least impression on the surface of the plain. All that could attract or sustain animal and vegetable life Nature seemed to have rigidly excluded from this scene of desolation. Thus the sun went down, and Captain Sturt and his men encamped for the night in the Stony Desert.

With the morning, our party was again under way; and, at the distance of about thirty miles from its commencement, the Stony Desert was found to come to an equally abrupt termination. An immense plain of clay, or dried mud, now lay before them, entirely destitute of vegetation, and resembling, as Captain Sturt describes it, "a boundless ploughed field, on which floods had settled and subsided." No water, however, could be found and the earth, cracked by the heat of the sun abounded in immense fissures, which were avoided by extreme watchfulness and care. St

maintaining their original course, our party arrived at the termination of this plain also, and found the tall sand ridges re-appear precisely as they had left them on the eastern shore of the Stony Desert. In fact, the whole district seemed merely interrupted by the course of the Stony Desert and Mud Plain from north to south, and again resumed its former appearance without any disturbance whatever. Again our explorers toiled over this solid ocean of red billowous ocean seen, as it were, under the glare of some great conflagration, lashed into waves running mountains high, and then suddenly frozen all around from centre to horizon. From want of food and water, the horses were now almost exhausted; and the men, who could bring nothing with them from Park Depot but some tea and a little flour, were scarcely better able to encounter the difficulties of this most harassing country.

(To be continued.)

For "The Friend."

Nothing pertaining to this world is of equal value with a pure conscience void of offence towards God and towards man. Without it we cannot enjoy true peace and happiness, nor expect to be blessed with a certain hope of everlasting happiness in the world to come. No temporal sacrifices is so great to procure and to preserve such a conscience, and the reward of Divine approbation, and the peace which Christ gives to his humble, self-denying people. This heavenly peace is the element in which sanctified souls live and breathe, and constant watchfulness must be maintained that no temptation of the devil, the insinuations of worldly men, or any false estimate of the goods of this world, or the shame it attempts to attach to an upright walk with God, should draw us from steadfast adherence to the convictions and requirements of his Spirit.

In the prospect of great troubles, which Stephen Crisp believed to forewarn coming upon the nation, he gave the following excellent counsel to Friends, to put their trust in the Lord Almighty, and to maintain their watch against the influence of the spirit, and the craftiness of the men of this world.

He says: "But Oh! Friends, while all these things are working and bringing to pass, repose ye yourselves in the conviction of that Rock, that all these shakings shall not move; even in the knowledge and feeling of the eternal power of God, keeping ye subjectly given up to his heavenly will, and feel it daily to kill and mortify that which remains in you, which is of this world. The worldly part in you, is the changeable part, and that is up and down, full and empty, joyful and sorrowful, as things go well or ill in the world. For as the Truth is but one, and many are made partakers of his spirit, so the world is but one, and many are partakers of the spirit of it; and so many as do partake of it, so many will be straitened and perplexed with it. But they who are single to the Truth, waiting daily to feel the life and virtue of it in their hearts, these shall rejoice in the midst of adversity. These shall not have their hearts moved with fear, or tossed with anguish, because of evil tidings.—Psal. cxlii. 7, 8, because that which fixeth them, remains with them. These shall know their entrance with the bridegroom, and so be kept from sorrow, though his coming be with a noise. And when a midnight is come upon man's glory, yet if they being ready and prepared, it will be well with them; and having a true sense of the power working in themselves, they cannot but have unity and fellowship with the works of it in the earth, and will not at all murmur against what is, or wish or will what is not to be. These will be at rest till

the indignation passeth over, and having no design to carry on, and no party to promote in the earth, cannot possibly be defeated or disappointed in their undertakings.

"And when you see divisions and parties, and rendings in the nations, and rumors and tempests in the minds of people, then take heed of being moved to this party or to that party or giving your strength to this or that, or counselling this way or that way; but stand single to the Truth of God, in which neither war, rent nor division is. Take heed of that part in any of you, which trusts and relies upon any sort of men of this world, in the day of their prosperity; for the same party will bring you to suffer with them in the time of their adversity, which will not be long after; for stability in that ground there will be none. But when they shall say, come join with us in this or that, remember you are joined to the Lord by his pure Spirit, to walk with him in peace and in righteousness; and you feeling this, this gathers out of all bustlings, and noises, and parties, and tumults, and leads you to exalt the standard of Truth and righteousness in an innocent conversation, to see who will flow unto that. This shall be the refuge for many of the weary, tossed and afflicted ones in those days, and a shelter for many, whose day is not yet over.

"So dearly beloved friends and brethren, who have believed and known the blessed appearance of the Truth, let not your heart be troubled at any of these things. Oh! let not the things that are at present, nor things that are yet to come, move you from steadfastness, but rather double your diligence, zeal and faithfulness to the cause of God. For they that know the work wrought in themselves, they shall rest in the day of trouble, yea, though the fig-tree fail, and the vine bring not forth, and the labour of the olive-tree cease, and the fields yield no meat, and the sheep be cut off from the fold, and there be no bullock in the stall, yet then mayest thou rejoice in the Lord, and sing praises to the God of thy salvation.—Hab. iii."

We have always professed belief in the necessity of the guidance of the Spirit of Truth to lead us in the path of safety and to guard us against the temptations of Satan. It may be easy to profess, but to put in constant practice this essential christian doctrine, requires steady watchfulness and prayer and the obedience of living faith. Our testimony against all wars and fightings is founded in this pure spirit which would lead us to breathe "glory to God in the highest, on earth peace and good-will to men." To support this blessed testimony, our own spirit, and actions, and words must be steadily watched, that we may guard against every thing that is inconsistent with this christian doctrine and would lay it waste. Our lives are intended to glorify our Heavenly Father and spread the kingdom of the Prince of peace, who came not to destroy men's lives but to save them.

Kindness to one another and a patient endurance of contempt, rudeness or injury when offered, are fruits of the good Spirit by which we may overcome our enemies.

It is inconsistent with the profession of a conscientious scruple against fighting, to rejoice in victory obtained by the sword. The destruction of human life is cause for deep mourning, let it be of what party it may. How can any one glory in the carnage of human beings, who may have been suddenly sent into an awful eternity unprepared to meet the judge of quick and dead. The spirit and practice of revenge does not belong to the gospel dispensation. "Ye have heard that it hath been said, an eye for an eye, and a tooth for a tooth; but I say unto you," is the command of Christ,

"that ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also." "Ye have heard that it hath been said, thou shalt love thy neighbour, and hate thine enemy: but I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you; that ye may be the children of your Father which is in heaven; for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust."

His compassion is extended unto all; and Christ adds, "Be ye therefore perfect, even as your Father which is in heaven is perfect." He also said, "Blessed are the merciful for they shall obtain mercy—blessed are the peacemakers for they shall be called the children of God."

For "The Friend."

The Women's Aid Society.

This Society, to which attention has been called in the columns of "The Friend," (vol. 35, p. 349), has been instituted within the last six months, for the purpose of co-operating with an association of similar character called "The National Freedman's Relief Society," in providing clothing and other necessaries, for the destitute coloured people, lately slaves, who are now under the protection of the United States Government.

These poor creatures, many of them deserted by their masters; have for many months past been constantly seeking refuge in greater or less numbers in Washington, Fortress Monroe, and other places of supposed safety; and lately, since the withdrawal of the Federal forces from North Eastern Virginia, in greatly increased numbers; and the provision made by the government for their subsistence and clothing, having of late become quite insufficient, many not otherwise assisted, are now suffering from the want of proper clothing, suitable medicines, and it may be feared, in some cases, of sufficient food.

The efforts of this Society have been principally directed towards collecting, purchasing and making up garments for women and children; and during the few months since it commenced, it has prepared and forwarded more than 2500 such garments. Of these about 1200 were sent to Port Royal, over 700 to the "Contraband Camp" at Washington, and nearly 300 to Hampton, near Fortress Monroe: in two instances a small assortment of medicines, dietetic articles, &c., were sent with the clothing.

The funds which have been used in purchasing and making up material, and in defraying the other expenses of the society, amounting to about \$1500, have been obtained (with the exception of \$200, presented by The "National Freedman's Relief Society,") entirely by individual donations. This sum has now been considerably reduced: and the demand for relief still continues urgent, and will probably increase. Under these circumstances the Society desires again to call the attention of Friends and others interested, to this suffering class, and to make an appeal for assistance in promoting the benevolent objects of the association. Clothing either new or partly worn may be forwarded to the House of Industry, No. 112 N. Seventh st., and contributions of money will be received by Sarah W. Cope, No. 1312 Filbert St., Hannah E. Kaibin, No. 716 Arch st., Sarah Pennock, 805 Franklin st., Mary Scattered, No. 413 Spruce st., and Elizabeth Fogg, No. 1310 Cherry st.

The following extracts from letters written by persons directly interested in the care of these coloured persons, will give a more detailed account of their condition in the neighbourhood of Wash-

ington, D. C. D. B. Nichols, Superintendent of "Camp Barker" in that city, an asylum intended for those who cannot be provided with labour, on account of the number of their children, or who are crippled, or too infirm to work, as well as a hospital for any "contrabands" who fall sick in or around Washington, writes under a recent date:—"Since our military changes in the vicinity of Manassas, the blacks have taken a perfect stampede, and I understand the road from Manassas Junction is lined with contrabands who will be here in due time. These fugitives have suffered the greatest privations in reaching this place. Some mothers have carried two children in their arms and on their shoulders for miles, and for all this I have never found a single one in whose heart the sparks of freedom burn so dimly, that they feel that with all their trials and discomforts which their fleeing has occasioned them, that they would exchange their present condition for their former one. * * *

These wretched ones come here half starved, miserably clad, worn out by exhaustion and disease, to seek an asylum; to throw themselves into the arms of those who will protect their interest,—those upon whom they may rely for sympathy and help: this hope for the future gives them strength to endure the fatigue of the journey." After acknowledging the timely reception of a box of men's and women's clothing, sent by "The Women's Aid Society," he adds, "I am greatly in want of dresses for women and children; I hope our friends will not be satisfied with the liberal bestowal already made, for the demand seems to increase."

Hannibal Hamlin, President of "The National Freedmen's Relief Society," in a letter dated at Washington, on the 9th inst., says, "During the last week the contrabands have increased to the number of 1500, nearly double the number at any previous time; three hundred arrived yesterday, half naked and exhausted by a long journey. Our stock of clothing is wholly used up, and we are in immediate and pressing want of more. Our camp ground is entirely covered. The Government is putting up extra tents. Yesterday, the government rations fell short of the demand, and we had to supply 200 loaves of bread at the expense of the association. The number of rations will doubtless be increased to correspond with the present population at the contraband camp."

For the present the common thin clothing for working women will do very well. We have also a large number of children. We also need men's clothing, such as has been sent to Port Royal and other southern places.

By the following extract of a letter, dated Hampton, Va., Ninth month 9th, 1862, it will be seen that there is also a large number of fugitives there in a very suffering condition:

"The contrabands to whom I refer are stationed at Hampton, and number, I am told by one who is herself a teacher of them, some 1500 persons, who are greatly in need of clothing and medicines, from the want of which they are dying daily.

"Clothing, (thin) and medicines suitable principally to cases of fever and diarrhoea are earnestly desired, and I can assure you that those who will have the direct superintendency of their distribution are men and women whose hearts are in the work. * * * The persons who have the superintendency of the contrabands, are I believe in no ways connected with the Government, and I know they are earnest characters.

W. G. TYLER."

He who sees the faults of others with real concern, will not be inclined to aggravate them, nor can he delight to dwell upon them, or wish to expose them.

For "The Friend."

BIOGRAPHICAL SKETCHES

OF Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

THOMAS GOODWIN.

Thomas Goodwin, son of Thomas and Elizabeth Goodwin, was born in Wales in the year 1694. His parents were members of the religious Society of Friends, who endeavoured to educate their offspring in conformity with its doctrines and testimonies. About the year 1708, they removed to Chester county, in the province of Pennsylvania, bringing their children with them. Thomas became, through obedience to the Truth, a useful member of religious Society. In the year 1729 he was married to Ann Jones of Goshen, and settled within the limits of Chester Monthly Meeting.

A gift in the ministry of the gospel was committed to him about the year 1734, in which he laboured honestly and fervently, yet with the meekness of wisdom; and his services therein were well accepted, and very useful and consolatory to the church. He did not travel much abroad for several years, but in this respect as well as in his gift, he was enlarged, as he faithfully occupied that committed to his trust, and was obedient to his blessed Saviour's requirements.

About the year 1749, he removed within the limits of Goshen Monthly Meeting, and seems from this time to near his close, very much engaged in public service. He visited the neighbouring provinces, attended the various Yearly or General Meetings for worship, and in the early part of the year 1763, then being in the 69th year of his age, he was set at liberty, with the full unity of his friends, to pay a religious visit to Great Britain. From this extensive service in which he had much labour in many meetings in England and Wales which was very acceptable to the Friends in those parts, he returned about the beginning of the year 1765.

He continued faithfully occupying his gift, and visiting meetings at home and the neighbouring provinces until the spring of the year 1768, when he was once more liberated to visit the meetings of Friends, and the inhabitants of parts of England, Wales, and more especially in Ireland. He accomplished the service and returned home in time to attend his own Yearly Meeting, held towards the close of the 9th month, 1769. In one of the sittings of the Meeting of Ministers and Elders, held at that time, the following minute was made:—"Our ancient, worthy Friend, Thomas Goodwin, now gave some account to the meeting of his late journey, in which he was Divinely supported, and experienced much comfort and satisfaction therein, having found great openness in many places, and particularly in North Wales, where he had divers meetings, where few or no Friends live. [His account] yielded satisfaction and encouragement to this meeting."

During his long life of dedication, he was a great lover of good order in the church, and zealously concerned to exert Friends in Meetings for Discipline, to wait in humble watchfulness for the puttings forth of the Truth, as the alone safe Guide, the alone Qualifier, for any good word or work.

The memorial of Goshen Monthly Meeting says that he was often employed in religious visits to the families of Friends, in which he was eminently successful. They also say his ministry was sound and edifying, being in the demonstration of the spirit and power. He was a loving husband, an exemplary and instructing parent, a kind neighbour, an upright Friend, and may be said to be of the number of them, that through faith have obtained a good report."

He continued active and visited neighbouring meetings, going as far as Shrewsbury Yearly Meeting, when nearly eighty years of age. The last year of his life, being prostrated in strength by a painful disorder, he was much confined at home, yet even then when the weather was suitable, he sometimes got to his own meeting, and frequently therein was lively opened in the exercise of his gift.

His friends say, "although he was as a shock of corn full ripe, gathered in its season, yet we are sensible of the loss the church has sustained by his removal. We trust, however, it is his everlasting gain, and that he now enjoys the fruits of his labours. His last expression was, 'Lord Jesus, receive my soul.'"

His death took place Fourth month 16th, 1775, he being 81 years old.

JOHN CHURCHMAN.

For an account of this worthy, who died at his residence in Nottingham, Seventh month 24th, 1775, we refer the reader to his interesting and instructive journal.

SARAH MILHOUSE.

Sarah Milhouse was the wife of Thomas Milhouse, a valuable elder of Pikeland, Chester county, much esteemed and used in the services of Society in the Yearly Meeting of business, and that of Ministers and Elders. He deceased about the year 1770, after which his widow removed into the compass of New Garden Monthly Meeting.

The memorial issued concerning her says, "She was religiously inclined from her youth, and when married was a good example in her family, being a loving wife, an affectionate mother,—of an inoffensive life and conversation, a diligent attender of religious meetings, until prevented by age and infirmity of body. Her appearances as a minister were not frequent, but savoury and in few expressions."

A paper written by her for her children, before her death was to this purport:—"Oh! that my children would walk in the Truth,—the pure, inward, everlasting Truth,—which is Christ. Seek unto him in secret in great humility. He alone can preserve you in every trying time, and such must be met with in this life. So shall you be prepared for that life which is everlasting. Seek it before any earthly treasure."

During her last illness she manifested great resignation to her lot, being willing to live or die. She gave good advice to her children and others, and appeared in a humble loving frame of mind, signifying that she could see nothing in her way. Thus in living faith and hope she quietly departed this life, Eighth month 26th, 1775, aged about 74 years.

From "The Leisure Hour."

The Gorilla Hunter.

During the past season, one of the chief topics of conversation in London society has been the "gorilla." The world was taken by surprise when to the now famous traveller and naturalist, De Chaillu, a few months since, first told the learned and fashionable London world, assembled at the Geographical Society, of the aspect, nature, and habits of the huge man-like monkey, which he had seen, hunted, and killed in the dense and dark forests of Western Africa. Not but we were aware of the existence of gorillas on the face of the earth, we had skeletons and skins; but of their habits, or their haunts, of their ferocity, of their gigantic strength, we knew little, if indeed anything at all. At last Du Chaillu came fresh from the pursuit of these "wild men of the woods;" brute force

had yielded to human intelligence, and twenty-two prisoners, "ghastly and grim," slain for the sake of their skins, or skeletons, formed a running comment upon the marvellous stories which so adventurous gentleman narrated. For a week or so, the scientific world did not know whether to believe or disbelieve; then from Albemarle Street came "the gorilla book," as it is now called. In their easy chairs warming their feet before the fire, and full of experiences of dry skulls and moth-eaten specimens, certain home naturalists read this book. "This cannot be," said they; "what we had here is untrue; these are travellers' stories." The evil report spread apace; but truth will come to the surface. Du Chaillu invited cross-examination and close questioning; he was severely tested both by word of mouth and by the press; he triumphed; this courageous and intrepid traveller has been feted by the great men of the land; his book could not be printed fast enough; gorillas are now in the British Museum, where all can contemplate them at their ease.

Having already given ample accounts of Du Chaillu's adventures when in pursuit of these specimens, we now quote his interesting narrative of a attempt to keep and tame a young gorilla.

A GORILLA TAKEN ALIVE.

On the 4th of May I had one of the greatest pleasures of my whole life. Some hunters who had been out on my account, brought in a young gorilla alive! I cannot describe the emotions with which I saw the struggling little brute dragged into the village. All the hardships I had endured in Africa were rewarded in that moment.

It was a little fellow of between two and three years old, two feet six inches in length, and as fierce and stubborn as a grown animal could have been. My hunters, whom I could have bugged to my heart, took him in the country between the Senegal and Cape St. Catherine. By their account, they were going five in number, to a village near the coast, and walking very silently through the forest, when they heard what they immediately recognised as the cry of a young gorilla for its mother. The forest was silent. It was about noon; they immediately determined to follow the cry. Presently they heard it again. Guns in hand, and the brave fellows crept noiselessly towards a clump of wood, where the baby gorilla evidently was. They knew the mother would be near; and here was a likelihood that the male, the most dreaded of all, might be there too. But they determined to risk all, and, if at all possible, to take the young one alive, knowing what a joy it would be for me.

Presently they perceived the bush moving; and, crawling a little further on in dead silence, scarce breathing with excitement, they beheld, what had seldom been seen even by the negroes, a young gorilla seated on the ground, eating some berries which grew close to the earth. A few feet further sat the mother, also eating of the same fruit. Instantly they made ready to fire; and none too soon, for the old female saw them as they raised their guns, and they had only to pull triggers without delay.

She fell. The young one hearing the noise of the guns, ran to his mother, and clung to her, hiding his face, and embracing her body. The hunters immediately rushed toward the two, hallooing with joy as they ran on. But this roused the little one, who instantly let go his mother and ran to a small tree, which he climbed with great agility, where he sat and roared at them savagely. They were now perplexed how to get at him. One cared to run the chance of being bitten by this savage little beast, and shoot it they would

not. At last they cut down the tree, and as it fell, dexterously threw a cloth over the head of the young monster, and thus gained time to secure it while it was blinded. With all these precautions, one of the men received a severe bite on the hand, and another had a piece taken out of his leg.

As the little brute, though so diminutive, and the merest baby for age, was astonishingly strong, and by no means good-tempered, they could not lead him. He constantly roused at them. So they were obliged to get a forked stick, in which his neck was inserted in such a way that he could not escape, and yet could be kept at a safe distance. In this uncomfortable way he was brought into the village, where the excitement was intense. As the animal was lifted out of the canoe in which he had come a little way down the river, he roared and bellowed, and looked around wildly with his wicked little eyes, giving fair warning that if he could only get at some of us he would take his revenge.

I saw that the stick hurt his neck, and immediately set about to have a cage made for him. In two hours we had built a strong bamboo house, with the slats securely tied at such distances apart that we could see the gorilla, and it could see out. Here the thing was immediately deposited; and now for the first time, I had a fair chance to look at my prize.

It was a young male gorilla, evidently not yet three years old, fully able to walk alone, and possessed for its age, of most extraordinary strength and muscular development. Its greatest length proved to be, afterwards, two feet six inches. Its face and hands were very black, eyes not so much sunken as in the adult. The hair began just at the eyebrows and rose to the crown, where it was of a reddish-brown. It came down the sides of the face in lines to the lower jaw, much as our beards grow. The upper lip was covered with short coarse hair; the lower lip had longer hair. The eyelids very slight and thin; eyebrows straight, and three-quarters of an inch long.

The whole back was covered with hair of an iron-gray, becoming dark nearer the arms, and quite white at the lower part. Chest and abdomen were covered with hair, which was somewhat thin and short on the breast. On the arms the hair was longer than anywhere on the body, and of a greyish-black colour, caused by the roots of the hair being dark and the ends whitish. On the hands and wrists the hair was black, and came down to the second joints of the fingers, though one could see in the short down the beginning of the long black hair which lines the upper parts of the fingers in the adult. The hair of the legs was greyish black, becoming blacker as it reached the ankles, the feet being covered with black hair.

When I had the little fellow safely locked in his cage, I ventured to approach to say a few encouraging words to him. He stood in the furthest corner, but, as I approached, bellowed and made a precipitate rush at me, and, though I retreated as quickly as I could, succeeded in catching my trowsers-leg, which he grasped with one of his feet and tore, retreating immediately to the corner furthest away. This taught me caution for the present, though I had a hope still to be able to tame him. He sat in his corner, looking wickedly out of his gray eyes, and I never saw a more morose or ill-tempered face than had this little beast.

The first thing was, of course, to attend to the wants of my captive. I sent for some of the forest berries, which these animals are known to prefer, and placed these and a cup of water within his reach. He was exceedingly shy, and would

neither eat nor drink till I had removed to a distance.

The second day found Joe, as I had named him, fiercer than the first. He rushed savagely at any one who stood even for a moment near his cage, and seemed ready to tear us all to pieces. I threw him to-day some pine-apple leaves, of which I noticed he ate only the white parts. There seemed no difficulty about his food, though he refused now, and continued during his short life to refuse, all food except such wild leaves and fruits as were gathered from his native woods for him.

The third day he was still morose and savage, bellowing when any person approached, and either retreating to a distant corner or rushing to attack. On the fourth day, while no one was near, the little rascal succeeded in forcing apart two of the bamboo rails which composed his cage, and made his escape. I came up just as his flight was discovered, and immediately got all the negroes together for pursuit, determining to surround the wood and recapture my captive. Running into the house to get one of my guns, I was startled by an angry growl issuing from under my low bedstead. It was master Joe, who lay there hid, but anxiously watching my movements. I instantly shut the windows, and called to my people to guard the door. When Joe saw the crowd of black faces he became furious, and, with his eyes glaring, and every sign of rage in his little face and body, got out from beneath the bed. We shut the door at the same time, and left him master of the premises, preferring to devise some plan for his easy capture rather than to expose ourselves to his terrible teeth.

How to take him was now a puzzling question. He had shown such strength and such rage already, that not even I cared to run the chance of being badly bitten in a hand-to-hand struggle. Meantime Joe stood in the middle of the room looking about for his enemies, and examining with some surprise the furniture. I watched with fear lest the ticking of my clock should strike his ear, and perhaps lead him to an assault upon that precious article. Indeed, I should have left Joe in possession, but for a fear that he would destroy the many articles of value or curiosity I had hung about the walls.

Finally, seeing him quite quiet, I despatched some fellows for a net, and, opening the door quickly, threw this over his head. Fortunately we succeeded at the first throw in fatally entangling the young monster, who roared frightfully, and struck and kicked in every direction under the net. I took hold of the back of his neck, two men seized his arms and another the legs, and thus held by four men, this extraordinary little creature still proved most troublesome. We carried him as quickly as we could to the cage, which had been repaired, and once more locked him in.

I never saw so furious a beast in my life as he was. He darted at every one who came near, bit the bamboos of the house, glared at us with venomous and sullen eyes, and in every motion showed a temper thoroughly wicked and malicious.

As there was no change in this for two days thereafter, but continual moroseness, I tried what starvation would do towards breaking his spirit; also, it began to be troublesome to procure his food from the woods, and I wanted him to become accustomed to civilized food, which was placed before him. But he would touch nothing of the kind; and as for temper, after starving him for twenty-four hours, all I gained was that he came slowly up and took some berries from the forest out of my hand, immediately retreating to his corner to eat them. Daily attentions from me for a fortnight,

more did not bring me any further confidence from him than this. He always snarled at me, and only when very hungry would he take even his choicest food from my hands. At the end of this fortnight, I came one day to feed him, and found that he had gnawed a bamboo to pieces slyly and again made his escape. Luckily he had but just gone; for, as I looked around, I caught sight of master Joe making off on all fours, and with great speed, across the little prairie, for a clump of trees. I called the men up and we gave chase. He saw us, and, before we could head him off, made for another clump. This we surrounded. He did not ascend a tree, but stood defiantly at the border of the wood. About one hundred and fifty of us surrounded him. As we moved up he began to yell, and made a sudden dash upon a poor fellow who was in advance, who ran, tumbled down in affright, and by his fall escaped, but also detained Joe sufficiently long for the nets to be brought to bear upon him.

Four of us again bore him struggling into the village. This time I would not trust him to the cage, but had a little light chain fastened around his neck. This operation he resisted with all his might, and it took us quite an hour to securely chain the little fellow, whose strength was something marvellous.

Ten days after he was thus chained he died suddenly. He was in good health and ate plentifully of his natural food, which was brought every day for him; he did not seem to sicken until two days before his death, and died in some pain. To the last he continued utterly unmanageable, and after his chains were on, added the vice of treachery to his others. He would come sometimes quite readily to eat out of my hand, but while I stood by him would suddenly—looking me all the time in the face, to keep my attention—put out his foot and grasp at my leg. Several times he tore my pantaloons in this manner, quick retreat on my part saving my person; till at last I was obliged to be very careful in my approaches. The negroes could not come near him at all without setting him in a rage. He knew me very well, and trusted me, but evidently cherished a feeling of revenge even towards me.

After he was chained, I filled a half-barrel with hay and set it near him for his bed. He recognised its use at once, and it was pretty to see him shake up the hay and creep into his nest when he was tired. At night he always again shook it up, and then took some hay in his hands, with which he would cover himself when he was snug in his barrel.

He thus describes the appearance of the animal at the moment of attack. "The gorilla is only met in the most dark and impenetrable jungle, where it is difficult to get a clear aim, unobstructed by vines and tangled bushes, for any distance greater than a few yards. For this reason the gorilla hunter wisely stands still and awaits the approach of the infuriated beast. The gorilla advances by short stages, stopping to utter his diabolical roar, and to beat his vast breast with his paws, which produces a dull reverberation as of an immense bass drum. Sometimes from the standing position he seats himself, and beats his breast; at the same time the deep-set grey eyes sparkle out with gloomy malignity, the features are contorted in hideous wrinkles, and the slight sharply cut lips, drawn up, reveal the long fangs and the powerful jaws, in which a human limb would be crushed as a biscuit. The hunter, looking with fearful care to his priming, stands still, gun in hand, often for five weary minutes, waiting with growing nervousness for the moment when he may

relieve his suspense by firing. I have never fired at a male, at a greater distance than eight yards, and from fourteen to eighteen feet is the usual shot. At last the opportunity comes, and now the gun is quickly raised, a moment's anxious aim at the vast breadth of breast, and then pull trigger."

For "The Friend."

The unkind efforts of some editors to create an issue between the people at large, and the Society of Friends, with regard to the performance of military duties, compares but poorly with the consideration accorded by the leaders of the rebellion to the views and feelings held by Friends in the South, or with that of a Georgia slaveholder who, while riding with a Friend in North Carolina, acknowledged to having six sons in the army, but was nevertheless glad to find there was one Society opposed to all wars; expressing the hope that they would continue firm to their principles; also with the testimony of a distinguished member of the Philadelphia Bar, who holds a position, second to none in the State, and remarkable for the depth of his judgment and learning, who says, "it would be a lasting disgrace to this or any other community, to disregard the real, unaffected, conscientious feelings of such as are opposed to all wars."

The question is not, may the Society of Friends as such, be exempted from military duties—for I blush to acknowledge there are some in membership with us, who appear to have little or no scruple about murder and plunder when legalized, and combined under the name of war—but the question is, may such individuals of whatever name, as are raised above these baseful lusts, and are bound by the Spirit of their God to admit without any reservations, the necessity of unquestioning obedience, to His commands; and such, too, as an, in the fulness of their Redeemer's love, adopt the language, "there is a spirit that I feel within me, that delights to do no evil, nor revenge any wrong; as it bears no evil in itself, so it conceives none in thought to any other; its crown is meekness—its life is everlasting love unfeigned, and it takes its kingdom with entreaty, and not with contention, and keeps it with lowliness of mind. Are such as these to be forced to violate their highest obligations? We trust there are none who would wish the scenes of the dark ages to be again enacted.

Our country has its enemies, but those whose confidence is in the Lord of hosts, and lean not on the arm of flesh, are not among them, and while submitting to the powers that be, they cannot forsake the Captain of their salvation. I have said, our country has its enemies; it has its men maddened with an unholy ambition, its conspirators, its secret foes—but none of these are so dangerous to peace and prosperity as he, who, with an able and envenomed tongue or pen, stirs up the dormant revenge of a sensitive people—who, under the garb of either loyalty or religion, call upon their brethren in stirring tones, and with the offer of a bounty, to go forth and slay those who are opposed to them only in religious faith and practice.

What reason is there why "ministers of the gospel" should be exempted from military duties, while they appear to have no objections to the enormities of a state of war? but rather invite it with the most exultant confidence; and yet I do not want the laws changed with respect to them; for if there is but one among them, who is conscientiously concerned, so far as lays in his power, to smooth the troubled breasts, to allay the waters of strife and to keep subdued the burning lusts which yet reign in the children of disobedience, I would have them all remain for the influence of this one—neither does the world question the propriety of their ex-

emption from a business so totally at variance with their profession, and the avowed object of their mission.

But when the little and insignificant ones, those without popularity, who have vowed with their God, "Let others do as they may, as for me and my house we will serve the Lord," plead for a like privilege, it is sad to find there are those by whom they are despised and pointed at as useless cowards in times of soborness, laws have been made for the benefit of the conscientious against bear arms; but if they are quickly repealed, as has been the case in Rhode Island, it is unmeaning justice virtually saying we will exempt you from military service, so long as there is none to be performed, but no longer. Who are the conscientious in their opposition to all wars?—not those who admit the plea of national necessity—not those who, by the giving of bounty money or otherwise, encourage enlistments—not those who exult in the slaughter of their enemies, nor those who grow rich off of the necessities of the army—but those, who, in tota abnegation of self, can approach their Redeemer throne with the petition—"Father, forgive them for they know not what they do."

I sincerely trust that our Society everywhere may be strengthened to show forth a patient, for giving lamb-like spirit, while it deals faithfully with every breach of this divine testimony against all war and fighting, and not suffer the reasonings of our cunning enemy to interpose excuses for the temporary suspension of our supreme allegiance which must be unflinching, if we expect to be saved

The venerable Bede died at Jarrow Monastery near Newcastle, England, in the year 735. He account left us of his death is very striking. For a long time previous, Bede had been engaged upon a translation of St. John's Gospel into the Saxon language. His work, which was to give God's word to the common people in their own tongue, was very nearly completed, but Bede's strength was ebbing fast. He sat in his chair, however, conscious still though the shades of death were fast gathering around him. The scribe, who was writing to Bede dictation, now hastily exclaimed to him:—"Dei master, there is yet one sentence not written!" The speech recalled Bede's fast failing senses; gather together all his strength, he answered:—"Write quickly!" and then dictated to the scribe the sentence of the last chapter of the gospel according to St. John. The scribe wrote it down rapidly, and then said, "The sentence is now written." Bede replied:—"It is well. You have said the truth. It is finished! Consummatum est!"

Esquimaux Architecture.—As the days lengthen the villages are emptied of their inhabitants, and move seaward on the ice to the seal-land. They come into use a marvellous system of architecture unknown among the rest of the American nation. The fine, pure snow has by that time acquired under the action of strong winds and hard frosts sufficient coherence to form an admirable building material, with which the Esquimaux miter-mason erects most comfortable dome-shaped houses. A circle is first traced on the smooth surface of the snow, and the slabs for raising the walls are cut from within, so as to clear a space down to the ice, which is to form the floor of the dwelling, and whose evenness was previously ascertained by probing. The slabs requisite to complete the dome, after the interior of the circle exhausted, are cut from some neighbouring sp. Each slab is neatly fitted to its place by means of a fleecing knife along the joint, when it instantly freezes to the wall, the cold atmosphere firmly

not excellent cement. Crévices are plugged up, and seams accurately closed, by throwing a few borefuls of loose snow over the fabric. Two men generally work together in raising a house, and one of who is stationed within cuts a low door and creeps out when his task is over. The walls, being only three or four inches thick, are sufficiently translucent to admit a very agreeable light, which serves for ordinary domestic purposes; but if more be required, a window is cut, and the aperture fitted with a piece of transparent ice. The proper thickness of the walls is of some importance. A few inches excludes the wind, yet keeps down the temperature so as to prevent dripping from the interior. The furniture—such as seats, tables, and sleeping places—is also formed of snow; and a covering of folded reindeer-skin or seal-skin renders them comfortable to the inmates. By means of antechambers and porches, in form of long, low galleries, with their openings turned to leeward, warmth is insured in the interior; and social intercourse is promoted by building the houses congeniously, and cutting doors of communication between them, or by erecting covered passages, storehouses, kitchens, and other accessory buildings may be constructed in the same manner, and a degree of convenience gained which would be tempted in vain with a less plastic material. These houses are durable: the wind has little effect on them, and they resist the thaw until the ice acquires very considerable power.—*Sir John Richardson.*

For "The Friend."

Supposing that some of the readers of "The Friend," like myself, take an interest in reading the early minutes and rules of the Society of Friends, I herewith send a copy of several marriage certificates, which I have taken from the original records of Thirdhaven Monthly Meeting, held at Talbot county, Maryland, by which it appears that their marriage contracts were often very short, and were not even signed by the parties themselves, till a number of years after the commencement of the record.

The names of the witnesses are given merely, because many of them are mentioned by George Fox and other Friends, who travelled through Maryland in the early days of the Society.

"Abraham Strauss, of Baltimore county, in the province of Maryland, took Mary Halbrook, of Talbot county, to wife, the 21st day of the Ninth month, in the year 1672, in a meeting of the people of God called Quakers, at the house of Robert arwood, and we whose names are under-written, are witnesses. Robert Harwood, Bryan Omelia, Henry Wilcocks, Richard Lee, James Hall, Obah Judkin, Robert Williams, Thomas Gilpine, William Southbee, Elizabeth Southbee, Elizabeth brams, Joan Lee, Elizabeth Harwood, Joan adkins."

"Be it known unto all people, that, upon the 27th day of the Sixth month, commonly called August, 1773, Bryan Omelia, of Talbot county, in the province of Maryland, and Mary Lewis, of the same county and province, was solemnized, joyned, and bled, in marriage, by and with the consent of their relations, and with the consent of the church and churches where they lived, being several times testified to the men and women's meetings, and solemnly in the true fear of God, being performed, as whose names are here subscribed, do witness. John Pitt, John Pemberton, John Spooner, Alex-

ander Nash, Thomas Marsh, Ann Spooner, Elenor Elston, Dennis Hopkins, John Edmondson, William Leeds, James Hall, John Hout, Ralph Elliot, Thomas Errington, Robert Lambden, Robert Kemp, Thomas Vaughan, James Pastor, Henry Woathaves, James Murphey, John Sum, William Dobbins."

"Ralph Fisbourn and Sarah Lewis, both of Talbot county, took each other as husband and wife, in the presence of God, and before the assembly of his people, at Betteys Cove Meeting-house, the 9th day of the Ninth month, 1678. Friends that were present, were, Wenlock Christerson, Mary Christerson, Henry Wilcocks, John Pitt, Bryan Omelia, Joan Lee, William Southbee, Sarah Edmondson, Mary Lewis."

"These are to certify whom it may concern that Abraham Strand and Rachel Nicholson took each other as husband and wife, the 25th day of the Ninth month, 1677, before us, in our meeting at Salem, and we whose names are under-written, being present, are witness to the same. Samuel Nicholson, Peter Cornelius, Thomas Scholey, Richard Guy, Edward Broadway, Henry Grubb, Nathaniel Smart, Richard Robson, Mary Sanders, Prudence Wade, Margaret Ginnis, Hester White."

"Richard Hall, of Talbot county, in the province of Maryland, this 21st day of the Second month, in the year one thousand six hundred and eighty, in an assembly of the people of God, at their meeting-house, at Thomas Taylor's, in the county aforesaid, did solemnly, in the fear of God, take Sarah Raston, of the province aforesaid, to be his wife, and then the said Sarah Raston did then and there in like manner take the said Richard Hall to be her husband, each of them promising to be faithful one to the other as husband and wife so long as they should live. In the presence of us." (Signed by 24 Friends as witnesses.)

Five years after, the certificates were much longer, as follows:

"Whereas, William Troth, of Talbot county, in the province of Maryland, planter, and Isabell Harrison, of the county and province aforesaid, having declared their intentions of marriage, two sundry times, at several meetings of the people of God called Quakers, in the county aforesaid, which was approved on by those meetings:

"Now these are to certify all people whom it may concern that for the full determining of their intentions aforesaid, this 20th of the Second month, called April, in the year of account, 1685, in an assembly of the people of God aforesaid, at their meeting place, William Troth did solemnly, in the fear of God, according to the example of the holy men of God recorded in the Scriptures of Truth, take the said Isabell Harrison to be his wife, and in like manner, the said Isabell Harrison then and there took the said William Troth to be her husband, each of them promising to be faithful one to another as husband and wife so long as they shall live, and hereunto set our hands, witnesses unto the same the day and year aforesaid.

(Signed.) WILLIAM TROTTH,
ISABELL TROTTH.

And 38 witnesses."

There must have been a considerable body of Friends on the Eastern Shore of Maryland, at this early period of their settlement in this country, as I find in the volume that I have taken the foregoing from, there were thirty-one marriage certificates recorded in the first thirteen years after the commencement of the volume.

S. F. T.

Philad., Ninth mo. 15th, 1862.

Communicated for "The Friend."

Aid for Friends of North Carolina.

It is known to many of the readers of "The Friend," that our brethren of North Carolina have suffered much since the breaking out of the war. The conscription law of the rebels has borne heavily upon them, a number in several places having been imprisoned, and others driven from their homes. Many have been greatly reduced in their circumstances, while the necessities and ordinary comforts of life have been scarce, and at exorbitant prices. Conscientiously opposed to both slavery and war, they have been liable to suspicion and misrepresentation, by men of evil minds, rendering their situation uncomfortable and precarious. Thus far, Divine protection seems to have been mercifully extended, but the pressure of a complication of difficulties, and the portentous uncertainties of the future, have induced a large number to emigrate.

Great efforts have been made to extinguish the debt due by the Yearly Meeting on account of the Boarding School; some Friends selling a part of their real estate to enable them to contribute, and those who have removed, generally aiding before they left.

By strenuous efforts, and no small sacrifices among themselves, with a little help from abroad, the debt is reduced from \$22,000 to \$10,500; and there are funds applicable to the object, given by Friends in most of the Yearly Meetings on this continent, which will diminish it so much more, that if about \$2000 additional are raised, the whole indebtedness, principal and interest, can be paid.

The recent rebel invasion of Maryland has thrown into that State a large amount of North and South Carolina bank notes, which are selling at a discount of nearly one half their nominal value, while in North Carolina, they are a very desirable currency. It is owing to the present favourable opportunity of buying these, that the funds already subscribed, with the addition of the \$2000, will be made sufficient to discharge the debt; and as this opportunity will probably soon pass away, it is important the money should be early procured.

Our Friend, Francis T. King, of Baltimore, has kindly agreed to attend to the application of the funds to the discharge of the debt.

As this is a Society debt, the liquidation of which we must all desire, and as Friends of North Carolina, in their very trying situation, have strong claims on our sympathy and help; we trust the occasion will be met in a spirit of cordial liberality, and that each one will contribute according to his or her ability, whether little or much. Money designed for this object will be received by Thomas Evans, 817 Arch St., Philadelphia.

Lake Superior Iron Mines.—The iron from Marquette, on Lake Superior, is more tenacious than Russia iron in the proportion of about 6 to 5. Between 1857 and 1860 the ore shipped increased from 3,000 tons in the former year to 150,000 in the latter, since which time business troubles have checked it. It is expected, however, that 200,000 tons will have been shipped during 1862.

Novel Mode of Smuggling.—A watchmaker of Alencon, having lately offered some Swiss watches at exceedingly low prices, was asked how he could afford to sell them so cheap. "O, that is simple enough," he replied; "I bought them of a wild beast showman who had just come from Switzerland. Before leaving Geneva he purchased a quantity of watches, which he concealed under the litter of his lion's cage. It is hardly necessary to mention," added the scrupulous watchmaker, "that the custom house-officers at the frontier did not venture to search there for contraband goods."—*London Express.*

* George Fox visited the meetings of Friends in Talbot county, Maryland, at three different times, viz.—in the fourth and seventh month, 1672, and first month, 1673.

THE FRIEND.

TENTH MONTH 4, 1862.

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 20th ult. Sales of cotton at Liverpool for the week, amounted to 24,000 bales. Stock in port, 91,000 bales. Orleans 30d. uplands, 22d. The market for breadstuffs, dull and unchanged. Red wheat, 9s. a 10s. 10d. per 100 uncleanly; white, 11s. a 12s. Consols, 93 $\frac{1}{2}$. The bullion in the Bank of England had declined £247,000 during the week. It is reported that the rebels are buying and building numerous steam and sailing vessels, and a rym on the Mersey. It is said that three of the finest steamers on the Clyde—the Trona, the Giraffe, and the Clydesdale, have been sold to the Confederate government. The Liverpool Telegraph says: "besides the commissions committed to other shipbuilders by the Confederate government, which are being pushed forward with all possible despatch, a large iron-plated ram is being constructed on the river Mersey, without any attempt being made at concealment. This ram will be of the most formidable character, and will attempt to run the blockade at Charleston." The same journal says that a vessel is lying at Liverpool fitted in a cargo of iron plates, destined for fitting a Southern vessel, which is awaiting their arrival at Charleston. Intelligence has been received of the defeat of Gen. Pope's army in Virginia, and it was the theme of general comment by the press. The defeat is regarded as most disastrous for the North. The London Times argues that, if the U. S. Government is brought to the verge of ruin, there is nothing we now appear, there is no element of better prospect in the future. It is asserted that the French Emperor decidedly favors the recognition of the Southern Confederacy, and is anxious that Great Britain should join France in adopting that measure. In the Manchester Chamber of Commerce, a resolution was passed in relation to Indian affairs, in which they said they could not expect more than a million and a quarter bales of cotton from India during the next twelve months, and if it should be impossible to get the cotton raised in the Southern States during the present crisis, they would have to go on with augmenting every year the quantity of cotton which they had made, more would be required before the termination of the struggle and the recognition of the Southern Confederacy by England and the other great powers.

UNITED STATES.—The Rebellion.—On the 24th ult., the President issued an important proclamation in relation to the suspension of the writ of *habeas corpus* in certain cases and in certain persons who are arrested or imprisoned by "military authority, or sentence of court martial," &c. The Governors of sixteen of the loyal States, met in conference last week at Altoona, Pennsylvania, and subsequently, most of their number proceeded to Washington, to "aid in executing with the President the policy of the United States." They presented an address, congratulating the President upon his emancipation proclamation, believing that it will be productive of good as a measure of justice and sound policy, and pledging to him their aid in all measures calculated to bring the war to an early termination, which should be vigorously prosecuted to ultimate victory, unless the rebels shall return to their Constitutional duty and obedience.

Virginia.—Since the retreat of the great rebel army across the Potomac, there is much uncertainty respecting the position of the main body. It is said to be concentrated near Winchester, only a sufficient force being left at strategic points to oppose the crossing of the river. They have erected heavy batteries at all the forts. A division of U. S. troops, which attempted to enter Virginia soon after the great battle of Sharpsburg, was driven back with severe loss. Harpers Ferry is held by the Federal forces, and their pickets extend several miles into Virginia. The rebels are engaged in vigorously rebuilding the bridges at this place. Gen. McClellan's head-quarters remained near Sharpsburg. The Richmond papers state that the Confederate army has been reinforced, so as to repair all the losses sustained in Maryland. The rebels have inflicted great injuries to the Baltimore and Annapolis railroads, and many important bridges, &c. Trains run at night and day

from Richmond to Culpepper, bringing supplies for the rebel army. The supplies are taken in wagons from Culpepper to Winchester. The rebel pickets extend all the distance from Winchester to Prentissville, six miles distant. The rebels claim that they have captured magazines in all the recent battles, and call upon the people of the South not to believe one word contained in the Northern papers, or Union successes. They still hold up the idea that the army has only temporarily retired behind the Potomac, and that the campaign is to be conducted in Maryland, &c. further west.

Southern Items.—Gen. Lee's letter to Jefferson Davis, giving an account of the battle at Sharpsburg, describes it as the most tremendous that had ever occurred on this continent. The Richmond Examiner complains of the cold and sinister reception experienced by the Confederates in Maryland, and says that the Richmond Examiner thinks the result clearly shows that Maryland is not prepared to unite her destinies with the South. The yellow fever in a very malignant form prevails at Wilmington, N. C. A bill has passed both Houses of the rebel Congress, calling out all citizens between 35 and 45 years of age, and giving Jefferson Davis authority to call out all between 18 and 45.

The West.—Cannon have been placed at the ends of the main streets in Memphis, Tenn., leading east out of the city, and should an attack be made upon the city by the rebels, it is stated that it will be reduced to ruins if it is surrendered. Murders and robberies are rife from the rebels, Augusta, Ky., a town on the Ohio river, forty miles from Cincinnati, was entered on the 27th, by 600 rebel cavalry. They drove out the inhabitants, and burned a portion of the town. The army of Gen. Buell reached Louisville on the 26th, after a march of 350 miles from Lebanon, Tenn. The excitement and alarm in Louisville had partially subsided, yet there was intense anxiety respecting the issue of the expected battle between Buell's army, and the rebels under Bragg and Smith. The latter, on the 26th, were reported to be at Taylorsville, on the East Fork of Salt River. In Missouri, several conflicts between the armies of Gen. Hunter and parties of rebel forces took place, in one near Carthage, the rebels suffered severely. Gen. Schofield had arrived at Springfield, and was making preparations to check the advance of a rebel army from Arkansas, under Generals Hindman and Rains.

The South.—Gen. Mitchell has taken the place of Gen. Hunter in the command of the Federal forces. His headquarters are at Port Royal, S. C. On his arrival, he made a personal inspection of each camp, and made a speech to every regiment. He assured the troops that he should omit no opportunity of giving them active employment. The English schooner, Rambler, loaded with cotton, escaped from the blockade of Charleston, and was captured by a U. S. cruiser. Instructions were found on the Rambler to sell her cargo at Havana, purchase powder, medicines, and army stores, and return by the Sabine Pass. Col. Hamilton, formerly a member of Congress from Texas, has succeeded in making his escape from that State, in company with his friends. He represents that there is still a strong Union feeling in the western part of the State.

New York.—Mortality last week, 410.
Philadelphia.—Mortality last week, 211.
The Markets.—The following were the quotations on the 29th ult. *New York.* Gold, \$123. *Sp. in Am.* 104. *Y. bank 50.* *Consols.* 105. *The London market* easy, at 4 per cent. on call, and at 4 1/2 per cent. for prime paper. The previous week had been marked by much excitement in the stock market, and a general advance of prices. Government stocks, however, advanced but little. United States sixes, 1881, sold at 115; and 7-30 Treasury notes, 124 1/2. The market of New York, both in imports and exports, continues large. Cotton middlings, 50 cts.; Chicago spring wheat, \$1.11 a \$1.19; red western, \$1.20 a \$1.32; white Michigan, \$1.28 a \$1.42; rye, 62 cts.; corn, 61 cts.; 62 cts. for mixed, and 63 cts. a 65 cts. for yellow. *Philadelphia.*—Prime flax seed, 28 a 33; white, \$1.40 a \$1.45; rye, 70 cts. a 72 cts.; yellow, corn, 69 cts. a 70 cts. of Oats, 39 cts. a 41 cts. The cattle market is well supplied, and rates low—ranging from 7 to 8, according to quality. Sheep, 4 to 4 1/2 per pound, gross; hogs, 5 to 6. *Baltimore.*—White wheat \$1.55; red, \$1.35 a \$1.43; yellow corn, 60 cts. a 70 cts.; rye, 70 cts. a 72 cts.; oats, 39 cts. a 41 cts. The Government survey of the great lakes, gives the following exact measurements: Lake Superior, greatest length, 355 miles, greatest breadth 160 miles, mean depth 988 feet, height above the sea 627 feet, area 32,000 square miles. Lake Michigan, greatest length 360 miles, greatest breadth 160 miles, mean depth 900 feet, height above the sea 587 feet, area 20,000 square miles. Lake Huron, greatest

length 200 miles, greatest breadth 160 miles, mean depth 300 feet, height above sea 574 feet, area 20,000 miles. Lake Erie, greatest length 250 miles, greatest breadth 80 miles, mean depth 200 feet, height above sea 556 feet, area 6900 square miles. Lake Ontario, length 180 miles, mean breadth 65 miles, mean depth 500 feet, height above sea 262 feet, area 6,000 square miles. Total length of five lakes—1,345 miles; total area—84,000 square miles.

A Terrible Hurricane.—Canton dates of Eighth month 1st, represent that Canton, which had been visited by a violent typhoon, which caused great destruction of property. It is stated that 40,000 persons lost their lives.

RECEIPTS.

Received from Ezekiel Bundy, agt., O., \$27.21, to be credited as follows, viz: Jonathan F. Schofield, \$10, to 52, vol. 35; Jesse Bailey, & A., vols. 35 and 36; Robert Plummer and George T. Smith, \$2 each, vol. 35; Eli Hodge, John Bundy and E. Bundy, \$2 each, vol. 36; and \$3.21 for extra numbers.

Received from George Harrison, of Manchester, England, a remittance of £10 sterling, for subscriptions for "The Friend," and his statement for vols. 34 and 35.

WEST-TOWN SCHOOL.

The Committee to superintend the Boarding-School at West-Town, will meet in Philadelphia on Sixth-day, the 10th of next month, at 2 o'clock, P. M.

The Committee on Instruction, and that on Admissions, meet on the same day, the former, at 10 o'clock, and the latter, at 11 o'clock, A. M.

The Visiting Committee attend the semi-annual examination of the school, commencing on Third-day morning, and closing on Fifth-day afternoon of the same week.

If the accommodation of the Visiting Committee, 1 conveyance will be at the Street Road Station, on Second day, the 6th inst., to meet the trains that leave Philadelphia at 2 and 4.15, P. M.

JOEL EVANS, Clerk.

Ninth month 25th, 1862.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, — JESSE W. HORTON, M. D.
 Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to ISAAC MORGAN, Jr., 622 Noble street, SAMUEL ALLEN, 524 Pine street, GEO. J. SCATTERGOOD, Fifth and Callowhill street.

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable Friend as Governess at West-Town Boarding School. Application may be made to Sidue Coates, 1116 Arch St., Philadelphia; Abigail W. Hal Frazer, P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 39th and Bridge Sts., Philadelphia.

TEACHER WANTED.

A teacher competent to give instruction in reading and other branches is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Erie St.; Deborah M. Williamson, 1024 Arch St., or Rebecca S. Allen, 325 S. Fifth Street.

WEST GROVE BOARDING SCHOOL.

The duties of West Grove Boarding School for Girl on the Philadelphia and Baltimore Central Railroads will be resumed on Second day the 3rd of Eleventh month next.

Address, Mrs. COXARD, Principal, West-Grove P. O., Chester Co., Pa. Ninth mo. 26th, 1862.

Died, on the morning of the 19th of the Ninth month A. M. KIRKBRIDE, wife of Dr. Thomas S. Kirkbride and daughter of the late Joseph K. and Ann Jones, the forty-ninth year of her age.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, TENTH MONTH 11, 1862.

NO. 6.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Instances of Divine Preservation in Danger.

(Continued from page 34.)

Circumstances like those related by Joseph Haughton, are calculated to have a humbling effect on the mind. No man can claim the intercession of the Most High in his behalf on the ground of merit. It is only of that mercy which, every morning, that He condescends to notice and care for his creatures. This should incite watchfulness and frequent self-examination, seeking to be clothed with humility and love. Not only the outward walk to be clean and blameless, but the frame of the mind must be right. The Psalms testify, "If I regard iniquity in my heart, the Lord will not hear me;" and where there are secret reserves made, unkind or hard feelings harboured, or covetous disposition indulged, true prayer must be hindered, and a fearful, distrustful spirit engendered. An easy, clean conscience, while it keeps the mind calm and staid, is generally accompanied with humble dependence upon God, a filial fear of offending him, even in very little things; and a living confidence in his goodness and protecting care. "If our heart condemn us not, then have we confidence towards God."

J. Haughton's narrative proceeds; "Having eaten the food offered them, they proceeded on their road to Ennisceorthy, where, in a little time after, we could see the columns of smoke rising from the burning houses, six miles distant. In the evening some of them returned with tidings at Ennisceorthy was in their hands, and their camp fixed on Vinegar Hill, over the town."

"Next day, a man with a malicious countenance came to me, with a long spit in his hand, and threatened to kill me for some offence which he said I had done him. "I have killed Turner," said he, and burned him in his own house, and now I will ek you as I please." [This Turner was probably the magistrate mentioned in the preceding part of the narrative, who came to J. Haughton's bout his destroying his gun.] I endeavoured to convince him of his mistake, (in supposing he had fended him), and being joined by the persuasions of a neighbour, he was with difficulty prevailed upon to be quiet, and at length we parted in friendship."

"Most of the horses being taken from Friends of our Particular Meeting, we had generally to walk our meetings; and the first time we did so, some

of us met a man who was very terrible, having killed one of my neighbours a day or two before; but he was very friendly to us, and offered to have us carried to the meeting. We acknowledged his civility, but did not accept his offer, pursuing our journey on foot six miles.

"Parties of these people would often meet us going to or coming from meeting; and sometimes would be very inquisitive where we came from, and whither we were going; but none of them offered us any molestation, except at one time, when several Friends were passing through Camolin, a neighbouring village, on their way to meeting, having a horse belonging to one Friend and a car belonging to another; and a large number of the United Irishmen being in the street conversing about us, one of them said it was the last time we should ever go that way; and, after we had passed them a gun was fired, apparently to frighten us. The horse took fright and broke the harness, which we endeavoured to set right, and went to our meeting place. Before the next time for our going to meeting there, the power of those people was overthrown."

"The day after the battle of Ennisceorthy, several of the poor, distressed protestants, mostly women, returned homeward. Two female servants of the Bishop of Ferns, and a woman whose husband was killed the day before, with her children, came to my door as persons that had no dwelling-place. They stood looking about in all the eloquence of silent distress. My house was small, but my heart and my house were both open to the afflicted; and we endeavoured to keep the house open for as many as we could accommodate, notwithstanding the severe threatenings we met with from the then ruling party. Such of the United Irishmen as staid in the town, would come at night to my house to lodge with their wives and families, as many as we could take; supposing they might be more safe than in their own homes, and this was also the case at the houses of other Friends."

"The laws were now suspended; and the rule was for every man to act according to his own will. I recoil at the prospect of the wickedness of man, unrestrained by law or religion! Well indeed did Young say;

"Heaven from all eyes conceal, but from His own
That hideous sight, a naked human heart."

And it is so in great mercy—but now, for a little space, the bosom became as it were transparent, and the depravity of the heart seemed fully displayed in action. I forbear to mention many scenes witnessed which I wish to be buried in oblivion, and that are not so properly connected with the intent of these lines.

"Previous to the breaking out of the rebellion, the military had destroyed the habitation of a neighbouring farmer, who with his family, sought refuge at the house of Joseph Wright, a Friend near Ferns. Joseph provided them one of his out-houses to live in, until they could better their condition; but when their party [the rebels] got the ascendancy, these persons took possession of his dwelling, and showed their determination to turn out him and his family; the short duration of the

rebel control prevented them from carrying out this ungrateful intention.

"Friends' houses appeared to be marked out as places for entertainment, and were almost always full day and night, so that it was wonderful their provisions held out to the end. Friends, and also of the oppressed party, would sometimes convey provisions to one another privately; and the United Irishmen would occasionally offer us of their stock; but knowing it to be plunder, or, as they called it, the spoils of war, we always declined accepting any of it. Our refusal was generally considered as an offence, and it went hardly with them that they could not, in any degree, get us to unite with them."

"When the usual time for holding our Monthly Meeting at Ennisceorthy came round, I went there in company with William and Martha Wright who were on horseback. We got on without much interruption until we reached about half way; when their horses were taken from them by some of the patrol from the camp at Vinegar Hill. We walked into Ennisceorthy, not knowing whither to go except to the meeting house. There we met with several Friends of the town, some from Cooladine Particular Meeting, but none from Ross, as that town was in a state of seige; nor from Forrest, which was near Scullabogue barn, where so many persons were burned alive."

"During our meeting for worship we were a good deal interrupted by persons walking about and making a noise in an adjoining gallery, who, after a while went away. It appeared that they came with an evil intent, which they were not permitted to fulfil. I observed they had broken a large hole in the ceiling, which we were afterwards told was for the purpose of more readily setting it on fire and burning it, but that some of their own party stopped them from carrying out their design. After the meeting for worship was over, our attention was turned to the transaction of the business of the Monthly Meeting, but as only a part of the members could assemble, it was adjourned."

"Afterward we had the opportunity of sympathizing with our friends in their distress. Oh what a humbling scene it was! Some had to pass by their own homes, lately the abodes of peace and comfort; now, partly destroyed by fire, some wholly so, and all plundered to desolation. We repaired to the house of Thomas and Nathaniel Thompson, a new building, till then unoccupied, their own particular homes, together with a large timber-yard adjoining, having all been burned to the ground. Here we had an opportunity of hearing each other's narratives of distress, and condoling with the afflicted. A Protestant clergyman of sober moral character, with his wife, lodged in the house of Joseph Thompson. When he saw the danger, in consequence of the approach of the rebel army, he requested that the clothing of a Quaker might be given him, expecting in this disguise to find preservation, or at least to make his escape. He was told that it would be of no avail to him, and he then hid himself in the Friend's garden by the river side, where the insurgents found and murdered him."

"A woman, living within a few doors of Joseph and Martha Thompson, came to their house, and, while making great professions of friendship and sympathy, plundered the house and shops before their faces, having brought horses and cars to take their goods away with her. In order to compel the family to leave, she set the house on fire; which, when the owners saw, they withdrew, and went to Thomas Thompson's at Coolindine, being assisted in removing by an old and faithful servant, and by others also of the United Irishmen, who offered to help them on their way.

"Thomas Thompson, the elder, and his son, remained at Ennisorthy in the new house aforementioned; and it fell to their lot, in conjunction with another Friend, Thomas Mason, to bury the dead bodies, which were lying promiscuously and offensively about the streets, some torn by the swine.

"Samuel Woodcock, Jacob Martin, and John Hancock of Ulster Province, being in the neighbourhood of Ennisorthy, were all made prisoners and taken to the rebel camp on Vinegar Hill. Here they underwent a sort of trial, but no charge being brought against them, they were set at liberty; which was indeed a mark of divine protection, for many other persons against whom nothing was alleged were put to death.

"Previous to this, Samuel Woodcock was made prisoner at his own house, by a number of pikemen, and taken to the house of a Popish priest, with whom he was intimately acquainted. The priest told him he must become a Roman Catholic and be christened, for that no other profession of religion was now to be allowed. Samuel was much surprised, and told him he had a better opinion of him than to suppose he would make men profess what was contrary to their consciences. The priest said there was no alternative but to turn Roman Catholic or to be put to death. Samuel replied that by so doing they would only be making hypocrites of such as complied; and for his part he would rather suffer death than violate his conscience; adding, that if any crime was laid to his charge, he was willing to be tried for it; but on that ground he was not afraid to look any one of them in the face.

"The priest, who had made every preparation for baptizing him according to their mode, seemed much disappointed at Samuel's constancy, and brought him out to the pikemen to be taken to Vinegar Hill. Samuel expostulated with him and them together, saying again that if anything worthy of death was laid to his charge he was willing to undergo a trial. Although the pikemen were much displeas'd that he would not become a papist, yet they acknowledged the justice of his proposal, and he was taken to the rebel camp as before stated. After their remarkable liberation, the three Friends returned to their families at Clonmel, where they were joyfully and thankfully received by their relatives and friends; who, when parting from them, feared they should never meet again."

(To be continued.)

The Explorers of Australia.

(Concluded from page 35.)

"At length a small creek appeared ahead, and revived the hopes of the party. It received the name of Eyre's Creek. It contained some good water, and communicated sufficient fertility to its neighbourhood to furnish a meal for the horses. On following it down, however, it soon dried out on the desert, leaving merely a few incrustations of salt, and leading to a country as destitute of vegetation as that they had already traversed. Re-

suming their original course, from the slight deviation along Eyre's Creek, the party again proceeded on their way, and penetrated to lat. 25° 50' without meeting any further signs of vegetation, and only a creek—whether a continuation of Eyre's Creek was not ascertained—which afforded no relief to man or horse. 'Its channel was glittering white, and thickly encrusted with salt, nor was any water visible; but, on going down to examine it, in several places, where the salt had the appearance of broken and rotten ice, we found that there were deep pools of perfect brine underneath, on which the salt floated, to the thickness of three or four inches.' They were now more than 400 miles from Park Depot, and, with the exception of the head of Eyre's Creek, some fifty miles behind, had nothing in the intermediate region to fall back upon. They had advanced 200 miles beyond the Stony Desert, without meeting any indications of a permanent change in the nature of the country, or any encouragement whatever to proceed further. Both men and horses were so weak that any further advance would greatly endanger their retreat on Eyre's Creek. Under these circumstances, Captain Sturt decided to fall back on Eyre's Creek, and, by its assistance, to regain the Depot. To reach the centre of the continent, in their present condition, would strain both horse and man; and should the centre of the continent be found a desert, their destruction would be certain.

"Yet I turned from it with a feeling of bitter disappointment. I was, at that moment, scarcely a degree from the tropic, and within 150 miles of the centre of the continent. If I had gained that spot, my task would have been performed, my most earnest wish would have been gratified; but, for some wise purpose, this was denied me. Yet I may truly say that I should not thus have abandoned my position, if it had not been a measure of urgent and imperative necessity."

"The party regained the main expedition with considerable difficulty, and in a most exhausted condition. And so ends the first excursion from Park Depot.

"After some short rest at Park Depot, Captain Sturt again started with Stuart and two men. His present object may be shortly explained. The whole appearance of the Stony Desert—its immense deposits of mud on its western bank, the waterworn appearance of its quartz pebbles, the sudden change from sand ridge to level pavement and from mud bank to sand ridge, the similarity of the country for so many miles on each side of it—all led him to the conclusion that it was the dry bed of some immense watercourse coming down from the north. Should this conclusion be correct, the Stony Desert would be again met by a more northern route, and might possibly furnish a key to the solution of this strange country. With this object Captain Sturt left his former course to Eyre's Creek a little on the left, diverging from it at a small stream which he called, in honour of his friend and fellow explorer, Strzelecki's Creek, and maintained a course from Strzelecki's Creek almost due north.

"After some days' travelling, our explorers were agreeably surprised by increasing signs of fertility, and on the seventh day of their journey they came upon the banks of a fine creek flowing through an extensive and even picturesque tract of pastoral country. This is Cooper's Creek, so recently associated with the melancholy fate of Burke and Wills, after they had solved the most important problem of our age, after some examination of their original course, after some examination of the Cooper's Creek district, Captain Sturt and his small party soon left this oasis behind them,

and were again toiling over a sea of red sand ridges, exactly similar to those met with in the first excursion from Park Depot. At the end of another week's travelling, the Stony Desert again appeared in all its awful stillness. It seemed broader at this point, and, though preserving the same features on its eastern bank, some changes were now observed on its opposite shore. There was no mud plain, and the Stony Desert itself, instead of being replaced by the red sand ridges, seemed to extend its character to the surrounding country. Some hills were completely covered by their summits with the same description of fragments, so closely strewn as to obstruct all vegetation. Nor could any water be discovered. The country beyond seemed of a most forbidding character, and both men and horses were now suffering severely from want of water. For half an hour Captain Sturt sat on the summit of one of those quartz-clad hills, sweeping the horizon with his telescope, hoping to find some encouragement to advance. But no change in the nature of the country could be detected, and the attempt was abandoned.

"I was now nearly fifty miles from water, and feared that, as it was, some of my horses would fail before I could get back to it. Yet I lingered, undecided, on the hill, reluctant to make up my mind for I felt that, if I thus again retired, it would be a virtual abandonment of the task undertaken. I should be doing an injustice to Stuart and my men if I did not here mention that I told them the position we were placed in, and the chance on which our safety would depend, if we went on. They might well have been excused, if they expressed an opinion contrary to such a course; but the only reply they made me was to assure me that they were ready and willing to follow me to the last. After this, I believe I sat on the hill for more than half an hour, with the telescope in my hand; but there was nothing to encourage me onward."

"Reluctantly the horses' heads were turned, and the most protracted effort yet witnessed to reach the centre of the continent was finally abandoned. The party now hastened to throw themselves back on Cooper's Creek, some 200 miles distant, and the nearest halting-place. It was a journey for life or death. The horses which refused to proceed were abandoned on the way. When a horse fell his light baggage was hastily distributed among the rest, and the retreat continued. Uninterruptedly night and day, they retreated. At night one of the men went before them with a lantern, and thus assisted in their course over these vast sand ridges, and through the unbroke solitude of the Stony Desert, our explorers safely reached Cooper's Creek. Over these regions, the hot winds, so disagreeable, fell even on the coast settlements, blow with a useful violence. On the morning of their arrival at Cooper's Creek, one of these hot winds began to blow, and towards midday raged with great fury. The leaves of the trees along the creek became crisp in a few moments, 'and fell like a snow show around us.' The wastes of sand ridges, from which they had just escaped, seemed now a very ocean. The crests of the sand billows were cut off, and whirled on high in thick spray. Blinding torrents of fine sand, driven before the wind, were poured over the Cooper's Creek district, smarting and blistering the feverish skin. Towards the horizon, sea and sky were mingled in one red mass. Every living thing turned from the glow. An all-pervading relaxation seized man and beast. The horses were unable to bear the weight of their own head. Propped against trees, and turned from the hot wind, they let their heads fall to the ground as the muscles of the neck had been severed. A thermometer graduated to 127°, burst from its

excessive heat, though placed in the fork of a large tree. And, in all probability, had this tempest overtaken our party in the desert, they would have all perished. Passing through Cooper's Creek district, Captain Sturt with his men again joined the main expedition at Park Depot, greatly weakened by sickness, and scarcely capable of any further exertion. On the following day, he found himself unable to walk. In a day or two more, his muscles became rigid, and his limbs contracted. Gradually also my skin blackened. The least movement put me to torture, and I was reduced to a state of perfect prostration.

But Park Depot was many hundreds of miles from Adelaide, and an immediate retreat was now necessary. Already another summer had come round, and the sun was drying up all the pools and watercourses on the way. It was doubtful, indeed, whether the way was still open. — Brown proposed to go and ascertain, lest the expedition should be again caught in the desert. Unless Flood's Creek, about 150 miles nearer Adelaide, contained sufficient water, it would be dangerous to move the expedition, and Brown determined to earn the condition of Flood's Creek. The hide of a bullock was sown together so as to form a water-tight bag. This, filled with water, was placed on the way some seventy miles in advance, and on the following morning Brown started with a light spring cart, containing about thirty gallons of water. By this contrivance he was enabled to supply himself and his horse with water half way on his journey, without encroaching on the store which he carried with him. Anxiously the men watched for his return. On his report depended another six months' imprisonment in Rocky Glen Depot, and both officers and men recalled Rocky Glen Depot with horror. On the eighth day they came to Sturt's tent to tell him that Brown had appeared a sight, and in a few minutes he stood before him. Well, Brown, said I, 'what news?—is it to be good or bad?' 'There is still water in the creek, said he; 'but that is all I can say.' What there is, as black as ink; and we must make haste, for a week it will be all gone.' A bed of leaves was placed in one of the carts, into which Captain Sturt was lifted, and the whole expedition commenced its retreat from Central Australia. Flood's Creek was safely reached, and it enabled them to rush on to the Murray. The news was carried on the Murray that Sturt, now nineteen months absent and supposed dead, was returning. The settlers along its banks hastened to place their arrangements at the service of himself and his exhausted men. Under the light of an Australian moon, they again passed the clustering vines and golden heat fields which surround Adelaide.

"I reached my home," writes their commander, at midnight, on the 19th of January, and, on crossing its threshold, raised my wife from the floor, on which she had fallen, and heard the carriage of my considerate friends roll rapidly away."

For "The Friend."

[We give below the address of the London Peace Society to the people of the United States. We would rejoice if our fellow countrymen would accept the counsel offered in a spirit favourable to a speedy and peaceful termination of the present deplorable war; but the persistent acrimonious misrepresentation of the motives and conduct of the Government of this country, and of its loyal inhabitants, by the British press, keeps up a feeling towards that nation in the public mind here, which avails little willingness to listen to the language of peace or entreaty from any part of it, however loudly and sincerely it may be offered.]

THE PEACE SOCIETY AND THE AMERICAN QUESTION.

Friends and Fellow Christians,—More than sixteen months have elapsed since we ventured to address to you a few words of respectful and earnest entreaty against referring the dispute which agitated your country to the decision of the sword. Since then the evils of war have been brought home to your own experience with an impressiveness and force which make the language of respectful admonition we then employed, and, indeed, all human language, poor and powerless in comparison with the reality.

But the difficulties in which the war originated appear as far as ever from a satisfactory solution. And is it not necessarily so? How is it possible that conflicts of brute force can decide complex questions of moral and political right? Is it not the inevitable tendency of such conflicts to exasperate, rather than to conciliate, differences? And is not the time come when thoughtful and religious men among you should begin to ask yourselves the question, "Shall the sword devour for ever?"

We entreat you to believe, Christian friends, that apart altogether from political and commercial considerations, of any and every kind, there are myriads of christian hearts in this country which are wrung with a very anguish of sympathy and sorrow at the desolating calamity which is laying waste your country. How, indeed, can it be otherwise? Are you not our nearest kindred among all the nations of the earth? Are we not united to you by the manifold ties of common race, language, literature, and religion? Are there not many of us bound to many of you by the closest moral and spiritual sympathies, by community of interests and action in great enterprises of christian philanthropy, and by frequent acts of religious fellowship? How, then, can we witness the deplorable scenes of blood and misery now presented to us in your country without having our hearts rent with grief?

It is not merely the loss of precious human life with the premature extinction of what incalculable capacities for usefulness in the service of God and man—not merely the enormous waste of wealth, which might have been turned to so many admirable purposes—not merely the prolonged agony of loving hearts, and the eternal desolation of families, which this war involves. More mournful to us than even these evils, fearful as they are, is the appalling, moral damage it is inflicting on the national life and character, hardening the heart, searing the conscience, unchristianizing the temper of the whole population. Nor is this deteriorating process likely to stop. It is in the nature of all war—emphatically so of all civil war—to become more ferocious in feeling, more bloody and barbarous in act, at every step in advance. There are not wanting ominous indications that this war also is rapidly developing the same tendencies, revealing to us, at no distant time, the probability of a series of retributions and reprisals, becoming ever more ruthless and savage, until humanity veils her face in horror at the prospect.

Is the time not come, we repeat, friends and fellow-christians, when an attempt should be made to arrest this destructive conflict? We deprecate utterly all armed intervention, or any intervention at all, but such as you yourselves would willingly admit on the part of England or any European power, in your affairs. But surely the idea of a friendly mediation may be entertained without any derogation of your national dignity. We beseech you to reflect that, sooner or later, some method of peaceful adjustment must be adopted. There are

only two alternative issues out of war—either the utter extermination of one party, or some form of accommodation and compromise between the contending sides. None of you can wish the former. And is it not better at once to have recourse to the latter, before further blood is shed, and the feelings on both sides shall become hopelessly inflamed with animosity and vengeance?

We appeal especially to the religious portion of the community amongst you. Is not this one of the conjunctures by which the practical value and power of christianity are to be tested? And shall American christianity at such a crisis as this abdicate its high functions as the great reconciler, whose special business it is to calm the angry passions, and to keep before the minds of men the sublime lessons of the universal fatherhood of God, and the universal brotherhood of man?

The eyes of the whole world are fixed upon you. There is no great principle in which the friends of humanity are interested, but must suffer incalculable injury by a prolongation of this conflict. We beseech you, therefore, friends and fellow-christians, for the interests of civilization, for the honour of free government, for the glory of Christ's gospel, that you, the ministers of religion, and the conductors of the religious press especially, should put forth your influence to bring about a speedy settlement of a quarrel which at present is arresting the progress of civilization, bringing disrepute upon all free government, retarding the triumphs of the gospel, and causing the Name that is above every name to be blasphemed among the heathen through you.

JOSEPH PEASE, President.
HENRY RICHARD, Secretary.

An Incident on the Battle-field of Malvern Hills.—A full grown rabbit had hid itself away in the copse of a fence, which separated two fields near the centre and most exposed portion of the battle ground. Rabbits are wont to spend the day almost motionless, and in seeming dreamy meditation. This one could have had but little thought (if rabbits think) when choosing its place of retreat at early dawn, that ere it was eventide there would be such an unwonted and ruthless disturbance.

During all the preparations for battle made around its lair throughout the forenoon, it nevertheless remained quiet. Early, however, in the afternoon, when the rage of battle had fairly begun, and shot and shell were falling thick and fast in all directions, a shell chanced to burst so near the rabbit's hiding-place that he evidently considered it unsafe to tarry longer. So, frightened almost to death, out he springs into the open field, and ran hither and thither with the vain hope of finding a safe retreat. Whichever way it ran cannons were thundering out their smoke and fire, regiments of men were advancing or changing positions, horses galloping here and there, shells bursting, and solid shot tearing up the ground. Sometimes it would squat down and lie perfectly still, when some new and sudden danger would again start it into motion. Once more it would stop and raise itself as high as possible on its hind legs, and look all around for some place of possible retreat.

At length that part of the field seemed open which lay in the direction opposite from where the battle raged most fiercely. Thither it accordingly ran, with all its remaining speed. Unobserved by him, however, a regiment was in that direction, held in reserve, and, like Wellington's at Waterloo, was lying flat on the ground, in order to escape the flying bullets. Before the rabbit seemed aware, it had jumped into the midst of these men. It could go no further, but presently nestled down beside a

soldier, and tried to hide itself under his arm. As the man spread the skirt of his coat over the trembling fugitive, in order to insure it all the protection in his power to bestow, he no doubt feelingly remembered how much himself then needed some higher protection, under the shadow of whose arm might be hidden his own defenceless head from the fast multiplying missiles of death scattered in all directions.

It was not long, however, before the regiment was ordered up and forward. From the protection and safety granted, the timid creature had evidently acquired confidence in man—as the boys are wont to say, “had been tamed.” As the regiment moved forward to the front of the battle, it hopped along, tame, seemingly, as a kitten, close at the feet of the soldier who had bestowed the needed protection. Wherever the regiment afterward went, during all the remaining part of that bloody day and terrible battle, the rabbit kept close beside its new friend. When night came on and the rage of battle had ceased, it finally, unmolested and quietly, hopped away, in order to find some of its old and familiar haunts.

“My times are in Thy hand.”—PSALMS, xxxi. 15. Selected.

Father, I know that all my life
Is portioned out for me,
And the changes that are sure to come,
I do not fear to see;
But I ask Thee for a present mind
Intent on pleasing Thee.

I ask Thee for a thoughtful love,
Through constant watching wise,
To meet the glad with joyful smiles,
And to wipe the weeping eyes;
And a heart at leisure from itself,
To soothe and sympathize.

I would not have the restless will,
That hurries to and fro,
Seeking for some great thing to do,
Or secret thing to know,
I would be treated as a child,
And guided where I go.

Wherever in the world I am,
In whatsoever estate,
I have a fellowship with hearts,
To keep and cultivate;
And a work of lowly love to do
For the Lord on whom I wait.

So I ask Thee for the daily strength
To none that ask denied,
And a mind to blend with outward life,
While keeping at Thy side;
Content to fill a little space,
If Thou be glorified.

And if some things I do not ask
In my cup of blessing be,
I would have my spirit filled the more
With grateful love to Thee—
More careful, than to serve Thee much,
To please Thee perfectly.

There are briars besetting every path,
That call for patient care,
There is a cross in every lot,
And an earnest need for prayer;
But a lowly heart that leans on Thee
Is happy anywhere.

In a service which Thy will appoints,
There are no bonds for me;
For my inmost heart is taught “the truth”
That makes Thy children “free;”
And a life of self-renouncing love
Is a life of liberty.

THOU, GOD, SEEST ME.

Selected.

“When my spirit was overwhelmed within me, then
Thou knewest my path.”—PSALMS, cxliii. 3.
My God whose gracious pity I may claim
Calling Thee “Father,”—sweet endearing name,

The sufferings of this weak and weary frame,
All, all are known to Thee.

From human eye 'tis better to conceal
Much that I suffer, much I hourly feel,
But, oh, this thought does tranquilly and heal,
All, all is known to Thee.

Each secret conflict with indwelling sin,
Each sickening fear, I ne'er the prize shall win,
Each pang from irritation, turmoil, din,
All, all are known to Thee.

When in the morning unrefreshed I wake,
Or in the night but little rest can take;
This brief appeal submissively I make,
All, all is known to Thee.

Nay, all by Thee is ordered, chosen, planned,
Each drop that fills my daily cup, Thy hand
Prescribes for its none else can understand,
All, all is known to Thee.

The effectual means to cure what I deplore,
In me thy longed for likeness to restore,
Self to dethrone, never to govern more,
All, all are known to Thee.

And this continued feebleness, this state
Which seems to unnerve and incapacitate,
Will work the cure my hopes and prayers await,
That cure I leave to Thee.

Nor will the bitter draught distasteful prove,
While I recall the Son of thy dear love;
The Cup Thou wouldst not for our sake remove,
That cup He drank for me.

He drank it to the dregs—no drop remained
Of wrath—for those whose cup of woe He drained,
Man ne'er can know what that sad cup contained,
All, all is known to Thee.

And welcome, precious can His Spirit make,
My little drop of suffering for His sake;
Father I the cup I drink, the drink I take,
All, all are known to Thee!

For “The Friend.”

“Watching unto Prayer.”

In looking over an old volume of “The Friend,” this afternoon, I found an epistle of Mary Jessup on this important subject, so deep and living, and so filled with gospel truth, that I write to request its re-publication, in the hope that many will give it an attentive perusal, and be aroused, strengthened and comforted thereby.

An Epistle to Friends of Great Britain and Ireland.

Dear Friends:—Prompted by motives of gospel love towards my fellow-professors, and by a desire for the exaltation of Christ's kingdom in their hearts, I venture to address them on a subject which appears to me to be of the first importance.

I have neither the tongue nor the pen of the learned to employ in this service; but I believe this ought not to prevent my expressing, in the simplicity of my heart, the exercise I have long been under, on behalf of the members of our religious Society, that they may increasingly become a spiritually-minded people; such were the *primitive christians*; such, there is reason to believe, were our *early Friends*. Would it not be well for us to consider by what means we also may be enabled to “walk in the Spirit” with persevering watchfulness. To engage in religious performances with unprepared hearts, would not promote this desirable end; but I would not encourage all classes amongst us to be *rigid in waiting for ability* to perform the indispensable duties of mental prayer and praise; and this not only in religious meetings, and when families are collected for the purpose of reading the Holy Scriptures, but that care be taken daily to dedicate a portion of

time, to withdraw from our temporal engagements and, even literally, to “enter into the closet (or private apartment) and shut the door,” that we may be secluded from all outward interruption such an effort to disengage our minds from hindering things, it is believed, would prove an acceptable sacrifice in the sight of Him who seeth in secret. And though discouragement may at times be felt, because “the flesh is weak;” yet, if there be to a *patient waiting* for holy help, and a steady perseverance in “looking unto Jesus, the Author and Finisher of our faith,” there is ground to believe, that a capacity would be witnessed, how acceptably at the footstool of Divine mercy and to offer up our petitions for ability to “lay aside every weight, and the sin which doth so easily beset, and to run with patience the race that is set before us!” Should this address obtain general circulation, I trust it will fall into the hands of many, who can testify from blessed experience, that at seasons, when they have retired in a state of *dryness and insensibility*, light has arisen, and they have been favoured to experience a true “*hunger and thirst after righteousness*” so that they indeed have made sensible that the Spirit hath indeed helped their infirmities, and made intercession for them.

I do not assert that every rightly exercised mind will, at all times derive *sensible* encouragement and consolation from this practice; but I fully believe it is nevertheless *our duty* to place ourselves in a situation the most likely to draw down the Divine blessing upon us. There will doubtless be times, when we shall have “the sentence of death in ourselves, that we should not trust in ourselves, but in God, which raiseth the dead;” but this will humble the creature, and promote our growth in grace and spiritual advancement, perhaps as much as those seasons wherein sensible refreshment is dispensed. Allow me therefore, my dear Friends, to impress upon you minds the necessity of faithfulness in the discharge of so great a duty as that of “watching unto prayer.” We read that our blessed Lord “spake a parable to this end, that men ought always to pray, and not to faint.” In another place, he says “Verily! verily! I say unto you, whatsoever ye shall ask the Father in my name, He will give it you!” “Ask and ye shall receive, that your joy may be full;” and again, “If ye, being evil, know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him.” Surely the encouragement thus held out by the highest authority should strengthen our faith in his promises “Let us, therefore, come boldly to the throne of grace, that we may obtain mercy, and find grace to help in time of need.”

To those who thus reverently wait upon the Lord, I believe it seldom occurs but that a renewal of spiritual strength is experienced, and a degree of ability witnessed to offer up our petition “unto Him that is able to keep us from falling and to present us faultless before the presence of his glory with exceeding joy.” And who that has been thus exercised in the opening of the day, but would be impressed through the course of it with a sense of the necessity of endeavouring to cherish the spirit of prayer: that when he mixes with society a holy restraint may be felt, lest there should be any departure from the paths of duty. The watchful disposition of mind would neither be pre-emptive of a gloomy reserve, nor preclude the enjoyment of social intercourse; but would expand our hearts in love and charity towards our fellow mortals, and in desire that we may be preserved from putting “a stumbling-block, or an occasion

to fall in our brother's way." Who does not see the spiritual advantage that would result from having the mind thus impressed, day by day, with a sense of its duty to God and man; and with a conviction that, in order to perform this duty, Divine assistance must be reverently waited for?

Thus sensible of the incalculable benefits of retirement, I am anxious to prevail upon all my friends to avail themselves of the privilege, to press through the crowd of impediments which may obstruct their perseverance in this important duty; should they even seem, when faith is at a low ebb, like insurmountable difficulties. It is admitted, that, in some situations in life, the time devoted to this purpose, must of necessity be short; but if very little time can be prudently spared from domestic or other duties, that little, rightly spent, may prove as acceptable to the Searcher of hearts, as the widow's mite which was cast into the treasury. Again, persons in health, by early rising, may always secure a portion of time for this important service, before the occupations of the day commence. Thus the man of business may be enabled to cultivate the spirit of prayer; and, if his eye be single, his whole body will be full of light; so that his spiritual perception will be quick, and he will the more readily discover the snares which the adversary of man's happiness is continually laying to entangle the unwary. If this watchful state of mind be cherished, devotional feelings, there is every reason to hope, will so prevail in the evening, that sleep will not be given to the eyes, nor slumber to the eye-lids, until some time has been spent in reverently drawing nigh unto Him, whose we are, and whom we ought faithfully to serve.

A mother, whose neourbrances may be many, in attending to her infant charge, and to other necessary cares, will find that a few minutes thus spent in reverential awe, at the footstool of Divine mercy, will not be, to her, time lost; on the contrary, she will thereby be enabled to cast her care on Him, who is "touched with the feeling of our infirmities," and be encouraged to commit the keeping of her soul, with the souls of her offspring, to a faithful Creator.

In an especial manner I wish to encourage diffident minds, who may be tempted to think it almost presumption in them to expect that the spirit of prayer should be vouchsafed to any so unworthy as they feel themselves to be. May such be animated to begin and persevere in the practice here recommended; for there is no doubt with me, if they thus present themselves before the Lord, in humility and abasement of soul, but that the blessing which they seek will be mercifully dispensed.

And, oh! how thankful should I be, if any nominal professor amongst us, who may have forgotten his heavenly Father, or neglected his duty towards Him, days without number, might be awakened to a sense of his dangerous situation; and should any such be so smitten with remorse as to fear that his iniquities will forever separate between him and his God, let him not despair, but remember that he Saviour declared, "I came not to call the righteous but sinners to repentance." Instead, then, of the awakened soul endeavouring, like our first parents to hide himself from the All-seeing eye, because he is afraid; let him consider how awfully affecting it would be, if in such a state of alienation from his Maker, he should be summoned to appear in another state of existence, before the Judge of all the earth. May such an awful reflection induce him to flee to our great Advocate, "Jesus Christ, the righteous," who is "the propitiation for our sins; and not for ours only, but also

for the sins of the whole world;" trusting in his mercy, who is "able to save them to the uttermost that come unto God by him; seeing he ever liveth to make intercession for them." Let all such be encouraged to humble themselves "under the mighty hand of God," and listen to the apostolic counsel, "Repent ye, therefore, and be converted, that your sins may be blotted out, when the times of refreshing shall come from the presence of the Lord."

The poor penitent, humbled under a sense of transgressions, waiting upon the Lord in daily retirement, and patiently bearing his indignation, because he hath sinned against Him, will come to witness a capacity to "sorrow after a godly manner," and in a degree of faith, to adopt the language, "Lord, if thou wilt thou canst make me clean;" and if he sincerely confess his sins, God is "faithful and just to forgive him his sins, and to cleanse him from all unrighteousness." Then will he be enabled to "pray with the Spirit and with the understanding also." May persons of this description come, taste, and see for themselves that the Lord is gracious; that he is mercifully disposed to "heal their backslidings, and love them freely." If these submit to have their steps ordered of the Lord, they may in due time be enabled experimentally to adopt the words of the Psalmist, "I waited patiently for the Lord, and he inclined unto me, and heard my cry; he brought me up also out of an horrible pit, out of the miry clay, and set my feet upon a rock, and established my goings; and he hath put a new song in my mouth, even praise unto our God."

Those who have been measurably purified and enlightened, so as to have a deep and abiding sense of the incalculable value of immortal souls, and what is due from dependent creatures towards the Author of our being, will not only experience a living exercise of spirit on their own account, but will be likely at seasons to feel their hearts enlarged to supplicate for their families, their connections, their friends, and the whole family of man, agreeably to the advice of the Apostle Paul, in the first of Timothy, 2d chap. 1st to 6th verse, viz: "I exhort, therefore, that, first of all, supplications, prayers, intercessions, and giving of thanks, be made for all men: for kings, and for all that are in authority; that we may lead a quiet and peaceable life, in all godliness and honesty. For this is good and acceptable in the sight of God, our Saviour, who will have all men to be saved, and to come unto the knowledge of the truth. For there is one God, and one Mediator between God and men, the man Christ Jesus, who gave himself a ransom for all." This comforting assurance of the universality of the love of God, may encourage us to intercede for those who appear dead in trespasses and sins, when we are favoured with access to the throne of grace, even as the same apostle exhorts, "I will, therefore, that men pray everywhere, lifting up holy hands, without wrath and doubting." Many indeed are the iniquities and transgressions which abound in this land: some of its inhabitants who have the form of godliness, are, it is to be feared, strangers to the power thereof: there are others who have even "denied the Lord that bought them," and are in danger of "bringing upon themselves swift destruction." Because of these things, the hearts of the righteous among the various religious denominations, are made sad; perhaps justly fearing, lest the awful language should, in effect, go forth from the Most High: "Shall I not visit for these things? Shall not my soul be avenged on such a nation as this?" I have a firm persuasion, that sincere prayers have been offered up by many,

for the continued extension of that Divine mercy which has hitherto preserved and distinguished this highly-favoured nation in a remarkable manner. Here I would enforce on the minds of my fellow-professors, the necessity there is for a guard on our part, on the one hand, that we do not engage in any devotional act, in the activity of our own will; and on the other, lest we should through unwatchfulness, indifference and the love of ease, deprive ourselves of a capacity to "know the mind of the Spirit," whereby we may be enabled at times, acceptably to petition that the spirit of infidelity may be checked, and that those whose precious souls are in jeopardy, may yet be turned "from darkness to light, and from the power of Satan unto God."

Finally, my brethren and sisters, may "the God of peace, who brought again from the dead our Lord Jesus, that great Shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work to do his will, working in you that which is well pleasing in his sight, through Jesus Christ; to whom be glory forever and ever. Amen."

MARY JESUP.

Halstead, in Essex, 1st of Fifth mo., 1820.

From "The Leisure Hour."

Inundations in Holland.

BY J. D. LIEFDE, OF AMSTERDAM.

I gladly accede to your request to give a short account of the inundations which came over a considerable portion of our country in the beginning of this year. Fearful indeed was the calamity with which it pleased the Lord to visit thousands of people, who now are deprived of everything, and have to mourn over many a beloved friend who lost his life in the desolating element.

Holland has very often been the theatre of such afflictions; and, indeed, every year the population inhabiting the river districts have to expect a repetition of these calamities. You know that our country bears its name, the Low Lands, from its low situation, some portions of it being even lower than the level of the sea. It is not the sea, however, that causes the inundations which I have now to write of. Since the Cimbrian flood, which probably happened some centuries before the commencement of our Christian era, Holland was never inundated by the sea. Our enemies are the rivers which flow down from Germany, and, taken up by the Rhine, pass through our country to find their way into the ocean. On entering our frontier, not far from Arnhem, the Rhine splits into two arms, the larger of which is called the Waal, while the smaller continues under the name of the Rhine. The Waal, after having watered the walls of Nymegen, Tiel, Bommel, Brakel, and other places, meets the Maas, which comes from Belgium, and, united with this powerful river, flows down by Gorinchem, towards the sea. So the whole vast country from Arnhem down to Gorinchem is, as it were, covered and intersected with a network of larger and smaller rivers, encircling most fertile fields, and carrying the richly freighted crafts of all mercantile nations on their surfaces, but concealing in their bosom at the same time a hostile power, which, alas! too often destroys the profits which they have yielded to the agriculturists and merchants. Our forefathers, having experienced that fearful power, have lined the rivers on both banks with dykes or dams, which are composed of earth and mud, and built up to a height of twenty to thirty feet above the bottom or bed of the river. As long as frost does not change those fluent mirrors into marble, all goes well, for seldom the water which comes down from Germany reaches such

a height as to overrun the dykes. But when the frosty breath of winter congeals the limpid crystal, the greatest danger threatens the villages and towns with which those districts teem. Nothing is to be feared, however, as long as the ice is unbroken. But no sooner do the rivers begin to melt in Germany, than large pieces of ice, many of them being hundreds of yards in dimension, float down with irresistible speed. Nobody except eye-witnesses can have a conception of the crushing force of the floating ice. Bridges, houses, trees, are carried off, and poles five feet thick are cut off as with a razor. So long as the ice meets with no great object in its way, it floats down peaceably on the surface of the swollen water. But often, in consequence of the short windings of some rivers, a large piece of ice gets stopped, soon another piece of ice unites with it, and within a few minutes a large mountain of ice stops the river. Then the water, having no outlet, swells to an incalculable height. No dykes can be elevated enough to prevent its swelling. The hydraulic pressure becomes irresistible. Large pieces of floating ice beat like storm rams against the earthen dykes; in a trice some large portion is cut out of them, and with thundering violence the raging element pours down into the fields, which lie from thirty to forty feet beneath.

Such ice stoppings have often been the cause of most lamentable disasters in our country. The years 1784, 1799, 1809, 1820, 1827, and, above all, 1855, are written with blood and tears in the annals of Holland. In 1855, not less than thirteen dykes were broken by the ice; a fourth part of the large countries of Gelderland, Utrecht, North Brabant, and South Holland was turned into a sea. By one dyke-break, near the village of Dremmel, nearly 50,000 acres of cultivated land were inundated, and a thousand families deprived of their homes and property.

But all this misery, however great, has been put into the shade by the calamities which came over us in the early portion of this year. Never before had the water reached such a height, nor was the fury of the ice so extravagant. The place which God's mysterious providence permitted to be first struck was the fertile and luxuriant district of Bommelerswaard. This is an island, encreined by the rivers Waal and Maas. At nine miles distance from the town of Brommel are the flourishing villages Brakel and Poederoyen. There an ice stopping took place about the 8th of January. The inhabitants of those places were at work day and night to fortify the dyke. Stones, earth, dung, and all sorts of rubbish, were brought to heighten the dyke, and men, women, and children exerted themselves in fighting the common enemy. But all in vain. The ice broke through, and the thunder of the cannon, which always is placed to give warning, announced the sad intelligence to the surrounding villages and towns. In a few minutes the whole district was under water. The ice swept away everything that opposed resistance. Lots of rickyards, houses, and farms were uprooted and turned upside down. Soon the water covered the villages up to the roofs of the houses. Pieces of furniture, swimming cattle, roofs of houses, floated to and fro on the surface of the large pool, between pieces of ice which threatened to crush everything. Some few houses remained standing; their inhabitants saved themselves by escaping to the attics or the roofs, where they spent all the night and a portion of the next day in fear and agony, till a boat came to take them off. Most people ran to the dyke, where it was not broken, and kept there waiting for boats, which, however, in consequence of the darkness of the night and of the floating pieces of ice, could not reach them until the next

day, and then with great difficulty. There was no possibility of saving any property. Many persons had no time even for dressing, and died in their under-clothes. Within two days, sixteen thriving villages were inundated, nearly 18,000 persons driven from their homes, and forty lives lost.

All this happened while it was thaw weather. Some days afterwards a severe frost again set in, and the whole inundated district was covered with ice. Many persons from all parts of the country now came to witness the fearful spectacle. It was a strange heart-rending sight—a sea of ice, as far as the eye could see, and here and there a top of a tree or a roof of a house peeping out. An acquaintance of mine visited that spot on skates. Having reached the place where once the village of Garenen stood, he saw the church peeping out at half its height. He skated through the window, over the pulpit, and went out through the window on the opposite side of the building.

But this was only the beginning of the misery. A still greater calamity was in store. It was to be expected that a second inundation would take place, when thaw weather again would set in. With fear and trembling, every one watched the thermometer. Soon the dreaded danger approached. About the end of January, the rivers again melted, and now the poor village Leeuwen, situated on the bank of the Waal, not far from the town of Tiel, was the disastrous spot. On the 1st of February, the cannon announced a dyke-break in that place, and soon at other places, namely, Zuilechem, Nieuwaal, etc., the furious element destroyed the work of man. At Nieuwaal, a piece of 110 yards' length was cut out of the dyke, leaving an abyss of thirty feet depth. Again, some twenty villages, with their surrounding farms, were covered with water and ice. Again, thousands of families were driven from their homes. To rescue themselves, 3056 persons clustered together on an elevated spot scarcely spacious enough for 1000. There they spent several days in the open air in that frosty season, with no other food than fifty loaves of rye bread for all of them. Some saved themselves on floating pieces of ice. One family, consisting of nine persons, floated away on a piece of thirty yards dimension. In the night the piece was broken into two parts, and five of the family were severed from four. Of course they thought each other lost forever. But God held his hand stretched out over them. After two days floating about they met again in a place of refuge, where they were hospitably taken in. Most affecting accounts have been related of the wonderful protection with which the merciful God preserved many of those victims. Thus, a girl of eight years was found on a floating roof, who had spent seven days and nights in that position. Still she was alive. She had subsisted on apples, which she had picked up while swimming along.

The Lord also has moved the hearts of thousands in our country and abroad to succor those poor sufferers. Thousands of pounds have been sent in from all parts of Holland, from Germany, from Belgium, from France, and from England. Provisions and clothes were generously sent to Arnhem, St. Herlogenbosh, Tiel, Bommel, Gorinchem, &c., where between 30,000 to 40,000 of the victims were hospitably received and cared for. Our King came twice in person to the spots of misery, while the people were still in danger. He often stood up to his knees in the water to speak to them, or climbed up a ladder to reach a roof, whence he addressed them with words of kind consolation. Men, however, and cartily kings, can only save the bodies. We pray that the heavenly King may do a greater work still, and sanctify these fearful calamities to many souls, that they

may learn to fear him whose arm is strong and mighty. Certainly he has permitted this awful visitation of his chastening rod, to remind sinners of a still greater danger that awaits them, and to call them to the only Saviour from the fearful flood of fire which will yet assuredly come over the whole earth.

For "The Friend."

The Day of Trial and Hope of Deliverance.

He who gave to the sea its set bounds, and appointed to the year its seasons—turned the captivity of Israel, and wrought deliverance for Jacob—is now and forever able to limit the power and continuance of evil, and to cause the succession of day and night, summer and winter, seed time and harvest, in our spiritual experience; and will lift up a standard against the floods of enmity, as the hearts of the people are made willing to submit unto Him, supplicating from heart-felt need of preservation and help, "Spare thy people, O Lord, and give not thine heritage to reproach."

A day of sifting and proving has long been foretold, wherein the foundations of all should be tried; and happy will it be for those who may be found standing upon the ground of divine confidence and acceptance, through humble obedience; with no reliance upon the wisdom or power of the flesh, for God will not be mocked, or robbed of his honour—"I will not give his glory to another nor his praise to graven images"—but has appointed the way of the cross and of self-denial, as the only way of safety and peace.

Long enough have human wisdom and policy sought dominion, in church and state; and now it would seem that the Lord had arisen in judgment against them, and would drive us home to himself, as the alone unfailing protector and refuge, when the waves of affliction and trouble arise, filling the mind with fearful apprehensions of danger, and a sense of human impotency.

When through the humbling judgments of the Almighty, righteousness shall so prevail as to secure unto Him the ascription of all wisdom and power, glory and dominion, then will the work thereof be known by the prevalence of peace, and the experience of quietness and assurance, and those other fruits of the Spirit against which there is no law. When we shall apply unto the Lord for wisdom, and the word of command, then may we hope to be endued with power from on high to wage against the mighty—to prevail against the enemies of our own household; and it may be also strengthen the hands of others in the same night work; according to the injunction, "When thou art converted, strengthen the brethren."

In this humble dependence and obedience, there is no striving for rule or dominion; but meek and humble submission to the powers that be, as a testimony to the Truth and the sincerity of our profession; which is opposed to all envyings and strifes; all discord and violence, all confusing departures from good order; and a single eye is kept to the glory of God, in the promotion of his cause through the help of his saving light and power. The humble, confiding soul looks beyond all temporal advantages and attainments, to divine preservation and acceptance, in the way of righteousness; whereby it is qualified to glorify God and to promote "peace on earth and good-will to men."

Knowledge and profession are not what is needed, neither is the offered help of Divine goodness to make us what we were designed and ought to be; for these were never more sufficient than at the present period, wherein evil and unfaithfulness seem equally to abound, producing divisions in

church and state, fearfully threatening disorganization and anarchy; and all for want of timely and faithfully heeding the salutary admonition, 'Study to be quiet and do *thine own business*.'

What, therefore, remains for us to do, in order for our deliverance and preservation, but to repent and do our first works, that our captivity may be turned. If we do this, we may confidently believe it will be well with us; we shall have returned from our wanderings, and glorify God.

For "The Friend."

Young people generally like new things; for hem novelty has a charm; but for the old, there is nothing like the "old wine" of many years ago, and some degree of suspicion hangs about whatever has not been mellowed by time.

We see this craving of the young, this liking of the old, in nothing more than in the choice of reading. And many young persons are repelled at once from articles of the truest interest, simply because they are not new, and "don't look interesting;" while they, whose gradually deepened experience has as gradually transformed their own interests and tastes,—find in those old names, from which perhaps they too once turned away, a sure indication of life and truth.

Is there, among us, enough regard paid to this strong characteristic of young minds? The same person may be attractive or unattractive, and yet be equally good,—though that may admit of a question, for there is good in denying self by setting aside *indifference to others pleasure*—but at least a good and true thought, bearing the dignity of a great and honoured name, may certainly be set before the young as to win them to its pursuit, without in any way detracting from it.

We should remember that evil of the heart, *rejudice*, and how easily it is aroused, how great an enemy it is, and how hard to slay; and be very careful, in our anxiety to bring good authors and good books before young persons, lest we inadvertently teach them to shun rather than to seek.

There is a charm in sympathy; and if something that sublimely detroned of self, which made it. Paul say he has all things to all men, that he might by any means gain some, were to induce those of ripened experience to enter into the feelings and interest of the young, they would better understand and meet the want that in so many instances leads astray for its gratification; and this sympathy and interest given, would, let us hope, generally find sympathy and interest returned, and those who are amiable "swift to hear," would be disposed to "hold fast that which is good."

Practical value of Scientific Knowledge.—Some years ago it was the practice of tin-plate workers to throw away a large quantity of black dust formed during the manufacture. In conjunction with the late Henry, Dr. Percy visited tin-plate works in both Wales and procured specimens of this dust, which it had been the former custom to throw into a river hard by, and in which Henry found 60 per cent of tin! Many copper ores contain considerable quantities of gold and silver, which it has not been considered worth while to separate. At some large chemical works, in which sulphate of copper is prepared by dissolving copper in sulphuric acid, an insoluble residue was produced in the process, which had been put aside from time to time, and had not been thrown away. A small sun was offered by certain persons for this residue; and suspicion having been excited by the quarter from which the offer proceeded, it was declined, and the residue was examined, with the result of finding to contain £700 worth of gold!—*Westminster Review*.

For "The Friend."

Review of the Weather for Ninth Month, 1862.

The first two days of the past month were cloudy, with a heavy rain, accompanied by thunder and lightning on the evening of the 1st, during which half an inch of rain fell. On the morning of the 3d, there was some frost in low places, and that day and the five succeeding ones were clear, with the wind generally from the west and southwest. On the 9th, the wind changed to the northeast and east, and the weather became cloudy, and so continued until the night of the 11th and 12th, when a heavy storm of rain commenced and continued until noon of the 12th, during which about three inches of water fell; it was accompanied by a strong easterly wind, which prostrated a good deal of the corn in this part of the country. This storm did much damage in the upper part of Philadelphia,—where the papers state from five to seven inches of water fell,—by overflowing the culvert of the Cobocokink creek, and undermining the streets and foundations of houses; thus destroying a large amount of property, both public and private. During the remainder of the month, the weather was generally clear, there being only a slight sprinkle of rain on the afternoon of the 17th, and on the 28th, there was some rain in the morning. The average temperature for the month was 67° the amount of rain 3.68 inches. J.

Religion can never be a living and quickening principle if only assented to as a mere act of the understanding.

THE FRIEND.

TENTH MONTH 11, 1862.

LIBERATED NEGROES AT CAMP HAMILTON, VA.

The readers of "The Friend," have already been made acquainted with some particulars respecting the condition of the numerous "contrabands," so called, who have sought the protection of the United States Government. The number is so large, and their destitution so great, that a wide field is open for the exercise of benevolence, in a cause too, which is free from objection, as respects the christian testimony against war. We learn that the President of the United States has expressed a grateful appreciation of the endeavours

Friends have used to meliorate the condition of these poor suffering fellow creatures; and as our religious Society has long been known as the advocate of the liberty of the coloured race, we trust in their present exigency, Friends everywhere will exercise a generous liberality in contributing to the supply of their wants.

The government supply pork and ship-biscuit; clothing, medicines and comforts for the sick, beds, bedding, &c., must come from other sources.

A number of women Friends of Philadelphia, have for some months been labouring in this work, under the title of "The Women's Aid Society," as has already been stated in previous numbers of this Journal. Recently they sent some boxes of clothing, medicines, &c., and the following letter has been received in acknowledgement of them; which will be interesting to many, viz:

CAMP HAMILTON, Sept. 29th, 1862.

Dear Friend.—Your letter, together with the boxes, barrel and bale, arrived the 27th inst., and at L. C. Lockwood's request, I have consented to write to you, as Mr. Tyler and myself had the distribution of the articles already made.

If you could have been in that camp of destitution and heard the fervent "thank you, massa," as we gave out to these almost literally naked, I think you would have been well repaid for your efforts in their behalf. It came too, just in time, as it had been quite cool for a day or two, and they had begun to feel more sensibly their destitution.

The medicines are just what we need. The cinchona pills work very well in cases of fever and ague, and the tinctures in cases, will serve the purpose of any stimulant required.

I spend all the time I get in camp, relieving as far as possible, the wants of the sick and destitute. We have not had time yet to make arrangements for the making up the articles of clothing, but hope to do so this week.

The article sent for tickling will answer admirably. The very generous supply sent by you, is only as a drop in the bucket; there are 1400 in camp here, and more than half the women and children need dresses and petticoats, and bonnets, while men, women and children all need shoes and boots; and unless the North will furnish them, I fear they will suffer almost to death this winter. But they have strong faith in the Lord, and are very patient in their sufferings.

There are scores of children in the camp who have no parents, and no one to take care of them at all. But for your timely donation these must have suffered much.

The articles sent for food for the sick were just what we wanted; the Government furnishes no delicacies; I am sorry to say we have no lady teacher. I have had only one assistant at any time, and she is now sick; she expects to go North as soon as she is able to travel. My school numbers about 300 in daily attendance, and I get along as well as I can.

Very respectfully
C. P. DAY,
Teacher of Contrabands.

FRIENDS IN NORTH CAROLINA.

We would invite the attention of our readers to the claims of Friends in North Carolina to their liberal assistance. Contributions for this object will be gratefully received by Thomas Evans, 817 Arch St., or John M. Whitall, 410 Race St.

"The delicacies" sent for the sick, were corn-meal and rice. The Government rations are hard biscuit and salt pork.

In our number of to-day, will be found a Review of the Weather for the Ninth month, which has been furnished by an interested correspondent in Delaware Co., Pa. We trust he will continue his labour, and furnish us with similar reports, as they can hardly fail to be interesting and valuable to our readers, on whose behalf we return him our thanks.

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 26th ult. Sales of cotton in the Liverpool market, 10,000 bales for the week. Prices had declined 1/4; uplands, 27d.; sea, 29d. The London market was quiet, and the Manchester Cotton Supply at its annual meeting, took a hopeful view of the capacity of India, but denounced the obstruction policy of the Indian Government. A marine plant, known as the *Betrea Marina*, or grass ruck, has attracted attention, as a substitute for cotton. A committee of examination has reported favourably, and anticipated. A correspondent of the *Times*, who has travelled over the greater part of England, says the wheat crop will be from six to eight bushels below an average per acre, and of a shrivelled and inferior quality; the barley will be ten, and oats from four to six bushels below an average. Of peas, there is a fair crop, and potatoes are from ten to twenty per cent above the average. The crop of hay has been abundant.

UNITED STATES.—The Rebellion.—The Confederate Congress at Richmond, is highly indignant at President Lincoln's proclamation of prospective emancipation, and various measures of retaliation have been discussed by the Confederate Congress. The proclamation of the Confederate insurrection in the Confederate States, and is not understood North or South. A bill has passed the Rebel Congress authorizing the Secretary of the Treasury to issue copper coins of the denomination of five, ten, and twenty-five cents, to the amount of \$5,000,000. Appropriations of \$2,000,000 have been made for the determination is manifest in the rebel leaders to exert all their energies and devote the entire resources of the South, to the further prosecution of the war. A bill is before the Congress, and likely to become a law, which proposes to tax each person resident in the Confederate States on the 1st of January, 1863, one-fifth of the value of all the wheat, corn, rice, oats, potatoes, hemp, flax, peas, beans, barley, hay, wood, resin, tar, pitch, turpentine, cotton, sugar, molasses and tobacco produced by him in these States during the previous calendar year; also, one-fifth of the horses, asses, mules, sheep and swine; also, one-fifth of the profits made in the preceding calendar year, on the sale of swine, sheep, cattle or mules; also, one-fifth of each person's yearly income for the preceding calendar year, from all sources whatsoever, except from the sources hereinbefore described, and except from the interest on Confederate bonds, certificates, or Treasury notes.

The Horrors of War.—The numbers reported, from time to time as killed and wounded in battle, represent very inadequately the terrible waste of life and destruction of health constantly going on. Some conception of its extent over the whole field of warfare, may be inferred from a few items. The Richmond papers state that the official returns show that there are forty-nine hospitals at Richmond and Petersburg, which 110,678 sick and wounded soldiers have been received since the beginning of the war, of whom 11,602 have been furnished, 2,498 discharged, 7,603 have died, and 12,613 remain. The *Washington News* says that only fifty-nine men were slain in the second Wisconsin Regiment, in which, when it left the State a year ago, numbered fully eleven hundred. The destruction of many other regiments has been nearly as complete. Gen. McClellan reports that the U. S. army under his command, lost 14,750 men, in killed, wounded, and missing, in the battle of South Mountain, North Mountain, and Antietam. Of the rebels, according to the most probable estimates, about 4000 were killed in these two engage-

ments, and 18,000 wounded, beside which more than 5000 were taken prisoners.

Virginia.—The great rebel army under Gen. Lee, recently occupied the ground situated between the Operation creek and the road running from the river opposite Williamsport to Winchester. Explorations southward from Washington, have not disclosed the presence of any large bodies of rebel troops within fifty miles from the Capital. Their main force is supposed to be concentrated in the Shenandoah Valley. An expedition sent by Gen. Sigel, to Warrenton, captured 1032 sick, wounded, and convalescent soldiers of the Confederate army at that place. The prisoners were paroled. The railroad bridge at Harper's Ferry has been rebuilt, and measures have been taken by Gen. McClellan to fortify the position so strongly as to prevent its being again taken by the rebels. The rebels' headquarters was visited by the President last week. An officer in Winchester stated that he had heard from General Lee the acknowledgment that since their advance upon Gen. Pope, at the Rapidan, in all their battles at Manassas and Bull Run, before Washington, and in the several engagements in Maryland, in killed, wounded and prisoners, and from sickness caused by marching and other causes, and by desertion, their army had suffered a reduction of 60,000 men. The strength of their army appears, however, to be maintained by a rigorous enforcement of the conscription, under which, all men between 18 and 45 years of age are liable to be drafted.

The War in the West.—Despatches from Gen. Grant state that a sanguinary engagement took place at Corinth, Miss., on the 4th inst., between a rebel army commanded by Generals Price and Van Dora, and the Federal forces under Gen. Rosecrans. The rebels were defeated with great slaughter, having killed and wounded on the field, nearly one thousand rebels, beside the wounded, were taken prisoners. The loss of the Federal army is said to be serious, particularly in officers. The retreating rebels were pursued and attacked the next day on the Hatchery river, when two batteries and about two hundred prisoners were taken. Missouri is threatened with a rebel invasion from Arkansas. The rebels have collected a large army, with the declared object of wintering in St. Louis. They are said to have 17,000 men at Little Rock, and 23,000 either within the boundaries of Missouri or on its southern line. Gen. Schofield was at Springfield, for the resistance of their invasion. The battle of Cumberland Gap, Kentucky, has been abandoned by Gen. Morgan. He brought his entire force safely to Greenup, after an exhausting march of sixteen days. The men were said to be in good health, although generally shodless, halless and almost naked. They were about ten thousand in number, with nearly eight pieces of artillery. Much skirmishing has been going on with the hostile armies between Frankfort and Louisville. In one of them, about six hundred rebels were taken prisoners. Many thousands of the Kentuckians have joined the rebels, since they crossed the border. In some parts of the State, they have compelled all the men of the State to either join the rebel service, or leave the country. Gen. Buell's army, since its arrival at Louisville has been re-organized and greatly strengthened, and according to the latest reports, was moving against the army of Bragg.

New York.—Mortality last week, 370. The health of New York is better than the present year, with a less per centage of deaths to the population than has been the case for many years. The decrease of infantile mortality has been especially marked.

Philadelphia.—Mortality last week, 283. **The Markets.**—The operations in stocks were unusually large, and attended with increasing participation. The rise in prices is not to be attributed so much to any increased value of the securities dealt in, as to the cheapened currency with which they are bought and sold, the best paper currency being now at a depreciation of more than twenty per cent, compared with gold. The following were the quotations on the 6th inst. **New York.**—The money market well supplied, at 4 1/2 per cent for prime paper; premium for gold, 23 per cent; specie in the New York banks, \$38,325,587. The supply of wheat large, with sales of white Michigan, at \$1.05; red do., \$1.05; red do., \$1.05; white Michigan, \$1.05; \$1.05; \$1.15; rye, 82 cts.; barley, \$1.10 a \$1.15; mixed Western corn, 59 cts. a 61 cts.; oats, 56 cts. a 60 cts. **Philadelphia.**—Pennsylvania red wheat, \$1.32 a \$1.35; white, \$1.00; rye, 73 cts. a 74 cts.; yellow corn, 70 cts.; oats, 44 cts. a 45 cts.

RECEIPTS.

Received from John Tyler, N. J., \$2, vol. 35; from

John D. Harvey and Aon Sheppard, Pa., \$2 each, vol. 35; from Lydia C. Hughes, Pa., \$4, vols. 34 and 35; from Amy S. L. Eaton, N. J., \$2, vol. 36; from Joshua Coppuck, O., \$2, vol. 35.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent,—JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to ISAAC MORGAN, Ja., 622 Noble street, SAMUEL ALLEN, 524 Pine street, GEO. J. SCATTERGOOD, Fifth and Callowhill streets.

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable Friend as Governors at West-Town Boarding School. Application may be made to Sidney Coates, 1116 Arch St., Philadelphia; Abigail W. Hall Frazer P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 36th and Bridge Sts., Philadelphia.

TEACHER WANTED.

A teacher competent to give instruction in reading and other branches, is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Arch St.; Deborah M. Williamson, 1024 Arch St.; or Rebecca S. Allen, 335 S. Fifth Street.

WEST GROVE BOARDING SCHOOL.

The duties of West Grove Boarding School for Girls on the Philadelphia and Baltimore Central Railroad will be resumed on Second day the 3rd of Eleven month next.

Address, THOS. CONARD, Principal.

West-Grove P. O., Chester Co., Pa. Ninth mo. 26th, 1862.

DIED, on the 19th ult., at her residence in Moorestown N. J., MARY ANN, wife of Bartram Kaighn, and daughter of the late Griffith Edwards, of this city, in the fifty second year of her age. Of keen sensibilities, and very retiring disposition, this dear Friend was little known except in the domestic circle. In early life she endured protracted years of sickness, accompanied at times by great suffering, marked through all, with the most uncomplaining fortitude, earnestly desiring that no suffering might be withheld which her Heavenly Father saw fit to require in order for her purification, and that her own will might be brought into complete submission to His. Thus, in self-distrust, and sometimes with much discouragement, she endeavoured to follow her Divine Master, and though experiencing many deep privations, was of latter time, mercifully enabled frequently to enjoy the support she derived from the sense of God's soul-satisfying, enriching peace and consolation, which compensated abundantly for all outward trials. In her last severe illness, her patient gave evidence of the sustaining power of Divine Grace, and we reverently believe, that through the mercy of Jesus Christ her Saviour, in whom alone she trusted, her robes were washed, her spirit justified, and she admitted where sickness and sorrow are unknown — near West Chester, Chester Co., Pa., on 21st morning of the third ult., aged about sixty-two years. DEBRY L. CORE, wife of Gerard Cope. Her meek and unobtrusive Christian disposition, endeared her to those with whom she mingled; and the saviour of Life which she tended, evinced her preparation, through the efficacy of Divine Grace, for the enjoyment of the blessing pronounced on "those servants whom the Lord, when I come, shall find watching." On the 1st of Fourth month last, at her residence Haddonfield, N. J., SARAH CLEMENS, an esteemed member of our religious Society, in the eighty-first year of her age. "Sick, and ye visited me."

WM. H. FILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, TENTH MONTH 18, 1862.

NO. 7.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

[In the Seventh month's number of the Edinburgh Review, is an interesting article upon the uses and manufactures of Iron, which, though prepared with special reference to the preparation and employment of that metal in England, contains such information of value to all who take an interest in such matters. We have marked some extracts, which we think will be acceptable to most of the readers of "The Friend."]

"The present century offers the first instance in the history of the world of a supply of iron which exceeds the demand. The scarcity of this most useful of all metals was the great clog on the newly developed civilization of the ancient world. Homer's days the supply of iron barely sufficed for the rude agriculture of the period. His heroes were content to mangle each other with brazen spears and swords, and a lump no bigger than an apple could carry of wrought iron, fit for making iron-heads, was thought a prize worth contending for at the funeral games of Patroclus.

"The Romans possessed iron in much larger quantities. Pliny speaks as authoritatively as a modern geologist, though not as scientifically, of the ores 'to be found in almost all parts of the world,' of their various qualities and different uses. And it is remarkable that wherever iron has been discovered in this country, even in very recent times, the traces also of ancient workings have been found.

"But the age of bronze cannot be said to have passed away till the first of the three great inventions which form landmarks in the history of the iron manufacture—the art of making 'pig iron'—had been made known to the world. The Romans undoubtedly succeeded in increasing the 'blast' of the combustion of their furnaces; but the perfection of the art of smelting consists in the introduction of a third substance, called a 'flux,' which, when fused in combination with the earthy matter of the ironstone, and permits the disengaged metal to flow freely from the bottom of the furnace to the moulds prepared for it. The iron thus produced is called pig iron, and is not only more abundant in quantity but differs materially in quality from the product of the processes previously in use. When this great discovery was made, or by whom, is unknown. Its value was probably not appreciated at the time, and its date is unrecorded. Certain it is that with the first dawn of modern history we find iron established

in the economy of daily life as the useful material of all hardware. Soon after the invention of gunpowder we read of cast-iron ordnance, and 'casting' implies a previous familiarity with the art of making pig iron. In the Middle Ages a degree of skill which has never been surpassed, was attained in working in steel. The artisans of that period were artists, and they employed all their powers in both capacities to decorate the arms and armour, and other hardware intended for the personal use of the great. They inlaid them with the precious metals in patterns of the most exquisite design; and further to adorn them the art (the parent of engraving,) was invented of carving on little plates of silver an outline which was subsequently filled up with a dark composition called niggellum, and hence the name of the Nielli, so highly prized by modern collectors, and so dexterously imitated by modern forgers. But, with these and a few such like exceptions, iron was applied to only the most ordinary uses. Yet even for these the supply was insufficient, and early enactments forbidding its exportation prove its scarcity and value in this country. So far, however, from encouraging the manufacture, the legislature for some centuries seems to have considered it as the natural enemy of the oak forests, on which the national safety then depended; and at best as a necessary evil which could only by great vigilance and restrictive laws be contained within tolerable bounds.

"In Charles I.'s day, Dud Dudley discovered the art of substituting coke or coal for charcoal in the smelting furnace—the great invention which forms the second epoch in the history of the iron manufacture—but even he failed to see or feared to urge the great importance of his own discovery; and in his passionate pleading with the restored Government of Charles II. for the renewal of his patent, he claims no merit for increasing the supply of iron, and dwells only on the advantage of sparing the native oak forests.

"If Dudley did not feel the full value of his own invention, no one else felt it at all. The discovery was, in fact, premature. Till the necessary improvements in the blowing apparatus of the smelting furnace had been effected, the means were lacking to turn it to account, and this was not accomplished till about 1740, at which date the iron trade had reached its lowest point of depression. Under the double check of legislative discouragement, and a diminishing supply of charcoal, the home manufacture had sunk to less than 18,000 tons per annum; and so far had the political troubles of the preceding half century checked industrial enterprise, that the imports did not average more than 30,000 to 35,000 tons. But better times were at hand. With the assistance of pit coal, which was soon brought into common use, the home manufacture was raised in the interval between 1740 and 1788 to nearly 70,000 tons per annum, while the imports increased to upwards of 50,000. And now at last the time was arrived when the need of foreign aid was yearly to become less. About the year 1788 the completion of the steam engine gave a new impulse to all the operations of mining, and facilitated

all the processes of the iron manufacture. From this period dates the supremacy of England in the iron trade. And while this rapid stride in advance was still fresh in the memory of the middle-aged, the third and last great discovery, the application of the hot blast (the nature of which we shall describe presently,) secured a supply of iron large enough to meet any possible demand, and cheap enough to permit its application to every variety of purpose."

"It is difficult to conceive how a supply of 70,000 tons of home manufactured iron could have sufficed for the wants of an age which already displayed so much industrial energy, but everything is relative; and even before the annual 'make' had reached this amount, the comparative plentifulness and cheapness of iron suggested the idea of applying it to hitherto untried uses. Even then John Wilkinson of Broseley, who is known as 'the father of the iron trade,' ventured to predict the time would come when we should live in iron houses and sail in iron ships. He was called 'iron-mad,' and it was supposed to be a symptom of his prevailing delusion, when in 1773 he proposed that cast iron should be used as the material of a single-arched bridge, which it was desired to erect across the Severn. The idea was not wholly new. As early as 1755 an attempt had been made at Lyons to construct an iron bridge. But it had failed; and even if its fame had reached Shropshire, its failure could have held out no encouragement to repeat the experiment. Bridges of cast iron are now so common, it is difficult to appreciate the boldness of the man who first conceived the project of employing this new material in the construction of a gigantic arch to span a navigable river. Hitherto cast iron had been little used. Dudley speaks of certain cisterns and other articles for domestic use, which he had cast from his pit-coal iron as novelties beyond the reader's belief. More recently, Savery and Newcomen had made use of it in constructing their pumps and engines. As yet, however, the art of casting was imperfectly understood. But the vigorous efforts which were made in the latter half of the last century to develop the industrial resources of the country, by the construction of roads, bridges, and canals, called forth a vast amount of engineering and mechanical talent—and taxed it to the utmost to invent novel modes of construction, and to discover materials of more extensive application than those hitherto in use. Wilkinson's proposal was referred to—Pritchard, the architect of the county, and was carried out in the erection of the bridge near Coalbrookdale—the first iron bridge in the world—which gives the name of Ironbridge to the little town rapidly rising on the adjacent bank. The second iron bridge was designed some years later, by the well-known Thomas Paine, whose notoriety is derived from a less creditable employment of his talents. It was executed at Rotherham, and taken piecemeal to London, where it was set up on a bowling green at Paddington, and exhibited as a curiosity. Paine had intended it for the Schuylkill in America. But his means failed, and he ran away to Paris, then in the height of its revolutionary frenzy, to

join the friends of liberty, or to avoid his creditors. The friends of liberty, more formidable than his creditors, threw him into prison, and would have gillotined him if he had not contrived to escape. In the subsequent confusion of his affairs, the bridge was ultimately taken back by the manufacturers, Messrs. Walker, and supplied part of the materials for T. Wilson's great arch across the Wear near Sunderland. This work was completed in 1796, and was long regarded as a world's wonder; it has indeed no longer the merits of novelty and rarity, but it well deserves the praise bestowed on it by Robert Stephenson, who pronounced it to be a structure which, as regards its proportions and the quantity of material employed, will remain unrivalled.

Contemporaneously with the construction of the iron bridge at Sunderland, the second actually completed, Telford was engaged in erecting another of the same material, two miles above the first—at Buildwas, to replace an ancient stone structure which had been carried away by the Severn in a recent flood; and so rapid was the progress which engineering had made in less than twenty years, that although the span of his bridge was thirty feet wider than that of Pritchard's, it contained less than half the quantity of cast iron.

"Since those days, there has sprung up another rival of the parent arch some miles lower down the stream at Coalport—where is really made the china which London chooses to call by the name of Coalbrookdale, while to complete the triumph of tradition over fact, the structure itself is known in the neighbourhood as the 'Wooden bridge.'

(To be continued.)

In the testimonies from the Monthly Meeting of Wells, in Norfolk, concerning Katherine Peckover, who died in the year 1741, aged about seventy-five years, it is said:—

"She received the truth whilst she was very young, and, with her honorable mother, was imprisoned for her testimonies thereunto, before she was sixteen years of age, and undauntedly confessed the same, and pleaded for it in her examinations before the judge in court, being first called to answer to their indictment, though there were upwards of sixty persons then present upon the same good account, and she the youngest of them all; where she conducted herself with such modesty, giving pertinent reasons for her joining with her friends in assembling together to worship God in Spirit, &c., and refusing her liberty on terms inconsistent with her religious profession, as drew from the court no small attention and surprise; and it was so ordered, that she, with her fellow prisoners, were all set at liberty, which she would afterwards often mention with great sweetness and gratitude of soul to the Divine hand by which she was supported to hold out to the end of her days, in a constant dependence on that arm of Power, which gloriously visited and wrought upon her.

For "The Friend."

Lock Haven, Penna.

This wooden town is pleasantly located on the south bank of the West Branch of the Susquehanna river, about two hundred miles from its mouth. The Bald Eagle Creek, a beautiful stream, having its source in Clearfield Co., comes in on the south side of the town, leaving the foot of a heavily wooded chain of mountains of the same name, and empties into the river about two miles below. Looking down upon the town and its surroundings from the summit of the high hill belonging to P. M. Price, immediately to the west, the view presented, particularly at this season of the year, is one of the finest that can well be imagined. A

large plateau seems to have been scooped out of the mountains, purposely to set a town upon. Spurs of the Alleghenies, broken into wild and variegated masses, and now mantled in almost all the hues of the rainbow to their very summits, and a beautiful curve in the river, compose the northern boundary of the picture. An uninterrupted view of near twenty miles in extent is had to the west; the Bald Eagle chain in the south; whilst below and to the east, the eye rests pleasantly on the neatly painted houses of the town, the river, wooded island, bridge, &c. A walk to this hill, about an hour before sunset, will amply repay those who are fond of natural objects and scenery.

The population consists of some 4000 persons, principally of eastern descent, whose occupations are mostly dependant upon the profits derived from the purchase, cutting up and selling white pine and hemlock lumber. The *modus operandi* of converting growing timber on the mountains into dollars and cents in the pocket, is somewhat in this manner. At this season of the year, the owners of timberland up the river and its tributaries, (many of whom are also proprietors of saw mills here,) go into the mountains, taking with them a sufficient number of sturdy men, armed principally with double edged keen looking axes, and provided with all the necessaries and some of the conveniences of camp life, and either build a shanty, or camp out during the lumbering season, which usually lasts until spring. The trees after being felled, are barked, logged off into convenient lengths, and each one stamped or branded on the end with the owners private mark or initials, and then started headlong down the slide on the mountain side, on its way to the stream of water at its foot, thence to be floated off, upon rise of the water in the winter and spring to the river, down which it is borne with thousands of its fellow victims, to the boom erected by the West Branch Boom Company, at this place, for the purpose of securely holding them until called for by their proper owners.

The "Boom" consists of a series of strongly built piers, extending diagonally out into the river for about one half its width, and then upwards for near two miles, and are connected together by heavy spars or pieces of timber, bolted and clamped into each other at the ends, and yet forming a somewhat flexible joint, which rise and fall with the surface of the water, and form a barrier against which the logs float and are stopped, some flatwise, others rise up on end, and in that manner secure themselves. About twenty-five million feet of lumber is annually floated, taken out, sawed, shipped, and consumed at this place. Five or six large saw mills driven by steam, besides several smaller ones, are engaged in preparing the lumber for market. An interesting sight it is to visit one of these huge consumers of the raw material, where a log of three or four feet in diameter is reduced into stuff of any required thickness, from one-half to three inches, at one passage through the devouring jaws of a dozen to twenty saws fastened into one head piece, and all moving up and down with unceasing regularity, and never stopping whilst the mill runs, for want of fresh material, for as fast as one is brought another follows it in immediate succession.

The distance from Philadelphia to this place is 225 miles, per the Erie Railroad, which is now completed some twenty-five miles above on its way to meet the western end, which is extended eastwardly into the oil region from Erie. A railroad is also in process of erection along the valley of the Bald Eagle to Tyrone, on the Pennsylvania Railroad. Both of these works are now under the entire management and control of the latter company, a fact which not only insures their completion in

good order, but their successful operation were done.

Land well adapted to sheep raising can be purchased at low rates along the valleys running up from the river. Bituminous coal is being discovered in sufficient quantities to make remunerative returns for working the veins, as well as fire proof clay, and so far as human foresight can perceive, bright future, so far as worldly prosperity is concerned, is in store for the industrious inhabitants of the Valley of the West Branch of the Susquehanna.

T. P. W.

Instances of Divine Preservation in Danger.

(Continued from page 42.)

Those who are familiar with the history of the Irish Rebellion, and the dreadfully cruel and wicked character of the insurgents, who committed the most atrocious barbarities upon innocent persons, women and children, will readily appreciate the remarkable and merciful interference of Divine Providence on behalf of Friends, by which they were preserved, in almost all instances, from bodily injury. It furnishes a very striking and conclusive proof of the value of peace principles, and that meek and steadfast adherence to them is often far more secure protection than military strength and equipments.

The narrative proceeds; "In the neighborhood of Old Ross, there lived two brothers named Jones, who had some leaning toward Friends. They were made prisoners; and when the rebels were about to put them to death, some one saw they were Quakers. Reply was made that if they could show they were Quakers, they should not be killed. One of them offered to turn Romanist if they would spare his brother's life; but the other stood firm to his protestant faith, enclosing his brother to be faithful also, reciting that of Scripture, 'He that denieth me before me shall be denied before the angels of God.' The wife of one of them showed much christian fortitude, and supported each one of the sufferers her arms when he was put to death.

"A party of the rebels went to the house of J. and A. Goff, to drive away their cattle for the supply of the camp, and being told the cattle had lately been taken for tythes, they departed. Some of them, however, came again and took their horses. At another time a party came with the apparent intention of murdering the whole family. Some of them would say to their comrades, 'why do you begin?' they replied, 'we will shortly.' Being prevented by a Power they knew not, they still delayed carrying out their intention, and being again asked why they did not go on with their work, the leaders said, 'we will come another time. They went away in a rage, after damaging a furniture by stabbing it with their pikes. They were the words of the Psalmist verified, 'The wrath of man shall praise thee and the remainder of wrath thou shalt restrain.'

"A party of the king's army came to Ferns to disperse the rebels, who held possession of the town and, at first made as if they would stand a battle, but, seeing the king's troops had cannon, they fled. Hearing the king's army was coming, I stood in my door, lest I should be suspected of being an enemy. When the military came near me, one of the soldiers stepped out of the ranks, and presenting I to my breast, was about drawing the trigger. I called to him to desist from murdering; when he let the gun fall from his shoulder like one struck with amazement, and his officer being at hand prevented his doing any mischief. Thus was I mercifully preserved by Him who can turn the hearts of men as he pleases.

"These soldiers took several persons prisoners whom they found unarmed in their houses, and who pleaded that they were innocent. The commanding officer told them that if there were any pluckers in the town they should procure from them certificates of good behaviour, which he would accept, and liberate them. I was accordingly applied to on behalf of several, and got them set at liberty.

"From the numbers of pikemen (or rebels) who came almost every night to lodge in Friends' houses, we were in continual danger of falling a prey to the king's army if they should make an attack on the town; and, on the other hand, we were continually threatened by the pikemen for not turning out the poor protestant women who took shelter under our roofs.

"Joseph Wright being much threatened at one time for not complying in this matter, told the pikemen he would not turn from his house, poor, diseased and helpless fellow creatures, let the consequences be what they might; and when they saw his steadfastness, though greatly enraged, they did not enforce a compliance.

"Some of the rebels came to me one morning and told me my house was to be burned that day, in consequence of my refusing to turn out the protestant women to whom I had given a home. I told them if they did so, I could not help it; but so long as I had a house I would keep it open to the poor destitute and distressed, and if they arraigned it because of my doing so, I must only run out along with the others and share their affliction.

"It was our meeting day, and with a heavy heart I took my family to meeting, above a mile distant; expecting on our return to be bereft of a home and even of subsistence. But the good God that had hitherto preserved us, did not permit them to carry out their design; nor did they at I remember, require the like of us afterward.

"I found that the more I attended in my own conduct, to what I believed to be right, the more was respected by them. Even when I have exultated with them on account of their cruelties committed at their camps, particularly at Vinegar Hill and Wexford; and their burning men, women and children, in a barn at Scullabogue, they have quietly listened to my remonstrance and sometimes knowledge the wrong.

"At length a time approached when Divine reprobation was more remarkably conspicuous, for nearly three weeks the rage of superstitious gory spread over the country with fire and sword, and from all the information we could gather, as well as from a concurrence of circumstances, it appeared that a day was fixed for a general massacre of every class who were not of the Romish church, for the rebels often said in my hearing, 'One religion only shall be allowed.' In the morning of that day a black standard or flag was carried by the rebels through the streets of Wexford, bearing this inscription M. W. S. in large letters, which was understood to signify 'murder without sin.'

"On the evening preceding, the king's army entered Vinegar Hill, and early next morning a battle took place, in which the pikemen or rebels were totally defeated and put to flight. The royal troops pursued them to Wexford, got immediate possession of the town, rescued from instant death many of the poor protestant victims, and all who were not made prisoners by the rebels, from the terrible massacre which was rapidly going forward, triumphantly on the bridge of Wexford, and did not cease until the king's army entered the town. It was said that the murderers were ankle deep in blood on the bridge.

"The wife of Thomas Mason, of Enniscoorthy, was told by her Romish servant maid, on that day, that by evening she would have no father for her children; and during that week I was told by some of those people that our lives, viz: the Quakers, would soon be ended.

"James Becker, a person of Clone, in my parish of Ferns, with whose family I am well acquainted, was one of those employed by the rebels on Vinegar Hill to kill the Orangemen, as they called the protestants; and when afterwards he was under sentence of death for the murders he had committed, being smitten with remorse, he made a full confession that it was the intention of the Romanists to cut off all the protestants 'smack and smooth,' as he expressed it; that while on Vinegar Hill he was kept almost continually drunk, by those in authority over him, that his humane feelings might not prevent him from acting as executioner.

"Two men who were taken prisoners on the day of the slaughter of the insurgents at Carlow, being asked by the officer before whom they were tried, what they expected to do, had they been successful in the attack on Carlow, confessed that they intended the death of all the protestants. 'And what?' said the officer, 'did you intend to do to the Quakers?' 'They also were all to be put to death;' was the answer. These facts are written, only to show there was sufficient ground to believe that our total destruction was determined on, when He who commands the fury of the winds and controls the raging of the sea, was pleased in mercy to us to proclaim; 'Thus far mayest thou go and no further; and here shall thy proud waves be stayed.'

"Although the Divine regard had been so particularly manifested in preserving the Society of Friends through all from the stroke of the assassin; yet on one occasion, as the time approached for holding the Quarterly Meeting at Enniscoorthy, the aspect of affairs was such that it seemed impossible it could be accomplished. Several Friends, however, acting in faith, left their homes, as with their lives in their hands, to attend it. The way was gradually opened before them; and passing among heaps of slain which lay in their road, they reached the meeting house at the appointed time, and being comforted together under an humbling sense of the providential care of the Almighty so largely and mercifully experienced, they held their meeting for worship and discipline quietly, and were favoured to return to their habitations in safety. So remarkable was the exemption of Friends from the general devastation, that strangers passing by the houses of Friends and seeing them preserved, while ruins were on either hand, would frequently say, without any other knowledge of the fact, 'these are Quakers' houses.' One young man, a member of the Society, of or near Rathangan, departing from the peaceable principles of Friends, sought safety among the king's troops, and fell a victim to party rage.

"After the rebellion subsided, the country was much infested by bands of robbers, and where Friends lived in country places, they were exceedingly annoyed by them. Jacob Goff, of Horetown, was brought before his own door to be shot, but the robbers were not permitted to accomplish their murderous intention. In some places Friends were so frequently assailed by night, that they were wearied out and obliged to leave their homes.

"The following circumstance will show how much observations, called religious, may be placed above morality and honesty. One sixth-day night the robbers came to the house of Thomas Thompson at Cooladine, and after plundering the house

of what they could find, prepared to eat their supper. But before they began to eat, they had a consultation 'whether they might dispense with the sin of eating meat on a Friday;' and prayed to be directed aright.

"Their department was very different in different places; where Friends lived simply and in plainness, their treatment of such was in general respectful, and showing full confidence in the truth of their assertions.

"Though the lives of Friends were thus preserved even to a proverb, yet their property was in many instances much reduced, and in some, nearly destroyed. A general sympathy for the sufferers prevailed among their brethren through the nation, and considerable sums of money were raised and their wants relieved. Friends in England and America also evinced much brotherly kindness and generosity in offering to assist them."

A Continent of the Future.

This is the expressive remark lately made by the celebrated explorer, Livingstone, of Africa. And the light received recently in regard to its interior, justifies the prediction. Geographical research, commercial adventure, colonizing enterprise, and missionary zeal, unite in opening the continent, and in exhibiting vast fertile regions densely inhabited by much more intelligent and powerful tribes than those to which our former acquaintance was restricted.

The explorers of the Tanganyika Lake, in Eastern Africa, report the land visited as abounding in iron and timber, coal mines and ivory, and that the cotton plant is indigenous, and rivals in fineness, firmness and weight the medium staple of the New World.

Livingstone, wrote to a friend at Cape Town the result of his recent three months' tour on the Nyassa. He states that the lake is over two hundred miles in length, the water fresh and cool, and is "surrounded by mountains, or by the high table lands, that appear as such. A mountainous cape divides the southern end into two bays, one thirty and the other eight or nine miles in length. We went along the western shores and found a succession of bays, until, in the far north, the spurs of the mountains, running sheer down to the water, scarcely afforded landing places. In the south no bottom was felt with our sounding line of thirty-five fathoms. * * * * We never saw so many people anywhere else as on its shores; they were on the whole very civil. * * * Healthy localities can be secured on the highlands, which arise on our east to a height of some seven thousand or eight thousand feet above the sea."

Dr. Kirk thus concludes an interesting communication on the natural products and capabilities of the Shire and lower Zambesi valleys:—"The expedition has thus shown unlimited tracts of land adapted for cotton, and others suited for sugar cane; the best for both being near the coast, and enjoying a healthy climate, thickly peopled by a race already engaged in the growth of cotton, all that is required being to develop further a branch of industry now existing, in doing which the slave trade would be broken, and the victims of it turned to industry at home. A large supply of lignum vitæ, ebony, and Indian rubber, has also been pointed out, while the abundance of wild indigo seems to indicate a country adapted for its production."

David J. May, an officer of the British exploring corps of the Niger, made a journey overland from Rabba, a point about four hundred miles up that river, across Yoruba to Lagos, and then returned to Nupe. In a detailed description of his

travels, he states that: "Throughout the journey I met with much consideration and hospitality at almost every place: a goat or a sheep, and a few cowries were given to me, even where I met comparative poverty and much depression; yet parsimony, with shrewdness and industry, are the prevailing characteristics. * * * Corn, yams and cotton are the principal productions, palm oil being only prepared for their own moderate consumption. The country is evidently capable of producing a vast amount of these commodities."

George L. Scynmour, and James L. Sims (colored), both enterprising citizens of the Republic of Liberia, travelled some two hundred miles east of Monrovia. They journeyed in a reverse direction from each other, and agree in declaring the section visited as highly salubrious, and possessed of vast resources of agricultural, mineral and industrial wealth.

Other similar quotations and testimonies might be produced were it necessary. Heretofore the worst and most repulsive aspects of the African continent and its inhabitants have first appeared. Now the inland presents an entirely different character. Towering mountains, large bodies of water and immense tracts of luxuriant land rise before the traveller, producing almost spontaneously not only cotton, coffee and sugar, but other important and desirable products. The people of the interior have generally been found to be physically inferior to no race, and equal to any aboriginal population in activity, hospitality, industry and intelligence. What a field does this rich and populous continent open to America for commercial, colonization and christian labours? With unrivalled facilities to spread the arts of civilization and the institution of religion, let the future declare that we have not slighted our weighty obligation, nor allowed the great opportunity to escape unimproved.—*Col. Herald.*

Selected.
WHO ARE THESE? WHENCE CAME THEY?

Not from Jerusalem alone
To heaven the path ascends;
As near, as sure, as straight the way,
That leads to the celestial day,
From farthest realms extends;
Frigid or torrid zone.

What matters how or whence we start?

One is the crown of gold;
One is the hard and glorious race,
Whatever be our starting-place;
Ring round the earth the call
That says, Arise, depart!

From the balm-breathing, sun-loved isles
Of the bright Southern sea,
From the dead north's cloud-shadowed pole,
We gather to our bedchamber goal—
Our common home in thee,
City of sun and smiles!

The cold, rough billows hinder none;
Nor helps the calm, fair main;
The brown rock of Norwegian bloom,
The verdure of Tabbithan bloom,
The sands of Mizraim's plain,
Or peaks of Lebanon.

As from the green lands of the vine,
So from the snow-wastes pale,
We find the ever open road
To the dear city of our God;
From Russian steppe, or Burman vale,
Or terraced Palestine.

Not from swift Jordan's sacred stream
Alone we mount above;
Indus or Danube, Thames or Rhone,
Rivers unassaid and unknown;
From each, the home of love
Beckons with heavenly beam.

Not from gray Olivet alone
We see the gates of light;
From Morvan's height, or Jungfrau's snow,
We welcome the descending glow
Of pearl and chrysolite,
Under the setting sun.

Not from Jerusalem alone
The Church ascends to God;
Strangers of every tongue and clime,
Pilgrims of every land and time,
Through the well-trodden road
That leads up to the throne.

SOON AND FOREVER.

"Having a desire to depart, and to be with Christ, which is far better."—*Phil. i, 23.*

Soon, and forever, such promise our trust,
Tho' ashes to ashes, and dust unto dust;
Soon and forever, our union shall be
Made perfect, our glorious Redeemer, in Thee;
When the sins and the sorrow of time shall be o'er,
And its pang and its partings remembered no more,
When life cannot fail, and when death cannot sever,
Christians with Christ, shall be soon and forever.

Soon and forever, the breaking of day
Will drive all the night clouds of sorrow away,
Soon and forever, we'll see as we're seen,
And learn the deep meaning of things that have been;
When fightings without, and fears from within,
Shall weary no more, in the warfare of sin;
Where tears, and where fears, and where "partings
shall never;
Christians with Christ, shall be soon and forever.

Soon and forever, the work will be done,
The warfare accomplished, the victory won;
Soon and forever the soldier lay down
His sword for a harp, and his cross for a crown;—
Then droop not in sorrow, despond not in fear,
A glorious to-morrow, is brightening and near;
When, hissed about, and each faithful endeavour,
Christians with Christ, shall be soon and forever.

Proper Time of Year for cutting Wood.—Four pine trees of the same age, equally sound, which had grown on the same soil and under the same conditions, were chosen. The first was cut at the end of December; the second at the end of January; the third at the end of February; and the fourth, at the end of March. They were shaped in the same manner, into beams of the same dimensions, and seasoned under the same conditions. Their resistances to bending were then determined, by laying them on supports and loading them at the middle. The resistance of the first beam, (that felled in December,) being called 100; that of the second was 88; of the third 80; and of the fourth 62.

Similar results were obtained as to the durability and strength of posts made of sticks cut at the end of December and of March. The first were still perfectly sound after sixteen years; the second at the end of three or four years, broke with the slightest effort. All were buried in the same soil, and under the same conditions.

Four oaks, as like as possible, and placed in the same conditions, were cut at the end of December, January, February and March. A disk of the same thickness was cut from each at the same height above the ground, and was made the bottom of a vessel filled with water; the sizes of the vessel and the height of the water being the same in all. The first, (cut in December,) allowed no water to pass; the others passed more or less,—that cut in January, at the end of forty-eight hours; that of February before the end of the second day; that of March in two hours.

Two similar oaks were selected and felled, the one at the end of December, the other at the end of January, and staves made of the wood. Bar-

rels were made of them, which were soaked in the same way, and then filled at the same time, and with the same wine. In a year, the barrel made of the wood cut in December, had lost 0.14 quart while the other had lost 7.2 quarts.—*Jour. Frank Inst. from Cosmos.*

Agriculture and Women.—We have known no a few farmers who have abandoned agriculture life because their wives and daughters were no happy and repining, and coveted an easier existence. This must be regarded as a sign of nation decay, and the Baltimore American makes some admirable remarks on the subject:—"An American gentleman who lately visited England, was struck with the interest manifested by ladies, including those of the highest rank, in agriculture. On the west, the Duchess of Portland, exhibited perfect familiarity with the minutest details of farm management and work, showing her American guest over the whole of the Duke's large estate, and explaining to him the various processes and methods of cultivation. We could wish that our American ladies would adopt one of the few aristocratic tastes and habits which sit gracefully upon republican women, and which would be of equal advantage to the interests of agriculture and to their own delicate physical organizations. A great deal of care is uttered in these days about the mission of women; but whenever we hear an attenuated, dyspeptic female talking in this wise, we feel sure that the daily handling of a broomstick, in a peaceable manner, or the charge of a kitchen garden, would soon put her upon the track most useful for herself and for society. When Rome was young and virtuous, the kitchen garden was always placed under the care of the mother of the family. In Sparta the women, fit to be the mothers of heroes, cultivated the soil, while the men were fighting the battles of their country. Indeed, from the earliest period in the annals of our race, woman has aided by her counsels, and sometimes by her labour, in bringing agriculture to a state of perfection. The laws which Osiris gave to Egypt were not as valuable to that country as those precepts in agriculture, those instructions in embankments, irrigations and drainings, which Isis, his Queen, gave to the Egyptians, and which enabled them to derive so much benefit from the deposit of the Nile. Ceres deified by the Greeks, made her people acquainted with the use of wheat, and the mode of cultivating it. To the Empress of China we are indebted for the mulberry tree, and the rearing of silk-worms. Woman of late years has demonstrated her capacity of shewing in many spheres once considered the peculiar province of man. Miss Herschel has discovered comets; Mrs. Somerville laid open the mathematical structure of the universe; some have analyzed the chemical relations of nature in the laboratory, and others investigated the laws of social relations. With such a great amount and variety of power, may we not augur the most beneficial results to agriculture, if the women of our country, by their sympathy, encouragement, and co-operation, by their studies and counsels, would prove themselves, as did the women of old, help-meets to him whom God has ordained to cultivate the earth?"

For "The Friend."

"Fighting Quakers."

This is a phrase, which has gained place with some—perhaps many—but it is in fact an absurdity—a wild contradiction of terms. As well might we talk of a blunt sharpness, a jet black whiteness, or a sinful godliness. If a man is a fighting one he has not the remotest claim to be a Quaker in principle, whether he displays his propensities

within the narrow limits of his own little neighbourhood, or in the "Old Dominion."

It is all essential, especially at such times as the present, to know the ground on which we stand; we should endeavour not to deceive ourselves by feelings and opinions which are merely educational, but allow the candle of the Lord to search out the depths,—the recesses of our hearts. If this search were acted on in good faith by the members, it might lessen our numbers, but the society would have a loss to fear from that than from bearing on its skirts a host of members whose religion is but a deadening mixture.

Could we in this sad day and present an unbroken, unyielding front to the world's mighty errors, and with God's armor on, were prepared to suffer, if needs be, anything and all things for conscience' sake and for the sealing of our testimonies, we should soon cease hearing of compulsory measures against "Quakers." It is because of the mixture in so large a number, that they and their more faithful brethren alike, obtain the credit of doubtful conscientiousness. Are there not many among us who talk war, who thirst for news, who set themselves up as judges of military strategy—who compare notes with their neighbours on the probabilities of success and defeat? and perhaps not so much as a sigh escapes them for this sad desertion of their Master's cause: and although surrounded with all their lives with human suffering in various shapes, are there not among these, those who have never had an hour of time or a dollar of money to spend towards its mitigation till now? Now, they can spend and be spent for the soldier, while before, the oft told history of quiet misery and patient poverty in our midst, failed to touch a chord of generous feeling in their hearts!

I judge no man—I would have none withhold their care of suffering humanity wherever found; but I would have us all be especially careful to ascertain clearly where our duty to God ceases, and our interest in bloodshed begins: or rather, which is the moving spring of our action, duty to God and man, or our interest in the war.

Thirty-first Annual Report of the Board of Managers of the Association of Friends for the Free Instruction of Adult Colored Persons.

To the Association of Friends for the Free Instruction of Adult Colored Persons.—The Managers report, that, on taking charge of the schools committed to their care, they found that the expenditures of the past year had exceeded the receipts from subscriptions and donations by about sixty dollars, to which amount the association was indebted to the treasurer. In consideration of this and the probability that the income from these sources would be still further reduced during the present year, by the increased depression of business, it was deemed expedient to retrench the expenses of the schools, by shortening the length of the session; and they were accordingly opened on Second-day evening, the 14th of Tenth month, 1861, being two weeks later than the usual time. William Smedley, Jr., was engaged as Principal of the men's school, with two assistants, and Emma Ogborn, as Principal of the women's department, with four assistants.

The names of 28 men and 42 women were entered on the rolls, the first evening; which numbers were increased during the session to 94 men and 165 women, being 37 less of the former, and 58 less of the latter than were entered the previous session. The average attendance of the men has been 26 for each school evening during the term, and that for the women 44.

From these statistics, it will be seen that the number that have partaken of the advantages of the school during the past winter, has been much smaller than for several years past.

The cause of this diminution in attendance has been a matter of much concern to the managers, and after considerable investigation they believe that it has arisen in great measure from the peculiar difficulties to which the colored population is at present subjected by the great interruption of the ordinary branches of business, which renders it exceedingly difficult for them to find employment, and obtain a living. One of the men, when asked why he did not come to the school more regularly, replied that he could not find any work to do; and had not the heart to attend school, when he did not know where to obtain bread for the support of his family.

It is, however, a satisfaction to the managers to be able to report that notwithstanding the depressing effects of so small an attendance upon both teachers and scholars, there has been quite as much progress made by those who have been at the school during the session as at any time since they have been acquainted with its management.

The teachers, we believe, have filled their respective stations with efficiency and faithfulness, and the commendable improvement of many under their care is in our estimation, owing in great measure to their cheerful industry and attention in the performance of their duties. Spelling, Reading, Writing, and Arithmetic, with the study of Geography from the outline maps, have formed the principal exercises in both schools; and though such a course is somewhat monotonous, the interest of the pupils has been kept up, and considerable progress made by a number in the several branches taught. In the men's school, considerable attention has been paid to mental arithmetic, in which the pupils have been much interested, and their improvement in the same, we think, is apparent.

In the female department, the interest manifested for several years past in the study of arithmetic, has been kept up, and considerable advancement made in that branch by several members of the first and second classes. The writing of dictation followed towards the close of the session by lessons in letter writing, has also been an interesting and instructive feature in this school.

The interest of the pupils, in the routine of their school duties, has been increased by interesting lectures occasionally delivered by friends of the Institution. A number of subjects have thus been treated of in a familiar manner adapted to their comprehension; and the careful attention and interest manifested, gave evidence that they were both gratified and instructed. Among the subjects thus treated of were the Art of Writing, Biblical Geography, the Present Condition of the Colored People in Liberia, Electricity, illustrated by numerous experiments, &c.

The schools have been frequently visited by the Managers, and monthly reports of their condition have been made by committees to the Board.

The number of Friends, who have visited the schools during this term, has been much smaller than for several years past, which is a matter of regret to the Managers, who believe that the interest manifested by such visits is encouraging to both teachers and scholars, and animates them in the performance of their respective duties.

The practice of reading a portion of the Holy Scriptures each evening before closing the school, has been continued, and the Moral Almanac and a number of Friend's Tracts have been distributed among the scholars by whom they were gladly received.

The schools were closed on Sixth-day evening, the 28th of Second month, when 32 men and 112 visitors were present in the men's room. After some very creditable recitations in Geography and the Multiplication Table, one of the Managers made a few remarks encouraging the men to perseverance in the prosecution of their studies during the vacation of the school, and inviting their attendance next winter, if the schools should reopen. After which, several of the scholars spoke feelingly of the advantages they had received from their attendance at the school, and desired that the Managers and teachers might still persevere in the work. They expressed much gratitude for the care and attention bestowed upon them, and desired that the school might be reopened next season. In the female department, about 70 women and 90 visitors were assembled. Several letters selected from a large number written by the scholars to the teachers and Managers, were read, in which they expressed their feelings of gratitude for the opportunities afforded them, of obtaining an education, and for the benefits they had received from the instruction imparted to them. They were encouraged to continue their studies during the time in which there was no school for them to attend, and to pay diligent attention to the education of their children, after which the schools adjourned.

In conclusion, the Managers would state that they believe there never was a time in which the education and advancement of the colored people was a matter of greater importance than the present, when from the great changes taking place in our country, it seems probable that many now held in bondage will ere long be liberated; and the system which has so long kept this oppressed class of our fellow beings in ignorance, may gradually be removed, and the colored race take that place among the nations of the earth, which He, who created all men, and in whose sight there is no distinction of color or race, designed for them. We trust, therefore, that we shall be encouraged to press forward with renewed zeal in what we feel to be a good work, and that those who have the means, will contribute liberally of their abundance to help a class of our fellow-beings, who stand so much in need of their sympathy and aid.

On behalf of the Board of Managers,
GEO. J. SCATTERGOOD, Clerk.
Philad., Third mo. 6th, 1862.

For "The Friend."
"Watchmen, What of the Night?"

The query arises, who are the watchmen, and what are their duties? I apprehend that through the assumption of some who claim to be ministers of the gospel, the idea has become very prevalent that those occupying that station are emphatically the watchmen alluded to in the text. But weakness and blindness must attend, wherever this error prevails, for all are called to faith and good works with a high and holy calling; and what was said by the Master to his chosen messengers, was said to all; "Watch, watch and pray, lest ye enter into temptation." It is not to be denied that some, through continued obedience to the gift of faith, have attained to a greater degree of religious experience than others, consequently a greater degree of responsibility rests upon them as watchmen upon the walls of Zion; and to these the charge seems particularly addressed, "Take heed to yourselves and to the Church of God over which the Holy Ghost hath made you overseers; and these may be occupied in different parts and services in the vineyard; but all, according to the grace of God, and the gift by grace which they have received. Oh! that all who claim to be watchmen might be humbled under the hand of the mighty God of

Jacob, to do his will, and nothing more. But alas, I have had to fear that some, in the present day, were greatly endangered by the praise of men, which they are led to look for, more than the praise of God. It would seem to be the wish of some to build up the kingdom by outward observation, and a specious narration of works, which may be good in themselves, but when unseasonably made public, or spoken of in terms of praise, whether with a view to exalt the individual or the church, may do much hurt to both. I allude to the practice which has become so common on the other side of the Atlantic, (and is gaining some imitation on this side,) of journals under the patronage of Friends, publishing letters, or parts of letters, written by ministers or their companions, whilst out on religious service; giving in some instances, exulting views of the effects of their labours. It may be proper enough, that a few chosen Friends should keep up a correspondence, but if they would be kind to the Friend thus travelling, they would not publish his doings from the house tops. Divine Wisdom, I have no doubt, dictated to Friends, in times past, to be very careful not to say or do anything which might have a tendency to flatter a vain mind in any; and it is not to be expected that all who are called, and it may be rightly called, to the work of the ministry, are yet so far redeemed from the transgressing nature, as not to be subject to the power of temptation, especially to flattery, which is an evil of the most subtle kind. And would not the poor servant, if under a right sense of his or her unworthiness, count these things as wounds received in the house of their friends, and crave not to be led into temptation but to be delivered from the evil. The practice above alluded to, and also that of recording the general movements of ministers, tends to the same thing, and I cannot see that it can result in any good. It is a practice of recent origin, and seems to me to call for the serious enquiry of every concerned mind, whether it ought not to be abandoned by every one that would name the name of Christ.

M. A.

Somerset, N. Y., Tenth mo., 1862.

Japanese Manufactures at the Great Exhibition.

That portion of the exhibition building devoted to Japan, contains a small but curious collection of specimens of the arts and manufactures of that country, forwarded by — Alcock, English Envoy to the Tycoon. It attracts considerable attention from visitors. It is not strictly a representative exhibition, because there is nothing sent by the Japanese themselves. It simply contains such articles as a few foreigners were able to collect. The *London Times* says: "Small as is the collection, it is large enough to prove the skill of the people in their own manufactures, and in ours, too, and, above all, to show that the general disposition of the people leans to broad comic fun. To be satisfied of this, one has only to examine the wonderful collection of little metal buckles for fastening the dress, shown by — Alcock. The designs in some of these are irresistibly grotesque, and at once recall to mind the little black wood-outs with which Leech began his connection with Punch. Probably every object in this collection is by a different artist; yet though in some the designs are so minute as to require a magnifying glass to see them well, all are treated with the same broad humor, so that it is almost impossible to avoid downright laughter as you examine them. There is one figure of a man timidly venturing to coax a snarling dog, which is imitable in its funny expression; and so also is the expression on another's face, who is frightened by a ghost. And all these works, the

reader must remember, are not mere sketches, but are solid little pieces of metal work, the background being of bronze, and the raised figures in relief being either gold, silver, steel, or platinum; or, as in most cases, of all four metals intermixed. It is evident, from the platinum being so freely used here, that the metal must be more common with the Japanese than with us, and that the secret of melting it, to which our chemical knowledge has only just attained, has long been known to them. In the adaptation of bronze to ordinary domestic purposes, such as inkstands, tobacco jars, candlesticks, and the like, there is a wonderful ingenuity shown. There is a bronzed tripod candlestick so ingeniously hinged that it folds up into the size of a small envelope, and not much thicker. Of the side of this case is shown an object which is one of the most curious of all in the whole building. It is a small window-blind, made apparently of rods of twisted glass strung together. The rods are as hard, as clear, and as sharp as glass. Let the visitor examine it attentively, and then believe it he can that it is made of rice. Of all who have seen, or are yet to see, this wonderful little screen of rods, we venture to say not a hundred will believe them to be other than what they seem to be — pure glass. Yet — Alcock asserts that they are made from a gelatine of rice, and his statement is borne out by the fact that, hard and sharp as they are, they sound when knocked together like sticks of soft wood. In the side of the case where the metal buckles are shown, we find, in a collection of ivory carvings, fresh proofs of the art, skill, and comic genius of the people. Let any one examine the litter of puppies sprawling over each other, the grotesque look of pain on the face of the woman who has been startled by a fox, and tumbled forward with her fingers under the edge of a basin; the triumphant aspect of the companion figure, who has succeeded in clapping his basin down on the fox. Yet, notwithstanding their wonderful finish, all these figures are so small that they might be worn as brooches. Opposite this case is one of porcelain, in which is a large plate that represents two Japanese ladies wearing French bonnets and shawls, with deeply-flounced silk dresses spread out by such an amplitude of crinoline as even our belles seldom venture on. One has a telescope, with which she is pointing to the sea with an air of nonchalance, while the other figure, to still further exemplify European habits, has her gloved hand filled with green apples. In the background are two other Japanese ladies dressed in the costume of the country, and who are shrinking with horror and astonishment from their strangely attired sisters. This ceramic caricature tells its own tale. The attitude of the Europeanized Japanese lady pointing to the sea whence the barbarians are to come, the fidelity with which our dress and very walk is copied, all show it to be meant as a warning satire of what will result to Japanese costumes and custom, if once the Europeans are admitted within the pale of their strange community. It is a curious illustration of their manufacturing skill, that a passing joke like this should be represented in such costly medium as this beautifully-finished porcelain. The specimens of egg-shell porcelain shown in this case are, if anything, almost thinner than egg-shell. Even the renowned specimens of this china made at Worcester are mere earthenware compared to them. The show of arms and armor is not great, though the Japanese, as might be expected from a people among whom the sword is an insignia of rank — the first three lay classes having the right to wear two — manufacture blades of the most exquisite temper. A good weapon is handed down as an

heirloom from generation to generation, and so sharp and well balanced are the blades, and so dexterous are the people in the use of their favorite weapon, that their best swordsmen can, it is said, cut a man in two at a single blow. Among the weapons here, is a formidable short double-edged sword, taken from one of the party of assassins who attacked the house of the English Embassy at Jeddo, by night last year. The best Japanese swordmakers, it is said, get as much as £100 for a single blade. This sum, however, is perhaps not very great, among a people who possess gold in such profusion that its value appears to be estimated at little more than twice or three times that of silver. The coinage is shown in the collection. The silver coins are thick and square; those of gold are large, but thin, and have the corners rounded off. The largest coin of the latter kind is about three inches long by two inches broad, yet its value is only equal to 30s. of our currency. It is certainly thin, but there must nevertheless be at least £3 worth of gold in it. Yet, amply as they seem to be supplied with gold and silver, the Japanese have found their way to a paper currency, and their notes for various amounts, all of which are oblong, like the coins, are shown near the money. In paper the manufacturers of Japan have undoubtedly attained an excellence and skill of which in Europe know nothing. Here are paper water-proof coats, paper leathers, paper parasols, and paper pocket-handkerchiefs. Some of the paper leathers are as strong apparently as any lides that ever left a tan-yard. There is a large collection of different kinds of paper used for paper hangings, for writing, printing, and for wrapping up parcels; and, in fact, the different qualities and kinds of paper seem infinitely more numerous than our own, and in their combinations are efficiently applied to such purposes as are not thought of here. The different specimens of printing are also shown. There is a Japanese Court Guide; a directory, which gives the names, ranks, and abodes of all the notabilities of the empire; there is a set of Japanese play-bills — for the theatre is even a more fashionable place of resort in Jeddo than in London — a Japanese encyclopaedia, and some children's story books, which the comic genius of the people enables them to illustrate with the most raucy humour. At the eastern end of the court is a most valuable collection of Japanese drugs and surgical instruments. Of the value of this pharmacopoeia we can, of course, give no opinion beyond saying that all their medicines seem derived from herbs. Their surgical instruments, however, are a numerous and as formidable as if the Japanese were accustomed to have railway accidents on a colossal scale every day in the week. One thing is evident of their surgery, which is, that the terrible practice of resorting to actual cautery is still maintained, and the irons used in this dreadful operation are shown with the other instruments."

For "The Friend."

Concerning War.

The late Dr. William Gordon, of Kingston-upon-Hull, England, was a man of distinguished celebrity in science and philanthropy; and by his unwearied labours for the good of mankind, obtained the epithet of "The People's Friend." A very interesting narrative of the closing scenes of his useful life has been written and published by Newman Hall, with the title, "The Christian Philosopher triumphing over death." Among other very striking and instructive remarks made on his dying bed, I notice the following, which, with the comment of his biographer, furnish testimony from men of distinction, not Friends, of their conviction of the incompatibility of war with christianity.

The memoir says;

"He had been for a considerable time deeply impressed with the conviction that all war was anti-christian and inhuman, and often expressed his astonishment that any good men could fight, as the precepts of Christ seemed to him so decidedly to condemn the practice. The subject now—(during his dying days)—presented itself to his mind with peculiar force." He said, "how wonderful that men can go to war! How could I die now, hoping God would forgive me, if I would not forgive them (my enemies), but sought to kill them in battle! How different is dying in my circumstances, from death on a battle-field!"

Newman Hall, who is a person of high religious standing, and the author of several valuable works, adds; "Striking indeed is the contrast! In the one case, calm, quietness, the presence of dear friends, the voice of affection, the accents of prayer and praise. In the other, tumult, the roar of cannon, 'the thunder of the captains,' the fury of the combatants, the execration and groans of the dying, rage, revenge, slaughter.

Whatever may be said of the glory of dying on the field of battle, surely it is an awful thing for a man to be hurried from the excitement and din of conflict, into the presence of his Judge, fresh from the slaughter of his fellow men, accompanied perhaps by the souls of those he has just slain! Are the combatants christians? Then, by those mutual relation to their common Lord, binds them to a special love towards one another, appear before Him, their last act on earth having been one of hostility even to death. But if not christians, then the blow which sent them into eternity, was one which forever cut them off from the hope of salvation, which smote the soul as well as the body, and consigned it to eternal death.

"To slay a christian is to smite Christ himself; to slay an unbeliever is to plunge a fellow-being into hell. Terrible alternative! Yet all who fight, not only (aim to) strike such a blow, but expose themselves to the risk of dying in the very act of striking it.

"May all christians soon acknowledge the universal obligation of the command, 'Love your enemies and do good to them that hate you.' Without waiting for others, may they at least, by obeying the precepts, fulfil the predictions of the sacred book, and 'beat their swords into ploughshares and their spears into pruning hooks;' thus manifesting that christianity is indeed, as the angels heralded it, 'Peace on earth, and good will to men.'"

God's Ways and Man's.—When man proceeds on the accomplishment of some mighty enterprise he puts forth prodigious efforts, as if by the sound of his "axes and hammers;" he would proclaim his own fancied might, and hear down opposing obstacles. He cannot work without sweat, and dust, and noise. When God would do a marvellous work, such as may amaze all heaven and earth, he commands *silence* all around, sends forth the *still small voice*," and then sets some feeble instrument to work, and straightaway it is done! In toil and pants, and after all effects but little; the Creator, in the *silent* majesty of power, noiseless yet resistless, achieves by a word the infinite wonders of Omnipotence! In order to loose the bands of winter, and bring in the verdure of the pleasant spring, he does not send forth his angels to hew in pieces the thickened ice, or to strip off the mountain's side the gathered snows, or to plant new, over the face of the bleak earth, flowers fresh from his creating hand. No. He breathes on his lips a mild warmth into the frozen air, and forthwith, in *stillness* but in irresistible power,

the work proceeds; the ice is shivered, the snows dissolve, the rivers resume their flow, the earth awakes as out of sleep, the hills and the valleys put on their freshening verdure, the fragrance of earth takes wings and fills the air, till a new world of beauty arises in *silence* amid the dissolution of the old! Such is God's method of working, both in the natural and in the spiritual world—*silent*, simple, majestic, and resistless!—*Christian Treasury*.

The Eagle's Flight.—Great as are the distances which these birds sometimes fly, it becomes comprehensible when we know that an eagle, as he sweeps freely through the air, traverses a space of sixty feet in a second of time. To be able thus rapidly to move along is undoubtedly an attribute of power; but there is something far more imposing, far more majestic, in that calm, onward motion when, with wings outspread and quirt still, the mighty bird floats buoyantly in the atmosphere, upheld and borne along by the mere act of volition. The length of time he can thus remain suspended without a single beat of his broad, shadowy pinions, is, to me, still an inexplicable fact. He will sail forward in a perfectly horizontal direction for a distance of more than a mile without the slightest quiver of a feather giving sign that the wings are moved. Not less extraordinary is the power the bird possesses of arresting himself instantaneously at a certain spot in dropping through the air with folded wings from a height of three or four thousand feet. When circling so high up that he shows but as a dot, he will suddenly close both wings, and, falling like an aerolite, pass through the intervening space in a few seconds of time. With a burst his broad pinions are again unfolded, his downward progress is arrested, and he sweeps away horizontally, smoothly, and without effort. He has been seen to do this when carrying a sheep of twenty pounds' weight in his talons, and from so giddy a height that both the eagle and his booty were not larger than a sparrow. It was directly over a wall of rock in which the eryie was built; and while the speck in the clouds was being examined, and doubts entertained as to the possibility of its being the eagle, down he came headlong, every instant increasing in size, when in passing the precipice, out flew his mighty wings; the sheep was flung into the nest, and on the magnificent creature moved, calmly and unfurried as a bark sails gently down the stream of a river.—*Boner's Forest Creatures*.

THE FRIEND.

TENTH MONTH 18, 1862.

The views and observations expressed by our correspondent at Somerset, N. Y., are, we think, sound and well worthy serious consideration. Where ministers are kept faithful to their master, their services are of as much importance while at home as when abroad, and it would be as appropriate to publish to the world how they were engaged—labouring in word and doctrine—within the limits of their own meetings, as is the present practice. But, until the Society gets beyond the superficial religion now so prevalent, we can hardly look for a change in this respect.

Amid the affliction and gloom which pervade the whole country on account of the war and its direful attendants, there is yet much vouchsafed to us which calls for grateful and humble thanks.

No one of the free States has had to pass through

the desolating horrors of contending armies, marching and countermarching throughout its borders, staining its soil with the blood of their legions, and marking their course by smoking ruins, wasted farms and depopulated towns. These direful results of war have been grievously felt by our brethren in most of the slave States; and while we condemn them for bringing on the deplorable strife now so hotly maintained, and for pertinaciously enlisting all their means and energies to overthrow the excellent government under which the whole country had prospered so largely, we ought to keep our hearts open to feel for their sufferings, and pity their delusion. Some of their writers represent that large sections of the country, in different States, which, before the war, were thickly populated, and smiling under the careful tillage of an improved agriculture, are now barren and lonesome wastes; where scarcely any thing of the work of man is to be seen, but the traces of his maddened passions, and his power to destroy. Not only have the luxuries attendant upon wealth, been generally banished from among them, but poverty and want have made sad inroads upon the accustomed comforts of those, who, a little while ago, were considered well off; while large numbers are obliged to put up with the coarsest food and clothing, often finding it difficult to procure the necessaries of life.

In the free States there has been nothing of this kind. Thousands of the inhabitants have been swept off by the sword, thousands more have been crippled and maimed for life, and sorrow and mourning have broken up the peace and happiness of many neighbourhoods; many find their incomes diminished, while their taxes are increased, and in some branches of business there may be stagnation and embarrassment, but there is no lack of employment for those who are disposed to be industrious; most of the ordinary branches of business are unobstructed; the mechanics who remain at home have as much work as they can attend to, and remunerative prices are easily obtained by them, as well as by nearly all engaged in different kinds of trade. Thus, the means for commanding a comfortable living are within the reach of all.

Divine Providence has not withheld an ample yield of the fruits of the earth; the crop of grain of various kinds, being quite an average one, while other fruits, of nearly every description usually cultivated, were rarely, if ever, more abundant. The weather during the time of harvest, was generally favourable for curing and gathering the products of the land, so that, from the abundance of the stores laid up, there is reason to believe the prices of the necessaries of life, will continue moderate throughout the coming year. Copious rains and warm sun have again covered the face of the earth with a rich mantle of grass in this section of country, affording ample pasturage for the flocks and herds, now arriving by thousands from the far west. So far as reliable reports have been received from the great grain growing districts in the West, they imply a supply of breadstuffs, not only sufficient for home consumption, but for a large export also, to meet the deficiency in Great Britain; thus ensuring employment for the shipping and for the mercantile part of the community, while the high rate of exchange caused by the return home of large amounts of American securities, and the premium on gold, almost preclude importation of articles not absolutely necessary, and thus save the country from a large foreign debt. Disease has rarely taken on an epidemic or malignant character, to add largely to the affliction which death by violence has spread abroad; and even in those districts in the South, where fevers of malignant type, so often, in the heats of summer, sweep off

hundreds of victims from among the ordinary inhabitants, they have been scarcely felt among the unaccustomed troops congregated about the seats of their nearly annual visitations. Such at least, is the tenor of the reports from the armies of the United States so situated, and, so far as has been ascertained, of the rebel forces likewise.

The loss and suffering which the nation is feeling deeply and keenly, are therefore, the fruits of man's own headlong rage and violence, permitted to punish him for indulging his vile passions, and disregarding the dictates of truth and justice. While thus showing by his judgments, his controversy with sin, and his power to punish those who commit it, our merciful Heavenly Father manifests his continued willingness to spare us the infliction of the full punishment that the iniquities of the people might justly invoke, by withholding pestilence, famine, and many other of the dreadful evils which often attend or follow in the wake of war, and by condescending still, to confer upon them the many undeserved blessings to which we have alluded. How awakening then ought to be this double motive for the whole nation to humble itself before the Lord, confess their sins, and seek ability from him to put them away, and to implore Him, for his great name's sake, to forgive them their past transgressions, and restore the government to peace and stability. But where are we to look for the evidence of these feelings being produced and cherished? The general prevalence of the spirit of war, the animosity harboured and expressed towards the reckless, deluded southerners, the large resort to the various places of public amusement, where the youth, at least, are taught lessons of shameless profligacy, and the demoralization incident to a soldier's life, would lead us to fear that the people were still determined to take counsel of their own evil hearts, and to cover themselves with any other covering than the Lord's spirit, that they may add sin to sin.

But we have faith to believe, there are thousands scattered over the country, who are mourning in secret for the wickedness that abounds, and the awful retribution it has called forth, and whose petitions are put up for the people, and for the staying of the scourge which overflows the whole land. When we remember that in the unbounded mercy of our Heavenly Father, he once offered to his servant to spare a city if ten righteous could be found in it, we may hope and trust that his gracious ear still hears the supplications of the upright among us, and for their sake, He will, in his own time, stop the devouring sword, and again give to the nation peace and quietness.

Ye are the salt of the earth, were the emphatic words addressed by the Saviour to his poor, despised disciples, and when we reflect, that it is for the sake of these his compassion fails not, and that He preserves communities and nations from sinking into total corruption and anarchy, the force of the expression is brought home, and our solicitude and interest in these and for their increase, far exceeds any feeling for armies or for victory.

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 3rd inst. The Paris correspondent of the *Times*, says it is reported in political circles that the British Government is no longer so universally averse to the recognition of the Southern Confederacy as it has hitherto been, and it is understood that there is a probability of the question soon becoming the subject of deliberation in the Ministerial Councils. An address to the President of the United States, in favour of a truce, preliminary to negotiations for peace, has been signed at Brussels, by eminent men of almost every European nation. The U. S. steam frigate *Conan* Science Convention. The U. S. steam frigate

St. Louis had sailed from Lisbon in search of the pirate Semmes, who is reported of the Azores, engaged in destroying American whalers. In Paris, it was fully expected by the first of next month the city of Mexico would be in the possession of the Federal troops. It is again rumored that England had pointed out to France the necessity of evacuating Rome. The following were the quotations in the Liverpool markets. Fair Orleans cotton, 29½d; middling, 27½d. Red Western wheat, 10s. 9d.; white southern, 11s. 3d. a 12s.; and corn, 29s. 6d. a 31s.

UNITED STATES.—Virginia.—The great rebel army appears to remain encamped near Winchester, and that of Gen. McClellan in the vicinity of Harpers Ferry, with no indications of a movement upon the part of either. The rebels show increased activity in Western Virginia, and it is said they were completely successful in their operations in the mountains of the State. A body of 5000 rebels at Franklin, on the Blackwater river, in the southeastern part of Virginia, was attacked and routed by the Federal forces on the 3rd inst.

Invasion of Pennsylvania.—On the night of the 9th inst., a brigade of rebel cavalry with two batteries of light artillerists, crossed the Potomac river, just above the town of Hancock, Md. Passing through Mercersburg, they proceeded with little delay to Chambersburg, Franklin County, Pa., which they occupied without opposition. They were burned the railroad depot, with a large quantity of army supplies, and secured some stores of provisions, which were seized from the farmers along their route. The invaders made but a short stay at Chambersburg, when they turned their faces again towards Virginia, moving in a southeasterly direction to the Potomac, which they crossed safely near the mouth of the Monocacy. In this remarkable raid, the rebels met with no opposition of Federal troops, while they proceeded entirely around Gen. McClellan's army, having marched a distance of about one hundred and twenty miles in forty-two hours, besides stopping at various points on the route long enough to obtain valuable information, as well as supplies. This most daring and skillfully conducted reconnaissance was commended by some accounts to Gen. Washington of South Carolina. Some accounts say that Gen. Stewart also accompanied the expedition.

Missouri.—The attempted invasion of this State has been filled for the present. A rebel force of 15,000, which had advanced as far as Newtonia, fifty-four miles south of St. Louis, was attacked at that place, by Gen. Schofield, and completely put to rout. The rebels were all driven beyond the State line into Arkansas.

Mississippi.—The late engagement near Corinth, was a very severe one, and the losses on both sides heavy. That of the Federal army is estimated at 350 killed and 2000 wounded, and about 1000 captured; while the rebels lost 1000 killed and 2000 taken prisoners, besides the wounded, of whom the number is very large. Gen. Grant recalled Gen. Rosecrans from the pursuit on the 9th inst. He returned on the 10th, and reported the rebel army dispersed, and incapable of further mischief at present. The rebels abandoned and spiked 13 guns; most of the arms and other military baggage were captured. The *Greenville Appeal* admits the total defeat of the Confederate army, and makes the result even more disastrous to the rebels.

Tennessee.—At the latest dates, Nashville was surrounded by the rebels, who were committing all sorts of depredations. Forty U. S. foraging wagons were burned by them last week, about nine miles south of Nashville. Provisions were scarce in that city, and the Union troops had been put on half rations.

Kentucky.—The two great divisions of the rebel army of invasion, commanded respectively by Generals Bragg and Kirby Smith, effected a junction near Bardonia. The army of Gen. Buell, which moved from Louisville, came in collision with the rebels on the 8th inst., and a severe battle ensued, in which both sides suffered heavy losses. The despatches of Gen. Buell claim a decided advantage for the Federal army, which held the field. The loss in officers of the Union army was very great, including several Generals. On the side of the rebels, it is reported that Generals Bragg and Chestnut had been killed. On the 9th inst., the rebel army retreated southward, followed closely by Gen. Buell, and another battle was expected daily. In other parts of Kentucky, skirmishes and captures are reported, the rebels being sometimes the victors. The army of 3000 rebel cavalry under Morgan, had been driven out of Frankfort by Gen. Damont. On the whole, the rebels seem to be losing ground in Kentucky.

Louisiana.—New Orleans dates to the 1st. The city continued remarkably healthy. The *Piney* of the 28th ult., says: "Rumors of an unpleasant character

reach us from the negroes on the plantations below the city." The *Piney* of the 1st inst., says: "The rumored rising of three hundred negroes on the plantations below the city, was not attended by all the anticipated circumstances of atrocity. A few white men were attacked and beaten, but we did not learn that any of them were killed. Most of the runaways got up to the city."

South Carolina and Georgia.—No recent military operations are reported. Gen. Beauregard arrived at Savannah on the 18th ult., and formally took command of the defence of that city, and of Charleston on the 19th. He made a speech on his arrival, in which he promised to retake Fort Pulaski in thirty days. Great preparations have been made for the defence of both Charleston and Savannah.

Minnesota.—The Sioux Indians in Minnesota have ceased their hostilities, and many have surrendered themselves. It is stated that the entire number of warriors does not exceed 1100.

Colored Emigration.—The departure of the expedition to Central America has been temporarily postponed, owing, it is believed, to the unsettled political condition of that country, and in order to remove objections that have been officially interposed to such a colony.

The Import Trade.—The imports into New York the present year, from First month last to Tenth month 10th, amounted to \$139,973,214. In the corresponding portion of 1861, the imports amounted to \$163,360,959.

New York.—Mortality last week, 386.

Philadelphia.—Mortality last week, 252. The military hospitals contribute largely to the weekly mortality. In that of last week, 31 of the deaths were from gunshot wounds.

The Rebellion.—Estimates and statements which have the appearance of probability, make the present strength of the rebel army nearly as follows, including the new recruits. In all parts of Virginia an aggregate of 300,000; Kentucky and Tennessee, 80,000; Northern Mississippi and adjacent territory, 60,000; Arkansas, 40,000; Alabama, Georgia and South Carolina, 100,000; at other points, 80,000, 60,000.

The Markets.—The following were the quotations on the 13th inst. New York.—Gold, 29 a 30 per cent. premium; United States' 6s., 1881, 104; 7/30 Treasury notes, 105½. Specie in New York, £ banks, 349,263,086. Money market easy, at 5 a 6 for prime paper. Chicago specie, 129½; wheat, 123½; corn, 74½; flour, \$1.37; choice Kentucky, \$1.40 a \$1.41; white Michigan, \$1.45 a \$1.50; mixed corn, 63 cts. a 64 cts.; white 67 cts. a 68 cts.; oats, 56 cts. a 58 cts. Philadelphia.—Prime red wheat, \$1.40 a \$1.45; white, \$1.55 a \$1.85 yellow corn, 71 cts.; oats, 43 cts. a 44 cts.

RECEIPTS.

Received from Ann Hutton, Pa., per Addition Hutton \$2, vol. 35; from Mead Atwater, N. Y., for Hibbard Fuller, Joshua Haight, Caty Haight, Levi H. Atwater Abraham Duell and William Bracken, \$2 each, vol. 36 and for Ambrose Boon, and William Brownell, \$2 each vol. 25; from William B. Smith, Pa., per Charles Walcott, N. B. for Amy S. L. Eaton, in last week's issue, was \$15.00, S. L. Eaton.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA. Physician and Superintendent,—JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable Friend as Governors at West-Town Boarding School. Applications may be made to Sids Coates, 2116 Arch St., Philadelphia; Abigail W. Hall, Frazier P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 36th and Bridge Sts., Philadelphia.

WEST GROVE BOARDING SCHOOL.

The duties of West Grove Boarding School for Girls on the Philadelphia and Baltimore Cent. Rd. cars will be resumed on Second day the 3rd of Elcvent month next.

Address, THOS. CONARD, Principal.

West-Grove P. O., Chester Co., Pa. Ninth mo. 26th, 1862.

WM. H. PILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, TENTH MONTH 25, 1862.

NO. 8.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The Edinburgh Review."

Iron, its Uses and Manufacture.

(Continued from page 50.)

"The largest cast-iron bridge is that of Southark, built by Rennie in 1815-19, the principal arch of which has a span of 140 feet; but since his first invention, bridges of this material have multiplied so fast, that the enumeration of them would be tedious, and the skillfulness of their construction has ceased to excite wonder. Nor is it only where great spaces were to be traversed, that cast-iron was employed; it has frequently formed the material of bridges of ordinary construction. At never, perhaps, was a greater compliment paid iron than when it was selected to form the arches of the new bridge at Westminster, in immediate juxtaposition with the House of Parliament. From very early date, Telford used it largely for the piers of his canals, as also for lock-gates and other purposes connected with inland navigation; and in two instances where it was found a lock had been constructed on a stratum of quicksand, lined the whole interior of the basin with cast iron.

"For many years no satisfactory plan could be proposed for bridging over the Menai Strait. Rennie had sent in a magnificent design for a cast-iron bridge, to the centre arch of which he gave a span of 450 feet, but the cost was enormous. Long afterwards Telford sent in 'alternative' plans for two cast-iron bridges, to be carried across at a lower level—but obstruction to navigation was apprehended, and nothing was decided. At last when Telford published his design for a suspension bridge across the Mersey, the Commissioners of the Holyhead Road instructed him to prepare a plan for effecting the desired communication on this new principle. New, strictly speaking, the principle was not. In many parts of the world it might be exemplified in hanging bridges of rude construction and perishable materials, but it could not be applied to works of importance till the increased supply of iron afforded a material of the requisite strength and durability. And the difficulties of applying the principle of suspension to a structure vast, and to a material so ponderous, were such as to entitle the man who overcame them to all credit of invention. Telford felt the greatest anxiety as to the result, and spared no pains to insure success. He made, we are told, an elaborate

series of experiments to test the tenacity of wrought-iron bars (for wrought iron he ascertained to be the proper material for a suspension bridge,) and fully aware of the difference of quality which even in those days distinguished the product of different districts, he finally bound his contractor to use none but the best Shropshire iron.

"The Menai bridge has been followed by similar works of equal and even greater magnitude in various parts of the world; and previously to its erection, the principle of suspension had much engaged the attention of our engineers."

"The experiments which — Fairbairn conducted, in order to ascertain the strength of the materials to be employed in the tubular bridges, led him to the discovery, which he tells us he had not anticipated, that wrought iron answers better than cast iron for many of the purposes to which cast iron exclusively had hitherto been applied.

The reader is doubtless aware that pig iron is the raw material of both wrought and cast iron; but, while the former is brought to its perfection by repeated working, the latter is produced by merely once more making the metal fluid in the 'cupola furnace,' and then pouring it into a mould of the form required. Hence, as the process of manufacturing is so much less laborious, cast iron is proportionally cheaper than wrought; but it must not be supposed that these two forms of iron resemble each other in kind, and differ only in degree. For all practical purposes they are distinct metals:—

"Cast iron differs from wrought," says Fairbairn, 'in its physical as well as its mechanical qualities. It is a hard, rigid, crystalline, unamalleable substance. It possesses great powers of resistance to compression, but comparatively small resistance to that of extension, and from its low degree of ductility it undergoes but little elongation when acted on by a tensile force. On the contrary, wrought iron is a flexible, malleable, ductile substance, which presents great resistance to a force of extension, but a somewhat less resistance to a force of compression; from its high degree of ductility it undergoes a considerable elongation when acted upon by a tensile force. And for a long time it was assumed that when applied to resist compression, it would crumple like leather.'

"Fairbairn gives a most interesting account of the experiments by which he disposed of the 'crumpled leather' theory. On the other hand, he gives excellent reasons why cast iron cannot be depended on. The unequal contraction of the metal which takes place when it is exposed to great variations of the temperature, causes it to snap. Moreover, the nature of the materials is treacherous: 'all crystalline bodies are of a more brittle and uncertain character than those which are of a fibrous structure.' Flaws and imperfections are of frequent occurrence in the casting, which cannot be discovered by the minutest inspection of the surface.

"Repeated instances have occurred wherein castings presenting every appearance of perfection have been found to contain the elements of destruction, either in concealed air bubbles, or in the infusion of scoria, which had been run into the moulds and

skinned over by a smooth covering of apparently sound iron.'

"It is a fearful addition to all these causes of insecurity, that cast iron when it breaks gives not the slightest warning. No external crack, no alarmatory sound, gave cause to doubt the soundness of the engine beam which caused the disaster at the Hartley pit; and the large flaw in the casting which was discovered after the fracture, was not indicated by the smallest defect on the surface. These objections apply to all cast iron, as such; but the inevitable risks are greatly multiplied if the iron employed is of an inferior quality, or of a character not suited to the purpose. The iron of the Hartley engine beam was neither cheap nor bad, but it was composed of a mixture not well calculated to produce a tough quality of iron.

"In the first instance, cast-iron exclusively was applied to the construction of fire-proof buildings. In the year 1801 the first cotton mill of this description was erected by Messrs. Lee and Phillips, of Manchester, with cast-iron beams and cast-iron pillars. It was constructed with great skill, and for many years remained the model of all similar works. But since then the subject has been more carefully investigated. The account which Fairbairn gives of the experiments, chiefly conducted by himself and — Hodgkinson at his works, by which he has established the theory, and improved the practice, of cast-iron architecture, is highly interesting, and very valuable to those who still continue to prefer that material; but he in some degree supersedes his own work by proving (quite we own, to our conviction), that not only strength, lightness, and roominess, but even economy, will be consulted by substituting wrought for cast iron. The difference in the weight compensates for the difference in the cost. A wrought-iron beam of 18 cwt, Fairbairn sets down as equivalent to a cast-iron beam of 40 cwt. Moreover in many ways the expenses of construction are diminished by the use of wrought iron, and more especially the supporting columns may be retrenched with not less advantage of convenience than economy.

Fairbairn justly remarks that the construction of buildings of this kind must not be attempted without a considerable amount of scientific and practical knowledge. He mentions a mill at Oldham which fell down in the year 1844, and seems to attribute the disaster to some defect in the construction; but the date leads us to suspect there may also have been some fault in the iron. Long previously to the year 1844, cheap iron was common in the market, and the effect of cheapness upon quality was imperfectly understood by consumers. Would it were duly appreciated even now!

The late destruction of the iron fire-proof warehouses on the Thames has somewhat discredited this application of iron; but we think unreasonably. It is plain that if highly inflammable goods are stored in an absolutely incombustible warehouse, in which there is an unimpeded communication between the parts, and a free circulation of air, they will be much in the condition of fuel arranged for lighting in the grate. Fairbairn gives many valuable

ble directions for excluding the external air, and dividing the various parts of the building; but sooner or later the skill of the architect is neutralized by the carelessness of the warehouseman. On some unlucky day the requisite combination of untoward incidents takes place, and a conflagration which no exertions can extinguish ensues. In such a case, no doubt, the iron-built warehouse will be destroyed, and as in the great fire at Liverpool, in 1844, the gutters will run molten iron—whereas a series of fire-brick vaults would remain in the state of a kiln when the contents are withdrawn. But the enormous expense of such a construction is hardly repaid by the preservation of the mere shell of the building. The wisest course is to store away all inflammable goods, and especially those which are liable to spontaneous combustion, in separate warehouses, or in vaults which realize Fairbairn's conditions of safety—exclusion of the external air and non-communication; and here fire-bricks should be the material. But most inflammable substances are far less easily ignited when compressed in bales or stowed away in casks; and they are safe if the building in which they are deposited is secured from the danger of combustion to which buildings of ordinary construction are exposed. Loose paper is highly inflammable, but the closely packed treasures of the British Museum are perfectly safe in the new Library—the most commodious and the most beautiful fire-proof magazines.

(To be continued.)

The great business of life, with the necessity of regeneration.—Now, O man! what is the great business of thy life in this world, but to regain thy place in the paradise of God; to secure an everlasting establishment in that inheritance which is incorruptible, undefiled, and that fadeth not away? To accomplish this, thou must be stripped of all that which unfits thee for an entrance. Whatever has been the cause of exclusion must be removed. Whatever can have no place nor habitation there, must be separated from thee, or thou canst not be admitted. That which lets will tell it be taken out of the way. Whatever thou hast in thee or about thee, that thou art attached to, in consequence of the fall; all separate self and the carnal mind, thou must resign, or thou canst never know a restoration. The gospel-axe, the power of the Spirit of God, must be laid to the root of the tree of corruption in thee, that it may be extirpated, and the vine of life implanted in its room; that in the heart, where the sinful nature hath spread its poisonous produce, the engrafted wood, which is able to regenerate and save the soul, may flourish, and bring forth its heavenly fruits; from whence arise happiness to the creature, and praise to the eternal author of all virtue and felicity.—*Joseph Phlips.*

Human abilities in the affairs of the Church.—It is of the utmost consequence, that the members, who constitute the Church of Christ, be thoroughly acquainted with the true spring of action therein, lest any one should presumptuously imagine, that seeing church government carries much the appearance of outward economy and civil proceedings, human abilities natural or acquired, are sufficient to manage it. If for any fall into such a dangerous error, it must be for want of duly considering the nature of the work to be engaged in; it being no other than what appertains to the spiritual kingdom of Christ, and the pronouncement thereof on earth: which kingdom man by nature cannot see or understand. It is written, the world by wisdom knew not God, and they cannot know his kingdom, nor how to act properly therein under the Supreme Head, whom they know not.—*John Griffith.*

Second Annual Report of the Committee having charge of the Camden School for Colored Adults.

To the Association of Friends for the Free Instruction of Adult Colored Persons.—The Committee who have had charge, during the past session, of the school in South Camden, N. J., report, that in accordance with the discretionary power given them by a minute of the Association, dated Tenth mo. 11th, 1861, to open the above mentioned school should they be able to procure sufficient funds for the purpose, they came to the conclusion at their meeting in the Eleventh month, to do so, having received information to warrant them in believing that the means of defraying the expenses would be forthcoming before the usual time of ending the session.

Four teachers were engaged at the outset, but the number of female scholars preponderating, an additional female teacher was soon added. The attendance of scholars on the first evening was 26, and the whole number entered up to the close of the session was 121. The weather during much of the time, as will be remembered, was very inclement, rendering the walking unpleasant, particularly to a class who are often unprovided with good shoes; and in addition; my live at a considerable distance from the school-house; the small-pox also prevailed to perhaps more than usual extent among the colored residents of Camden, and one of the most industrious female scholars fell a victim to it after a short illness, while others were kept away temporarily, nursing their relations. All the above causes operated to diminish the average for the session, which was about 34; for the previous session it was near 40. While this would indicate that the benefits of the Association had not been extended to quite as great a number as during the winter of 1860 and 1861, an agreeable offset is found in the fact that a number were very faithful in their attendance, and made the best use of the time and opportunities afforded. Several cases might be cited of individuals who progressed from a bare knowledge of the alphabet, to the ability to read the Scriptures with some ease, and who thankfully acknowledge the exertions of the Association as affording them the only chance they had had for this kind of self-improvement since their childhood, or during their whole lifetime. The committee may state that these instances have been so encouraging, as amply to repay them for any personal inconvenience they may have undergone, and they trust that it will afford satisfaction also to those who have contributed their means to this institution.

The exercises of the school have consisted mainly of spelling, reading and writing, the rudiments of arithmetic, in which some have advanced as far as the reduction of compound numbers, with the use of the tables frequently, in which the whole school joined, and occasional instruction on the maps of the United States. The committee in their semi-weekly visits have also given familiar lectures upon such subjects as the human eye, Liberia, the United States, &c, which are thought to be of advantage in breaking the monotony of the usual routine and affording some new subjects for thought.

The school was closed on Fifth-day evening, Second month 27th, when about 70 scholars were present, and some members of the committee and other friends; some of the men in taking leave of the teachers and committee, spoke with gratitude of the exertion which had been made on their behalf, and expressed their desire for the continuance of the school another year, when they thought the attendance might probably be greater than during the present session.

They were encouraged to keep up their efforts during the vacation of the school, and to be careful to give their children an opportunity for learning, after which they separated with much good feeling, many coming up to shake hands with the managers and teachers. The following are a few of the letters which were also read on the same occasion; the spelling and punctuation have been in some instances corrected.

“Kaignsville, Newtown township, N. J.,
Second month 27th, 1862.

“To the Committee:

“Esteemed Friends; this is to inform you how very much I am obliged for the opportunity of coming to this school and learning to read and write, and cipher a little in the first of the arithmetic. When I first came to school here, last winter, I knew very little more than my letters. I hope my friends will still continue the school, as they are doing so much good for us poor folks that cannot [get] an education in any other way; and I intend to improve it well if possible. But I know not how to thank the committee and teachers enough. No more, but respectfully [your] scholar,

To his friends,
(signed) CHAS. T. GARDNER.”

“To the Committee:

“Esteemed Friends;—I take this way to let you know how glad I am for having the opportunity of coming to this school, learning to read and write a little, and also to cypher some. When I first came to this school I did not know anything much but my letters. I hope my friends will continue the school, and then I can learn more, and make a better use of what I have learnt; if not I shall have to remain in ignorance.

Your friend,
(signed) JOHN MADDEN.”

“Camden, Feb. the 27th, 1862.

“Teachers,

“I am very happy to have the pleasure of addressing you with a few lines, and expressing my thanks towards the teachers, for the interest they have taken in trying to improve me in spelling, reading, arithmetic and writing, which I knew very imperfectly before I attended very regularly last winter. I did really improve a great deal more than I expected. I was very much pleased with my teachers, and likewise the committee. I think they have abundance of patience to come over through all the storms for our benefit; we ought to appreciate it more than we do, by attending more regularly. I was not able to attend this winter on account of sickness, but I would have liked to, very much. I both thank the teacher and committee. I hereby close, expressing my warmest thanks to them.

Yours respectfully,
(signed) MARGARET KINCADE.”

Signed on behalf of the Committee,
WM. EVANS, JR., Secretary.

For “The Friend.”

BIOGRAPHICAL SKETCHES

OF Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

WILLIAM FOULKE.

William Foulke was a grandson of Edward Foulke, one of the first settlers of Gwynedd, and was born here in the year 1708. His parents were religious and consistent members of the religious Society of Friends, and he was educated

in those religious principles of the Truth of which they had been convinced and were living examples of. The guarded education he received from his pious parents, and more especially the tendering visitations of Divine Grace, to which, through mercy, he gave heed from his early youth, caused his conduct and conversation to be exemplary. As he gave diligent heed to the instructions of the Holy Spirit, he grew in the knowledge of Divine things, and became qualified for usefulness in the church; he was also instructed thereby to walk in faithfulness amongst men, filling up the social and domestic duties with loving and scrupulous fidelity. In the year 1734, he was married to Hannah Jones, at Gwynedd, to whom he proved a faithful and loving husband. From the testimony of his friends, it appears that his character as a husband, a father, a master, a neighbour, his hospitality and charity to the poor, much endeared him to his family, his friends, and his neighbours. He was a man of integrity, and a lover of peace, which he endeavoured to promote in all around him. He was blessed with a happy talent for composing differences, and through the Lord's assisting grace, for reclaiming offenders. In these useful services he was much employed by his dear Lord and Saviour, the Prince of Peace, who laid down his own life for the salvation of sinners.

He was an overseer and elder of Gwynedd meeting, and was faithful in the arduous services which thereby devolved upon him. For a few months before the close of his life his health was declining, and through the painful period of his lingering disease, he manifested great resignation, and looked forward to the approaching termination of his earthly life with calmness. The day before his death, a friend remarked to him, what a comfortable reflection it must be as he was drawing near to the close of life, that he had filled up the station allotted him, in a good degree of faithfulness. On this, he meekly replied, "I have no light when my change may be,—I endeavour to resign,—I have not anything to boast of,—I have not anything to expect from any works I have done. It was but little,—but I have experienced that the Lord, in whom I trust, is merciful, having redeemed my soul from destruction. I much desire to be within the pale of happiness,—somewhere within the door, where I may find a quiet habitation." He remained sensible to the last, saying just before his close, "the pains of death are hard to bear." His decease took place Eighth month 10th, 1775, being in the 67th year of his age.

SARAH MORRIS.

Sarah Morris, a daughter of Anthony and Elizabeth Morris was born in the city of Philadelphia, in the year 1704. Her parents were valuable members of the religious Society of Friends, and her father a much esteemed minister of the gospel of Christ. She was favoured with a carefully guarded education—was brought up in the plainness and simplicity of the Truth, in a diligent attendance of religious meetings, and was early life made acquainted with the Holy Scriptures, and was by the precepts of her parents, and their pious examples, shown the advantage and necessity of waiting upon the Lord for a renewal of spiritual strength. The outward instruction she received, was confirmed by the teachings of the Holy Spirit, by submission to the inward guidance thereof, she became in a good degree, even in early life, very circumspect in her walk amongst her schoolmates and in her father's family. She was of a very benevolent disposition, and her great kindness to others, joined to the good example, which through the Lord's assisting grace, she was

enabled to set to those around her, made her very useful and caused her to be much beloved. Her father, who was gathered to receive the reward of faithful dedication to his Blessed Saviour, when she was about seventeen years of age, in remembrance of her filial love and kindness, outstripping filial duty, her affectionate conduct in the family, her exemplary walk in the world, declared before his close "that she had been never disobeyed him, and that she was his comfort."

In an account left by her, enumerating the blessings conferred upon her in early life, she mentions the advantages derived from her religious parents, and the sober, religious education she had received. She however estimated far above all outward blessings, the visitations of the Lord's Holy Spirit to her soul,—whereby she was made sensible of the touches of his love. These merciful visitations she testifies were granted her in infancy, and through every period of her extended life. Through submission to these it was, that she witnessed preservation in a good degree, from the follies, the vanities, the corruptions of the world. In these too, she found comfort and support, amid all the trials, the troubles, the difficulties of life. Although regarded as a very religiously minded young woman, one greatly desiring the temporal and spiritual welfare of others, and seeking for herself an inheritance incorruptible, rather than the pleasures and treasures of this world, yet she found the necessity of seeking after and labouring after a state of greater attainment.

One of her sisters, to whom she was tenderly attached, whom she says "I entirely loved," having deceased, she was led in her sorrow to ponder more deeply than ever on the uncertainty, and the unsatisfactoriness of all temporal blessings. During this season of affliction, she found her desire after heavenly things quickened, and she says; "strong cries were raised in my soul that I might be brought to a nearer acquaintance, and a more constant abiding with Him, who is the beloved of souls; He who by the secret touches of Divine goodness had raised such a hunger and thirst after righteousness, that my soul could not be satisfied short of it. After it had pleased God to incline my mind to seek after a more full enjoyment of that inward life and virtue which is communicated, and conveyed to the soul through the illumination of the Holy Spirit, I was visited with sickness, in which I had so near a prospect of eternity, that I seemed just entering into it. Oh! then, the emptiness and vanity of all the world, its pleasures and friendships, appeared in a clear and strong light; nothing but the hope of an entrance into the kingdom of heaven seemed of any value,—and that hope the Lord was pleased at that time in some degree to afford me. Yet I thought I saw [in myself] a great deficiency, and was made to desire of the Lord that if it was his will to restore me, he would enable me to live more closely to his teachings, and to follow him more fully than I had hitherto done." After this, a state of great exercise and trial came upon her,—affliction of mind, with pain of body,—temptations and buffetings of Satan, whilst spiritual comfort and refreshment were apparently withheld. Yet the Lord secretly sustained her, and she felt the assurance in and through all, that the trials she was passing through were to prepare her for his service. Under this assurance, she was prepared at that Bethel to enter into this solemn engagement of soul: "If thou, O Lord, will be with me, in the way that I go, and give me bread to eat, and raiment to put on, in a spiritual sense, and bring me to my heavenly Father's house in peace, thou shalt be my God and I will serve thee." She says, "the Lord, who knows the tenderness of

my heart, for it was his own work, was pleased graciously to shower down of the heavenly rain, by which my soul was greatly comforted and refreshed. In a true sight and sense of my own nothingness and inability to do anything acceptable in the sight of God, without his help, my spirit was greatly humbled before him, and a resignation was wrought in my will to be given up in all things to Him, who had enabled my soul to praise him upon the banks of deliverance, from great and sore troubles and conflicts. These were unknown to any in that day,—for the Lord was my refuge and sure hiding-place, and under the shadow of his wing was I kept. In the sweet enjoyment of Divine love, light, and hope, I was at times made to say, surely nothing shall ever be able to make a separation from the love of God in Christ Jesus.

(To be continued.)

From "The Leisure Hour."

Bashikouy Ants.

In the forests of Equatorial Africa are found vast numbers of ants, some of whose tribes are so terrible to man and even to the beasts of the wood, from their venomous bites, their fierce temper and voracity, that their path is freely abandoned to them, and they may well be called lords of the forest. There are many different species of ants found in these regions, all differing widely in their choice of food, the quality of their venom, the manner of their attack, or the time of their operation. The most remarkable and most dreaded of all is, the *Bashikouy*. "This ant," says Du Chaillu in his "African Travels," is also called *nchaunne* by the Mpongwe, is very abundant in the whole region I have travelled over in Africa, and is the most voracious creature I ever met. It is the dread of all living animals, from the leopard to the smallest insect.

"I do not think that they build a nest or home of any kind. At any rate, they carry nothing away, but eat all their prey on the spot. It is their habit to march through the forests in a long regular line—a line about two inches broad and often several miles in length. All along this line are larger ants which act as officers, stand outside the ranks, and keep this singular army in order. If they come to a place where there are no trees to shelter them from the sun, whose heat they cannot bear, they immediately make underground tunnels, through which the whole army passes in columns to the forest beyond. These tunnels are four or five feet underground, and are used only in the heat of the day or during a storm.

"When they grow hungry, the long file spreads itself through the forest in a front line, and attacks and devours all it overtakes with a fury which is quite irresistible. The elephant and gorilla fly before this attack. The black men run for their lives. Every animal that lives in their line of march is chased. They seem to understand and act upon the tactics of Napoleon, and concentrate, with great speed, their heaviest forces upon the point of attack. In an incredible short space of time the mouse, or dog, or leopard, or deer, is overwhelmed, killed, eaten, and the bare skeleton only remains.

"They seem to travel night and day. Many a time have I been awakened out of a sleep, and obliged to rush from the hut and into the water to save my life, and after all suffered intolerable agony from the bites of the advance-guard, who had got into my clothes. When they enter a house, they clear it of all living things. Cockroaches are devoured in an instant. Rats and mice spring round the room in vain. An overwhelming force of ants kills a strong rat in less than a minute, in spite of the most frantic struggles, and in less than ano-

their minute its bones are stripped. Every living thing in the house is devoured. They will not touch vegetable matter. Thus they are in reality very useful (as well as dangerous) to the negroes, who have their huts cleaned of all the abounding vermin, such as immense cockroaches and centipedes, at least several times a year.

"When on their march, the insect-world flies before them, and I have often had the approach of a bashikouay army heralded to me by its means. Wherever they go they make a clean sweep, even ascending to the tops of the highest trees in pursuit of their prey. Their manner of attack is an impetuous leap. Instantly the strong pincers are fastened, and they only let go when the piece gives way. At such times this little animal seems animated by a kind of fury which causes it to disregard entirely its own safety, and to seek only the conquest of its prey. The bite is very painful.

"The negroes relate that criminals were in former times exposed in the path of the bashikouay ants, as the most cruel manner of putting them to death.

"Two very remarkable practices of theirs remain to be related. When, on their line of march, they require to cross a narrow stream, they throw themselves across and form a tunnel—a living tunnel—connecting two trees or high bushes on opposite sides of the little stream, whenever they can find such to facilitate the operation. This is done with great speed, and is effected by a great number of ants, each of which clings with its fore claws to its next neighbour's body or hind claws. Thus they form a high safe tubular bridge, through which the whole vast regiment marches in regular order. If disturbed, or if the arch is broken by the violence of some animal, they instantly attack the offender with the greatest animosity.

"The bashikouay have the sense of smell finely developed, as indeed have all the ants I know, and they are guided very much by it. They are larger than any ant we have in America, being at least half an inch long, and are armed with very powerful fore legs and sharp jaws, with which they bite. They are red or dark-brown in colour. Their numbers are so great that one does not like to enter into calculations; but I have seen one continuous line passing at a good speed a particular place for twelve hours. The reader may imagine for himself how many millions on millions there may have been contained here."

A tender exhortation for those in early life.—How affectionately do I desire that those in early life, of every description, who are objects of my tender and earnest solicitude, may choose the Lord for their portion, and the God of Jacob for the lot of their inheritance; that by a strict attention to the Spirit of Christ, and obedience to the gradual unfoldings of divine counsel, they may become qualified to show forth his praise: then will the many gracious promises left upon sacred record for the instruction and encouragement of the humble and sincere christian, be verified in their joyful experience: the Lord their God will delight to bless them with the frequent incomes of his light and life: He will be unto them a rock of defence in every season of conflict, a gracious preserver in the day of prosperity, and the everlasting source of effectual help and consolation, in times of adversity; so that "neither heights nor depths," nor any of the varied dispensations of unerring Wisdom, "will ever be able to separate them from the love of God, which is in Christ Jesus our Lord."—*Ann Crowley. F. L., vol. 7th, p. 476.*

A Testimony of Lydia Hawksworth, England, 1783.—Towards the close of her life she was tried with great affliction of body, by illness; and to all human apprehension, the lamp of life, as herself expressed it, was just extinguished. At this time she dictated to a friend some things which engaged the attention of her mind; among which were the following advice and observations:

"Let ministers be careful not to judge too highly of any of their services: for it is only when the breath of the Lord blows through the trumpet, that life and harmony are known, and the great truth is evinced, that it is only his own works that praise him, or benefit the churches: nothing that man can do. In most places, the elders want to stand deeper in Jordan. A more unreserved, total sacrifice of the world must be made, and even the accursed thing cast out of some of their tents, before they can stand as valiants for the Lord's cause upon earth. Every shekel of pure gold in the sanctuary ever had, and still must have, the signature of holiness upon it: for what is of man is but man: the Lord bloweth upon it, and lo, it is nothing, however specious in the eyes of man.

"I see clearly that when the ancient simplicity and purity are known again amongst us, then the glory of the Lord will appear as in former years; and his praise sound forth through all the churches. Therefore, under the fresh flowings of godly love, I salute my beloved friends everywhere, and bid them farewell in the Lord."—*Piety Promoted, vol. iii.*

The Mirage of Life.

The most melancholy life is that of the professed merryman. You remember the answer of the wo-begone stranger, when the physician advised him to go and hear the great comedian of the day—"You should go and hear Matthews." "Alas! sir, I am Matthews!" Akin to which is the account of one who for many years manufactured mirth for the great metropolis, the writer of diverting stories, and the soul of every festive party which was able to secure his presence. But even when keeping all the company in a blaze of hilarity, his own heart was broken; and at one of these boisterous scenes, glimpsing his own pale visage in the glass, he exclaimed, "Ah! I see how it is. I look just as I am—done up in mind, in body, and purse"—and went home to sicken and die. And who can read this passage without recalling one who was, sixty years ago, the most dazzling speaker in our British Parliament, whose bow had as many strings as life has pleasures—the wit, the orator, the dramatist, the statesman, the boon companion and the confidant of princes? But when "wine" had quenched the "wisdom;" when riot had bloated the countenance, and debt had dispersed the friends of the man of pleasure; when in splendid rows his books stood on the shelves of the brokers, and the very portrait of his wife had disappeared—on a wretched pallet, trembling for fear of a prison, the gloomy, forsaken worldling closed his eyes on a scene which he was loth to quit, but which showed no wish to detain him—leaving "no profit under the sun," and without any prospect beyond it.

Nor can we promise a satisfaction more solid to the godless virtuoso. Every other year the public is startled with some grand explosion. A great tower of Babel comes toppling down. Then come the excavators—the collectors who carry off the curiosities to decorate other toy-shops, and the builders who buy the bricks, in order to construct new Babels elsewhere.

Not long ago a wealthy compatriot erected such a palace for his pride, and reared it with such impatience, that the workmen plied their labours

night and day. When finished, "a wall, nearly twenty miles in circumference, surrounded it. Within this circle scarcely any visitors were allowed to pass. In sullen grandeur the owner dwelt alone, shunning converse with the world around. Majestically self was desirous of visiting this wonderful domain but was refused admittance. . . . Its interior was fitted with all the splendor which art and wealth could create. Gold and silver cups and vases were so numerous that they dazzled the eye and, looking round at the cabinets and candelabra and ornaments which decorated the apartments was like standing in the treasury of an Eastern prince." But a hundred thousand pounds a-year failed to support this magnificence, and the gate which "refused admittance to a monarch were thrust open by a sheriff's officer;" and whilst the architect pined in unipitied solitude, the gorgeous structure was pulled down by its new owner. More frequently, however, it is the structure which stands, and it is the architect who becomes the ruin. Many of you have visited Versailles. As you stood upon its terraces, or surveyed its picture-furlong after furlong, or wandered among its enchanted fountains, did it strike you, How fresh and splendid is Versailles! how insignificant is now its author! Or did you think of that gloomy day when, in one of its chambers, lay dying the monarch who has identified Versailles with his royal revelries, and near the silken couch a throng of courtiers lingered, not in tears,—not anxious to detain his spirit—not sedulous to soothe the last moments of mortal anguish; and wearying till their old master would make an end of it and die, that they might rush away and congratulate his successor? And did you think that thus it is wid every one who layeth up treasure for himself, am who is not rich towards God? Did you think of him who said to his soul, when he had built large barns, "Soul, thou hast goods laid up for many years; take these ease, eat, drink, and be merry; and to whom God said, "Thou fool, this night shall thy soul be required of thee; then who shall these things be?"—*Dr. James Hamilton.*

Our Religious Society.—With respect to our religious Society, I trust it may yet be said, "Oh Israel, who is like unto thee?" but my fears have been many, lest, through the subtlety of the serpent, we should more and more lose this distinction and become mingled with the world in its spirit and lest his various transformations should ever prevail with many, unto the removing them from their places, like the dragon with his tail drawn down the stars from heaven; for we have become so wise, and so liberal, that, even with divers of those first in rank amongst us, many things, once deemed highly inconsistent with our holy profession, are yielded to with impunity. It seems to few, that some inexperienced minds are in danger of going out to meet that, and of settling down to that which the true spirit of the gospel leads from and so a scattering day, even in this respect, appears to threaten, and in many ways are we likely to be spoiled.—*Sarah [Lynes] Grubb. 1821.*

Big Words and Small Ideas.—Big words are great favourites with people of small ideas and weak conceptions. They are often employed by men and women, when they wish to use language that must conceal their thoughts. With few exceptions however, illiterate and half educated persons are more "big words," than people of thorough education.

It is a very common, but very egregious, mistake to suppose that long words are more genteel than short ones—just as the same sort of people

imagine high colours and flashy figures improve the style of dress. They are the kind of folks who don't begin, but always "commence." They don't live, but "reside." They don't go to bed, but mysteriously "retire." They don't eat and drink, but "partake of refreshments." They are never sick, but "extremely indisposed." And instead of dying, at last, they "decease."

The strength of the English language is in the short words—chiefly monosyllables of Saxon derivation—and people who are in earnest seldom use any other. Love, hate, anger, grief, joy, express themselves in short words and direct sentences; while cunning, falsehood and affectation, delight in that Horace calls *verba sesquipedalia*—words a foot and a half long."

* * * "It is further to be noted, that the most divine fruits of christianity, like those of the private christian, blossom in secret. As nature is noisy only when she rends asunder, but is silent when she brings forth; so it is the abuse of divine power, which is more narrated in history; while none is blessed influence, except only the sufferer who is refreshed, and the angel who numbers his dried tears. And who is there that has ever sat, as a curious spectator, at that exhibition which all others is the greatest in the kingdom of God, here the heart falls into rebellion against itself, and flaming lust, and smouldering rancour, amid infinite contests, are extinguished by the tears of a humility which lies low before God! There sat, yea there, where not even the eye of the christian brother may cast a glance, is the excellency and glory of Him who is born of the Spirit. There smokes an incense more precious to the Lord, than all the aloes of the most fragrant odours; since nothing is greater before God as the proud human heart humbling itself and vesting itself of its hidden selfishness, before hisaming eye."—*Tholuck's "Nature and Moral Influence of Heathenism."*

Good Servants.—When so many housekeepers complain of incompetent and inefficient servants in their homes, it is pleasant to meet with testimony like the following, of an opposite character, from Lydia H. Sigourney: "It has been my good fortune to have employed several who are faithful in their service, and reciprocated every expression of kindness. This alleviated, on their part, any sense of hardship, and made their exertions a pleasure. I greatly valued every evidence of their attachment, and though the complexion some of them had a darker shade, they were to me as my own flesh and blood. Indeed, those of a latter description have seemed to me inclined put more heart into their work, and therefore to do me more worth in return. Twenty-five years were served by such a one, to whom our interests were our own, who delighted to see our guests, exulted in our joys, and in our bereavements sympathized. A difference of color was no barrier to friendship, and since her death, the desire of being served from a negro regard still remains with me, a search, though an illusion. I should like to speak of another, whose face and form are among my earliest recollections. She was not of the African race, but a specimen of the honest New England character, and a native of beautiful Norwich, my own birthplace. She must have been in full prime when I first remember her and her attentions to my childhood. An adept was she in the culinary art, in neatness, the spirit of order, and the care of every article that appertained to her dominion. The virtues that belonged to the sphere of unassuming industry she was a model. Possessed of good

capacities, diligent, truthful, and not lightly given to change, the hearts of those whom she served might safely trust to her. The integrity and punctuality which were essentials in the training of the olden time were inherent in her character, and from their habitual practice no temptation caused her to swerve. She had a deep respect for knowledge, and employed her intervals of leisure in the perusal of useful books. Whatever she undertook was well and thoroughly done, and the interests of those under whose roof she dwelt were her own. Great kindness of heart had she for the sick and sorrowful, and spared no pains either in nights of watching or other offices of aid, to relieve them according to her ability. She had a sense of propriety and a wisdom of speech, for she was not given to much talking, which won the respect of all who knew her."

THREE REQUISITES OF A TEACHER, LOVE, HOPE, PATIENCE.

O'er wayward childhood would'st thou hold firm rule,
And soothe thee in the light of happy faces;
Love, Love, and Patience, these must be thy graces,
And in thine own heart let them first keep school.
For, as old Atlas on his broad neck places
Heaven's starry globe, and there sustains it,—
So do these upbear the little world below
Of Education,—Patience, Love, and Hope.
Metnikns, I see them grouped in seemly show,
The straitened arms upraised, the palms aslope,
And robes that touching, as adown they flow,
Distinctly blend, like snow embossed in snow.

Oh part them never! If Hope prostrate lie,
But Love too will sink and die.
But Love is subtle, and doth proof derive
From her own life that Hope is yet alive;
And, bending o'er with soul-transfusing eyes,
And the soft murmurs of the mother dove,
Wooe back the fleeing spirit, and half supplies:—
Thus Love repays to Hope what Hope first gave to Love.

Yet haply there will come a weary day,
When overtaken at length,
Both Love and Hope beneath the load give way,
Then, with a statue's smile, a statue's strength,
Stands the meek sister, Patience, nothing loth,
And both supporting, does the work of both.

S. T. Coleridge.

Cattle Comforts.—A writer in the *American Agriculturist* says:—"I hear and read a great deal about having good horses, fat cattle, and the like; also, a good deal about feeding them on this or that, but I don't hear much about trying to make our stock comfortable and positively happy. I want my cattle and horses not only to live but to enjoy life as they go along, just as their master does. A really good-hearted man will take pains to please and gratify his domestic animals; he will strive to attach them to his person, so that they will know his voice and step, and always be glad to see him. Do you get my idea? Well, this is the way I work it:—In cold weather, I see to it that my cattle have wholesome food, and as much of it as they will eat up clean. I see to it that they have a variety, also—hay of various kinds, oat-straw, corn-stalks, roots and grain, cooked and uncooked. Milch cows, fattening cattle and working cattle, all thrive best and keep happy on a variety. Of course, I don't neglect giving them comfortable quarters, whenever they need shelter. Come out here, sir, and see my stalls and my sheds, and my dry, well-littered yards, if you doubt. Experience shows me—and I know you teach the same doctrine—if that stock will eat about twice as much fodder, if they are kept out in the wind, and pinched with the cold. But, letting go the dollars and cents, I want to see my family, rational and irrational, happy. So I go in for good quarters. In addition to this, temperance man as

I am, I believe in good drinks for my stock. I won't compel them to wade a half mile through mud and snow to a stream of water, but I have got up a penstock in a clean corner of the yard, which pours into a large tub, and the overflow goes into a long trough, so that quite a number of cattle can drink at once. My cattle are salted once a week regularly, the year round. Some people keep it before them all the time; and some cattle never see it. But this in the general. Besides this, I go out of my way often to please my friends at the barns. In the summer, I seldom go into the pasture without taking along an ear or two of corn, or a handful of oats to give to the first horse or cow I meet; and I am sure to meet some creature in double quick. They flock around me as soon as I come into their domain. And when I go out to the barn to harness a horse, or to yoke up the cattle, I take into the stall a sweet apple, or something else that will please the poor creatures. I speak pleasantly to them, and caress and fondle them. Be sure I do. In this way they become gentle and kind, and are plainly much attached to me. None but a fool or a hard-hearted man will doubt that they are made happy by such treatment. Now, when I deal so with my horses and oxen, they will do for me whatever service I ask. When they are at work, I give them to understand that they must mind, and they always do. But I never overwork them. I have lived long enough to know what a fair load is, and I never mean to tax them beyond their strength, nor work them for too long a time. In this way, they learn to confide in me; they never revolt, but work cheerfully."

For "The Friend," Musings and Memories.

HONESTY.

There is a sad want of honesty in the world. Many men, who would scorn to do any thing which the community in which they live would call dishonest, do yet many things which, if their own consciences were truly sensitive, they would feel to be so. There have been professedly honourable men, who, when their own notes had fallen in the estimation of the business community, and were selling at a large discount, have employed others to purchase them at their depreciation, and have thus taken from their creditors 25 and 50, nay, some even 75 per cent. of their just dues. During the Revolutionary war, when a colonial money was worth little, although still a legal tender, many individuals paid off debts with funds which, in real value, were worth sometimes not more than one fourth of the sum for which the creditor was obliged to receive them. Many honest-hearted Friends were made victims of such fraud—but we have no record of one honourable religious person who took advantage of the peculiar state of the currency, to pay off his or her just debts, with depreciated notes. Indeed, no person of upright principles could stoop to such dishonest practices.

Whilst musing on the pleasant anecdote related below, the above train of thought arose in my mind, as showing that every one in the world did not act on the principles that governed the honest-hearted little boy. The editor of the *American Agriculturist* narrates the circumstance in these words:

"A man was carrying some peaches past the *Agriculturist's* office. They were contained in baskets, covered with cloth, and slung over his shoulder, making a pretty heavy load. By some means one of the covers became loosened, and quite a number of the touting-looking peaches rolled down upon the sidewalk, and the man went on without perceiving the loss. A poorly dressed

little boy, about ten years old, who was walking a little way behind, observed them, and immediately picked them up. We expected to see him put them in his pockets and run away; but we had mistaken his character. 'Here! here!' he shouted to the man, who stopped, and the honest little fellow restored him his property. He was rewarded with one of the finest of the peaches, and went on his way rejoicing—but that was not all. Just then he met two of his companions, and immediately divided his peach with them. Was not that a noble-hearted little fellow? We could but love him, ragged and dirty as he was. The part of the peach he had for his own portion was sweetened by kindness, by honesty, and generosity, and was more luscious than the most costly fruit could have been, if obtained dishonestly."

Yes, that was right thinking and right acting. That little boy, when he grows up, unless spoiled in the training, or led astray by the temptations of the evil one in the conflicts of life, and the eager chase after money, will never be found paying his debts with bad money, or buying his own notes at a discount, to defraud his creditors. This would be like eating other people's peaches which did not belong to him, but which ought to have been the comfort of some one else. Years ago I became acquainted with an action performed by one then of considerable repute in the circle in which he moved, which in a moment opened my eyes to perceive that the reputation he had for religion and honesty, had little solid foundation. The individual had in his business taken a counterfeit note, which he directed to be sent in payment to a distance, saying to this import, that in that place, a counterfeit Philadelphia note would pass better than their own genuine currency. This speech of his came to my knowledge and I have often remembered it. It was thoughtlessly made perhaps, yet it indicated such a looseness of principle, that I felt little surprise when he in a time manifested other weaknesses in morality and made other departures from christian practice.

Yet honesty still exists in all its genuine grace and loveliness in every thorough christian. Some may be covetous by nature and old habits, yet christianity will be just and must make generous all in whom it reigns. Many years ago, a native of Great Britain, a christian in principle and profession, purchased on the continent of Europe, a horse of a German. The horse was delivered, but before the money was paid, the division of the army to which the German was attached, was suddenly removed from the place where the Englishman with the unpaid for horse was. All trace of his creditor being lost, the debtor returned to England and placed the money under interest, that the former should have his own with usury when he could be found. After many years the debtor heard that his creditor was still living in Germany, and taking with him the money with the accumulation of interest, he went thither, sought him out, and paid his debt. An interesting circumstance is stated to have occurred on the journey. Whilst on the Rhine in a steam boat, he discovered that his trunk with his money, had been left behind, and he was amongst total strangers without funds and with a very small acquaintance with the German language. A religious woman of rank, who with a daughter, was on the boat, and who had been secretly drawn towards the Englishman, in secret christian fellowship, learned his embarrassed condition from one of the passengers who could speak the English language. She approached the stranger as they were drawing near the place where she resided, with desires to do him a kindness, yet much embarrassed as to how she should effect

it, being unacquainted with English. Suddenly she remembered the address of Lydia to Paul and companions, and taking her German testament in her hand she pointed to Acts xvi. 15. He took out his own, and turning to the place, read "If ye have judged me to be faithful to the Lord come into my house and abide there." He at once accepted the offer, spent a pleasant week there, until his baggage being brought to him, he departed to pay his debt. Before going, however, he placed a sum of money in her hand, desiring her to employ it any way she might think would most promote the cause of the Lord in that place. She took it, established a protestant school with it and funds derived from other sources. It was a Roman Catholic town, yet the school has flourished and was recently in a healthy condition.

Some men will take every advantage which unsuspecting innocence may put in their way, of making a good bargain for themselves. They would be as overreaching, if it were not for the opinion of the world around them, as the abbot we read of, who rented a piece of land near his Abbey. The owner did not wish to sell it, but after much persuasion, he was induced to rent, the abbot saying he only wished to farm it for one crop. The bargain completed, the abbot planted it with acorns, a crop three hundred years in the gathering. Now I doubt not but some business men would say why this was all right, the abbot kept to his bargain. True he kept to the truth in words, but not to the truth of the bargain, as he caused the owner of the land to understand it when it was made, it was therefore a lie in principle as well as theft in practice.

A Jasper Cave.—A correspondent of the *Boston Transcript*, who is the Topographical Engineer of New Hampshire, states that one of the most wonderful geological discoveries ever made round the White Mountains, has just been brought to the notice of scientific men. Two young men of Berlin Falls, in sliding down the cliffs of a rugged mountain two miles from that town, found the entrance to an enormous cave, the existence of which was unknown before. William D. Sanborn, a noted guide in that region, made a thorough exploration of it, using candles to light his way. Finding in it a beautiful mineral of bright colour, he reported the fact, and the cave was visited by E. S. Brown, a mineralogist, who found the entire cave was made up of jasper, of magnificent colour and quality. The entrance is so small that a man can barely enter it on his hands and knees.

About ten feet from the entrance it is nine feet high and fifteen wide, opening into a fine apartment sixty feet in length, formed of jasper of a delicate blue ash colour, striped with fire red, so exquisitely beautiful as to draw exclamations of surprise and admiration from the dullest student of nature.

But the wonders of the cave do not lie in the fact that it is formed, but in the fact that the long disputed question is now settled where the Indians of New England got their jasper to make their arrow heads. It has never been known until now where this jasper of a blue colour, which they used, came from. There can be no doubt that the Indians, hundreds of years since, commenced the work of chipping off pieces, and continued their work until a cavern sixty feet in extent was cut out of the rock, for the top and sides of the cave wall show it has been chipped in many thousand places. In many places the vein of jasper has been cut to its intersection with the granite, and there the work stopped. An Indian axe and tomahawk were found in the bottom of the cave, such as were used dur-

ing the French and Indian wars, when the Pequabets, Pennacocks, and Androscoggins wandered in this beautiful region, in which their savage implements are now found in abundance. Berlin Falls is in Coos county, New Hampshire, within a half hour's ride of Gorham.

Perhaps I can help Father.—"Perhaps I can help father," says little John, as he looks up into his mother's face. He has seen her sad, anxious look. He has watched his father coming home from his daily toil with a care-worn brow, casting a troubled glance towards the cradle where the twin babes are lying. He is sure that something is wrong, and looking up with pleading earnestness as he stands by his mother's knee, he begs to know the truth, for perhaps "he can help father."

John is too young to give his father much assistance. The strength and wisdom of a seven years' old boy will not be able to combat vigorously with the world. But the mother's pleased tender look, as she returns his glance, shows that young as he is, his affection, his sympathy, has already been of use.

The youngest child may help his parents. Harry Mary, when your father comes home tired from his daily work, your kiss of love or sympathy may be as refreshing to his spirit as the dew to the flowers. You may not be able to bring a day's earnings in your hand, and add them to the family store; and yet your father's heart will bless you for your help. You may lighten your mother's cares. You may hold Willie—the babe—in your arms, and still his fretful crying while your mother is getting ready the noon-day meal. You may come gently to your mother's side, as she is tired with the toil of the day, and may whisper in her ear, "Mother, I love thee. Again, like the dew upon the flowers, shall your word or deed kindle new bright refreshment to your mother's heart.

"Honour thy father and thy mother," is that commandment to which God has annexed his special promise. The child who is obedient and reverent in youth, shall have God's blessing in his maturer years. The child who is a grief to his parents' heart, may yet live to know a child's in gratitude to himself, and, more than all, shall bring down upon himself the displeasure of the Lord.

Do what you can to help your earthly parents. They deserve from you all kindness and love. Do what you can to help on the work of your Heavenly Parent. Begin in your early days to love his service.—*Late Paper.*

For "The Friend."

Contrabands.

Enquiries having been made by several Friends interested in the contrabands who are assembled around Fortress Monroe and its vicinity, as to the position occupied by those individuals who are asking aid on their behalf, a series of questions was addressed to L. C. Lockwood, referring to the point and to other matters of interest connected with the colored people under his care.

The following extracts from his reply, embody the chief points of information contained in the letter:

"Tyler House, near Hampton, October 2nd, 1862.

"I am afraid I shall find it difficult to convey to your Society the exact state of things, much less enlighten you as to how things are to be made what they should be, but I will try.

"Understand, then, that the year old contraband refugees or freedmen, in and in the vicinity of this place, are in good condition. And those who u

a month past have come in and become mingled with them, share that good condition.

"The occasion for the present pressing appeal to you and other northern charity, is the deposit of a new camp of forlorn waifs by McClellan, on his retreat from Harrison's Landing.

"To this we have given the name of Camp McClellan. These people were first landed at Cany land at the entrance of Norfolk Bay, and thence they were brought here in a heavy rain in which they were thoroughly drenched. From the effects of this exposure they have not yet recovered, especially as all the protection they have had from inclement weather without, and dampness below, is undened tents and a few rags to begin house-keeping with." The adults number about 700; the children between three and four hundred. The girls among them have been from two to nine, or an average seven and a half per day; but the number of deaths is now diminishing.

"The adults are mostly women, a few men left sick, about twenty of whom have since nearly recovered, and a few old and disabled men. I have been waiting in anxious expectation of a mission as to the permanent disposition to be made these remains of the camp. It has been expected that they would be removed to Washington, but there or here, they should have barracks fit for them, as women and children cannot be comfortable in tents like these.

"The Government provides the camp rations and probably fuel for the winter. For all else, for clothing, for food for the sick, for shoes and stockings we must look to the North. You may well astounded at the idea of supplying these wants, I especially the added wants of twelve or fifteen hundred more men, women and children in Norfolk, equally destitute; and the many more coming to come. You, with all collaborators in benevolence, will find it very exhaustive of funds to supply these wants with new goods. The principal part of the clothing sent to us during the past year has been second-hand. Almost any ordinary article of apparel will be of use. We have received but three hundred barrels of such articles from North during the past year. All such barrels or cases should be directed to L. C. Lockwood, care of C. B. Wilder, Superintendent, Fortress Monro. In sending by Adams' Express, or by direct to the Fort, there is no difficulty.

"As to my own position and that of the teachers, we owe no objection to any superintendent, but strive as far as possible to operate in harmony. One advantage we have here is the presence of B. Wilder, a wealthy and practical business man, who being here on a visit, was at my recommendation appointed superintendent of the contrabands. C. B. Wilder has general charge of the contrabands and special charge of those in government employ. Yet he has hitherto laboured without salary or than payment of expenses. My charge extends from Hampton to all the regions round about. The funds of the association warranted it, we would long ere this, have had matrons to devote selves to visiting from house to house. We chiefly need the aid of women to teach these modes of work by which they could support themselves.

I know you would find it an interesting field of work for your Society. Any collaborators from the north would be cordially welcomed.

In reply to your questions about government employ in the bustle of war the poor negro employee is to be forgotten, and many, many have laboured long weary months without a cent of pay or rations. And if they do get pay it is barely sufficient to keep them in clothes; none is left for

wife and child. But God who feeds the ravens will see that his poor are fed, and He who clothes the lilies will see that his poor are clad.

"With grateful regard yours,

"L. C. LOCKWOOD."

Granaries of the West.—The following extract is from M. Trollope's recent travels in the United States:—"I was at Chicago and at Buffalo in October, 1861. I went down to the granaries, and climbed up into the elevators. I saw the wheat running in rivers from one vessel to another, and from the railroad vans up into the huge bins on the top stories of the warehouses; for these rivers of food run up hill as easily as they do down. I saw the corn measured by the forty-bushel measure, with as much ease as we measure an ounce of cheese, and with greater rapidity. I ascertained that the work went on, week-day and Sunday, day and night incessantly; rivers of wheat and rivers of maize ever running. I saw men bathed in corn, as they distributed it in its flow. I saw which bins there was space for a comfortable residence. I breathed the flour, and drank the flour, and felt myself to be enveloped in a world of bread-stuffs. And then I believed, understood, and brought it home to myself as a fact, that here, in the corn lands of Michigan, and amid the bluffs of Wisconsin, and on the high table plains of Minnesota, and the prairies of Illinois, bath God prepared the food for the increasing millions of the Eastern world, as also for the coming millions of the Western. I began then to know what it was for a country to overflow with milk and honey, to burst with its fruits, and be smothered by its own riches. From St. Paul down the Mississippi, by the shores of Wisconsin and Iowa—by the ports on Lake Pepin—by La Crosse, from which one railway runs eastward—by Prairie du Chien, the terminus of a second—by Dunlieth, Fulton, and Rock Island, from whence three other lines run eastward, all through that wonderful State of Illinois—the farmer's glory—along the ports of the great lakes, through Michigan, Illinois, Ohio, and further Pennsylvania, up to Buffalo, the great gate of the Western Ceres, the loud cry was this:—'How shall we rid ourselves of our corn and wheat?' The result has been the passage of 60,000,000 bushels of breadstuffs through that gate in one year! Let those who are susceptible of statistics ponder that. For them who are not, I can only give this advice:—Let them go to Buffalo next October, and look for themselves."

Letter of Susanna Hatton.

The following letter of that eminent minister of the gospel, Susanna Hatton, written whilst on her second religious visit to this country, to Sarah, the wife of her old friend, Samuel Neale, will be no doubt interesting to many of the readers of "The Friend."

"Stanton, near Philadelphia, First mo. 13th, 1763.

"Dear and tender Friend, Sarah Neale:—Thy acceptable letter to which thy dear husband's [addition] was a cordial to me, a poor pilgrim in a strange land. The hearing of the decease of our Friends, deeply affected my mind; but what shall I say but this, all that our Master does is for the best; we, poor short-sighted mortals, can see a very little distance before us. This I know the better it is for me, the more I am like a weaned child from all visible objects, with my mind fixed on durable riches, eternal in the heavens. Oh! that unalterable sure friend, in whom my soul de-

lighteth! He never yet failed me when I confided in him. It is true, I have been short in some part of my duty, before I left home, for which I have known much sorrow. But it is all over now, and passed by, on the condition of fidelity to my beloved Master in time to come. Thy husband makes some remarks concerning deep baptisms. The Lord only knows what I have gone through in this land, and am still wading in. Had he known my condition, he could not have written more suitably thereto. It came in an acceptable time. I wish to be truly thankful to the Great Remembrancer of his little ones. His love reaches over sea and land, in which the living can touch one another in spirit, feeling its pure cementing influence, binding up even the broken-hearted, and letting the prisoner go free. May we know it, dear Sally, more and more to come up in us into dominion. These duties will not be so much neglected as it is by too many. I wish, my dear friend, thou and thine may be preserved from letting the fading enjoyments of this world, keep you back from duty. I am truly glad to hear that you get out to meetings, a duty required of every well concerned member. Oh! my bowels are troubled within me, and many times I am ready to say, "by whom shall worm Jacob arise, for he is small!"

"I have been favoured with having dear Susy Brown,* for a companion to the eastward. First, to see the Indians, where upwards of five hundred of them were in one place. Every tribe were by themselves. About one hundred were of those who bear the name of Friendly Indians.† There are many of the others, who appear to be under conviction. We went to the treaty, held above fifty miles from Philadelphia, in the wilderness. The Indians were told that a Friend was coming to see them, who came over the great water, which pleased them much. When we arrived, a number of them came to our lodgings, inasmuch that the room was filled with Friends and Indians. After shaking hands, in a sweet feeling sense of the Father's love, we fell into silence, and I may truly say, my spirit was clothed with profound silence, as much so as I ever witnessed; and after a considerable time the Great Commander and Author of all good, moved on my understanding, and I was concerned in humble supplication to the Shepherd of Israel, who was pleased to prepare an offering that would find acceptance in his sight. It was a time not to be forgotten. The hearts of all being melted, and we being admitted to eat and drink in the presence of the Father. I believe each had, in a measure, to sit under their own vine, and under their own fig-tree, where neither the enemy nor any of his could make us afraid. The sense of this bows my mind in gratitude. The next day I had it in my mind to have a meeting with the Indians, of which I informed some Friends, thy spouse's old companion;† being there. Request was made to the Governor, his secretary and council, that they would grant the place for the meeting to be held in, which had been erected for the treaty. It was obtained, and as we went to meeting, we saw the Governor and his council coming. This brought a dread over my mind, and a cry was begotten in my heart to the Lord. 'O! let not thy glorious truth suffer on my account!' Neither did it. The Indians, who were many, sat in the middle; Friends, the Governor and council, with other people, sat round. After a time, all fear of man was taken from me,

* Susanna Brown, the wife of William Brown, both being ministers of the gospel.

† The Friendly Indians were those who had joined with Paopaoing in his labours for a reformation.

Iron, its Uses and Manufacture.

(Concluded from page 58.)

"The first attempt to realise the 'Great Iron Master's' prophecy that we should sail in iron ships was made by himself. He constructed iron boats, carry goods on the Severn and the canals; but what time, and how many, is uncertain. — Grantham has found in a journal of the year 1787, an account of the arrival at Birmingham of a small-boat built of British iron' (this point then required special notice,) 'by John Wilkinson, of 'Madley Forge'; and the writer then proceeds to describe the construction of this novel monster with much care as the newspaper correspondents lately bestowed on the 'Merrimac' and the 'Monitor.' From this period, similar boats were frequently used in inland navigation; and some of the earliest specimens, Grantham tells us, are still existence—an incontestable proof of the durability of the materials. The first iron boat that was ever launched in salt-water was a pleasure-raft, built under the direction of — Jevons, of Liverpool, in the year 1815; but it might have been long before iron was adopted as the material of ship-building in good earnest, if, in the meantime, the art of propelling ships by steam had not been brought into practical operation. Without engaging in the attempt to penetrate the obscurity which besets the origin of the steam-boat, like that of most other great discoveries, we may claim for Scotland the merit of having first given a practical solution to the problem which so long engaged the attention of projectors. The first steam vessel adapted to practical purposes was the steam tug-boat which was launched on the Clyde and Forth Canal in 1802; and the first steam packet-boat established in Great Britain was the 'Comet,' which began to ply on the Clyde in January, 1812.

"The quantity of machinery required by this new application of steam greatly increased the demand for iron, and gradually accustomed the public to include that metal among the principal materials of ship-building.

"A series of experiments instituted by the Forth and Clyde Canal Company in 1829—30, to ascertain the law of traction of light boats at high velocities on canals, led to the application of iron to the construction of vessels; and the lightness of these new vessels combined with their increased

strength, suggested the extended application of the material in the construction of vessels of much larger dimensions.' (*Fairbairn, Lecture on the Properties of Iron*, p. 31.)

"Iron, it was perceived, was better suited than wood to resist the strain of the engine, and would allow more space for the stowage, which was inconveniently curtailed by the coals and the engine. It was not till long afterwards that the employment of iron in the construction of a sailing vessel was attempted.

"The first iron steamboat that ever put to sea, 'The Aaron Manby,' was built by the manufacturer whose name she bore, under a patent which was taken out in France for steamboats, in 1820. She was built at the Horsley works at Tipton, in Staffordshire, was sent to London in parts, and was put together in dock. In September, 1821, Captain, afterwards Sir Charles Napier, who seems to have been a partner in the speculation, 'took charge of her, and navigated her from London direct to Le Havre, and from thence to Paris, without unloading any part of her cargo—she being the first and only vessel that for thirty years afterwards sailed direct from London to Paris.' It is farther worthy of note that 'from 1822 to 1830 her hull never needed any repairs, though she had been repeatedly aground with her cargo on board.' (*Grantham*, p. 10.)

"The iron vessels that were successively built are enumerated by Grantham in chronological order, and to most of them belongs some circumstance of interest. The 'Alburkah,' a little vessel, built in 1831, by McGregor Laird for the African expedition, which he conducted himself, drew only 3 feet six inches of water, and her success dispelled the prejudice which had previously existed as to the danger of going to sea with so light a draft of water. The 'Garryowen,' built in 1834, was the first that exhibited a 'regular arrangement of water-tight bulk heads,' an improvement the adoption of which has since been rendered compulsory by the legislature. The 'Nemesis' and 'Phlegathon,' built in 1839, whose names seem ominous of their future destiny, were the first iron steamers that were engaged in active warfare, and they took a conspicuous part in the first Chinese expedition. But, in our opinion, the greatest interest which attaches to these and all the other vessels mentioned by Grantham is, that whereas the average duration of wooden ships is thirteen years, they are all afloat at this day, with the exception of the first, the 'Aaron Manby,' and she was not broken up till the year 1855.

"Notwithstanding this success, the advocacy of iron steamboats was but up hill work, Grantham tells us, in the year 1842, when he published his first work on the subject. The judgment of practical men was convinced of the superiority of iron, but the feeling of the public was still in favour of the old marine. From that date, however, iron vessels have rapidly increased, and for some years past no ocean-going steamer has been built of wood.

"In his first work, Grantham gives an account of the construction of the 'Great Britain,' which was then on the stocks, and which was he says, at 'that

time, the boldest effort ever made in iron ship building, and formed the most remarkable feature in the history of that important science.'

p. 15.) The resistance which the 'Great Britain' offered to the beating of a violent surf, when stranded on the coast of Ireland, and the triumphant style in which she has kept the sea since, without receiving damage from the elements or needing repairs from the injuries of time, have often been cited as proofs of the durability of iron vessels. To this Grantham adds many other instances, the most striking of which is that of the 'Persia':—

"On her first voyage, in 1857, she was preceded by the 'Pacific,' a timber-built steamer, and both seem to have fallen in unexpectedly with large floes of ice. The 'Pacific' went down with her immense living freight; the 'Persia,' encountering a small iceberg when at full speed, split it in two, and received no injury, except by the fragments which floated into the wheels, and broke several of the floes." (p. 97.)

"We rejoice that the Great Eastern, after her disastrous trial trip, and her subsequent misfortune in the great Atlantic storm, has redeemed her character by two most successful voyages to and from the United States. Of no other material than iron could so gigantic a vessel have been constructed. The unfortunate 'President' was the largest wooden merchant steamer that ever put to sea, and we well remember how confidently it was predicted by the 'old salts,' as they are fond of calling themselves, at Liverpool, 'that she must break her back.' But there is a difficulty in the construction of such a vessel as the Great Eastern which is not yet fully overcome. She is propelled by the combined action of screw and paddle; but when she is encountered by a storm, the action of the screw is not affected by the waves in the same way as that of the paddle; and we have not yet learned by experience what under such circumstances is the strain upon the paddles and other parts of the vessel, and what are the fit provisions to be made for resistance. In all fairness the 'Leviathan,' as she was called in the first instance, must be considered a great success and the crowning triumph of her ingenious engineer, the late — Brunel. But she is as yet only an experiment from which much is still to be learnt. The fatal accident which occurred on her first trip was caused by a piece of carelessness which it is impossible to excuse, but which, happily, can never occur again. No outlet had been provided for the steam generated in the casing of her funnels. The result was exactly what might be expected from putting a teakettle to boil on the fire after having soldered up the lid and spout. We do not agree with those who think the Great Eastern will be the last vessel of her size ever constructed; we believe the contrary, and we earnestly hope she will prove the first of a race of Leviathans. It is well for us we have private companies to undertake projects which no constitutional government could venture to entertain.

"Grantham makes no allusion to iron rigging. The adoption of the chain cable was the first in-

stance of the application of iron in the navy to any purpose beyond those for which it had been used from time immemorial. A patent for the invention of chain cables was taken out by a navy surgeon in the year 1808; and in 1811, for the first time, a vessel provided with a chain cable put to sea. But it is only lately that iron wire has been employed, to any extent, for the rigging, and more lately still that the idea has been seriously entertained of constructing iron masts. As yet there seem to be objections to the general introduction of iron for these purposes, but the analogy of the past justifies us in believing that iron will ultimately supersede all other materials for ship-building.

"The great need of the day then is good iron: and it is acknowledged to be so by the government, who have appointed a commission to inquire and report on the subject. But that it is no longer an easy matter to find good iron, every man's daily experience tells him. If he goes into a hardware shop, he probably hears some complaint of modern iron. If he takes up a newspaper, his eye is caught by the account of some accident by sea or by land which is laid to the charge of iron. If his railroad dividends decline, the necessity of prematurely replacing the rails which had been made of bad iron bears the blame. In short, it is generally felt that notwithstanding all our boasted improvement, some deterioration of the manufacture, or some demoralization of the trade, has taken place; and our anxiety to check this growing evil is painfully increased when we find that the national safety is staked on the quality of our iron.

"The subject of the iron manufacture thus becomes of interest to many who had hitherto been repelled by its complexity and its technicalities; but it is less difficult than it appears at first sight; and by the exertion of a little patience, it will be easy to unravel one by one the threads of which the tangled tissue is combined—so far, at least, as to form some notion of the nature and extent of the evil, and of its remedy.

"Let us take up one of the price lists which are published from time to time for the guidance of manufacturers and dealers. It is very vague, and is not intended to give information to those unacquainted with the trade, but it will serve as a string on which to hang our explanations. The first distinction it marks is between pig iron, the raw material, and 'wrought,' or finished iron. But in the list before us is mentioned a third state, 'puddled' iron. This is *half-manufactured iron*, and in ordinary times it is not included in the price lists, because it is needed for his own use by the manufacturer who makes it, and none of it is to be found in the market; nor should we perplex the reader by noticing it, but that there is a probability that government may become a considerable purchaser of iron in this intermediate state. If pig iron is compared to flour, wrought iron will represent the loaf, and puddled iron is the dough. Dough is not usually an article of commerce, but if a demand were raised for it, the supply would not be lacking.* Pig iron is next classified according to its uses. There is a column headed, 'for foundry purposes,' and another, 'for forge purposes.' This diversity is caused partly by the different property of the ores, but mainly by the difference of the fuel and of the treatment. The fluid iron needed for the foundry is produced by diminishing the 'burden,' as it is called, of the furnaces; that is to say, by increasing the proportion of the fuel to the mineral, and thus impregnating the produce

with a greater amount of carbon; hence the foundry iron being the most costly to make, bears a higher price in the market than the forge iron, made with the same materials and by the same mode of manufacture, and in that sense is better, but in no other.

"The next distinction is between the hot and cold-blast iron. The existence of such a distinction has only lately been made known to the general reader; its nature is little understood, and as the explanation of it involves much that should be popularly known respecting the iron trade, it deserves our careful attention. The effect of this new and powerful agency, the hot blast, will be readily understood by the reader who remembers (as who does not!) to have passed many a quarter of an hour at a foreign inn in blowing his wood fire. He must have observed that where the blast of the bellows strikes the embers, it produces a black spot, and at the place and for the time checks combustion: of the same nature is the effect of the cold blast on the smelting furnace. But by previously heating in an oven to a very high temperature the air which is blown into the furnace, a prodigious increase of combusive power is obtained. The credit of this invention is due to—Neilson, of Glasgow, who took out a patent for it in 1829, and by this means raised the iron manufacture of Scotland to its present important position. The coal usually employed was so unfit for coaking that it lost 55 per cent. in the process. It was now sent to the furnace in its raw state, and less than a third of the fuel proved to be sufficient. It was found that the hot air expelled to a certain extent the noxious properties from the coal, which the process of coaking had hitherto been employed to overcome, and in many districts it rendered available materials, some of great value, such as the incombustible anthracite, and some on the other hand, of very inferior quality, all of which it had been inexpedient or impossible to employ in the making of iron. This discovery, as it slowly travelled southwards, brought timely aid to those parts of the old districts where the best fuel was becoming scarce, and it brought into general use a vast quantity of new mineral, and even a new material.

"These are all the varieties of British iron which for practical purposes we need notice at the present time. From them is derived the supply for the prodigiously increased production of iron, which has acted reciprocally as cause and effect of the rapidly expanding civilization of modern days. Between the years 1840 and 1860 the make of iron has actually trebled; in the former year it was a little less than 1,400,000 tons; in the latter it exceeded 4,150,000 tons. But the reader will have collected from the brief account we have just given of the ironstones recently brought into general use, that they do not supply iron equally available for all purposes, and that they especially fail to produce the best tough fibrous iron. It might, therefore, be anticipated that in spite of the great increase of production generally, the supply of this particular quality of iron would be insufficient, even though it were assumed to be still as considerable as it was before the new ironstones were introduced. But this, unfortunately, is far from being the case. Many of the manufacturers of the old district have been induced, or have been forced in some instances by the exhaustion of the best materials, but more generally by the pressure of competition, to avail themselves of the hot blast to introduce inferior and cheaper materials, and the result has been, that the quantity of cold-blast iron, which by official returns is stated to exceed 777,000 tons in the year 1840,—and therefore at that time exceeded

one-half of the whole annual make of the country—was in 1850 estimated (for there were no official returns) at about 150,000 tons, not much more than about one-thirtieth of the whole make of the year. It is not contended that the cold-blast exclusively produces tough iron of high quality. The precise effect of the hot blast is much disputed among practical and scientific men, nor has it even been satisfactorily ascertained whether, if the materials were precisely the same, the quality of the produce would be deteriorated by the hot blast. But the hot blast may be applied to any material from the very best to the very worst; the cold blast can be applied only to the best, and hence its produce bears a higher price than the best of the hot-blast in the market, either because practical men think it really better, or because they are willing to pay more for an article which is guaranteed by its very name. The introduction of the hot blast has conferred an infinite benefit on the iron trade and on the country, but it has brought with it a redundant supply of an inferior article and an unlimited power (and with the power the temptation) to practise false economy and to commit fraud. Hence have arisen two results which have generally been confounded, and which it is desirable to keep distinct. The one is, that there has taken place a notable deterioration in the manufacture. There is annually produced a large quantity of inferior iron than can be used for reservoirs, cisterns, and the multifarious purposes to which inferior iron is legitimately applicable, and at periods of unusual demand the inducement to produce quantity at the expense of quality acts with irresistible force. At the first establishment of railways for instance,—the time is now remote and truth has oozed out—in the hurry and eagerness of the moment, the manufacturers were urged by the surveyors to send 'any rubbish,' provided it were made smooth and looked nice, and delivered quickly. But at all times the cheap inferior quality is forced into use by competition. Competition acts feebly in an early state of society and in a different direction from that which it takes in a more advanced state of civilization. Its first aim is to produce something more costly and more choice, to win the patronage of the few; its next is to bring the luxuries of the few within the reach of the many; cheapness becomes its chief object and often ends in being its sole object. We long cherished the belief that no iron is so bad that it could not be turned to some account; but practical men affirm too confidently to admit of dispute that iron is produced which is good for *nothing but to sell*, and we betide those who fall in with it. It is remarkable how little the danger of a deterioration in the manufacture seems to have attracted the attention of professional writers on the subject. — Scrivenor, in the second edition of his history of the iron trade, published in 1854 announces with exultation that in that year its annual make had reached the amount of 2,700,000 tons (since so much exceeded); but the old drawback he apprehends that the resources of the country should not long suffice for so large a production, and no fear of possible falling off in its quality seems to cross his mind.

"The second result to which we have alluded is not less important. Amid the vast increase of different qualities of iron, to which it would be a superfluous of language to apply the word bad, as there are excellent for the different purposes to which they are specially applicable, there is a very insufficient supply of the best tough iron, the kind of iron which is needed when the materials are subjected to much manipulation, and is required to maintain its toughness to the last—the kind which

* It is not necessary to embarrass the reader with the mention of malleable castings made from charcoal pig iron, and annealed by means of domestic.

above all others, is required for the manufacture of armour-plates.

"The reader is aware that wrought iron is wrought to its perfection by repeated working; but one kind of iron reach their perfection after very few heatings, and all kinds after a certain number of heatings begin to decline in quality till at last they are utterly worthless. — Clay tells us that in six workings iron of ordinary quality attained its highest degree of strength, improving at each stage, but after each of six subsequent workings it successively sustained an inferior test. Superior iron would endure further manipulation; at it is only the very best which will bear the repeated heating and reheating to which the armour-plate is subjected, without losing its fibrous texture and its toughness. It is for this reason, moreover, that iron in the half-manufactured state of which we have spoken, the 'puddled bar,' is recommended as the proper material for an armour-plate. In a more advanced state, iron, however good in quality, is not enough vitally left in it to endure the manipulation to which it must be subjected.

"A visit to the Exhibition makes it clear that we can produce steel of the very finest quality from native materials, and for inferior purposes can manufacture it as easily and almost as cheaply as merchant iron. — Bessemer's stall is in the highest degree interesting. His process is new. Its value, and perhaps its capabilities, are not yet fully ascertained; but if the produce of his cupola is uniform in quality, there is no doubt it will force its way into general use. The steel ribs, tyres, and axles are excellent, and so are the 'homogeneous' plates, — so called (not very accurately) to denote that they are not formed of plates welded together. There are many new articles in steel, such as the steel wheels for heavy rolling mills, and steel rolls, which well deserve the iron-master's attention as being more efficient, and in the end more economical, than the machinery now in use. The recent accidents which have been occasioned by the 'double throw' crank axles of the locomotive engines suggest forcibly the propriety of substituting for the old 'faggotted' axles others of malleable steel. We earnestly recommend this subject to the consideration of engineers and railway boards.

"It would be foreign to our purpose, nor have we space, to dwell on the extraordinary variety, genuineness, and beauty of the machinery exhibited; but we must note how forcibly the perfection of the work proves the excellence of the material employed. But how is this triumphant catalogue to be reconciled with our complaints of deterioration and decay? Alas, it is but Regent Street masking the Seven Dials. The exhibition shows what the art manufacture is in its sound and healthy parts, and that it might be and would be everywhere but for those vitiating influences that infect all the works of man."

The only way to peace.—William Williams' tender and susceptible mind was illuminated with the shining of the heavenly Father's love in the morning of his day, though he found it hard for a man to submit to the lowliness and simplicity which the Truth requires. He endured many severe contents before he surrendered his will to the government of the Prince of Peace; but through submission to the refining baptism of the Holy Spirit, he was gradually prepared to fill the dignified station of a minister of the gospel of Jesus Christ; he became an able advocate of the cause in which he had embarked, and by a faithful attention thereto, his labours were blessed to the benefit of his friends and others, he having borne many living testimo-

nies amongst us; often recommending a close attention and obedience to the manifestations of light and grace in the soul, as the only means that can insure the peace which the world can neither give nor take away.—*From a testimony concerning William Williams.*

Useful Cautions.—If a man asks you to go his security, say "No," and run; otherwise you may be enslaved for life, or your wife and children may beget a weary existence, in want, sickness, and beggary.

If you find yourself in possession of a counterfeit note or coin, throw it into the fire on the instant; otherwise you may be tempted to pass it, and may pass it, to feel mean therefor as long as you live; then it may pass into some man's hands as mean as yourself, with a new perpetration of iniquity, the loss to fall eventually on some poor struggling widow, whose "all" it may be.

Never laugh at the mishaps of any fellow mortal.

The very instant you perceive yourself in a passion, shut your mouth; this is one among the best precepts outside of inspiration.

The man who always exacts the last cent is always a mean man; there is no "evacuant" in all the "*Materia Medica*" efficient enough to "purge" him of his debasement; he is beyond druggery.

Never affect to be "plain" or "blunt;" these are the synonyms of brutality and boorishness. Such persons are constantly inflicting wounds which neither time nor medicine can ever heal.

Never be witty at another's expense; true generosity never dwelt in such a heart; it only wants the opportunity to become a cheat or rogue.—*Hill's Journal of Health.*

That circumspection wherein safety consists.—In speaking of a time when, in his younger years, he had much of that circumspection wherein safety consists, George Bewley says, "Great was the care and concern of faithful elders in those days, in the city of Dublin, for the preservation of the young generation out of the evils that are in the world; they were good examples to us, and often advised and admonished us for our good, not only in family visits, but at other times; and we generally received their counsel well, and were thankful for it; and the well inclined were helped thereby. There was a large meeting in that city then, and many worthy ministers and elders; and Friends then were a plain, humble, self-denying people, and had a great regard to the advice, rules, and precepts of the ancients, and were zealously concerned to observe them, and in a good degree Truth prospered; and Friends were comforted in the Lord, and encouraged to follow him faithfully, and were greatly concerned that their children and families should do the same."—*From a short account of George Bewley.*

Well Speaking.—A pastor was making a call upon a parishioner, an old lady, who had made it an habitual rule never to speak ill of another, and had observed it so closely, that she always justified those whom she heard evil spoken of. Before the old lady made her appearance in the parlour, her several children were speaking of this peculiarity of their mother, and one of them playfully added: "Mother has such a habit of speaking well of everybody, that I believe if Satan himself were the subject of conversation, mother would find out some virtue or good quality even in him."

Of course, this remark elicited some smiling and merriment at the originality of the idea, in the midst of which the old lady entered the room, and

on being told what had just been said, she immediately and involuntarily replied:

"Well, my dear children, I wish we all had Satan's industry and perseverance."

For "The Friend."

High Balloon Ascention.

The last balloon ascention undertaken for scientific purposes, was that of James Glaisher, which took place in England last month. The ascention was made from Wolverhampton, in Coxwell's great balloon, and the highest point reached was not less than five and three-quarter miles. Glaisher's narrative of the voyage is interesting, especially his description of the effects of the atmosphere at different altitudes. He says, "On the earth at 1 b., 3 m., the temperature of the air was 59 deg., and shortly after we entered a cloud of about 1100 feet in thickness, in which the temperature of the air fell to 36½ deg., and the wet bulb thermometer read the same, showing that the air here was saturated with moisture. On emerging from the cloud at 1 b. 17 m., we came into a flood of light, with a beautiful blue sky, without a cloud above us, and a magnificent sea of cloud below, its surface being varied with endless hills, hillocks, mountain chains, and many snow white masses rising from them. When we attained the height of two miles, at 1 b. 21 m., the temperature had fallen to the freezing point; we were three miles high at 1 b. 25 m., with a temperature of 18 deg.; at 1 b. 39 m., we had reached four miles, and the temperature was 8 deg.; in ten minutes more we had reached the fifth mile, and the temperature of the air had passed below zero, and there read minus 2 deg., and at this point no dew was observed on Regnault's hygrometer when cooled down to minus 30 deg. Up to this time I had taken the observations with confidence. I had experienced no difficulty in breathing, while Coxwell, in consequence of the necessary exertion he had to make, had breathed with difficulty for some time. At 1 b. 51 m., the barometer read 11.05 inches, but which requires a subtractive correction of 0.25 inch, as found by comparison with Lord Wrottesley's standard barometer just before starting, both by his lordship and myself, which would reduce it to 10.8 inches, or at a height of about 5½ miles, I read the dry bulb as minus 5 degrees; in endeavouring to read the wet bulb, I could not see the column of mercury. I rubbed my eyes, then took a lens, and also failed. I then tried to read the other instruments, and found I could not do so, nor could I see the hands of the watch. I asked Coxwell to help me, and he said he must go into the ring, and he would when he came down. I endeavoured to reach some brandy, which was lying on the table at about the distance of a foot from my hand, and found myself unable to do so. My sight became more dim, I looked at the barometer, and saw it between 10 and 11 inches, and tried to record it, but I was unable to write, I then saw it at 10 inches, still decreasing fast, and just noted it in my book; its true reading, therefore, was at this time about 9½ inches, implying a height of about 5½ miles, as a change of an inch in the reading of the barometer at this elevation takes place on a change of height of about 2500 feet. I felt I was losing all power, and endeavoured to rouse myself by struggling and shaking. I attempted to speak, and found I had lost the power. I attempted to look at the barometer again, my head fell on one side; I struggled and got it right, and it fell on the other, and finally fell backward. My arm, which had been resting on the table, fell down by my side. I saw Coxwell dimly in the ring. It became more misty, and finally dark, and I sank unconsciously as in

sloop; this must have been about 2 h. 54 m. I then heard Coxwell say, 'What is the temperature? Take an observation; now try.' But I could not see, move nor speak. I then heard him speak more emphatically, 'take an observation, now, do try.' I shortly afterward opened my eyes, saw the instruments and Coxwell very dimly, and soon saw clearly, and said to Coxwell, 'I have been insensible,' and he replied, 'You have, and I nearly.' I recovered quickly, and Coxwell said, 'I have lost the use of my hands; give me some brandy to bathe them.' *His hands were nearly black.* I saw the temperature was still below zero, and the barometer reading 11 inches, but increasing quickly. I resumed my observations at 2 h. 7 m., recording the barometer reading 11.53 inches, and the temperature minus 2 deg. I then found that the water in the vessel supplying the wet bulb thermometer, which I had by frequent disturbances kept from freezing, was one solid mass of ice. Coxwell then told me that while in the ring he felt it piercingly cold, that hoar frost was all around the neck of the balloon, and on attempting to leave the ring, he found his hands frozen, and he got down how he could; that he found me motionless, with a quiet and placid expression on the countenance. He spoke to me without eliciting a reply, and found I was insensible. He then said he felt insensibility was coming over himself; that he became anxious to open the valve; that his hands failed him; and that he *seized the line between his teeth, and pulled the valve open, until the balloon took a turn downward.* This act is quite characteristic of Coxwell. I have never yet seen him without a ready means of meeting every difficulty as it has arisen, with a cool self-possession that has always left my mind perfectly easy, and given to me every confidence in his judgment in the management of so large a balloon.

Glaisher is convinced that the balloon (containing only himself and the aeronaut, Coxwell), finally reached an altitude of *over six miles*, but of this he is not positive, as his ability to read the instruments ceased at the height of five and three-quarter miles. On this point, he says:

"On asking Coxwell whether he had noticed the temperature, he said he could not, as the faces of the instruments were all toward me, but that he had noticed that the centre of the aneroid barometer, its blue hand, and a rope attached to the ear were in the same straight line. If so, the reading must have been between seven and eight inches. A height of six miles and a half corresponds to eight inches. A delicate self-registering *minimum* thermometer reads minus 12 deg.; but unfortunately I did not read it till I was out of the ear, and I cannot say that its index was not disturbed. On descending, when the temperature rose to 17 deg., it was remarked as warm, and at 24 deg. it was noted as very warm. The temperature then gradually increased to 57 deg. on reaching the earth. It was remarked that the sand was quite warm to the hand, and steam issued from it when it was discharged. Six pigeons were taken up. One was thrown out at the height of three miles. It extended its wings, and dropped as a piece of paper. A second, at four miles, flew vigorously round and round, apparently taking a great dip each time. A third was thrown out between four and five miles, and it fell downward. A fourth was thrown out at four miles when we were descending. It flew in a circle, and shortly after alighted on the top of the balloon. The two remaining pigeons were brought down to the ground; one was found to be dead, and the other (a carrier) had attached to its neck a note. It would not, however, leave, and when jerked off the finger, returned to the

hand. After a quarter of an hour it began to peck a piece of ribbon encircling its neck, and I then jerked it off my finger, and it flew round two or three times with vigour, and finally toward Wolverhampton. Not one, however, had returned there when I left on the afternoon of the 6th. It would seem from this ascent, that five miles from the earth is very nearly the limit of human existence. It is possible, as the effect of each high ascent upon myself has been different, that on another occasion I might be able to go higher; and it is possible that some persons may be able to exist with less air, and bear a greater degree of cold; but still I think that prudence would say to all, whenever the barometer reading falls as low as 11 inches, open the valve at once; the increased information to be obtained is not commensurate with the increased risk."

The London Times, commenting upon this perilous enterprise, observes: "The aerial voyage just performed by Coxwell and Glaisher, deserves to rank with the greatest feats of our experimentalists, discoverers and travellers. It is true these gentlemen have not brought down a very comfortable or inspiring report of the upper world into which they have penetrated. Science and poetry are unhappy rather at variance upon the subject of the air and the sky. Poetry points upward to the sky with glowing rapture as the scene of brightness and glory. Everything is happy and splendid that is connected with the sky. But science penetrates with its material eye into these vast upper spaces, and simply reports a great difficulty of breathing thro; that the blood stagnates, the limbs become benumbed, the senses evaporate, and nature faints in unconsciousness. The very birds will not fly in that sky which is their poetical home. The distinction is that poetry looks up to the sky from below, and science examines and feels it on a level. The sky is the emblem of poetry—the fact of science. Both aspects of it are equally true, but the point of view from which they are taken is quite different. But, though our recent explorers of the sky do not add to its brilliancy as a picture, they have furnished one more striking and impressive scene to the history of science. They have shown what enthusiasm science can inspire, and what courage it can give. If the man, as the poet says, had need of 'triple steel about his breast,' who first launched a boat into the sea, certainly those had no less need of it who first floated in the air six miles above the surface of the earth."

Bearing daily Christ's Cross, the only true Testimony of receiving Him.—It is the nature of true faith to beget an holy fear of offending God, a deep reverence for his precepts, and a most tender regard to the inward testimony of his spirit, as that, by which his children, in all ages, have been safely led to glory. For as they that truly believe, receive Christ in all his tenders to the soul, so true it is, that those who receive him thus, receive power to become the sons of God; that is, an inward force and ability to do whatever he requires: strength to mortify their lusts, control their affections, resist evil motion, deny themselves, and overcome the world in its most enticing appearances. This is the life of the blessed cross of Christ, which is the subject of the following discourse, and what thou, O man, must take up, if thou intendest to be the disciple of Jesus. Nor easiest thou be said to receive Christ, or believe in him, whilst thou rejectest his cross. For as receiving Christ is the means appointed of God to salvation, so bearing thy daily cross after him is the only true testimony of receiving him; and therefore it is enjoined by him, as the great token of discipleship, "If any

man will come after me, let him deny himself, and take up his cross, and follow me."—*Penn's 7th Cross, No Croton.*

GUARD WELL THY LIPS.

Selected.

"He that keepeth his mouth keepeth his life."

PROV. XIII. 3.

Guard well thy lips; none, none can know
What evils from the tongue may flow;
What guilt, what grief, may be incurred;
By one incautions, hasty word.

Be "slow to speak;" look well within,
To check what there may lead to sin;
And pray unceasingly for aid,
Lest unawares, thou be betrayed.

"Condemn not, judge not!"—not to man
Is given his brother's faults to scan;
One task is thine, and one alone,
To search out, and subdue thine own.

Indulge no murmurings; oh, restrain
Those lips so ready to complain!
And if they can be numbered, count
Of one day's mercies the amount.

Shun vain discussions, trifling themes;
Dwell not on earthly hopes or schemes;
Let words of wisdom, meekness, love,
Thy heart's true renovation prove.

Set God before thee; every word
Thy lips pronounce by him is heard;
Oh, couldst thou realize this thought,
What care, what caution, would be taught!

Think on thy parting hour; ere long
The approach of death may chain thy tongue,
And powerless all attempts be found,
To articulate one meaning sound.

"The time is short!"—this day may be
The very last assigned to thee;
So speak, that shouldst thou ne'er speak more,
Thou may'st not this day's words deplore.

Ellist.

What are trees made of?—If we were to tap up a handful of soil, and examine it under the microscope, we should probably find it to contain a number of fragments of wood, small broken pieces of branches or leaves, or other parts of the tree. If we could examine it chemically, we should find yet more strikingly that it was nearly the same as wood in its composition. Perhaps, then, it may be said, the young plant obtains its wood from the earth in which it grows. The following experiment will show whether this conjecture is correct or not: Two hundred pounds of earth were dried in an oven, and afterwards put into a large earthen vessel; the earth was then moistened with rain water, and a willow tree, weighing exactly five pounds, was planted therein. During the space of five years the earth was carefully watered with rain water. The willow grew and flourished, and to prevent the earth from being mixed with fresh earth, by being blown upon it by winds, it was covered with a metal plate, full of very minute holes, which would exclude everything but air from getting access to the earth below it. After growing in the earth for five years the tree was removed, and, on being weighed, was found to have gained one hundred and sixty-four pounds. And this estimate did not include the weight of the leaves or dead branches which in five years fell from the tree.

Now came the application of the test. Was all this obtained from the earth? It had not sensibly diminished; but, in order to make the experiment conclusive, it was again dried in an oven and put in the balance. Astonishing was the result—the earth weighed only two ounces less than it did when the willow was first planted in it! yet the tree had gained one hundred and sixty-four pounds

manifestly, then, the wood thus gained in the space of time was not obtained from the earth; we are, therefore, obliged to repeat our question, Whence does the wood come from? We are left with only two alternatives—the water with which it was refreshed, or the air in which it lived. It can be early shown that it was not due to the water; we were consequently unable to resist the perplexing and wonderful conclusion that it was derived from the air.

Can it be? Were those great ocean spaces of wood, which are as old as man's introduction into den, and wave in their vast and solitary luxuriance over the fertile hills and plains of South America, were all these obtained from the thin air? Were the particles which unite to form our wooden ships ever borne about the world, not only on wings of air, but air themselves? Was the firm on which I rest, the solid floor on which I walk, once in a form which I could not as much lay my finger on, and grasp in my hand? Wonderful truth! all this is air.

For "The Friend."

BIOGRAPHICAL SKETCHES

Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 60.)

Although Sarah Morris felt as though her will was thoroughly given up to the Lord's will, yet when after a time she believed it required of her, by her divine Master to bear a public testimony to his excellent name, and to come forth as a minister of his everlasting gospel, she shrank from the awful work. Long did she consult with flesh and blood, even indeed until for a season the sensible evidences of the merciful visitations of Divine love were withdrawn from her; she was deprived of all inward comfort, and was not able to take pleasure in anything. After this state of great spiritual desertion, feeling once more the quickening virtue of the Divine presence, and the arising of that power which gives life, she gave up to the requiring of duty, and appeared in a public testimony, much to the comfort and satisfaction of her friends. This was in the year 1745. Her memorial says of her ministry, that it being "brought forth through great mortification of her own will, and a deep travail, and exercise of spirit, it was evident to the sensible and judicious members of the church, that she was rightly called to this mighty work. Divers nearly sympathizing with her, were spiritual helpers, watching over her in much love and tenderness. Through faithfulness of her gift, she increased in knowledge and experience, and became an able gospel minister, rightly dividing the word of Truth. She was sound in doctrine, pertinent in exhortation, clear in utterance, and careful to adorn the doctrine she preached by a pious, exemplary life and conversation." Sarah Morris was acknowledged as a minister of the gospel by her Monthly Meeting, in the year 1746, and was very often engaged in public labour, in her own and neighbouring meetings. Her first journey in the work of the ministry was with her dear friend, Margaret Ellis, with whom she sited many of the meetings within the compass of her own Yearly Meeting. Afterwards her friends saw "through the efficacy of Divine love, she was drawn to visit many meetings in this province, New Jersey, and the Yearly Meetings in Maryland and our Island." She attended the Maryland Yearly Meeting, held at West River, in 1750, 1755, and 1759; the General Meeting held at Shrewsbury, 1752, 1757, and 1762, and those held at Choptank and Little Creek, in 1756. In 1764, she was

at the Yearly Meeting for New England, held at Newport, in company with her friends, Joyce Benezet and Elizabeth Smith; "her religious labours were chiefly in this city, manifesting among us a steady uniform concern for the cause of Truth, and preservation of true christian fellowship, not only in the exercise of her gift in the public ministry, wherein she was eminently favoured, but also of our christian discipline among Friends of her own sex, for which she was well qualified and of real use."

On the 4th of the Second month, 1767, her ancient mother deceased; who, according to her memorial, "in the ninety-fourth year of her age, departed in a calm and peaceful state of mind, toward whom she [Sarah] had manifested a filial affection and care."

On the 25th of Eleventh month, 1768, she obtained a certificate from her Monthly Meeting, to accompany that eminent minister from Great Britain, Kachel Wilson, to some of the Southern Provinces, having already visited with her "some of the meetings, in the back parts of this Province." A concern had been on her mind for a long time, to pay a religious visit to Friends of Great Britain, and after the death of her mother, the weight of it seemed to increase, with a call to dedication. Her humble mind was deeply affected with the prospect of the weighty work, and her own want of qualification therefor, and through mental anxiety and exercise, she was reduced to a very weak condition of body. For some time, her recovery seemed doubtful, but after her mind was brought into a simple condition of passive obedience, she was favoured with sufficient strength of body to lay her concern before her Monthly Meeting. That meeting, in the Third month, 1771, issued a certificate of their unity with her in her prospect, and state she had informed them of her concern in "much meekness." Her friend, Elizabeth Smith, of Burlington, one of a weakly bodily frame like herself, proved to be under a similar concern, and they looked forward, in hope that, if enabled to perform the service required, they might be permitted to do it in company.

Having obtained the unity of her Quarterly Meeting, in the Fifth month, Sarah Morris, at the Yearly Meeting of Ministers and Elders, in the Ninth month, in a tender manner, mentioned her concern, expressing her desires that Friends would give it a solid deliberation, and that they might be enabled to pray for her preservation, whether she should be at home, or abroad. Elizabeth Smith, who was too feeble in health to attend the meeting, laid before it, by the hands of a Friend, the certificate of unity which she had received from her Monthly and Quarterly Meetings with her prospect. Much unity and sympathy was expressed with those beloved Friends, who, though weak in body, were yet concerned in spirit to fulfil all their dear Saviour's requirements. In the flowings of gospel love and fellow feeling, the meeting believed it "safest and best" to leave both of them "to the guidance of the good Spirit, and to open their way in their proceeding in the prospect before them."

The Lord's ways, although all in perfect wisdom, are past finding out by the finite comprehension of man. Elizabeth Smith, having given up her will in resignation to the Lord's will, was granted a release from the earthly labour, which seemed to be allotted her, and was translated from her poor, weak, diseased tabernacle of flesh, wherein she had endeavoured to serve her Master, into the house prepared for her in heaven, into the spiritual body wherein, free from sickness or suffering, she should praise him forever. Sarah Morris, apparently as frail and as weak in body, perhaps even

more subject to depression of spirit, was strengthened to perform the service assigned her through manifold temptations and exercises. Her beloved niece, Deborah Morris, now believed it right to offer her services to attend her feeble aunt on this important mission, and the Monthly Meeting of Philadelphia, freely granted her a certificate of its approbation in which they say, "As she hath been of a sober and religious life and conversation, and has manifested great tenderness and sympathy for her worthy aunt, since she hath been under this religious exercise, we believe her giving this further testimony of affectionate regard and concern, will be very acceptable and serviceable. We fervently desire her preservation; and that in the discharge of this weighty service, she may receive the reward of peace and consolation."

(To be continued.)

The Elephants and the Rice.—Some Indian soldiers stationed at an outpost near Forte do Gallo, in Ceylon, to protect a granary containing a large quantity of rice, were suddenly sent away a few miles in order to quiet some unruly villagers. Two of the party happened to remain. No sooner had the soldiers withdrawn than a herd of wild elephants, which had been long noticed in the neighbourhood, made their appearance in front of the granary. They had been preceded by a scout, which returned to the herd, and having no doubt satisfied them that the coast was clear, they advanced at a brisk pace towards the building. When they arrived within a few yards of the enclosure, quite in martial order, they made a sudden stand, and began deliberately to reconnoitre the object of their attack.

Nothing could be more wary and methodical than their proceedings. The walls of the granary were of solid brick-work, very thick, and the only opening into the building was in the centre of the roof, to which the ascent was by a ladder. On the approach of the elephants, the two astonished spectators clambered up into a lofty banyan tree to escape mischief. They were so completely screened by the foliage of the tree that they could not be perceived by the elephants, though they could see very well what was going on below. Thick brick walls were obstacles which seemed at once to call forth both the strength and sagacity of these dumb robbers. Nothing daunted by the greatness of the difficulty which they had to surmount, they began their operation at the angles of the building.

A large male elephant, with tusks of immense size, laboured for some time to make an impression; but after awhile his strength was exhausted and he retired. The next in size and strength then advanced, and exhausted his exertions with no better success. A third then came forward, and applying those tremendous levers with which his jaws were armed, and which he wielded with such prodigious might, he at length succeeded in dislodging a brick. An opening once made, other elephants advanced, when an entrance was soon obtained sufficiently large to admit them. As the whole herd could not be accommodated at once, they divided into small bodies of three or four. When they had taken their fill, they retired, and their places were immediately supplied by the next in waiting, till the whole herd, upward of twenty, had made a full meal. By this time a shrill sound was heard from one of the elephants, which was readily understood, and those that were still in the building immediately rushed out and joined their companions.

One of the first division, after retiring from the granary, had acted as sentinel while the rest were

enjoying the fruits of their sagacity and perseverance. He had so stationed himself as to be enabled to observe the approach of an enemy, and upon perceiving the troops as they returned from the village, he sounded the signal of retreat, when the whole herd, flourishing their trunks, moved rapidly into the jungle. The soldiers, on their return, found that the animals had devoured the greater part of the rice. A ball from a field-piece was discharged at them in their retreat; but they only wagged their tails as if in mockery, and soon disappeared in the recesses of their native forests.

Goodness.—True goodness is not merely impulsive, but rational and considerate. There are many who, the moment that they see any one in want or suffering, are so pained at the sight that they instantly strive to comfort themselves by some gift or effort for their relief; and this class of persons, especially if they be rich, are fond of thinking that money is the cure of all human ills, and when they have given money, perchance profusely, are satisfied with their easy redemption. But true goodness, though it feels pain in regarding pain in others, and has pleasure in lessening it, thinks more of the sufferer than itself. It will therefore pause, and be at some trouble to inquire what service is best and how it may be rendered. Charity (we use the word in its large sense), when it is dictated by reason and piety, conveys a lasting benefit at the price of present gratification, when the man of impulse would have inflicted a lasting injury. Goodness should be willing to give time, and thought, and patience, and even labour; not merely money, and kind words, and compassionate looks.

True goodness is self-sacrificing—not in the end, for in doing good for God's sake, we can make no real sacrifice; but self-sacrificing in the ordinary sense of the word. Many are willing to give from the superabundance of their money, and think they have done wonders when they give the hundredth part of what they pay their milliner or their wine merchant, yet would not bate a single feather, or scant their table of a dish. Others give the waste hours of their leisure to charity, and chat, well pleased with their goodness, among pleasant companions, in session as a committee to do good upon a large scale. Others, again, are proud of using their influence with the world on behalf of some needy client, who in his turn swells the train of their dependants, and feeds them with flattery. Their goodness, it is easy to see, costs them nothing, for it only costs them money, or time, or influence, of little or no use to themselves. It is, therefore, worth nothing in the sight of God, and next to nothing in the sight of men. Our true goodness can be measured only by the sacrifices of self which we make for it; and that poor widow, who cast in the two mites, all she had, and perhaps went without that day's meal, approached nearer the dignity of His mercy who for our sakes became poor, than he whose name is blazoned high in the lists of princely donors for gifts which came from overflowing coffers.

True goodness is not confined to one or several modes of exhibition, but shows itself in all. The good man is not content with giving to the poor, and relieving the wretched, and exhorting the sinner, while he is harsh to his family, and overbearing to his servants, and haughty to his neighbours. He is gentle and kind to all; affable, courteous, ever ready to oblige, showing in every word, look, and gesture, that he wishes to see all happy. Wherever he enters, he brings sunshine with him, the sunshine of heaven gleaming from his holy heart upon a shadowed world. The grace

of God can dwell in strange places, but it is difficult to conceive how a peevish, passionate man, careless of others' feelings and comforts, can be a good man, though he may have built an hospital, and fed a city with bread.—*Bethune.*

Abyssinia Described by a Visitor.

A Dublin paper reports a lecture delivered before the Young Men's Christian Association of that city, by Speedy, who has been for some years resident in Abyssinia. The letter opens with some notes of the journey, which, at length, brings the traveller to Abyssinia Proper.

"While gazing about us for a few moments at the novel scene, in order to allow our baggage mules to overtake us, we discover that we are gradually being surrounded by a number of both sexes—from the child of six to the old man of sixty summers—all of whom have come to look at that wondrous thing, a 'white man'—the man from Jerusalem; for an Abyssinian imagines that every white man, no matter what his country, must, after paying his devotions at the Sepulchre of our Lord, have come to see the country of the free Ethiopia, as they call their land. After a time a gray-haired man will advance towards your party, the crowd respectfully making way for him. He is one of the magistrates appointed by the king to ask the business of every new comer. The magistrate having taken his leave, a cow is seen being dragged or driven towards you; also, perhaps, a couple of sheep, a woman carrying a half a dozen fowls, and three or four men with circular baskets on their heads. These latter, on examination, prove to contain bread, which is considered to be a great delicacy. . . . If you have a large retinue you can have the ox killed, and before the servants and their friends go to bed, there is not much beef left; but if, on the contrary, your number is small, your head-servant, will in your name, ask the magistrate and chief men of the village to dine with you. The magistrate has offered his house for our accommodation, and we accordingly, on arriving at the door, are ushered into the mansion of the greatest man for miles round. On entering, you can hardly see a yard in front of you, on account of the smoke, and groping your way, you may, after stumbling over a child or two, and breaking your shin against a log of wood, arrive at the 'alga,' or bedstead, which is simply a four-poster, without any sheet or mattress, but covered with an ox-hide, and when the master of the house is rich, a rug is spread over the hide. You are invited to seat yourself, which you do, the master asking your permission if he may sit beside you. After a while your eyes get accustomed to the darkness, and you begin to distinguish objects. On the left, and farthest from the door, are a couple of women grinding corn—not with a hand-mill, as is the custom in Arabia, India, and other Oriental countries, but in another and far more primitive style. A large stone, slightly hollow in the centre, of about eighteen inches long, and eight broad, and supported on a mud platform, is in front of each woman, who holds in her hand a round stone of about nine inches long, and four in diameter; the corn is placed close in front of her on the larger stone, and with the one in her hand she rubs, or grinds the grains between the two. It is a very monotonous process, but although the hand-mill was introduced many hundred years ago, yet the Abyssinian women cling to the mode to which they have always been accustomed. Opposite you most likely, a mule is tied to one of the wooden supports of the house; you may hear a calf loo on your right,

and cocks and hens are picking up a precarious subsistence between the aforesaid calf's legs."

The lecturer, having described the construction of an Abyssinian house, went on to tell the man of eating, which is rude in the extreme. The food consists of curries, so hotly seasoned with pepp as to take the skin off a European's mouth, a of raw meat, which is cut up with a large sword peculiar construction. He then went on to relate the traditions current about the descent of the Abyssinians, from Solomon and the Queen of Sheba, and subsequently described the Felashas and Jews of Abyssinia. "These poor ignorant Jews have the Six Books of Moses, also one book attributed to Enoch, and the greater and lesser prophets; but curiously enough, in the Ethiopic character, and not in the Hebrew. They know not living whatever about that language. Bronkhorst, missionary, who is stationed at Jenda, on the western border of Lake Dembea, purchased on one occasion the Old Testament in Ethiopic, from a Felasha priest, and in reading Isaiah, came to a passage in which the Messiah is promised, and, to his astonishment, the words rendered were Jesus Christos. Now, both words mean anointed, but only a christian would use the latter rendering. On that gentleman showing the passage to sever Jews, they replied they knew nothing of it. Bronkhorst very properly said, in our translation of Isaiah we have the Messiah, and in no part of the Old Testament are the words *Jesous Christ* used. This passage, however, by God's grace went many nearer to the light, and before I left Gondar I heard that upwards of thirty were willing and ready to receive the faith as it is in Christ."

He went on to speak of the weapons, and the dress of the clothing of the Abyssinians. The men wear short trousers of native cloth, reaching to the middle of the calf; a loose shirt, and over these a durable "kwarrie," or toga. When on the march, they use a waistcloth; when they can obtain it, a gaudy handkerchiefed on the head completes the costume. Having briefly related the history of Theodore, the present Emperor of Abyssinia, who, though of a royal descent, has raised himself to the throne from a very humble position by his extraordinary courage, and the skill with which he directs his army, Speedy proceeded to describe the position occupied by women in the country. He gave an interesting account of the dress and appearance of a native lady of rank. "An Abyssinian lady of rank, when preparing for a march, after having made her toilet, takes a 'kwarrie,' and after placing it on her shoulder takes a corner, and covers the upper part of her head with it. It is then brought down, and braided across the mouth, and finally allowed to droop from the back of the shoulder. Next she puts on her bournous, which is always blue, and generally made of cloth from Manchester. It is tastefully ornamented with silk of various colours, along the borders, and down the centre of the hood, and brought over the head chiefly to protect the hair from the dust. She then encases her feet in huge red slippers, and walks, or rather hobbles to the door, for the slippers are about three times the size of the feet. On approaching her gaily caparisoned mule, she is lifted into the saddle by her husband or some near relative. She rides Turkish fashion, and wears loose drawers, fastened at the ankle, and made either of chintz or gaudy-coloured silk. Her feet are pushed into the stirrups, which are purposely made large, to admit her enormous shoe, and away she starts, her attendant running at her side, sometimes with an umbrella, to keep her mistress from being sunburnt. The Abyssinians have charmingly small hands and feet,

which they are very proud; so much so, that a common act of coquetry of a lady of rank on passing you, is to manage to drop her shoe, so that you are the more surprised at seeing so pretty a foot appear, as the shoe was disgustingly large. You have plenty of time to admire it, as the attendant is had to run to pick it up; and while he is putting it on, you might possibly raise your head to see her face, and may notice a pair of flashing black eyes, and the prettiest nose in the world. She says, if there is time, draw her hands from under the folds of her 'kwarrie,' ostensibly to arrange her hood, but, as it lingers there too long, you suspect that it is only that you may admire it. Well, the slipper being re-adjusted, away ambles the lady, and the lady passes on, without deigning a glance at the white man. The hair of the Abyssinians is neither woolly like a negro's, nor straight, with us. Both men and women plait their hair; and men are only allowed to do so if they can prove they killed an enemy. Generally the men wear three plaits, and sometimes five, while the women wear sometimes as many as twenty-one plaits. Like their European sisters, they are very proud of having long hair, but, owing to the custom of shaving the head on the death of a relative, you seldom see it above twelve inches long."

"In one of the streets of Gondor there are on each hand several beehive-looking huts, while at the door of each, half a dozen children are romping about half naked, while a mother is carrying her child on her back in a leather bag, so that she has her arms free, and can spin away without stopping. The distance you see a house in the beehive hole, only some six times larger than the ordinary ones—that is a church. Yes, it is 'Kivus Kivam,' one of the largest churches in Gondar. You need not go inside; there is not much to be seen but paintings of saints, though there is one subject which might interest you. It is a fine painting by an unknown artist. The subject is 'The Israelites passing the Red Sea.' If you look closer, you will perceive that every man of them carries a gun the slope. You re-enter the street. How quiet the street is—not a carriage to be seen, and, I was going to say, not a horse—but here is a clatter, and presently we see a horseman riding at full gallop towards us. The Abyssinians are capital riders. I have often seen a man throw his spear, and on seeing the place where it fell, stop down and pick up his mind! at a gallop the whole time. Yes, but it will soon be out of sight. Did you notice how his dress was embossed with plates of silver, and in the centre a strip of lion's mane was hanging? Now, it is a strip of lion's mane is worn much in the same way, and for the same reason as when our soldiers wear a 'Victoria Cross.' It is given by the king to those who have done some extraordinary deed of courage."

"Come then, all ye who are not dead, and yet not alive: ye whom the earth will not leave unmolested, and whom Heaven will not accept; ye who serve two masters; how long will ye fluctuate? I'd fain in your souls this one truth, whatsoever ye do, be done on the part of God hath already been done. The wedding festival is prepared, you have been invited; nothing remains but for you to come. The sea of love surrounds you, nothing remains but for you to drink. At the last day, when you are engaged your hands in despair, shall it be said, 'I was willing, but ye were not willing!' How to approach Him who approacheth you so graciously, you know. Seek the still hour, every day; read the Holy Scriptures, every day. Attend, every hour, every instant, to every attracting influence of the Holy Spirit. When the Spirit keepeth silence,

then cling to your prayer: Israel! why wilt thou die? So thou knowest what course is needful for thy happiness. Whoever remaineth shut out from the work of grace,—he hath shut himself out.—*Prof. Tholuck.*

Hall's Arctic Expedition.—The arrival of this expedition has been announced by a telegraphic communication from M. Hall to H. Grinnel. The Newfoundland papers contain additional interesting particulars, from which we learn that M. Hall has secured a large quantity of relics of Frobisher's expedition, gathered at various points of his debarcation. Among them are pieces of coal, brick, and wood, and a portion of an iron cannon ball, probably used as ballast.

"The coal has been overgrown with moss and a dark vegetable growth; the brick looks quite as bright as when it was turned out of one tall ship of her Majesties, named the *Ayde*, of nine score tonnes, or thereabouts—the vessel in which Frobisher departed on his second voyage, after having 'kissed her Majesties hand and been dismissed with gracious countenance and comfortable words.' The pieces of wood are merely oak chips which have been well preserved, having been imbedded in coal-dust for nearly three hundred years. The piece of iron ballast is much decomposed and rusted.

"M. Hall found upon one of the islands a trench twenty feet deep and one hundred feet long, leading to the water, in which a party of Frobisher's men, who had been captured by the Esquimaux, and, with the assistance of their captors, had built a small vessel, intending therein to set sail for England. After putting to sea they experienced such severe weather that they were obliged to return, all of them being frost-bitten. They lived many years among the Esquimaux, who treated them very kindly, and all of them eventually died there. These facts are related by the Esquimaux of that region as a matter of tradition.

"Respecting the two boats' crews of Franklin, M. Hall learned that a few years since a party of Innuits had seen two *Codluna* (white men's) boats, and found on one of the Lower Savage Islands, (which commence near the mainland on the north side of Hudson's Strait,) what they termed 'soft stones.' One of the Innuits, who had become possessed of a gun and ammunition from the Hudson's Bay Company, recognised them as bullets.

"Sir John Franklin, not knowing how long he might be detained in the Arctic seas, carried out a large quantity of ammunition, and M. Hall has not a particle of doubt that the crews of these two boats, in their endeavour to get down through Hudson's Straits, and on to Labrador, had thrown out these bullets so that their progress might not be impeded.

"M. Hall has with him a very interesting Esquimaux family, consisting of a father, mother, and son, who are excellent specimens of their race. This family, excepting the child, have been in the civilized world before. They were taken across the Atlantic to England, some years ago, and presented to her Majesty the Queen.

"M. Hall has a number of interesting memorials of the social life of the Innuits, among whom he dwelt so long. They consist of little articles very neatly cut from bone or ivory, representing the polar bear, seals, walrus, and ducks, &c. These show a great deal of patient perseverance with the rude tools with which they must have been worked. M. Hall says life in these high latitudes is not so difficult of preservation as is generally supposed, the snow and ice houses of the Innuits being exceedingly tight and comfortable, and their coarse animal food rendered exceedingly palatable by

the sharpness of appetite engendered by the keen atmosphere of an extreme northern climate."

Practical daily preaching.—The sweet savour of her zealous, humble, meek example, and her dedication of time, faculties, and property, though in low circumstances, to the glory of God and the good of her fellow creatures, had a powerful tendency to enforce the doctrine she preached. She was remarkable for her diligence in the attendance of meetings for worship and discipline, from which neither distance nor weather kept her back, while of ability; and she frequently went nearly forty miles on foot in that mountainous country, to attend the monthly meeting; even when the inclemency of the season rendered it not only difficult but dangerous.

She contented herself with the least expensive manner of living and dress, in order to have more to distribute to the necessities of others; tenderly sympathizing with the poor inhabitants around her; and so bright was her example, that one, not in profession with us, declared, '*Her conduct preaches daily to me.*'—*From a testimony of Dorothy Owen.*

Time is a precious talent committed to christians, for the use of which they must give a strict account. This is a truism. Yet how many christians act as if their time was their own! They idle it away at will in trivial amusement, or lazy dreamings. Awake, thou idler in the Lord's vineyard! While thou art idling away thy probation, eternity is hastening to meet thee. Thy opportunities for service will soon be gone forever. The work thou mayest do now will soon be beyond thy reach. "Rodeem the time," every moment is precious.

"Indeed," writes Berridge, "for want of due authority and meekness on one side, and of patience and humility on the other, to give or take reproof, fear of raising indignation instead of conviction, often puts a bar to the door of my lips; for I find when reproof does not humble it hardens, and the seasonable time for striking, if we can catch it, is when the iron is hot; when the heart is melted down in a furnace, then it submits to the stroke and takes and retains the impression."—*Lady Huntingdon and her friends.*"

Don't let your children learn good and bad things indiscriminately. To be sure the bad might be eradicated in after years, but it is easier to sow clean seed than to cleanse dirty wheat.

THE FRIEND.

ELEVENTH MONTH 1, 1862.

SUMMARY OF EVENTS.

FOREIGN.—LONDON dates to Tenth month 12th. In a speech at New Castle, Gladstone, a member of the British Ministry, avowed his belief that Jefferson Davis had made the South a nation, and that he considered the permanent separation of the slave States as certain. He thought the slaves would be better off, if the States were separated, as on the basis of union the laws against the slaves were enforced by the whole power of the United States government.

In reference to the same subject, the London Globe says, "It has no authority to announce the day or hour the recognition will be given on the part of this country, but it is clear it cannot be deferred long, and in any other case there is no doubt it would have been given sooner. The sincere repugnance to countenance or encourage, by any premature act, the formation of an in-

dependent slave power, can alone account for the delay in this instance."

The Liverpool cotton market was firm, with an advance of *1d.* on American, and *1d.* on Surats. Fair Orleans was quoted at *31½*; middling, *27¾*. The Baltimore in the Bank of England had decreased £400,000 during the week. (See page 93.)

A royal amnesty had been notified to Garibaldi. His first impulse was to return to Capra, but it is said he had accepted an invitation to the villa of one of his friends, near Naples.

UNITED STATES.—The Public Debt.—The debt of the United States now amounts, it is said, to about six hundred and sixty millions of dollars. This amount includes the entire circulation, and every species of notes, but excepts the claims for which no requisitions had as yet been made. The unadjusted claims do not exceed twenty millions of dollars.

The Rebellion.—A correspondent of the New York Herald says, "I have information that a proposition has been received at Washington from leading Southern men, suggesting the holding of a National Convention by Representatives of all parts of the Union, to consider the feasibility of settling the present difficulties. It is understood the South recognizes as a basis of settlement—the North shall recognize the State right doctrine of secession which they claim to be founded on the Resolutions of 1798 and 1799, by Jefferson and Madison. Second—That they return fugitives from labour, or pay their value to their owners." This statement is not believed to rest on any substantial basis.

Government of the South.—The entire cotton crop from the Carolina Sea Islands this season, raised by the contractors, is estimated at not less than 3500 bales. This has been grown, and will be gathered under the direction of the Government. A small portion only will be given to the spot. Last season the Government of the South cotton was sold for \$600,000.

Arkansas.—A despatch from Gen. Curtis at St. Louis, announces a defeat of the rebel forces at Maysville, in the north-western part of Arkansas. Gen. Schofield, finding that the rebels who had retreated from Missouri had encamped on Pen Ridge, sent Gen. Curtis with the first division of the regulars, and ordered towards the mountains with the rest of his forces. Gen. Blunt, by making a hard night's march, reached, and routed the rebel army early on the morning of the 22d. The rebels who numbered from 5000 to 7000, fled towards the Boston mountains, leaving behind their artillery and a part of their transportation and camp baggage. It is organized rebel force in this section have now, it is believed, been driven back to the valley of the Arkansas river.

Tennessee.—On the 19th ult., the rebel General Forest, with a large force, crossed the Cumberland river near Nashville, but was attacked by the Federal troops at Fort Drake, and in confusion retreated to the Mississippi. He has been attacked by the rebels, but at the latest dates was still held by the U. S. troops. All was quiet at Memphis. A despatch dated the 25th, states that a thousand rebel cavalry are stationed on the Memphis and Charleston Railroad, within nine miles of the former city, and is supposed to be the advance of a large force about being sent to the front.

Kentucky.—The armies of the rebel Generals Bragg and Kirby Smith have passed safely out of Kentucky, into Eastern Tennessee, with all their trains, supplies, &c., it being impossible for Buell's army to pursue them for want of forage and subsistence. The Federal operations are very severe in the mountains, and the management of the campaign, and the want of generalship shown by some of the Federal commanders. The battle of Perryville, which, Buell alleges, was brought on by one of his generals contrary to orders, defeated all the plans for Bragg's capture. In this battle the Federal troops suffered a loss of 800 men killed, 2385 wounded, and more than 5000 prisoners. The loss of the rebels is believed to have been considerably less. On the 24th, Gen. Buell was relieved from the command of the U. S. army in Kentucky, and Gen. Rosecrans ordered to the position. Gen. Bragg is stated to have left Kentucky with more than 4000 heavily-armed warriors. The rebels have been ordered to retreat, several thousand head cattle, 1000 mules and 2000 sheep.

Virginia.—The rebel Governor Letcher's recommendation to destroy that part of the Baltimore and Ohio railroad which passes through Virginia, has been carried out by Harper's Ferry and other places, and the rails have been cut, and taken up and burned. The military movements beyond reconnaissances were attempted last week by the Federal forces. About 1500 rebels were discovered near Leesburg, and a large force at Warrenton. It is believed that the rebels are sending

part of their large army southwards. The whole country around Winchester is nearly exhausted, and starvation already locking many of the inhabitants in the face. Under these circumstances, it is believed that the Los Angeles and Memphis, in his present position, whether General McClellan advances or not. The advance, it is said, has been delayed chiefly because the U. S. troops were not supplied with the necessary winter clothing. Gen. Burnside's division crossed the Potomac on the 26th, on a new pontoon bridge, eight miles from the Falls of the Chesapeake, at Eggsville, Loudon Co., Va. It is stated that the other divisions of McClellan's army were under marching orders, and that a general advance was about being made. The rebel pickets had retired as the U. S. troops advanced. Martinsburg was abandoned by them on the 25th.

Western News.—The Grand Review Appeal, has a report of the capture and occupation by the U. S. forces, of an island in Galveston Bay. Gen. Van Dorn has been relieved from his command, and Gen. Pemberton appointed to succeed him. The Richmond Whig of the 20th, expresses great disgust at the result of the campaign in Kentucky, and is by no means satisfied with the safety of the Confederate forces. It says, "We had expected, and reasonably expected, from Gen. Bragg's magnificent army, something more than a mere incursion to the neighbourhood of the Ohio river; something more than fruitless marches and barren battles. We had anticipated from Gen. Bragg something more than the issue of orders to his troops and sounding proclamations to the people beyond the Ohio. We had formed exalted hopes of the great expedition which he led across the Tennessee river, and nearly up to the suburbs of Louisville. It is all over now. The Kentucky movement is in the hands of General Bragg, who has turned out to be simply a feint. No other word can be said about the blunder and a magnificent failure."

Western Exploration.—Capt. Mullan, of the U. S. army, commander of the Columbia and Missouri overland route expedition and party, arrived last week in New York, from Washington Territory. He has already started for the War Department, to proceed to the North Pacific Coast, in Washington Territory, there to organize an expedition of some three hundred employes to open up and construct a practicable military and emigrant route from the head waters of the Columbia to the mouth of the Pacific, to Fort Benton, on the Atlantic side—across the Rocky Mountains, and passing through the territories of Washington and Dacotah. The party have passed four successive winters in the Rocky Mountains. This important work has been finally completed, leaving a good wagon route across the mountains. The United States recruits from the Atlantic States passed over this line in 1860, and during the past summer, four hundred emigrants landed at Fort Benton, which is the highest point on the Missouri river yet reached by steam. They travelled over this route to the Columbia river, in Oregon. They have already traversed the mountains in the valleys of Oregon and Washington. The line is said to traverse an interesting region of country, presenting extensive tracts of rich agricultural land, capable of supporting a large population. The explorations of the party have resulted in many developments of great importance to the geographical and political interests of the Government.

The U. S. naval forces in the Gulf of Mexico, after occupying Sabine Island, have taken possession of Galveston, the most populous and commercial city of Texas. It was evacuated by the rebels on the 4th ult., and on the following day was occupied by the U. S. troops. On Corpus Christi it was bombarded.

Carolina.—A despatch from Gen. Beauregard states that Pocotaligo and Coosawatchie had been attacked by the U. S. forces, who came in thirteen gunboats and transports. He states that they were repulsed and fled to their boats, leaving their dead and wounded on the land. The points attacked indicate that the object of the railroad communication between Charleston and Savannah. Pocotaligo and Coosawatchie are stations upon the railroad connecting the two cities. The first named is fifty-five miles from Charleston, and forty-nine from Savannah; the latter is six miles nearer Savannah. (See page 93.)

Philadelphia.—Mortality last week, 224, including 28 soldiers.

The Markets, &c.—The following were the quotations on the 24th ult. *New York*—The money market easy, at 4½ a 5 per cent. on call, and 5 a 6 per cent. on time. *Prime paper.* American gold, 31 per cent. premium.

Government stocks steady. U. S. 6's of 1881, 103½; 7.30 Treasury notes, 106 a 106½. *Specie* in the New York banks, \$37,433,531. *Import* for the previous week \$2,946,517; total, since First week 1st, 1862, \$147,016,475. *Cotton*, 55 cts. a 59 cts. for uplands; Chicago, spring wheat, \$1.14 a \$1.22; Western winter red, \$1.30 a \$1.37; amber Michigan, \$1.38 a \$1.39; white, \$1.50 a \$1.54; barley, \$1.32 a \$1.35; yellow corn, 65 cts. a 73 cts.; oats, 50 cts. a 57 cts.; *Flour*, *Philadelphia*—Prime wheat, \$1.45 a \$1.48; white, \$1.65 a \$1.75; yellow corn, 73 cts.; oats, 47 cts. a 43 cts. *Baltimore*—Red wheat, \$1.50 a \$1.66; white, \$1.70 a \$1.85. *Cincinnati*—Flour, \$5.25; red wheat, \$1.15 a \$1.16; white, \$1.10 a \$1.15. Gold, 26 per cent. premium.

RECEIPTS.

Received from E. Hollingsworth, Jr., for Geo. W. H. St. Louis, \$2, vol. 36; from Ann Hutton, Pa., per A. H. St. vol. 36; from Sarah Packer, O., \$2, No. 22, vol. 36.

WEST-TOWN BOARDING-SCHOOL.

The Winter Season of Friends' Boarding-school at West-Town, will commence on Second-day, the 10th or Eleventh month. Parents and others intending to send their children as pupils, will please make early application to Dubré Knight, Superintendent, at the school (address Street Road P. O., Chester Co., Pa.) or to Charles J. Allen, Treasurer, No. 304 Arch street, Philadelphia.

Pupils who have been regularly entered, and who go by cars from Philadelphia, will be furnished with tickets by the ticket agent at the depot of the West Chester and Philadelphia Railroad, north-east corner of Eighth and Market streets. Conveyances will be at the Street Road Station on Second and Third-days, the 10th and 11th of the Eleventh month, on the arrival of the train; that leave Philadelphia at eight, half past ten, and two o'clock.

During the Session, small packages for the pupils, left at Friends' Bookstore, No. 304 Arch street on Sixth-day, before twelve o'clock, will be forwarded; and the same will meet the first train of cars from the city, on its arrival at the Street Road Station every day, except First-days.

A Stated Meeting of the Female Society of Philadelphia for the Relief and Employment of the Poor, will be held at the House of Industry, No. 117 N. Seventh street, on Seventh-day, Eleventh month, last, at half past three o'clock.

JULIANA RANDOLPH, Clerk.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR SPAHRSDORF, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, — JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

WEST-TOWN BOARDING SCHOOL.

Wanted, a suitable Friend as Governess at West-Town Boarding School. Application may be made to Sidde Cottrell, 1116 Arch St., Philadelphia; Abigail W. Hal Fraser P. O., Chester Co., Pa.; Sarah Allen, S. W. corner of 26th and Bridge Sts., Philadelphia.

WEST GROVE BOARDING SCHOOL.

The duties of West Grove Boarding School for Girl on the Philadelphia and Baltimore Central Railroad will be resumed on Second day the 3rd of Eleventh month next.

Address, THOS. CONAWAY, Principal.

West Grove P. O., Chester Co., Pa.

Ninth mo. 26th, 1862.

Died, on the morning of the 8th of Eighth mo. 1862, near Moorestown, ELIZABETH H. MOORE, daughter of William and Martha W. Moore, aged 28 years & 10 days, a member of Chester Monthly Meeting, New Jersey.

This dear young friend had been for some time in a delicate state of health, whereby, through adoration, she became much redeemed from the pleasure of this world, and her friends have the consoling belief that she is permitted to enter one of those mansions which her Saviour has prepared for his sanctified one.

WM. H. PILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

SEVENTH-DAY, ELEVENTH MONTH 8, 1862.

NO. 10.

PUBLISHED WEEKLY.

Price Two Dollars per annua, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage by any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

An Epistle of Caution against Pride, &c.

From the Yearly Meeting in London, 1718.—Dear Friends.—It was a day of merciful kindness, wherein the love and great power of God awakened our souls, and enabled us, through faith, to love, fear and serve him in humility and holiness of life, and his own work in us brought honour to a holy name, and Friends were a people to his praise, glorifying him in body, soul and spirit.

It was by the same power, our ancient Friends are raised up to bear a faithful testimony against pride, and the vain and foolish fashions of this pride, as well as all other evils, and became a plain self-denying people, and adorned our holy profession by their grave, modest and exemplary conversation.

And a weighty exhortation coming upon this meeting, by reason of an undue liberty, which too many bear the profession of Truth, run into, to the great dereliction of faithful Friends, by reason whereof, the purity of Truth is evil spoken of, and our holy profession greatly reproached by many men amongst us, putting on extravagant wigs, and wearing their hats and clothes after the vain fashions, unbecoming the gravity of a religious people. And too many women decking themselves with gaudy and costly apparel, gold chains, lockets, necklaces, and gold watches, exposed to open view, which shows more of pride and ostentation, than for use and service, besides their vain imitation of that modest fashion of going with naked necks and waists, and wearing hooped petticoats, inconsistent with that modesty which would adorn their sex, and did adorn the holy women of old. And in the like vanity of mind, divers amongst us running into great extravagancy in the furniture of their houses; together with a great declension in some of both sexes, from that plainness and simplicity of speech, so constantly used in Holy Scripture, and recommended and practised by our ancient Friends, as well as by the faithful in this

age. There is likewise a declension crept in amongst us, by unbecoming gestures in cringing and bowing the body by way of salutation, which ought not to be taught or countenanced. And many running to excessive sumptuous and costly entertainments marriage dinners, great part of which would be better employed in relieving the necessities of the

poor. And divers men and women imitating the world in making a show of mourning for the dead in their apparel.

Now this meeting having been under a deep sense of the love of Christ, are concerned for a thorough reformation amongst the professors of Truth, and in that love do earnestly recommend the laying aside of those things before mentioned, and whatsoever else is a hurt to themselves, and brings a reproach upon us, for certainly it does not become the gravity of our profession, or any under it, to run into every new, vain, fantastic mode or fashion, but to keep to that which is modest, decent, plain and useful.

And therefore, Friends everywhere are desired to stand witnesses against those, and all other things that tend to lay waste our ancient testimony, especially those who are members of men and women's meetings; for those who are found in a contrary practice thereto, are not fit in that state to take care of the church of Christ; as the Apostle saith, "If a man knows not how to rule his own house, how shall he take care of the Church of God." 1 Tim. 3-5.

Wherefore, we tenderly advise those who are blessed with the riches of this world, would keep their christian concern to be exemplary themselves; which certainly will be very conducive to the much desired end, for then those of lower circumstances in the world would (we hope) be ashamed to take such undue liberties as we here complain of.

And that parents in the tender years of their children, would not adorn them with gaudy apparel, which practice cannot come from the spirit that leads out of the vain customs of the world, but must proceed from pride in the parents. And children being led into such vanities and fineries come gradually to be in love with them, which is apt to increase with their years, to that degree, until it may be found very difficult to reclaim them.

These things duly considered, we hope, will have a good effect, if parents would endeavour to impress a sense of the same Divine principles upon the minds of their children, as reached and convinced themselves at first. Then we should have ground to hope, that it will please the Lord so far to bless their endeavours, as to make the religion of their children's education the religion of their judgment.

And as there ought to be a religious care duly exercised towards our children, so, also, towards our servants, that all appearances of pride, idleness and vain conversation in them may be discouraged, and that they may be exhorted to attend First-day and week-day meetings, and have a sense of God's love upon their spirits, and therein partake with us of the sweetness of Truth, and in the discharge of their duty to God, and to their masters and mistresses, know peace in themselves.

And in order that Friends may be the more hearty and effectual in suppressing the above mentioned evils, it is absolutely necessary that they stand fast in one spirit, labouring together against the work of the enemy, that would destroy the work of God and lay waste his heritage.

Temperature of Chambers.—Human life would be prolonged, and an incalculable amount of disease prevented, if a little fire were kept burning on the hearth during the night, winter and summer, if the doors and windows are kept closed. One great advantage would be, that a constant draft would be kept through the room, fire-place, and chimney, making a great degree of atmospheric vitiation impossible. There is a baleful error in the popular mind as to the nature and effects of pure air, warm air, and cold air. Warm air may be as pure as that of the poles; and although cold air is almost a synonym of pure air, and although it is healthful to breathe a cold air asleep or awake, yet the breathing of cold air is healthful only to a certain extent. It is not true that because it is healthful to sleep in a cool room, it is more healthful to sleep in a very cold room, not only because, as has been previously stated, carbonic acid becomes heavy under a great cold, and falls from the ceiling to the floor and bed of the sleeper, but because also a great degree of cold in a room where one is sleeping is very certain to cause dangerous and even fatal forms of congestion in the brain and lungs. The same ailments result from keeping sitting or sleeping apartments overheated. In mid-winter the heat of a sitting-room should not exceed sixty degrees of Fahrenheit, five feet above the floor. In the chambers of the sick in French hospitals the directors are careful that there shall not be a greater heat than sixty degrees, or about fifteen centigrade. The temperature of a sleeping apartment for invalids and children in health should range about fifty degrees in cold weather, and not run lower than thirty-five; there is no advantage in sleeping in a colder atmosphere. Five hundred cubic inches of pure air should be delivered to invalids and sleepers every hour, as is the custom in the best regulated French hospitals.—*Hall's Journal of Health.*

Social Evils of the Rebellion.—Wherever it put its feet down, there was desolation. Its line of power is marked by the ashes of farm houses and the debris of desecrated churches. It traced its boundaries with a finger of fire, and marked its outposts by depopulated villages. Its *avant couriers* were exiled women and children, fleeing for their lives. It laid its hand upon populous villages, peaceful and happy homes, and they were cursed with the desolation of Sodom. Its laws were the sword and the bayonet; its peans of triumph the wailings of women, and the voice of Rachel crying for her children. Every living thing was blasted by it. Wide fields, spreading in beauty, were the camps for destroying armies; fine buildings the barracks for soldiers. A brutal soldiery had no law but their own lusts, no God but their own passions. Everything valuable that they wished, was seized, and what they could not carry off, was destroyed. Commissions of plunder were issued, and armed bands searched and stole under the authority of law. No place within the narrow circuit was safe from devastation. Everything they touched withered. In their flight they destroyed, with indiscriminate outrage, whatever was

most valuable. It made no difference whether it was the property of Union or secession, the fell spirit of organized mob struck it. The mere fact of its being property was enough to demand its destruction.—*Louisville Democrat.*

Interesting Document.

For "The Friend"

The following report of a committee of Vasselborough Quarterly Meeting, appointed to attend the Convention for framing a Constitution for the District of Maine, then being about to be admitted into the Union as one of the States, contains matter which ought to claim the serious consideration of the members of our religious Society at the present day.

"To Vasselborough Quarterly Meeting, held in the Second month, 1820.

"We, your Committee, who, in connexion with one from Falmouth Quarterly Meeting, pursuant to our appointment, attended the Convention sitting at Portland, for the purpose of framing a Constitution for the District of Maine; think well to make the following statement, viz:

"The object of our appointment was to endeavour to have our rights and privileges secured in said constitution, more especially as respects military requisition. We found many members of the Convention, who, upon principles of impartiality, were not willing to give one sect or society a preference in point of privilege, and who thought it but right and just that all of every denomination should be enrolled, and be equally liable to perform military duty, or pay an equivalent. We found it incumbent on us to urge the just propriety, and upon gospel principles, the necessity of exempting all who were principled against war. When we found that to urge so general an exemption was of no avail, we confined ourselves to the narrow limits of our own Society, in behalf of which, among other things,—we briefly pleaded, that we, as a religious body, had found it incumbent to bear a testimony against war, and that the Society, had for almost two centuries, amidst severe persecutions and sufferings, supported it with firmness and constancy. That under the guardianship of superintending Goodness, no penalty, inflicted by human policy, however severe, had been able to turn us aside from our testimony or from faithfulness thereto, which was unexampled by any other religious Society on earth. [We urged,] that whilst we were engaged as one general peace society, in the support of this important testimony, what a hardship it would be to impose such military requisitions, as would entail a great portion of suffering on our Society, and on our young men in particular, from which we had been in good measure exempted under the then existing laws. After much labour and care on the part of your committee, with the aid of faithful and zealous advocates, not of our profession, in the convention, a clause is inserted in the new constitution, by which Friends will be exempt from military duty.

"Now, on our part, with gratitude, we can say, the success our cause met with, was not owing merely to human exertion, but to the interposition of kind Providence; as a member of the convention, not of our profession said, 'the hand of Providence is in it.' Notwithstanding it is cause of thankfulness that our cause has thus succeeded, yet it is with painful regret that we conceive it to be our duty to name some of the remarks made upon the subject, and some of the reasons offered why we ought not to be exempt. 'We admit,' said they, 'that you as a society, have acquitted yourselves honourably in support of this testimony,—nevertheless there are those who shelter themselves

under your name, who in their external appearance, afford no evidence of their scruples as to military duty. Although nominally of your religious Society, yet amongst you, and of your young men especially, there are those, who nearly assimilate with ours; in dress, address, and general deportment, and you ought to turn them out to us, that we may enrol them in our ranks. Your members,' said they, 'ought to certify by their conduct and appearance, that we may know, when we meet them, to whom they belong.' From this we are led to infer, that though the constitution makes provision for our exemption from military requisitions, yet the enjoyment of this privilege uninterrupted, in the judgment of your committee, depends principally, if not wholly, on our demeaning ourselves answerably to our high and holy profession, and on our young men in particular, conforming themselves to the precepts and example of our worthy predecessors, who with unremitting faithfulness and fortitude suffered, some of them even to the loss of their lives, for the attainment of these inestimable privileges we now so richly enjoy. Let your light so shine before men, said the Blessed Redeemer, that they, seeing your good works, may glorify your Heavenly Father.

"Signed in and on behalf of the committee,

"MOSES SLEEPER."

Singular service rendered by a Bible.—One of our fellow-labourers travelling in Lapland, writes to us from Swatsojro (Dalecarlia) in September, 1861, following the narrative. It shows to what use, among others, a bible may be put when journeying.

We had [he says] just proceeded some way on our travels in Lapland, almost entirely on foot, and had arrived at Karesuando, a small town in Swedish Lapland, situated on the right bank of the Muonio, on departing from which we could finish our route by boat. Having no knowledge of the Finnish tongue, we requested the Norwegian and Lapland guides, whom we had brought from Athurgard, (near Hammerfest), to act as interpreters for us, and procure a boat. Some hours afterwards three strong Finnish rowers were taking us down the course of the Muonio, whilst our guides returned northwards by the road through the mountains.

The Muonio flows over a length of more than fifty leagues through great and impenetrable forests, the silence and solitude of which have never been disturbed by the hand or the foot of man; and we experienced a feeling of melancholy, very naturally resulting from the thought that we had no means of communicating with our boatmen, the only living beings whom we should see for many long hours.

Suddenly, although we had scarcely accomplished half our distance for the day, they ran our bark on shore, shouldered our luggage, and conducted us, notwithstanding our most energetic protestations and eloquent gesticulations, to a small deserted hut near the bank, in which, after having lighted a good fire, they left us alone, and disappeared in the forest.

A whole hour passed, and dejection began to gain upon us, when suddenly, whilst examining all corners of this little hut, I discovered, between two beams, some books in the Finnish language, amongst which was a New Testament. To show my discovery to my colleagues, with an exclamation of joy, to take my own New Testament out of my bag, and to commence study, was the work of an instant. My companions joined me, and after an hour of a task of which the interest and the ease increased as we advanced, we had compiled a

small vocabulary, containing all the words of which we had most need for the moment.

Soon afterwards our boatmen re-appeared upon the bank, and it was with very legitimate delight that we ran to meet them, to enquire, to their great astonishment, in pure Finnish, why they had put us ashore, and when we should set out again. Some indispensable repairs to the boat had been the cause of all this delay, and as it would yet be some time before they could be completed, we were able at once to complete the work we had begun. An hour afterwards they came to tell us that everything was ready. And when we quitted our little cabin we took with us, thanks to my New Testament transformed into a dictionary, the means of understanding our boatmen and their fellow countrymen during the six whole days that we had yet to pass in their midst. The remainder of our journey was thus accomplished without any difficulty, thanks to the bible, which had once more served us—and this time in the literal sense of the word—as a guide upon the earth.—*Independent.*

A praying wheel.—We went over the monastery, which was just the church of Gorogunta again, on a large scale. Amongst other things, we were shown with great pride a monster praying wheel; the cylinder was at least ten feet in height, and five or six feet in diameter, and it was hard work for two priests to turn it. These praying cylinders were the great feature of the place, and were of all sizes; the smallest were about the size of humming tops, and resemble that toy in shape. They are called *chos-khor*, and are carried in the lama's right hand—the handle being the axis on which they revolve. They turn a the slightest movement; and as each revolution counts as one prayer, it is easy to carry on an animated conversation, and get through any amount of prayers to Booth at the same time. Others, a little longer, were placed on shelves along the walls about the height of a man's waist. The pious in it passing, always give those a twirl. But the most perfect specimen of this business-like way of getting over their spiritual duties, practised by the Buddhists of Ladak, was a little water-mill, which we noticed a short time after, near a village. The stream turned the mill-wheel which was nothing more or less than a prayer cylinder, and revolved unceasingly; as long as the stream flowed on, so long would its devotions last. Unlike a "friar of orders grey," apt to fall asleep over his beads, and to shirk the number of *aves* which have been bargained for, the charming mechanical contrivance never stopped to take breath, never slept, never left off for meals, but prayed continuously, and all "free, gratis, for nothing." He was certainly no fool, whatever else he may have been, who invented the praying wheel.—*Travels in Ladak, Tartary, and Kasimir. By Lieutenant-Colonel Torrens.*

Strange Freak of a Raven.—On a recent day a tame raven, which is kept at the residence of Peter Bourke, Somerset House, played a somewhat practical joke upon the butler, or rather upon his watch. It appeared that he had left his watch upon the hall table, while he attended to something in another part of the house. During his absence "Ralph" hopped into the hall, and his covetous eye falling upon the watch, he picked it up, and marched off with it into the yard. There he removed the glass, and disposed of it in so mysterious a way that it has not been found since. Next he took of the pointers, and they have not been found either. It seems then to have opened the watch and carefully examined the works, but no

any way to have interfered with them; and, last of all, having satisfied his curiosity, he deposited the articles in the bottom of a spout in the yard, where the owner found it some time after, still glowing, and without having lost any time. While the search was being made for the watch, the raven was very unconcernedly keeping up an animated conversation with some jackdaws on the house-top; at he was wide awake to all that was passing, and at the moment that he saw that his hiding-place was discovered, and the watch removed, he perched on a high wall adjoining, and uttered some delicate chuckling sounds, evidently expressive of delight at his thievish exploit.—*Whitehaven Herald.*

For "The Friend."

BIOGRAPHICAL SKETCHES

Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 69.)

Deborah Morris kept a journal of their voyage and travels in England. From her memoranda we shall make some extracts:

"1772, Third month 3rd, and the third of the week, we parted with our kind friends at Chester, for a solemn sitting, wherein our friend, Joseph Oxley, took his leave with much love and tenderness, and my dear aunt was engaged in humble prayer."pecting this parting, Joseph Oxley says, "All things being now in readiness for my departure, Sarah Morris, of whom I have several times made mention, having yielded in obedience to what she pleased to be her duty, in paying a religious visit to Friends in England, and having Friends' concurrence, approbation, and certificate, it was thought ill we should accompany one another over the great ocean. She had also a kinswoman to accompany her, and though one not in the ministry, it was exercised in spirit for the prosperity of truth, and having near sympathy with her aunt in her present concern, gave up to attend her in her said undertaking. Her name was Deborah Morris; and, indeed, I thought her an excellent mother, raised up in our Israel. On the third-day of the week, being the 3rd of Third month, we had a short weighty sitting together in the house of our dear Friend, John Pemberton, to which place many were gathered, in order to take their last farewell. It was a time of love, our spirits broken and contrited before the Lord, who was pleased to pass us together. In this heavenly frame, we took our leave and parted. Several of our kind friends from the city accompanied us to Chester, the place where we were to embark, Samuel Neale, John Pemberton, and I suppose more than thirty. After I had taken some little refreshment at Chester, I retired into a humble, awful, reverent waiting, which was again graciously owned, and crowned with heavenly life and power. After thus taking farewell of our dear Friends, many of whom I met with us to the brink of the water, we set sail on board the Pennsylvania packet, Peter Osborne, commander." "We ran aground twice before we reached the Capes of Delaware, and the latter time threatened great danger, the captain and sailors saying there was but little likelihood of getting the ship off again, the wind blowing pretty hard." But he used their endeavours, which Providence was pleased to bless, and the ship worked off; but the captain said he hardly knew how. My soul reverently praises Him, who wrought this deliverance for us."

Sarah Morris, notwithstanding the evidence of divine favour attending the parting, became very weak and cast down, and discouraged, in a sense of her own weakness, during the passage down the bay,

with its difficulties and dangers, added to which was her own severe sea sickness, so that she felt as if she would like to return to her home friends with the pilot. Her sickness, however, was too great to admit of such a movement, had her mind been prepared for it, and on the sixth, they ran out to sea, soon after which her sickness left her. Her kind niece was very sick during most of the passage. On the 10th of Fourth month, being near Dover, the captain who had been very kind to them, advised them, as the morning was fine and calm, to land; this they did, and taking coach for London, went that night to Rochester to lodge, 26 miles. Deborah says, "Felt Divine goodness near, and slept till day." The next day about two o'clock they reached London. As they were passing by the house of Thomas Wagstaff, he saw them, stopt the coach in which they were, and persuaded them to alight and dine with him. Deborah says, "his wife was a motherly woman." They constrained us to spend the afternoon, and then our good friend, John Elliot, got a coach and took us to the house of our friend Thomas Corbyn, who with his wife were like parents, and his son and two daughters were very kind. Here we took up our abode, and were well entertained with all things needful.

On First-day, the 13th of the month, they attended Peel Meeting, which Deborah found much smaller than she expected, yet she says, "The Lord owned us by his love, and broke the bread and handed it to his servant, my dear aunt, who handed it to us. In supplication also she was favoured." In the afternoon, Sarah was also opened in testimony at a small gathering at Grace Church Street. On the 14th they attended the Two weeks Meeting of Ministers and Elders, wherein Sarah Bevington was much favoured in prayer. The meeting accepted their certificates. In the afternoon was held a Monthly Meeting in the same house, at which time "six couples passed in order for marriage." Sarah Morris was "much favoured" in supplication. They spent the evening of that day with John and Mary Elliot, she being the daughter of Mary Weston, who paid a religious visit to America.

Deborah continues, "On the 15th, the third of the week, went to Devonshire house week-day meeting. It was small, yet aunt's service therein was acceptable. We dined at Richard Crafton's with Joseph Oxley. After dinner a solemn session was unexpectedly fallen into, and aunt was led particularly in seasonable exhortation to the wife, who appears sometimes in meeting, which we then knew not, and to two daughters, the eldest a solid young woman. Her mother and two brothers were also present and were much affected. We drank tea at Joseph Roe's. The conversation was solid, and an humble supplication from aunt concluded this agreeable day. There were present Joseph Roe, his wife, two sisters, very plain Friends, and friend Crafton and her eldest daughter. On the 16th, we went to the week-day meeting at Grace Church street, where Margaret Bell and our kind landlady were much favoured, and aunt clinched the nail. We went home with our good friend, Thomas Wagstaff and wife to dine. The Young-folks Quarterly Meeting being held in the afternoon at 3 o'clock, we attended it, when Isaac Sharpless and others were favoured, but dear aunt extraordinarily so.

"On Fifth-day the 17th, we went to a meeting at Devonshire house, where was a marriage of one of the couples that passed the Second-day before. They were the gayest young couple I ever saw among Friends. Although it was a rainy day, it was a very full meeting, and many of other so-

cieties were there. Aunt was the first that spoke, beginning with the cry of the prophet, 'All flesh is grass,' and was carried on to admiration. She is generally most favoured in the largest assemblies, and so it was there. She was followed by Isaac Sharpless, Sarah Corbyn and Margaret Bell, all in one line, and Isaac Sharpless concluded the meeting in prayer. The people, though the meeting held long, were very quiet and attentive. We dined with Joseph Roe, whose wife went with us to Daniel Mildred. Daniel came in his coach to take us to drink tea with his wife, who is a gay Friend. He and his son are plain and have goodly countenances. He took us to Horsleydown evening meeting, which was small and heavy, although several short testimonies were borne. That of aunt was in very few words. On Sixth-day, we were at Grace Church street week-day meeting; it was larger than when we were at it before. There were some short but living testimonies, and it was concluded in prayer by aunt.

"On First-day the 20th, we were at the same meeting house in the morning, which was very full and very gay. A few words were dropped by a Friend, after which a man spoke awhile among the people, who was desired to sit down. Aunt had the chief service, being largely carried out on doctrinal points. We dined at Timothy Bevan's. His wife took us to Horsleydown meeting, which was full and better than before. Aunt bore her testimony therein for the Lord."

"Twenty-first. We dined with my dear old friend, Ann Fothergill and the Doctor, our good landlord, his wife and children, accompanying us. On the 22nd, we were at Peel week-day meeting. For a time it was very dull and heavy, although there was not a small number present, and these mostly plain. At length Sarah Corbyn and Margaret Bell spoke a few words in love and life, which seemed to open the way for my aunt, who lifted up her voice like a trumpet, to the rousing of us all. Dined at home with our kind captain and the wife of John Griffith and niece."

Discoveries at Pompeii.—A correspondent of the London *Athenaeum*, writes, Eighth mo. 9th, that on that day a baker's house in Pompeii was excavated, in one corner of which was found a heap of silver and copper coins, to the number of about 500, which had seemingly been tied up in a little bag. At the same time and near the same spot, were found two large shears, and soon afterwards a house mill of the ordinary description, together with a little heap of corn, the grains of which were blackened and somewhat shrivelled, but yet fully preserving their shape and very little diminished in size. In the next apartment was found a metal shovel with which the loaves were placed in the oven; the oven itself, the mouth of which was closed with a large iron door, not on hinges, but cemented at the edges to the faces of the four large slabs which formed the mouth of the oven. The door was soon removed, and we were rewarded with the sight of the entire batch of loaves, such as they were deposited in the oven, seventeen hundred and eighty-three years ago. They are eighty-two in number, and are all, so far as regards form, size, indeed, every characteristic except weight and colour, precisely as they came from the baker's hand. When it is recollected that up to the present time but two such loaves have been discovered, one of them imperfect, the interest of the discoveries will be fully appreciated.

Absurdity of War.—War is quite an incomprehensible mystery. In the abstract, it is so absurd that questions of fact, or right, or morals

should be decided by the deadly quarrels of large bodies of ignorant men, that a child's logic repudiates it. It is so repugnant, also, to the ordinary impulses of affection, and an instinctive regard for self-preservation, that it would seem utterly impossible to induce nations to fight. Were it not a fact, the very idea of war would be the extreme absurdity. Were it asserted that one half the population of a nation drilled themselves voluntarily to skillful evolutions, and that finally on a set day, they all by common consent committed suicide, each plunging his weapon into his own body, it would be no more absurd than the actual facts of war. Many times more human beings than now people the whole earth, have actually fallen in war; enough to people a number of planets like this!—*Zion's Herald.*

At Ohio Yearly Meeting of Friends, held at Mount Pleasant, on the 6th, and by adjournments to the 10th of Tenth month, inclusive. 1862.

Reports have been received from all the Quarterly Meetings, by which it appears their representatives in this meeting are—

From Redstone.—William Blackburn, Amos Cope and Frederic Maerck.

Short Creek.—Joshua Maule, Isaac Mitchell, Joseph Wilson, James W. McGrew, Nathan Hall and Asa Branson.

Salem.—Nathan P. Hall, Israel Heald, Isaac Bonnell, William Fisher, Henry Lupton and Christopher Allen.

Stillwater.—Asa Garretson, Israel Wilson, Edmund Bailey, Parker Aske, Aquilla Crew and John Vail.

Springfield.—Nathan Warrington, Linsey Cobb, John H. Stanley, Joseph Winder and Barton Dean.

Pennsville.—Elisha Hollingsworth, David Ball, Isaac Walker, Berwell Peebles, James Bowman and Ellwood Dean,—who all answered to their names except two, for whose absence sufficient reasons were given.

Short Creek Quarterly Meeting informs, that Jesse Bailey intends appealing from the judgment of that meeting to this, for his right of membership. William Blackburn, Benjamin Gilbert, Amos Cope, William Fisher, Nathan P. Hall, Jehu Fawcett, Edmund Bailey, Ezekiel Bundy, Eli Hodgins, Elisha Hollingsworth, James Bowman, Thomas Bundy, Nathan Warrington, Barton Dean and John H. Stanley, are appointed to examine the minutes of the Monthly and Quarterly Meetings in his case, hear the allegations of the appellant and the respondents thereto, and report to a future sitting their judgment thereon.

Stillwater Quarterly Meeting informs, there appears to be a scarcity of the Book of Discipline within its limits, which being considered, and there appearing to be a scarcity in other places also, the subject is referred to our Meeting for Sufferings, with instructions to have two hundred and fifty copies printed for the use of this meeting; and William Darlington, Jesse Cope, Isaac Mitchell, John W. Smith, Miffin Cadwalader, Jonathan W. Coffee, Sinclair Smith, John Thomasson, John Vail, Robert Ellyson, Joseph Winder, William Pickett, Thomas Bundy and Isaac Walker, are appointed to ascertain the number that individuals may wish to purchase on their own account, and forward information to that Meeting as early as practicable.

This Meeting now concludes to rescind the rule requiring Quarterly Meetings to appoint committees to assist in the orderly sitting of this Meeting.

Salem Quarterly Meeting informs, that the time

of holding its select Quarterly Meeting, is changed from eleven to two o'clock.

The Meeting is informed, that Stillwater Monthly Meeting is without a correspondent, on account of the death of William Green. The representatives from Stillwater Quarter are desired to offer to a future sitting the name of a Friend to fill the vacancy.

Jesse Cope, Benjamin Gilbert, Nathan Hall, David Conrow, Samuel Street, Isaac Bonnell, James Crew, Israel Wilson, Thomas Warrington, John Brantingham, David Ball and James Bowman, are appointed to examine the Treasurer's account; report the state thereof; what sum, if any, they may think necessary to raise the present year; and the name of a Friend for treasurer, to a future sitting.

The Representatives are desired to confer together, and if way opens, propose to next sitting the name of a Friend to serve the meeting as Clerk, and one for assistant the present year; also, the names of two Friends to serve as Messengers to the Women's Meeting.

Then adjourned to eleven o'clock to-morrow.

Third of the week and 7th of the month.

The Meeting gathered agreeably to adjournment.

Nathan P. Hall, on behalf of the representatives, reported that they had conferred together, but way did not open to propose any change in Clerk of Assistant; therefore, George Gilbert is appointed Clerk, and Robert H. Smith, Assistant, the present year.

He also reported they were united in proposing that Elisha Hollingsworth and Joseph Wilson be appointed Messengers to the Women's Meeting, which was satisfactory and they accordingly appointed.

Edmund Bailey, on behalf of the representatives from Stillwater, reported they had conferred together, and were united in proposing that Asa Garretson be appointed correspondent for Stillwater Monthly Meeting, which being united with, he is appointed to that service. Address, Barnesville, Belmont County, Ohio.

The Meeting for Sufferings informs, that a number of vacancies have occurred in that Meeting, and proposes having them filled as far as way opens for it. The subject is referred to the representatives, in order that they may offer to a future sitting such names as they may think right for such appointment. That Meeting also informs, that Caleb Bracken has ceased to attend it, he is therefore released from that appointment.

The consideration of the state of society was entered upon, by reading the queries and answers thereto from the Quarterly Meetings, and progressed therein to the ninth query inclusive. The annual queries being deferred until next sitting.

Then adjourned to ten o'clock to-morrow.

Fourth-day morning, 8th of the month.

The Meeting gathered agreeably to adjournment.

The reading of the queries and answers thereto is now brought to a close, and while the state of society has been thus before us, Friends were brought into a lively feeling of the importance of rightly coming up in the fulfilment of all that is thus queried after, and in the overflowings of that love which would incite all to faithfulness, many Friends were led to hand forth suitable counsel and encouragement.

SUMMARY.—Answer 1st.—All our meetings for worship and discipline have been attended, and generally by the greater part of our members; un-

becoming behaviour therein is mostly avoided, and the hour of meeting nearly observed; though several of the reports notice a neglect on the part of some of their members in the attendance of our religious meetings, and of cases of sleeping therein, in which some care has been taken.

2d. Most Friends maintain love towards each other in a good degree; as becomes our christian profession. Talebearing and detraction are generally discouraged, and when differences arise, endeavours are used to end them.

3d. Many Friends endeavour by example and precept, to educate their children and those under their care, in plainness of speech, deportment and apparel; to guard them against reading pernicious books, and from the corrupt conversation of the world, and to encourage them in the frequent reading of the Holy Scriptures.

4th. As far as appears, Friends are clear of importing, vending, distilling, and nearly clear of the unnecessary use of spirituous liquors; of frequenting taverns; and with some exceptions, in several of the reports, clear of attending places of diversion. Moderation and temperance in a good degree observed.

5th. The necessities of the poor, and the circumstances of those who appear likely to require aid have been inspected and generally relieved. They are advised and assisted in such employments as they are capable of, and some care taken to promote the school education of their children.

6th. As far as appears, Friends bear a faithful testimony against a hiring ministry, oats, military services, clandestine trade, prize goods and lotteries; except that a few of our members sometimes attend where a hiring ministry is supported and most of the reports contain information that a few have engaged in military services.

7th. Friends are generally careful to live within the bounds of their circumstances, and to avoid involving themselves in business beyond their ability; to manage; most justly in their dealings, and punctual in complying with their engagements; as when any give reasonable grounds for fear in these respects, care has been extended to them.

8th. Friends are careful to bear a testimony against slavery. The people of color under our care are suitably provided for, and instructed in useful learning.

9th. A good degree of care is taken to deal with offenders seasonably and impartially, and to endeavor to convince to those who will not be reclaimed the spirit of meekness and love before judgment placed upon them; though most of the Quarterly acknowledge that the discipline has not been fully put in practice against those who have separate from us.

Answers to the Annual Queries.—1st. A meeting for worship and preparative meeting, by its name of Springfield, and a meeting for worship by the name of Hopewell, both in Linn County Iowa.

A meeting for worship and preparative meeting by name of Hickory Grove, in Cedar County, Iowa.

A monthly meeting, composed of the preceding meetings, held alternately at Hickory Grove and Hopewell, and known by the name of Hickory Grove Monthly Meeting, and being a branch of Stillwater Quarterly Meeting.

A meeting for worship and preparative meeting by the name of Coal Creek, in Keokuk County Iowa, a branch of Pennsville Monthly Meeting.

2d. A good degree of encouragement is given; schools for the education of our youth, under the tuition of teachers in membership with us.

3d. The queries addressed to our Quarterly

Monthly and Preparative Meetings, are read and answered therein nearly as directed.

The Quarterly Meetings have forwarded the following information of deceased Friends, viz:

MERCY COPE, an elder and member of Providence Monthly and Particular Meeting, departed his life on the 19th of Third month last, in the 74th year of her age.

DAVID PAWCKETT, an elder and member of Salem Monthly and Particular Meeting, departed his life on the 6th of Second month last, in the 87th year of his age.

WILLIAM GREEN, an elder and member of Millwater Monthly and Particular Meeting, departed this life on the 26th of Second month last, the seventy-second year of his age.

WILLIAM KENNARD, a minister and member of Millwater Monthly and Particular Meeting, departed this life on the 13th of Eighth month last, the seventy-sixth year of his age.

Some uneasiness having been expressed about the disciplinary proceedings of some of our subordinate meetings, in the establishment of one or more of those meetings which have lately been set up; therefore, Benjamin Gilbert, Amos Cope, William Arington, Frederic Maerkel, Louis Taber, Nathan All, Elisha Sidwell, Isaac Mitchell, Nathan P. All, Daniel Koll, William Fisher, Samuel Street, Silman Patterson, Eli Hodgkin, Edmund Bailey, as Garretson, Nathan Warrenton, Barton Dean, Robert Elysson, Edwin Holloway, James Bowman, Eliza Hollingsworth, Ellwood Dean and John Atton, are appointed in conjunction with a like committee of women Friends, to examine the proceedings in the case, and report their judgment thereon to this Meeting next year.

Reports from the Quarterly Meetings respecting primary schools were now read, by which it appears that there have been for different periods of time since last year, twenty-nine schools taught under the care of Friends, including seven family schools.

That within our limits and attached to this Meeting, are 1008 children of suitable age to go to school; 322 have been going to Friends' schools exclusively; 496 have been going to district schools exclusively; 113 have been going to different classes of schools, some of these taught by our members, but not under the care of Meeting; 87 are not been going to school the past year, though most of these have been receiving instruction at home. This subject is again referred to our subordinate meetings, which are desired to forward to this Meeting next year explicit accounts as heretofore.

(To be concluded.)

The true welfare of children.—I suppose my wife was never in a state of greater enlargement, less tinged with selfishness, to all my relations and friends the world over. My desire for my children's substantial growth in the Truth, and strict adherence to all its discoveries, to the close of their days, is by far the principal wish I have for them. Out of the enjoyment of a good degree of this precious inheritance, I know of nothing in this world worth living for. Ye that know it, suffer nothing, I most cordially beseech you, ever to divert your minds from an increasing and fervent pursuit after the fulness of it, even unto "the measure of the stature of the fulness of Christ."—*Job Scott.*

For "The Friend."

Review of the Weather for Tenth month, 1862.

On the 1st day of the past month a storm of rain fell from the east, and lasted until the evening

of the 2d, during which time about .68 inches of rain fell; the morning of the 3rd was foggy, but towards noon it cleared off and remained so until the 10th of the month, when the sky became overcast with clouds, and about noon rain commenced falling, the wind being from the east, and the storm lasted until noon of the 11th, when the wind changed to the north-west, and the rain ceased, but it continued cloudy, and from that time to the 16th, there was a succession of cloudy, rainy and clear weather, with the wind from the east and north-east. On the 17th the wind changed to the west, and that day, and the five succeeding ones, were clear, with the exception of a light shower of rain on the afternoon of the 19th. On the 21st we had the first white frost of the season, and another on the 24th, which caused the usual beautiful changes in the appearance of the autumnal foliage. About eight o'clock on the morning of the 23d, a high wind set in from the north-west, and for about half an hour blew with great force, but it does not appear to have done any damage in this neighbourhood. On the 26th and 27th, we had another north-east storm, during which about 1.63 inches of rain fell; the four last days of the month were generally clear, with the wind from the west. On the evening of the 3d of the month, there was a beautiful display of the northern lights in the north and north-east, and if the moon had not been shining at the time, we should no doubt, have enjoyed a much more brilliant display. There being three omissions in my register, caused by my having gone from home without first asking some one to take notes of the weather during my absence, I am therefore unable to give the mean temperature for the month; and the amount of rain during the month was 3.65 inches. J.

Middletown, Delaware Co., Pa.
Eleventh month 1st, 1862.

Much Parental Tenderness with great Christian Firmness.—His children at once loved and honoured him; for while he possessed their entire confidence, and the fullest hold on their affections, they knew that he was *unflinching in the refusal of whatever he felt to be inconsistent with his principles or their highest good.* Notwithstanding the kindness of his nature, and the strength and warmth of his parental feelings, his known firmness precluded all hope of inducing him to yield to their inclinations, when these stood opposed to their eternal interests. Many perhaps may have

been more systematic in their instructions; but few could keep more steadily or practically in view the *superior importance of heavenly things.*—*From a Memorial of Daniel Wheeler.*

From "Peaks, Passes, and Glaciers."
The Pizzo Bernina.

By EDWARD SIBBLEY KENNEDY, M. A.
Was ist Stutz der Gletscherbäche,
Was ist also gross und kühn?
Deiner Seen Spiegelfläche,
Was ist so kristallen-grün?
Felsenwand und Schneegefilde,
Wald und Trüf, verküht im Inn,
Schönstes Bild von Ernst und Milde:
Sei gegrüsst, mein Engadin!—*Volklied.*

As this rush of glacier streams,
What can be so grand and bold?
As this mirror of thy lakes,
What can be so crystal-green?
Rocky ramparts, fields of snow,
Copied and made, seen clear in fan,
Beauteous scene, severe and soft,
All hail to thee, mine Engadin!

In the year 1322 of the Christian era, the Count Monfort assembled an armed multitude in the Ober-Engadin or Upper Valley of the Inn. This host, composed partly of inhabitants of the valley, partly of strangers from the west of Switzerland, was called the army of the Bishop. It was a wild and savage horde, too eager for plunder to remain long inactive.

After a short time spent in preparation, the invaders crossed the mountain range of the Pizzo Vadret, and, pouring down upon the peaceful hamlet of Davos am Platz, scattered the inhabitants, burnt their houses, and lifted their cattle. Those who planned this raid did not reap the expected reward. The peasants, who had at first fled in fear, now turned again in courage. A brave band, with the chieftain Lubens Guler at their head, quickly assembled and overtook their foe in the middle of the vale of Dischma, at a spot called the "Kriegsmatten" or "War-plain." This name, derived from that bloody strife, has been proudly retained until the present day; and fathers yet tell their children how their ancestors met the foe upon that fatal field, and how, after a hard-fought fight, the plunderers of their homesteads fled in inextricable confusion. After this defeat, the spoilers took refuge in the mountain fastnesses, and there, uniting with a detachment of their own party who were driving off the cattle, they reformed their broken ranks, and thus constituted a band of no inconsiderable importance.

Meanwhile the chieftain Domst, lord of Yatz, had collected a force in order to intercept their retreat. The victors, too, in the fight on the Kriegsmatten lost not an hour in the pursuit; while their familiarity with the mountain passes enabled them to make a detour and effect a junction with their friends. The "spoils encumbered" retreated but slowly; and when, after a toilsome ascent, they reached, jaded and wearied, the summit of the Scaletta pass, they found themselves face to face with an unexpected enemy—an enemy encouraged by the accession of friendly succours, and thirsting for revenge. The fight was not long doubtful. Scarcely a tenth part of the invader's band escaped to carry home the tidings of disaster, while the rest of the bishop's host was pursued by Domst as far as Greifenstein, a spot situated near the junction of the rivers Albulia and Landwasser, and lying between Filisur and Alvenau. The few who escaped the slaughter of battle fell in the pursuit.

Many relics of this fury have been met with; standard-poles and morgeu-sterns have been discovered, and bones and skulls are occasionally turned up by the husbandman's spade. Since that

memorable day the pass has been called the "Scaletta" or "Skeleton" pass.

Through the village of Davos am Platz, up the valley of Dischma, past the Kriegsmatten and above the Scaletta pass, two brethren of mountaineering followed, in the month of July, 1861, the route taken on that fearful day by the handful of combatants who sought to escape from the avengers of the Scaletta. My companion was John Frederick Hardy, an Alpestrian known to most Swiss readers and Swiss travellers.

Who were these so-called bishop's men that carried internecine strife and contention into the mountain villages of Switzerland? Were they intruders from other lands, or were they aboriginal autothones? It has been supposed that some members of the band were descended from colonies of Saracens, who at various periods had succeeded in establishing themselves in several districts of Switzerland. Traces of the Arabic language are to be found in many spots, and especially in the neighbourhood of Saas. The well-known Mischabel range, that separates the Saas valley from that of Zermatt, derives its name from an Arabic word signifying "Middle Peak."

Treading in the steps of these supposed followers of the Arabian prophet, the explorer of this district may either descend by the Scaletta pass to Zernetz in the upper valley of the Inn, or ascend the Schwartz-horn, and select the Grialetsch pass to the north of the Pizzo Vadred. This latter route was taken by Hardy and myself. I will not enter into details of this part of our wanderings. Suffice it to say that the view from the Schwartz-horn is remarkably fine, exceeding in the opinion of many, that obtained from the far-famed Pizzo Langard. It is an ascent strongly to be recommended. Its estimated height above the sea-level is 10,550 feet. We descended rapidly from the summit of the Schwartz-horn to a spot near the col of the Grialetsch pass, and leaving a beautiful blue lake, almost a twin-sister of the Marjelen-see, crowded with snowy-blocks of ice, upon our left, suddenly obtained a full view of the Grialetsch glacier. It was exceedingly grand, partly of dazzling whiteness, partly deeply crevassed and broken into ice-falls, with a dark moraine running down the centre; while in the background, partially shrouded in wreaths of mist, towered the craggy peaks of the Pizzo Vadred. I hardly knew a finer glacier view from so comparatively low an elevation. Descending to Siis, we proceeded rapidly onwards, by diligence and ear, up the valley of the Inn, through Zernetz and Sutz, to Samaden.

As we approached the town of Samaden, the sun was setting, and at the same moment the glaciers of Rosegg and Tschierwa, as well as the heights of Pizzo Rosegg and Pizzo Bernina, whence they flow, burst for the first time on our sight. That beautiful "Abend-glüh," that "evening-glow," which, as the sun descends, tints the higher snows, met our gaze. With this peculiar and attractive feature of the upper regions, nearly all Swiss travellers are familiar. The enthusiastic tyro has admired it when seen from his night-campment high up the mountain side; but it has rarely fallen to the lot of any to witness its display in greater perfection. As our eye is dwelling upon this glory of the even-tide, the thought that the ruby coronet is resting upon the head of the giant whom we propose to attack, adds not a little to the charm. That giant is now calmly resting in soft tranquillity, before he assumes his cold, grey night-mantle, and retires from the glare of day; and he looks as though the foot of childhood might tread, without difficulty and without danger, upon the

placid wreaths of snow that twine themselves around his brow. And now, while evening is drawing on apace, the ruddy warmth that suffused the Alpine realms is no longer seen; each mountain outline grows less and less distinct, and the whole range is rapidly disappearing. Another minute, and night, that has already claimed the valleys as her own, will assert her dominion over even the towering monarchs of the land. But no! the wondrous effects of the second illumination descend upon the ice-world above; subdued yet still glowing hues tint once more the snowy summits, and the western light, with unwonted potency, throws from the mountains a shadow, soft, yet distinct, upon the undulating snow field beyond. At the same time, the opposite horizon, as if in rivalry, is bathed in light, and in another moment the moon, nearly at her full, rises in the east. But still some time elapses before the west yields to the moon's increasing power, and long, flickering shadows, still tending toward the east, attest, like the wavering plumes of an outnumbered host, that, though the battle may be lost, the body-guards of the sovereign disdain to quit the field so long as their lord is seen striving for the mastery.

Another hour's drive carried us from Samaden to Pontresina. The ancient path following the turbulent stream, which forms one of the many tributaries of the Inn, came to an abrupt termination near the foot of the Morteratsch glacier. It was reserved to the skill of more modern times to construct the easy diligence road of the Bernina Pass, which, skirting the transparent lakes of Bianco and Poschiavo, finally conducts the traveller into the plains of Italy. All this time we have followed the handful of men who escaped from the fight upon the Kriegsmatten; and here we find further traces of their Arabian origin. The term "*Pont des Sarrasins*," or "Bridge of the Saracens," is supposed to have been the earlier appellation of the town, and to have been corrupted into Pontresina.

As is usual in a strange place, our eyes wandered right and left as we clattered up the stony street. It must have been a mutual sympathy in a mutual aversion that caused us both, while thus gazing around, simultaneously to make the same discovery—a discovery that tended somewhat to damp our hopes of an agreeable ascent. We suddenly beheld a board so placed that, none could miss it, projecting over the pavement, and inscribed on both sides with those characters which they of Chamounix have so long delighted to honour—"Bureau des Guides." Alas! during our progress up the remainder of the street, which, fortunately for our well-being, was not very long, we were haunted with visions of "*tariffs*," "*guides chefs*," *et d'genus onine*. On our arrival at the inn-door we were welcomed by the host, Herr Kredig, and at once surrounded by sundry hangers-on. I carried the poles, and Hardy, as usual, acting in the fulfilment of his destiny, and anticipating, as in a figure, his future fate, bore the rope. Whether there was anything remarkable in our appearance that attracted attention, or whether it was the striking effect produced by Hardy with the rope circled around his neck, it is impossible to say; but, whatever the cause, our ears were immediately assailed by the comment, "That's for the Bernina ascent."

(To be continued.)

A Prescription.—Let us lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us, looking unto Jesus. Heb. xii. 1, 2.

This world is a race-course, life is a race, an every one of us are racers. A mark is set up; which we are to aim, and a prize is promised to every overcomer. But there are many difficulties in the way, and we have many weights about us. Those difficulties must be mastered, and those weights must be laid aside. Our easily besetting sin must be opposed and laid aside, and we must run with patience the race set before us, keeping the eye on Jesus. Jesus is our example; we must copy him. Jesus is our leader; we must follow him. Jesus is our sovereign; we must submit to him. Jesus is our Saviour; and we must confide alone in him. We must look to him for pardon, righteousness and justification; for strength to do his will, and for our supplies in every time of need. Christians, look to Jesus when discouraged, it will animate you; when timid, it will embolden you when feeble, it will strengthen you; when weary it will stimulate you; and when dying, for it will give you the victory. Let thy last look be to Him! He says, "Look unto me, and ye shall live, and there is none else." No one ever looked to him in vain; but a very one was healed who looked at the brazen serpent, so is every one saved, sanctified, and sustained, who looks in truth to Jesus. Look to him for all need, and from all fear. Keep the eye fixed on Jesus; so wilt thou conquer the world, overcome Satan, reach the mark, and obtain the prize.

They looked unto him and were lightened; and their faces were not ashamed. Psalm xxxiv. 5.

Fallen Leaves.—The late Henry D. Thoreau in an article on "Autumnal Tints," in the *Atlantic Monthly* for October, thus refers to the uses and spiritual significance of the fallen leaves:

"How they are mixed up, of all species, oak and maple, and chestnut and birch! But nature is not cluttered with them; she is a perfect husbandman; she stores them all. Consider what vast crop is shed annually on the earth! More than any mere grain or seed, is the great harvest of the year. The trees are now repaying the earth with interest what they have taken from it. They are discomenting. They are about to add a leaf's thickness to the depth of the soil. This is the beautiful way in which nature gets her muck while I chaffer with this man and that, who talk to me about sulphur, and the cost of carting. We are all the richer for their decay. I am more interested in this crop than in the English grass alone or in the corn. It prepares the virgin mould for future cornfields and forests, on which the earth fattens. It keeps our homesteads in good heart."

"It is pleasant to walk over the beds of these fresh, crisp, and rustling leaves. How beautifully they go to their graves! How gently lay themselves down and turn to mould! painted of a thousand hues, and fit to make the beds of us living. So they troop to their last resting place, light and frisky. They put on no weeds, but merrily they go scampering over the earth, selecting the spot, choosing a lot, ordering no iron fence, whispering all through the woods about it—some choosing the spot where the bodies of men are mouldering beneath, and meeting them half way. How many flutterings before they rest quietly in their graves! They that soared so lightly, how contentedly they return to dust again, and are laid low, resigned to lie and decay at the foot of the tree, and afford nourishment to new generations of their kind, as well as to flutter on high! They teach us how to die. One wonders if the time will ever come when men, with their boasted faith in immortality, will lie down as gracefully and as ripe

with such an Indian-summer serenity will shed their bodies, as they do their hair and nails. "When the leaves fall, the whole earth is a metery pleasant to walk in. I love to wander and muse over them in their graves. Here are no iron nor vain epitaphs. What, though you own no lot in Mount Auburn? Your lot is surely cast somewhere in this vast cemetery, which has been consecrated from of old. You need attend no account to secure a place. There is room enough here. The loose-strife shall bloom, and the buckeye-bird sing over your bones. The woodman and hunter shall be your sextons, and the children all tread upon the borders as much as they will. Let us walk in the cemetery of the leaves—this is our true Greenwood Cemetery."

New Cotton Fields.—The conference held on the 31st instant between cotton consumers and cotton producers at South Kensington, England, cannot be proved in its results a terrible blow to the slavery. At the outbreak of the rebellion, no Southern doubter the prediction of their great commercial oracle, De Bow, that England and France would be compelled to obey the behests of king cotton at any cost; that they would find it impossible to receive without receiving from America their supply of cotton; and that, if they could not obtain it by force, they would have to buy it by force.

For some time, it seemed as if their hope was well-grounded. A large portion of the cotton manufacturers of England and France, without concerning themselves much about the hostility of public opinion in their countries to slavery, went for soul and body to the party of the rebels, and conjointly with those politicians who wished first of all to break the power of the Union, they endeavored for mediation and intervention in the American war, and for a recognition of the Southern Confederacy. When they gradually began to see that the war would, in any case, not be over in time to furnish them with their usual supply of American cotton, they made up their minds to look to other quarters for the necessary supply. The efforts made by the Cotton Supply Association of Manchester for exploring new fields of cotton, challenge admiration. Every inhabitable country of the globe has been examined; the necessary preparations have been made for beginning once the cultivation of cotton in a number of countries; and a powerful impetus has thus been given to cotton production throughout the world.—Thus, by a cruel nemesis, the very class of men upon whom the South relied as its most efficient allies and supporters, have been induced by a consideration of their own interests, to toil more industriously in any other class for undermining the main support of Southern prosperity. They have been reversing every land and every sea, to raise powerful competitors in the principal article of Southern exportation; and to encourage these competitors, they find it to their interest to represent the struggle against the South as likely to continue much longer, and to cripple for a long time the productive power of the Southern States.

At the recent meeting at South Kensington, the cotton lords held review over the agents whom they intend to use for breaking the monopoly of the cotton trade of our Southern States. The day is formidable. No fewer than thirty-five different countries—in Europe, Asia, Africa, America and Australia—have already sent cotton to the International Exhibition at London, and most of them were represented at the Cotton Conference among them the negro Republic of Liberia. The Chairman of the Committee of the Cotton Supply Association described to them the brilliant

prospects of the cotton-trade. The value of the American crop for 1860 was estimated at £40,000,000. It was represented as certain that America, for many years to come, could not attain to the position she had lost, and as probable that she could never attain to that position again. Of the £40,000,000 which had been the pride and possession of American planters, other countries, which had exhibited samples of cotton, ought to obtain at least £20,000,000. It was shown that the average price of American cotton in England would not be under sixpence per pound, and that, therefore, all those "many" countries which could make a profit out of cotton at sixpence a pound, might set to work to supply Liverpool without much fear of losing their labour.

The replies of the representatives of the several countries show that there will be a lively competition for getting the lion's share in these £20,000,000 or £40,000,000. Many countries claim to possess cotton fields large enough to supply the entire demand of Europe. India, Australia, Africa, South America, are most sanguine in their promises. Several countries can already command labour cheap enough to produce cotton at 3s. a pound, or even less; others have no doubt that they can furnish it to England at less than 6s. as soon as they get labourers from India or China. But nearly all will enter the race with vigour.

The competition with the cotton trade of our Southern States is therefore no longer merely prospective, but has begun in earnest. One of the speakers at the South Kensington meeting quoted a return of the quantities of cotton imported in 1861 and 1862 as follows:

	1861.	1862.
	cwt.	cwt.
From		
Illyria and Dalmatia	7	25,000
Malta	—	2,100
Greece	—	800
Turkey	180	21,400
Cape of Good Hope	200	1,500
India (Bombay)	650,000	847,000
India (Madras)	35,000	145,000
India (French possessions)	—	442,000
China	—	143
Bahamas	—	17,000
Guiana	41	162
St. Vincent	71	192
Demerara	1,000	2,052
Hayti	1,200	1,780
Mexico	—	7,300
United States	5,874,600	47,000
New Grenada	851	3,800
Brazil	52,000	103,000

In the following year, the increase in the importation from each of the above countries but this, is likely to be much greater than during the present, and conclusive proofs will doubtless soon be presented that the world can obtain the needed supply of cotton without having to depend upon slave labour.—*N. Y. Tribune.*

The door of apostasy; and how the ancient testimony of Truth will be more and more raised up.—He was one of a steady and sound judgment, as to the things of God; often desiring, that those who came amongst us, especially children of believing parents, might not settle down in a form of godliness, without the power, at which door the apostasy entered; but that they might be raised up to *walk in that*, wherein the saints' fellowship doth stand, which is the light of our Lord Jesus Christ, enlightening every man that cometh into the world. Then the ancient testimony of Truth will be more and more raised up in their hearts, and they being preserved of the Lord it will be maintained

in its several branches, as in former days.—*Testimony concerning Thomas Ellwood. F. L., vol. 7, p. 317.*

Bird Speed.—If falcons could be once more trained to carry messages—where the telegraph was destroyed—they might become useful servitors. Their swiftness is thus defined:—"It has been calculated that a hawk will fly not less than one hundred and fifty miles an hour. Major Cartwright, on the coast of Labrador, found, by repeated observations, that the flight of an elder-duck was at the rate of ninety miles an hour. The flight of the common crow is nearly twenty-five miles an hour; and Spallanzani found that of the swallow to be about ninety-two miles, while he conjectures that the rapidity of the swift is nearly three times greater. A falcon, belonging to Henry the Fourth, of France, flew from Fontainebleau to Malta in less than twenty-four hours, the distance being one thousand three hundred and fifty miles; and it is probable that his flight was about seventy-five miles an hour, as such birds fly in the day time only. These facts show how easily birds can accomplish their extensive migration, especially when we consider that a favourable wind materially helps them on their voyage."—*Late Paper.*

Teaching Children.—Do all in your power to teach your children self-government. If a child is passionate, teach him by gentleness and patient means to curb his temper. If he is greedy, cultivate liberality in him. If he is sulky, charm him out of it by encouraging frank good humor. If he is indolent, accustom him to exertion. If pride makes his obedience reluctant, subdue him by counsel or discipline. In short, give your children a habit of overcoming their besetting sin.—*Late Paper.*

Sea Sickness.—A late number of Silliman's Journal contains a paper by R. M. Baché, of the U. S. Coast Survey, on the "Physiology of Sea Sickness." Prof. Baché asserts the theory that this distressing malady is not a disease of the stomach, but of the brain, and arises from the fact of the mind not being able to understand the varying motions of the boat as rapidly as the senses feel them, thus causing a conflict of impressions and a consequent affection of the brain, which in turn deranges the nervous system, and produces nausea. The smell of food, close air, and similar matters may aggravate the disease, but are not the primary causes of it. As soon as the mind is educated up to a point that enables it to conceive the idea of each motion as soon as it is felt, sea sickness ceases. Prof. Baché recommends persons going on board a vessel to eat an ordinary meal, and whilst on board to conform as closely as possible to their habits whilst on land. The deck is the best place to remain during sea sickness, as the sight can there be best educated to the movements, and the fresh air has also a good effect. A steady gaze at the horizon enables the sufferer to quickly estimate the movements of the ship. If possible, choose a position amidships on deck, spread a mattress, lie down and look out at the horizon, and then all has been done that can be done to prevent or cure sea sickness.

Let those who now enjoy health and prosperity, never forget that they can have no reason to depend on finding religion their comfort in the hour of death, if they do not find it their happiness in life.

THE FRIEND.

ELEVENTH MONTH R. 1862.

Having received a copy of the printed Minutes of the proceedings of Ohio Yearly Meeting, we have commenced their insertion in the present number. From private sources we learn that the meeting was, on the whole, satisfactory.

We commend the report of the committee appointed to attend the Convention to form a Constitution for Maine, to the serious attention of all our readers. In the present trials consequent on drafting for the army, many of our gay young members have found how much harder it has been for them to appear before the commissioners to claim exemption on the ground of conscientious scruples than it would have been had their conduct, conversation and clothing, all borne witness for that they were bearing the cross of Christ.

SUMMARY OF EVENTS.

Foreign.—News from England to the 19th ult. The English papers contain a circular from Secretary Seward to the Diplomatic and Consular Agents, relating to the Emancipation Proclamation. He draws helpful conclusions from the present position of affairs. He says:—“The rebels must understand that if they persist in imposing a choice between the dissolution of the Government and the abolition of slavery, it is the Union and not slavery that must be maintained. While all the good and wise men of all countries must recognize the measure as a just and proper military act, intended to deliver the country from a terrible war, they will recognize, at the same time, the moderation and magnanimity with which the Government proceeds in so solemn a matter.” The London *Times* says this circular deprives the American Government of the right heretofore to appeal to its emancipation decree as a measure founded on moral principle, as Seward reduces it to a mere military act. The same shows the recognition of the South at the present time, to be inacceptable. The British minister, Gladstone, in another speech on American affairs, told his hearers to remember that the difficulty had arisen from slavery, which was a legacy from England to America. G. C. Lewis, the British agent in Washington, has shown the recognition of the Confederacy, and contends that the South has not yet established its independence. A Cabinet Council had been summoned to meet on the 23d ult. This is earlier than usual, and the consideration of the American question is supposed to be one of the purposes of the meeting.

The Army and Navy Details.—It is perfectly obvious that the number of men in the field toward the limits of the fighting position both North and South, and when to this is added the armies swallowed up in swamps, in battle-fields, in marches, and rendered non-effective by sickness, by wounds and by parole, the intervention which is to arise from the hard logic of accomplished facts, as more likely to terminate the war; war in which much ignorance of the first principles of military science has been evinced, and great indifference shown to human life. The Liverpool cotton market has been dull. Sales of the week, 15,500 bales. Prices had declined 1/4d. a 2d. in consequence of heavy arrivals from the United States, and the fact that only 12,000 were American. Breadstuffs were also falling, American flour is quoted at 22s. a 27s.; red wheat, 9s. a 10s. 3d.; white 11s. a 12s.

Changes have occurred in the French Ministry, which indicate that the government of Louis Napoleon has no intention of withdrawing the French forces from Rome. The Emperor, it is stated, now inclines more decidedly to the priestly party.

UNITED STATES.—The Army.—Although vast quantities of supplies, clothing and shoes, have been forwarded to Gen. McClellan's army, the surprising fact is stated that many regiments are without clothing and without shoes. The entire army has been paid to the 30th of Sixth month last, and a portion of it to the end of Eighth month. The reason for the non-payment as to the remainder, is owing to the Treasury Department being unable to meet all the requisitions upon it. The bounty and advance pay on the new recruits having first to be paid, and these requiring all the available funds.

The Internal Tax.—The revenue from the internal tax, it is said at Washington, will largely exceed the estimate of Congress. The data received by the Commissioner of Revenue, leads to the belief that it will reach nearer \$250,000,000 than \$150,000,000, the sum it was first thought to be. In one instance, the Commissioner states where the collector thought 3,000 licenses were necessary, 15,000 are required.

Virginia.—No serious collision took place last week between the hostile forces, though the advance of the U. S. army against the rebels at Winchester is steadily pressed. At New Market, east of the Blue Ridge, and a line with Winchester, has been occupied by the Federal forces under Gen. Hancock, and Thoroughfare Gap, considerably further south, has been taken possession of by a division of Gen. Sigel's army. The intention of these movements seems to be to confine the rebel army to the Shenandoah Valley. The hostile armies were daily being brought into closer proximity, and a battle appeared imminent, unless the rebel commanders decided to retreat. The Kanawha Valley in Western Virginia, is again occupied by the Federal forces. The rebel army there, it is stated, been withdrawn and united to the great army of the Potomac.

North Carolina.—The number of guerrillas is said to be increasing in Eastern North Carolina. A large rebel force is stationed at Kingston, about forty miles up the Neuse river. The shores on both sides of that point have been lined with powerful batteries, which render it almost impossible for ships of war to pass within the range of the fire. There are large numbers of fugitive slaves at Newbern, who have escaped from their masters in the interior. The fugitives are supplied with daily rations, by order of Governor Stanley. The Wilmington (N. C.) Journal, announces the arrival of seven regiments of negroes to garrison towns and fortifications during the sickly season. They have been in camp of instruction under white officers for three months. These negroes are in the rebel service.

South Carolina.—The Union account of the battle at Pocotaligo and Coosawatchie, does not agree with that given by Beauregard. The rebels, it is stated, were defeated on the 13th ult. and compelled to retreat, destroying the bridges on their way. The Union force destroyed a portion of the railroad and then retreated to their boats, taking their wounded with them, and some prisoners. The loss in killed and wounded was serious, and exceeded that sustained by the rebels. Gen. Mitchell and many of his officers and men, were suffering from malarial fever, a disease resulting from mallow fever. The U. S. blockading vessels have recently made several important captures of ships attempting to run the blockade. Among those taken, were the British steamers *Wachita*, *Anglia* and *Scotia*, which, with their cargoes, are valued at a million of dollars.

The blockade of the States seems to be temporarily suspended, all the large bodies of rebel troops having gone into Tennessee. An order of Gen. Buell forbids the return of all persons who have actively abetted the invasion of Kentucky. Gen. Rosecrans has arrived at Louisville, in order to assume the command and to be succeeded by him. Gen. Buell has been ordered to Annapolis.

Mississippi.—It is reported that the rebel Gen. Price has reorganized his army since the defeat at Corinth, and has concentrated a very large force at Holly Springs, with which he is threatening Gen. Grant, the Federal commander in the West. Price has been at an advance line of defenses. The rebels appear to be advancing by way of Grand Junction, and menace both Bolivar and Corinth.

Missouri and Arkansas.—The dispatches of Gen. Curtis, report further successes of the Federal arms. The rebel forces, which was collecting in south-east Missouri, have been completely routed and dispersed. A rebel camp of 3000 men near Fayetteville, Ark., was also recently attacked and dispersed.

Southern Texas.—The rebel government is trying to supply its army with clothing from manufacturers which it has established in Richmond. Thirty thousand garments and a large amount of shoes have already been sent to Lee's army. Twenty thousand garments a week are turned out at Richmond, but at this rate it will require more than a year to furnish each man with a suit of clothes. The Richmond *Whig* calls upon the people throughout the rebel States to help the government by home-made production. Brigadier-General Sherman, of Major General Price, has resigned his commission in the rebel army, and returned to St. Louis, believing that the rebellion is a failure. He has taken the oath of allegiance to the United States. Gen. Hindman has been thrown into prison at Little Rock, Ark., charged with various misdemeanors in office. He will be taken to

Richmond for trial. The Greenville, Tennessee, *Banner*, speaks of Bragg's invasion of Kentucky, as highly profitable in its results. It is asserted that he captured and purchased enough of goods of various kinds, to load a train of wagons forty miles long. Among the articles enumerated, are 5,000,000 yards of Kentucky jeans, 200,000 numbers of boots and shoes, 200,000 loads of bacon, 6,000 barrels of pork, &c., &c. He also brought away 15,000 horses and mules; 8,000 beef cattle, and large droves of swine.

Miscellaneous.—New York.—Salt.—The whole quantity of salt inspected at the Onondaga Salt Springs Reservation, from First month last, to the 25th ult., was 7,035 572 bushels. This is an increase of 1,292,153 bush over last year. **Illinois Cotton.**—The crop of this year will amount, it is said, to about 20,000 bales of upland quality. **Professor Manry.**—The Confederate steamer *Albatross*, having escaped from Charleston with a cargo of 600 bales of cotton, and a number of passengers, among whom was Professor Manry. The Herald is known to have reached Bermuda in safety. A Richmond paper stated recently that Manry was about to start for Europe, having been accredited by the Confederate government as its representative.

Philadelphia.—Mortality, last week, 206. **The Pirate Albatross** was seen on the 29th ult., in lat 39°, long 69°, steering north-west, and directly in the track of the California steamers. She is known to have already captured twenty-two vessels, nineteen of which are destroyed. The others were released on bond being given, on condition that they should be valued in proportion to the value of the prize, the payments to be made to the President of the Confederate States, thirty days after the declaration of peace.

The Markets, &c.—The following were the quotations on the 30d inst. **New York.**—Premium for gold, 130; price in the bank, \$27,390.456. The public debt of the United States have advanced a 1/4 cent. during the week. Chicago spring wheat, \$1.11 a \$1.24; ray, winter, \$1.27; rye, 85 cts. a 90 cts.; barley, \$1.40 a \$1.55; oats, 56 cts. a 59 cts.; corn, 71 cts. a 73 cts. **Philadelphia.**—Red wheat, \$1.44 a \$1.53; white, \$1.6 a \$1.65; rye, 90 cts. a 95 cts.; corn, 73 cts. a 75; ut 39 cts. a 41 cts.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of Friends' Boarding-school at West-Town, will commence on Second-day, the 10th of Eleventh month. Parents and others intending to send their children as pupils, will please make early application to Dubr Knight, Superintendent, at the school (address Street Road P. O., Chester Co., Pa.) or Charles J. Allen, Treasurer, No. 304 Arch street, Philadelphia.

Pupils who have been regularly entered, and who go by cars from Philadelphia, will be furnished with tickets by the ticket agent at the depot of the West Chester and Philadelphia Railroad, north-east corner of Eighth and Market streets. Conveyances will be at the Street Station, before 7 o'clock, and will forward at 10 o'clock, on the 11th of the Eleventh month, on the arrival of the train that leave Philadelphia at eight, half past ten, and 7 o'clock.

During the Session, small packages for the pupils, left at Friends' Bookstore, No. 304 Arch street, on Sixth day, before 7 o'clock, will be forwarded, and the Boarding-school will meet the first train of cars from the city, at its arrival at the Street Road Station every day, except First-days.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) PHYSICIAN AND SUPERINTENDENT, —JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES BLAIR, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

DEED, on the 16th of Twelfth month last, at the residence of the late Benjamin Colebrook, in West Elkton, Preb Co., Ohio, ELIZABETH COXSON, formerly of Burlington Co., New Jersey, in the seventy-eighth year of her age, her last illness was borne with much patience and resignation, and as she expressed that she saw nothing further in her way, her friends have the consoling belief that she has entered that rest prepared for the righteous.

WM. H. PILE, PRINTER,
Lodge street, opposite the Pennsylvania Bank.

The Pizzo Bernina.

By EDWARD SHIRLEY KENNEDY, M. A.

(Continued from page 78.)

Our first act was to fall in with the prejudices of the place and to desire the attendance of the Guide Chef." Signor Colani, the representative of a generation of hunters, soon put in an appearance, and we ventured to suggest our wish to attempt the Pizzo Bernina. The Signor did not receive the proposal so favourably as we had anticipated, and shortly withdrew, signifying that he could send another guide for consultation. In the meantime supper was announced, but hardly had we swallowed a mouthful of soup, when a tall, raven, broad-shouldered fellow entered the *salle*, and introduced himself as the Bernina guide. The consultation commenced and was carried on under difficulties; for to sustain conversation in a foreign tongue when the mouth is full of hot soup decidedly requires no little skill. Our new friend told us of the undertaking was somewhat unusual. For his announcement we were prepared. He, however, so frequently repeated the expressive sentence, "*Es is kein Spass, meine Herren.*" "It is no joke, gentlemen," and by his manner gave so much additional weight to the words, that we began to think one of two things must be the case—either that our guide was an impostor, or else that our mountain was very much the reverse.

As a matter of course, the old difficulty arose as to the amount of payment. The established rife came into play, and we were powerless. Although no stranger had as yet made the ascent, we found that a rule already existed to the effect that each traveller should pay 100 francs, that the principal guide should take what number of porters or subordinates he pleased, and that it could be his duty to find ropes, hatchets, blankets, and every other possible requisite, with the exception of provisions. To this arrangement we finally assented. Thus far all was smooth; but our guide evidently had his suspicions that the undertaking could prove too much for the English travellers, do not blame him for his caution. After a little hesitation, however, he proposed that we should together make a previous "*Probe-reise*," or "Trial trip," a little experiment, in fact, to ascertain the probability of ultimate success.

Thus commenced our acquaintance with Peter Jenni. There was no friendship at first sight, no eager rushing into premature confidence. On the contrary, so far as I can judge, there was some little misgiving on both sides. We thought that he started unnecessary difficulties, and evinced so excessive an amount of hesitation in regard to the whole proceeding, that we were by no means pressed in his favour; while he evidently considered that we overestimated our own powers, and aspired to an undertaking of which we were not capable. What has been the result? That both Hardy and I agree that it would be difficult to meet with a man who so preciously possesses all the qualities necessary for a first-rate guide. Let Chamoniards boast of their Simond and their Croz; let Oberlanders glory in their Lauener and their Anderegg, and Valaisians extol their Bortis and their Perren—all good men and true—yet I venture to say that all these would meet with their match in Peter Jenni. To him may justly be ascribed most careful foresight in the preparation of all that tends to the success of the expedition, especial watchfulness for the constant safety of the traveller, and instant readiness to render him assistance in positions of unusual difficulty; while in that quality which is, perhaps, the one most essential to the true Alpestrian, the quality of perseverance, he particularly excels. To him belong an indomitable persistency and a self-reliant disregard of advice offered by irresolute subordinates.

Of all these qualities we had ample experience in our ascent of the Pizzo Bernina. The next morning we had an interview with Jenni. The "*Probe-reise*" was given up, for it was deemed unadvisable to waste, in an unnecessary excursion, and at a time of doubtful weather, what might prove to be but a solitary fine day. It was therefore quickly settled that we should make a start for the sleeping quarters that afternoon. In the mean time we sallied out, inspected Jenni's preparations, ordered nails to be put in our boots, and felt ourselves the lions of the town—the observed of all observers. Unable to endure the gaze of an admiring populace, we sought the shelter of our inn, and there quietly whiled away the time, by settling down to accounts, diaries, and letter-writing. At 1.15 dinner was served. Meanwhile clouds had collected, and they were now rolling over the mountain ridges into the valleys below. Before our meal was finished, the rain came down heavily, and a murky afternoon succeeded the brilliant morning. The expedition was necessarily given up. Such are the disappointments to which not only all Alpine travellers, but also quiet *ad-fresco* parties in England are subject. Here was an opportunity for indulging in valuable novel and moral reflections. We must patiently bear the ills which "flesh is heir to," and it is well if this be done without too much grumbling.

The next day it rained, and the next, and the next. And then even the moraliser left off moralizing, and we did begin to lose patience, and we did begin to grumble. It is in such positions that the native genius of a man is brought out, and it is to such weather that we are indebted for the ex-

hibition of another of Hardy's multitudinous powers,—one that under the bright glow of sunshine might have lain dormant for ever. In point of fact, the moraliser disappeared, and the poet assumed his place. I hope the reader, whether fair or unfair, will grumble when he finds the "continuity of the narrative" broken by my companion's composition; for we shall both then be in an equally unamiable mood, and I shall consequently be the more sure of his sympathy.

THE ALPINE'S LAMENT.

Pity the sorrows of an Alpine swell,
Whose starchy limbs have brought him to explore,
The glaciers where the chamois ever dwell,
And rocks round which the lammergeyers soar.

With brightest hopes of many a new ascent,
Serene he started by the Dover train,
And, still on conquests in the Alps intent,
Marked not the blus'tring of the troubled main.
I saw him, wrapt in all his self-conceit,
Exposed his schemes to those who sat beside;
And still he promised many a mighty feat,
On horns and stocks that never had been tried.

With head erect, and self-approving eye,
Of all the lesser heights he spoke with scorn;
He patronised Mont Blanc, and thought he'd try
Pizzo Bernina and the Matterhorn.

Behold him now, the victim of despair,
Close cribb'd in Pontresina's narrow inn;
Listless he sits upon his wooden chair,
And sighs for honours that he cannot win.

For, patter, patter, with incessant fall,
Through weary days down pours th' incessant rain;
And still to catch some glimpse of mountains tall
Through steaming mists he strains his eyes in vain.
But lo! one vast impeneable cloud
Mountains and hills and vales alike enfolds;
White, shut within, with yells of mockery loud,
The demon of the storm his revel holds.

Return, my Alpine, to thy mother's lap!
Refresh thyself with British steaks and beer!
A sadder and a wiser man, mayhap
Thou'lt stay in London streets another year!

On Monday, July 22d, 1851, being the fifth day of our stay, Hardy and I, after our one o'clock dinner, left Kredig's inn at Pontresina, and walked up the village to Jenni's mansion, where he carried on his ordinary business of cordwainer and general worker in leather. It is a curious fact that most of the best guides are shoemakers by trade. Is this because they know practically the necessity of being well-shod, and find all others in the trade mere cobbler's? We found Jenni's preparations in a forward state, and, after a quarter of an hour's delay, all started in an open carriage and one, fully equipped for our projected excursion.

Oh that one skilled in photographic art had been at hand! On the low front seat of the vehicle, or, to speak more *Alpino*, at the lower extremity of the leathern aproncase, sat the driver and Jenni, with their legs suspended over the crevas beyond; immediately above the ridge in which the upper extremity of the slope terminated, appeared the heads of Hardy and Kennedy, also those of their poles, the lower portions of each being engulfed in the bergschlund. Beyond these capital features, and at a somewhat greater elevation, there emerged

above the highest ridge the heads and arms that belonged to Jenni's brother, Fleuri, and to his companion Alexander. So much of these worthies as was visible was decorated in the most formidable manner. Leather belts, and interminable coils of rope, gave the group the semblance of another Laocoon. Spikes, axes, and a hooked machine like that used by the omen of the "Royal Humane Society" for rescuing persons "apparently drowned," suffered themselves partially to appear; while conspicuously across their shoulders was carried a somewhat novel, but, as it afterwards turned out, a very useful, instrument in the form of a dustman's shovel.

We drove in this style about three miles along the high road of the Bernina pass, until we reached the lower end of the valley, down which there flows, from the Bernina, the "Vadret da Morteratsch," or Morteratsch glacier. It was long supposed that the Pizzo Morteratsch was the culminating point of the whole range, and consequently this peak gives its name to the principal glacier, while the Pizzo Bernina itself is wholly unrepresented in glacier nomenclature. At the junction of this lateral valley with the main pass, at a spot called Plattas, we alighted, and the short pause that ensued gave ample time to examine the appearance of the western sky. This was the windward quarter; and, alas! the anticipations of evil that an occasional backward glance *en route* had led us to form, were about to be realised. A black, thundery cloud was creeping up, and veiling the lower valleys in a dirty whiteness. However, there was no hesitation; "forwards" was the word.

The beginning of the valley is nearly level. A rude bridge carried us over the transparent stream that takes its rise in the slopes of the Diavolezza, but is almost immediately lost in the turbid water from the glacier,—a cloudy fate that awaits all the sparkling waters of Switzerland, and that, typical of the life of man, speaks of the inevitable hour when beauty passeth away. It is a destiny common alike to the tiny rill when sportively dancing down the mountain's side, and to the rapid Rhone as, revelling in strength and beauty, she rushes from the lake.

We soon reached the foot of the glacier, and, keeping the western bank, climbed by the usual rough, irregular path, until we had gained the level of its surface. Again the path was but little inclined, and again more steep as we gradually rose above the glacier, and the scene opened out to view. A few heavy drops of rain warned us to hasten onwards.

(To be continued.)

Worry.—Multitudes of human beings turn away from the blessings of their lot, and dwell and brood upon its worries. They persistently look away from the many pleasant things they might contemplate, and look almost constantly at painful and disagreeable things? We sit down in the snug library, beside the evening fire. The blast without is hardly heard through the drawn curtains. Every petty disagreeable in our lot is brought out, turned ingeniously in every possible light, and aggravated, and exaggerated to the highest degree. The natural and necessary result follows. An hour or less of this discipline, brings all parties to a sulky and snappish frame of mind. And instead of the cheerful and thankful mood in which we were disposed to be when we sat down, we find our whole moral nature is jarred and out of gear. Wife, daughters, and ourselves, pass into moody, sullen silence over our books, books which we are not likely for this evening to appreciate much or enjoy.

Now I put it to every sensible reader, whether there be not a great deal too much of this kind of thing. Are there not families that never spend a quiet evening together, without embittering it by taking up unpleasant subjects in their lot and history? There are folks who, both in their own case, and that of others, seem to find a strange satisfaction in sticking the thorn in the hand further; in even twisting the dagger in the heart. Their lot has its innumerable blessings, but they will not look at these. Let the view around in a hundred directions be ever so charming, they cannot be got to turn their mental view in one of these. They persist in keeping nose and eyes at the moral pig-sty.—*Late Paper.*

For "The Friend."

BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 76.)

"Fourth month 23rd, 1772. At the meeting at Grace Church street, Wallis and Sarah Corlynn appeared in testimony, and aunt concluded it in supplication. The meeting was larger than usual. We dined at the house of Robert Bell, husband of Margaret, after which our kind friend Joseph Koe went with us to the stage coach, into which, with Frances Griffith and her niece, we mounted by fifteen minutes after two o'clock. By half after seven o'clock we reached her house at Chelmsford, 29 miles. On the 24th, Fifth day, we attended their week day meeting. The town was pretty, and more Friends at meeting than I expected, but it was a dull time, and close work for aunt. Through this town our worthy Friend, James Parwell, was led in chains to receive his trial. As he passed along, he preached, to the convincing of Elizabeth Wingfield, who lived to preach the gospel at the yearly meeting, after she was an hundred and six years of age."

"The 24th was spent in preparing for a trip into the country, and in agreeable conversation with kind Friends. On the 25th, the seventh of the week, hiring a post-chaise, they rode twelve miles, to Dunmow, dined there with Dr. John Sims, and in the afternoon proceeded fourteen miles, to the house of William Impey, at Saffron Walden, a small town. Here they found a number of Friends collected to attend the funeral of Chaharie, the wife of Thomas Day. Deborah reports her to have been a woman much beloved, and the family to be one of note. She further says, their ride had been very pleasant, having Frances Griffith with them, whose conversation was agreeable and edifying. They were kindly entertained by William Impey, whose company, with that of his wife, they found peculiarly satisfactory. On the 26th, they attended meeting which, in the morning, commenced at nine o'clock. The number of Friends present was small, yet Sarah Morris had very reasonable service amongst them, and Frances Griffith also. Deborah says, "In the afternoon we attended the corpse to the meeting house, which was crowded. Aunt was led, in the demonstration and power of Truth, to speak to the people. Isaac Sharpless and Frances Griffith followed, when the former concluded in prayer. A highly favoured meeting. We took leave of our kind friends. Nancy Impey's mother, the widow Gibson, was particularly kind and full of love. In this town I was affected by seeing the stocks in which our ancient Friend George Whitehead was put. The prison in which he was confined, was, a few months since, pulled down. In it was found a manuscript written by him.

"We lodged at Dunmow. On the morning of the 27th, before we came down stairs, a messenger arrived from our kind friends, William Impey and wife, requesting our return. Her mother, who we left about house, had suddenly died in the night. This surprise was almost too much for the poor daughter. This sorrowful account was very affecting to us, but many concurring circumstance prevented our complying with their request. So after breakfast we rode to Chelmsford Monthly Meeting, at which there were nine men and nine women. The few gathered were owned by Him who has graciously promised to be in the midst of those who meet in his name. A few words of our encouragement were lovingly dropt by aunt, and the meeting for business, suitable advice was given. We dined at the house of John Griffith, and man, Friends spent the afternoon with us there.

"On Third day, the 28th, Joseph Sheldon, brother-in-law to Frances Griffith, accompanied in the stage-coach to London, where Joseph Romet us and took us to his house to dine. After dinner, dropping into silence, aunt was dipped into the suffering state of some there, who were tenderly affected under her ministry. Our kind friend Thomas Corlynn, took us home, and we spent an agreeable evening with friends who came to see us. On the 29th, we attended Grace Church street meeting, where was accomplished the marriage of Thomas Bishop and Mary Thorn. They were a solid, plain couple. There were three testimonies borne, and my aunt, being favoured as usual, concluded in supplication. Dined with John Elliot, attended Peew Monthly Meeting, and drank tea at John Tunn's friends.' His wife is like one of our own plain Friends, a kind, good woman, though young.

"On Third-day the 30th, went to Savoy Meeting. It was large for that place, and yet the were many empty benches. A heavy time it was yet aunt was favoured with what was suitable; remarkably so, as was afterwards noted. Spent the rest of the day at home. On sixth day, Fifth mo 1st, at Grace Street Meeting, a favoured opportunity Aunt had to set before us in an impressive manner, the beauty as well as the necessity of a godly life. We dined with John Wallis, and then visited the Chorley's, John Fothergill's grand-children with whom aunt had reasonable service. We spent the evening at home.

"On First day, Fifth month, 3rd, we went to the Meeting at Wapping. It was a good house, and full of people, who were chiefly Friends. Aunt had a good time. Lewis Weston and nephew took kindly note of us, and Thomas Wagstaff took us thence with his niece, Sarah Wagstaff, and Elizabeth Corlynn, to their country lodgings at Clapham, where we dined. In the afternoon we went to Windsor, to the burial of an ancient Friend, Rachel Trafford. A meeting held after the burial was large, many being there who were not Friends. There were several appearances in the ministry, and yet it was a heavy laborious time. At last aunt was favoured in supplication, and Elizabeth Bevington appears to edification, and it ended more lively. Drove with Jeremiah Waring, who had married my dear friend Mary Weston, who has, I believe gone to a happier mansion. The remembrance of what she had been to me, and her absence, made my heart very sorrowful, whilst I was looking over what were once her pleasant rooms and prospects. We returned with our good friends to Clapham and spent the evening in edifying conversation with Thomas Wagstaff, who is a useful member of our religious Society. On the 4th, returned to the Morning Meeting at Grace Church Street on the 5th, went to the Work-house Meeting. I was very deathly for a time, but this, through Di

vine favour, was overcome by the arising of Truth, which set aunt on her feet, to the comfort of the mourners in Zion. She had also something particularly edifying and tendering to the children, of which there were a large number, making a pretty sight. We dined with James Townsend, and his wife, my namesake. They pressed us to take in airing, to which we consented. He seemed much pleased with the opportunity of informing us of the various places presented to our view, and many beautiful prospects there were. All of them however, were as nothing to aunt, nor has any high terrestrial yet proved effectual to remove the cloud. He likewise took us through the town of Slighton, and pointed out the house in which our good friend Thomas Whitehead lived. It is a small, humble, white dwelling. Now there are many large houses there, but there is no Friends' Meeting. On Fourth day, the 6th, we were at Grace street Meeting, which was larger than common, and much favoured. Aunt stood, I think, an hour. We dined at Joseph Roe's, after which we went with his wife and sisters to Stamford Hill, where we were received kindly by the widow Lutridge, and entertained until the next morning. It is a good quarters for weary travellers."

(To be continued.)

Soils and Weeds.—It should be a general practice with farmers to gather up all the soils, weeds, &c. even the year's growth of briars, bushes, &c., and stack them in large, compact heaps, there to remain for from one to two years, or until they become properly decomposed and resolved into one mass. It would take but little time to gather these, while in doing so the fields would be cleared of this trash, which, if left to remain, obstruct the growth of plants and encourage the increase of these drawbacks to growing crops. The "manure" which ought to be produced on a farm of an hundred acres by this process, would hardly be believed until properly put in operation. But we say in advance there ought to be realized, at the lowest calculation, one cart-load per acre. This substance is extremely valuable for gardens, and especially for corn, as well as for soils of a heavy and tenacious character.

We have long been convinced that this part of farmer's business has not nearly been so generally attended to as it ought to be. In the pursuit of agriculture there are as negligent and indifferent farmers as other business men.—Some, indeed, appear to have no desire to succeed, or to make more than a mere from hand-to-mouth living; they never learn anything from the experience and example of their more energetic and thriving neighbours. They know enough, and hence are content to humdrum their lives away, leaving their children to pattern after them, unless they possess superior innate faculties of their own, and copy, in spite of the example of their parents, after those who have kept pace with the spirit of the age.

In passing through agricultural districts, the observant person sees many different phases of farming. He constantly notices where the eye and hand of the intelligent, attentive and successful farmer belong. He requires no guide to point out to him where the soil as well as the mind has been improved. He sees no failure of crops there unless through the visitation of agencies over which man has no control. Even severe drought has little effect upon his crops. Judicious manuring and thorough tillage and draining alone work these agricultural wonders. We have seen within two weeks and within less than ten miles of our office, the striking evidences of the two systems of farming. On one side of the road there was a field of

from twelve to fifteen acres of corn as fine as the eye could wish to rest upon; while on the other side there was another field, with the land naturally as good and well located, where there would not be more than half a crop. The reason for this discrepancy was as clear to us as the sun at noon-day.—*Late Paper.*

At Ohio Yearly Meeting of Friends, held at Mount Pleasant, on the 6th, and by adjournments to the 10th of Tenth month, inclusive. 1862.

(Concluded from page 77.)

The committee having charge of our Boarding School produced the following report, which is satisfactory, and the committee is encouraged, in view of the arduous labours they have to perform.

Report.—From the minutes of the acting committee, we find that the amount charged for board and tuition for session ending Third month 20th, 1862, for an average of about thirty-nine pupils is, \$1706 40

Articles sold and entertainment, . . .	158 20
Live Stock,	316 00
Provisions on hand,	228 00
Provisions consumed at Yearly Meeting,	86 00
Making,	\$2494 60

Live Stock and Provisions on hand at the close of last session,	\$396 37
Produce of Farm,	424 00
Provisions and contingent expenses,	602 70
Wages in house,	87 04
Wages on Farm,	51 61
Washing,	98 88
Repairs,	6 13
Taxes,	27 49
Salaries,	500 00
Making,	\$2194 22

Balance in favour of Institution, \$300 38

Amount charged for board and tuition, for session ending Ninth month 11th, 1862, for about thirteen pupils, \$488 09

Articles sold and entertainment,	135 13
Provisions on hand,	84 83
Live Stock,	366 00
Produce of Farm,	459 42
Making,	\$1533 47

Live Stock and Provisions on hand at the close of last session,	\$544 00
Provisions and contingent expenses,	193 49
Washing,	33 09
Wages in house,	54 25
Wages on Farm,	80 66
Taxes,	26 40
Salaries,	400 00
Making,	\$1331 89

Balance in favour of session, \$201 58

Balance in favour of Institution for the year, \$501 96.

From a settlement with the Treasurer, it appears there is due to Redstone Quarter, of Interest on Benevolent Fund, \$18 20

Short Creek,	21 05
Salem,	7 79
Springfield,	12 44
Fennsville,	62 20
Stillwater has overdrawn,	6 37

The committee appointed to ascertain the present financial condition of the Institution report, that

there are debts owing, believed to be collectable, to the amount of	\$761 88
Cash on hand,	455 45
Provisions,	84 83
Live Stock,	366 00
Produce of Farm,	459 42
Making,	\$2127 58

That there are debts owing by the Institution, including interest, to the amount of 2324 64

Balance of indebtedness, \$197 06

And by retaining the Live Stock, Provisions on hand, and Produce of Farm, which will be needed to carry on the school, the indebtedness would be \$1107 31.

Signed on behalf of the committee, ASA GARRETSON, Clerk.

Tenth month 8th, 1862.

A memorial of Short Creek Monthly Meeting, concerning Maria Hall, being approved by Short Creek Quarterly Meeting, and presented to this Meeting by the Meeting for Sufferings, was now read to our edification; and Nathan P. Hall and Asa Garretson are appointed to have 500 copies printed, divide them among the Quarterly Meetings, and call on the Treasurer for the amount of expense.

Then adjourned to two o'clock to-morrow afternoon.

Fifth day afternoon.

Friends again assembled.

The subject of receiving acknowledgments from persons residing too remote to attend in person, being introduced into the meeting and considered, it is now concluded to insert the following in our Book of Discipline, commencing on line twelve of "Acknowledgments," viz:—"But should the individual reside at too great a distance to attend in person, he or she may have the liberty of presenting the acknowledgment to the Meeting either by the committee or the overseers, as the case may be."

The Minutes of the Meeting for Sufferings since last year were read, and their proceedings approved.

The Representatives now produced the following report; which being satisfactory, the Friends therein named are appointed to the service.

Report.—"The Representatives having conferred together, are united in proposing that the following Friends be appointed to fill vacancies in the Meeting for Sufferings, viz: William Hall, Jr., Robert H. Smith, Richard B. Fawcett, Jesse Roberts and Edward Stratton."

Signed on behalf of the Representatives, NATHAN WARRINGTON, EDMUND BAILEY.

The Quarterly Meetings have responded to the call of this Meeting last year, and have forwarded the sum of six hundred and twelve dollars and twelve cents, to reduce the indebtedness of our Boarding School, which has been placed in the hands of the superintendent.

The Committee to settle with the Treasurer, produced the following report; which being satisfactory, our Quarterly Meetings are desired to raise their quotas of two hundred dollars, and pay it into the treasury; and the Friend proposed is appointed Treasurer.

Report.—"The Committee to settle with the Treasurer, having met and attended to their appointment, found in his hands one hundred and nine dollars and seven cents, and we unite in pro-

posing that two hundred dollars be raised the present year to increase the stock; and that William Hall, Jr., be appointed Treasurer."

Signed on behalf of the committee,

NATHAN HALL,
JESSE COPE.

The Committee on the appeal of Jesse Bailey, produced the following report, which is satisfactory, and the judgment of the Quarterly and Monthly Meetings confirmed; and Jacob Branson and Joseph Wilson are appointed to give him that information.

Report.—"The Committee on the appeal of Jesse Bailey, having all met (except one) and examined the proceedings of the Monthly and Quarterly Meetings in his case, heard his allegations and respondents thereto, were united in the belief that the judgment of those meetings should be confirmed."

Signed on behalf of the committee,

WILLIAM FISHER,
JERU FAWCETT.

Springfield Quarterly Meeting, refers to this Meeting the consideration of the subject of treating with those who separated from us in 1854. On deliberation, the Meeting concluded to appoint Amos Cope, William Blackburn, Frederick Maerik, Jesse Cope, Louis Taber, Isaac Mitchell, Nathan Hall, Robert H. Smith, Jeru Fawcett, Edward Stratton, Nathan P. Hall, Lewis B. Walker, John Patterson, Joseph Edgerton, Asa Garretson, Benjamin Hoyle, Nathan Warrington, John H. Stanley, Robert Ellyson, Barton Dean, Isaac Walker, Ellwood Dean, James Bowman and John Patton, to unite with a like committee of women Friends in taking the subject into solid consideration, and report their judgment thereon to next sitting.

Then adjourned to nine o'clock to-morrow morning.

Sixth day morning.

Friends again assembled.

The committee on the reference from Springfield Quarterly Meeting, produced a report, which, with a little addition, was united with and adopted, being as follows, viz:

Report.—"The joint committee on the reference from Springfield Quarter, in relation to treating with those offenders who separated from us in 1854, (effected as we believe from an attempt to introduce unsound doctrines into the Society,) all met, except one, and agree to report, that as the separation was made with a full knowledge of the circumstances leading thereto, and in opposition to much counsel and advice from the Yearly Meeting, we doubt whether the usual disciplinary treatment would be now availing; we therefore propose that information of such cases be forwarded by the overseers to the Monthly Meetings, and that they be furnished with a suitable minute therefrom, expressive of our desire for their restoration; and if after a suitable time is allowed, they are not brought to a sense of their transgression, and condemn the same, it shall be considered as a testimony of disownment against them."

Signed on behalf of the committee,

NATHAN HALL,
RACHEL GREEN.

Nathan P. Hall and Asa Garretson, are appointed to have 500 copies of the minutes of this Meeting printed, divide them among the Quarterly Meetings, and call on the Treasurer for the amount of expense.

The business of this Meeting having now been brought to a close, we feel bound to acknowledge the goodness of the Great Head of the Church, in

watching over and enabling us to result the different subjects that have come before us in a good degree of harmony and concension. The Meeting concludes, to meet again at the usual time next year, if the Lord permit.

GEORGE GILBERT, Clerk.

Leached Ashes.—Professor Buckland, the able editor of the *Canadian Agriculturist*, says:—"Wood ashes always contain a considerable amount of carbonate of potash, lime, &c., and are consequently very beneficial to such plants as require large quantities of these alkalis, such as Indian corn, turnips, beets, and potatoes. Leached ashes have lost much of the principal alkaline salts, and have been deprived of the greatest part of their most important soluble ingredients; still they must not be regarded as an unimportant fertilizer, and other matter which they contain is always more or less beneficial to the soil. Unless the land is well worked, and contains sufficient organic matter, we should not consider ashes, whether leached or unleached, as alone adequate to the production of a good crop of wheat, turnips, or corn. There is something about old leached ashes that we do not understand, though we have given the subject considerable attention. We have seen instances where old leached ashes have had an excellent effect on wheat, while unleached ashes seemed to do no good. We have thought that perhaps the potash and soda which had been washed out were replaced by ammonia and nitric acid from the atmosphere. The subject is one worthy of investigation. At all events, it is certain that leached ashes frequently have a very beneficial effect; and if the above hypothesis is true, the older they are the better."

Singular Phenomenon.—On the afternoon of Monday, the 9th of June, the hamlet of Aldreth, Haddenham, was visited by a severe thunderstorm. In this place there are two cottages standing in a lone place, occupied by Daniel Cockle and John Stokes, labourers. About five yards from Cockle's house, and in an adjoining field, there is a young elm-tree. The tree was struck by lightning; the fluid travelled from thence in a very indirect line to the furthest house, entering the back door, which was open. Ann Stokes, aged fourteen years, was standing in this room, not facing the doorway, but near the middle of it, and in a line with the door. The electric fluid struck the girl's lower extremities, paralyzing both feet, and producing an imprint upon the left leg and thigh of the colour of scarlet, and in every respect resembling the tree itself, viz: the trunk, the branches, and the leaves, and in the most beautiful model form it is possible to conceive. She has regained the use of her limbs, and the daggerroot-type appearance is fading away. Strange to say, her dress was not in any way injured by the electric fluid.—*Cambridge Independent.*

"Miserable is the case of that man who, when pursued with whole troops of mischief, has not a fort wherein to find succor; and safe and happy is he that has a sure and impregnable hold to which he may resort. How noble was the example of David.—Never man could be more perplexed than he was at Ziklag; his city burnt, his whole stock plundered, his wives carried away, his people cursing, his soldiers in a state of misery, pursued by Saul, cast off by the Philistines; helpless, hopeless and forlorn; yet David fortified himself in the Lord his God. There, there, O Lord, is a sure help in time of trouble, a safe protection in the time of danger. Let my dove once get into the holes of that rock, in vain shall all the birds of prey hover over me for my destruction."—*Hail.*

For "The Friend."

SMALL KINDNESSES.

"Written on receiving a gift of dried grasses."

Dried grasses for the winter,
A lightly drooping race,
So rich in modest colours,
And long enduring grace.

For us by dear one gathered,
By thy kindly feelings move,
Till their fair dry forms of beauty,
Grow fresh and sweet with love.

'Tis good, when flowers and grasses
Bloom round us as we go,
To treasure up the brightest
Which sweetly graceful grow,—

That dried in full ripe beauty,
They may with joy illumine,
The homes and hearts of dear ones,
Who could not see them bloom.

Those who but garner flowrets,
Or grassy forms of grace,
To make the fireside fairer
Of one of Adam's race,—

Fill up a sweet love mission,—
Home comforts to increase,
To soften sighs of sorrow,
And quicken smiles of peace.

No loving act can perish,
Even gifts of grass or flowers,
Bear precious seed to flourish,
And increase in after hours.

The love which one has shown us,
Oft warms us to our race,
Which our arms that kind act opened,
Fold the many in embrace.

Warm-hearted one, who seekest
A blessing to bestow,
On weary weeping pilgrims,
In earthly shades of woe,—

Hast thou no holy memories
Of mercies from above,
Which might sweetly draw these sad ones,
To the Prince of peace and love.

The records of God's kindness,
His love's unbounded scope,
Often light the darkest passage
With the beams of Heavenly hope.

Give but a word in season,
No trifle will it prove,
If the spring of faith it deepens,—
If it widen streams of love;

If in sorrow's heart recesses,
It gives the thanksgiving place,
For the sympathy of brethren,
And the Saviour's loving grace.

So to do small acts of kindness,
May we never more forget;
Let our love to all be shining,
As a star which cannot set;

Yea, a morning star, still pouring,
A clear and silvery ray,
Which fades not till in fulness,
Comes up the perfect day.

Statistics of Rome.—In the population of Rome by a recent statistical account, are included: 45,000 cardinals, prelates, priests, abbots, monks, and persons receiving greater or less incomes from the church.

10,000 women of religious orders.
1000 beggars, who pay for a first-class patent, empowering them to exercise their profession upon the steps of St. Peter's.

500/0 beggars, who pay for a second-class patent, admitting them to practice at the doors of the other churches, before the theatres, and in the streets, and other public places.

2000 women, who live by serving as models to painters and sculptors, or by begging, when that course fails.

29,000 soldiers, of all nationalities.

30,000 servants.

20,000 Jewish "pariahs."

50,000 Romans, called citizens, but having no art in administering the government, and most of them in a condition bordering closely on misery.—*Bulletin Evangelique de la Basse Bretagne.*

Krupp's Steel Castings.—The works of H. Krupp, at Essen, Prussia, have obtained a world-wide celebrity for the production of the most massive and perfect steel castings. His display in the London Exhibition has astonished and puzzled the English workers in steel. He exhibits a cast steel cylinder which weighs twenty-one tons, and it has been broken across to show its grain. Not a single flaw has been detected in it under the scrutiny of a magnifying glass. Steel shafts, rolls, alloy tires and wheels are also exhibited; also a steel cannon of eight-inch calibre. The processes by which such perfect steel castings are obtained has been kept somewhat secret.

The superiority of Krupp's castings is perhaps chiefly due to the perfection of the mechanism used, and the mode of conducting the operations. The smelting crucibles contain seventy pounds of steel each, and when a large casting is required, the organization has been carried to such a degree of perfection that at a given signal all the crucibles are ready to be lifted at the same time and poured into a large receiver, whence the steel flows to the mould. In bronze casting on a large scale, homogeneity of the alloy is obtained in the same manner.

The London Engineer states that Krupp's apparatus for making steel is the most gigantic in the world. He has a steam hammer which weighs 50 tons, and an anvil that weighs 192 tons, resting on eight blocks of cast-iron, each weighing 135 tons. The mould for a large steel casting is always made so as to avoid angles. It has been stated that puddled steel, made with a mixture of German cast iron, similar to Franklinite, is employed for these purposes.—*Late Paper.*

How to Admonish.—We must consult the gentlest manner and softest seasons of address; our advice must not fall like a violent storm, bearing down and making those to droop whom it is meant to cherish and refresh. It must descend as the dew upon the tender herb, or like melting flakes of snow; the softer it falls the longer it dwells upon, and the deeper it sinks into the mind. If there are few who have the humility to receive advice as they ought, it is often because they are few who have the discretion to convey it in a proper vehicle, and who can qualify the harshness and bitterness of reproof, which that corrupt nature is apt to revolt, by an artful mixture of sweetening and agreeable ingredients. To probe the wound to the bottom, with all the boldness and resolution of a good spiritual surgeon, and yet with all the tenderness of a friend, requires a very dexterous and hasty hand. An affable deportment and comeliness of behavior will disarm the most obstinate; whereas if, instead of calmly pointing out their mistake, we break out into unseemly sallies of passion, we cease to have any influence.—*Late Paper.*

Prayer, at this day, in pure resignation, is a precious place. The trumpet is sounding; the call goes forth to the church, that she gather to the place of pure inward prayer; and her habitation is safe.

For "The Friend."

Annual Report of the Female Society of Philadelphia for the Relief and Employment of the Poor.

The Managers of the House of Industry, in preparing their Annual Report, feel they have renewed cause for thankfulness to our Heavenly Father, for favors received during the past winter.

In these times of unsettlement, our Institution, like many others, has suffered financially; and on this account a fear was felt, lest our labours should be much restricted, and it was concluded to open the House, with the limited number of 30 women, on the 30th of Twelfth month, 1861.

An appeal for assistance was published, which met with a prompt and generous response, enabling us to give employment to more than twice the number at first proposed; for we find when the House closed on the 4th of Fourth month, 1862, there had been 80 women who had received help. Many of these through age or infirmity, were rendered incapable of active exertion, some of whom had depended for twenty winters, upon work received at this Institution, and by their orderly conduct, manifested a deep feeling of gratitude for benefits received.

Our matron, Ann Burns, is still with us, faithfully discharging her duties, which she has done with much satisfaction, for thirty-six years.

There have been 27 children comfortably taken care of by our nurse, all of whom, as well as the women, receive a good warm dinner daily. Eighty-seven pairs of shoes were distributed among them.

The sewing circle met at the close of the afternoon meetings; it has not only proved a source of profit to the Society, but, also, of much enjoyment to the members. The sale of useful and fancy articles amounted to \$121.93, the profit on which, was \$114.85. The whole number of pieces of sewing completed by the women, was 671; they quilted 11 bed quilts, 29 skirts, and 92 comfortables.

We renewedly thank our friends for their kind liberality during the past year, and will remind them it is to them we look for ability in the coming time; as we depend mainly on the sales from our store, subscriptions and donations received to aid us in carrying on this charity. We believe by keeping in view the object for which this Institution was organized, that is, humbly desiring to succor the distressed, our Society will continue to know this declaration to be true, "Blessed is he who considereth the poor, the Lord shall deliver him in time of trouble."

A stock of comfortables, wrappers, skirts, &c., is kept for sale at the store, No. 112 N. Seventh St., where, also, donations will be thankfully received.

Potatoes, turnips and other vegetables from friends in the country will be very acceptable.

Logwood as an Antiseptic.—Dr. W. N. Coté, the intelligent Paris correspondent of the *British American Journal*, says, in a recent communication: "Your readers may recollect the interest excited among professional men when Dr. Deucaux discovered the antiseptic qualities of coal-tar, a mixture of which with plaster being applied to the most fetid sores will at once dispel the offensive smell, and at the same time contribute to the speedy cure of the part affected. The Academy of Sciences has now received a paper from Dr. Desmartis announcing that logwood or campeachy (*Hæmatoxylon Campeachuanum*) possesses the same valuable property, and in a much higher degree. This fact was discovered by accident; Dr. Desmartis had several cancerous patients under his care, all

presenting large ulcerous sores, emitting a most nauseous smell. An astringent being considered expedient, a pomatum composed of equal parts of logwood and hog's lard was applied to these sores; whereupon, to the doctor's surprise, the fetor disappeared completely, and the emission of pus was much attenuated. To complete the evidence, he suspended the use of the pomatum for a few hours only, when the offensive emanations immediately recommenced, and the purulent secretion became again abundant. Logwood, as he has now ascertained, causes gangrene, especially that of hospitalis, to disappear, as if by enchantment. Dr. Desmartis has also found it efficacious in preventing or stopping the erysipelas which often occurs after amputation, or the infliction of other wounds, and is a source of constant anxiety to the surgeon. It entirely removes the putridity of ulcerous cancers emitting characteristic effluvia, and, in short, of the most fetid sores. This substance also possesses the advantage of being capable of mixture with hæmostatic remedies, such as ergotine, perchloride of iron, persulphate of iron, &c.; it may also be used as a powder and a lotion. The extract of hæmatoxylon, which is much used in dyeing, and is very cheap, is soluble only in warm water."

Grand Secret of Holy Living.—It is to obtain and retain the perpetual presence, fullness, and illumination of the Holy Ghost.

"He shall abide with you forever."

1. He will subdue your lusts and propensities. "Walk in the spirit and ye shall not fulfil the lusts of the flesh."

2. He will impart liberty. "Where the Spirit of the Lord is, there is liberty."

3. He reveals the things of Christ. "He shall receive of mine and show it unto you." "He shall testify of me."

4. He presents the truth of God, and the things of God to the mind. "Even so the things of God knoweth no man, but the Spirit of God." "But God hath revealed them unto us by his Spirit."

5. He imparts light and wisdom. "He shall lead you unto all truth."

6. He sustains in the hour of affliction. "And he shall give you another Comforter, that he may abide with you forever."

7. He imparts the virtues of a holy character. "The fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance."

8. He gives the witness of adoption and salvation. "The Spirit beareth witness with our spirit, that we are the children of God."

9. He imparts the divine unction—the heavenly signet to the soul. "Ye are sealed with the Holy Spirit of promise."

10. He is the source and author of all love to God. "The love of God is shed abroad in our hearts by the Holy Ghost which is given unto us."

11. He is the source of strength and success. "Not by might, nor by power, but by my Spirit, saith the Lord of hosts."

12. His presence and work make the soul a temple sacred to the service of God. "Know ye not that ye are the temple of God, and that the Spirit of God dwelleth in you? If any man defile the temple of God, him shall God destroy; for the temple of God is holy, which temple ye are."

Be careful my dear reader, and do not grieve the Spirit, but "work out your own salvation with fear and trembling, for it is God which worketh in you, both to will and to do of his own good pleasure."

Come, Holy! Ghost, all-quickenng fire,
Come, and in me delight to rest;
Drawn by the lure of strong desire,
O come and consecrate my breast,
The temple of my soul prepare,
And fix thy sacred presence there.

—Northern Christian Advocate.

The Gulf Stream.

As the best known and longest studied of oceanic currents, the gulf stream affords us a perfect picture of the other, perhaps greater, but less appreciated rivers of warm and cold waters, which traverse our seas. Heated in a tropical furnace to about 86 degrees Fahrenheit, a current of hot water, with a sharply defined edge on either side, and flowing over a cushion of cold water running down from the arctic zone, rushes with a force equal to that of the Amazon, but with many times its volume, out of the Gulf of Mexico along the shores of Florida. There, curving upon a great arc to the northeastward, it flows three thousand miles into the 40th degree of north latitude; yet such is the volume of that heated water, that its temperature through so long a journey only falls to 53 or 54 degrees. In that latitude the gulf stream overflows its banks, and, faring out over many thousand square leagues, it diminishes much in heat and velocity, yet reaches our shores, retaining enough of the former to rescue us from the horrors of a Labrador climate—to keep our seas open up to the 60th degree of latitude, when, on the opposite side of the Atlantic, the American continent is sealed up with ice nine hundred and sixty miles south of the Orkneys; and that warm current of water causes the vapour-laden atmosphere of Britain, which, although much abused, it is still, we believe, preferable to the six months of frost to which Canada and Russia are subjected in its similar latitudes. Such a torrent of hot water traversing the Atlantic wastes, naturally occasions great perturbations of the atmosphere, and the gulf stream may justly be called "a foul weather breeder." The English trader knows this well; but it must come much more home to the American navigator, because, on either quitting or sailing towards his shores, he has invariably to traverse the gulf stream, and stretch across a belt of cold water, the arctic current, which intervenes between it and his home. There, and especially in the winter season, the storm, cyclons, and cross-currents raise such a sea as shatters the best founded barque, and tests the skill and hardihood of the seaman. From New York to the Bay of Chesapeake, snow-storms and gales are encountered which mock all human skill and nerve. The trader from the Pacific, or China, finds herself in a few hours an ice-encumbered wreck, with a crew paralyzed by cold, and, but for the beneficent gulf stream, would assuredly be lost. Then the cunning master-mariner, undismayed by the battle of the elements, occasioned by the contact of the gulf stream with the arctic current, turns his ship's prow again towards the former, and confidently steers towards its well defined limits.

"His barque reaches its edge, and almost at a bound passes from the midst of winter into a sea at summer heat. Now the ice disappears from her apparel; the sailor bathes his stiffened limbs in tepid water. Feeling himself invigorated and refreshed with the genial warmth about him, he realizes, out there at sea, the fable of Antaus and mother Earth. He rises up and attempts to make his port again, and is again perhaps as rudely met and beat back to the north-west! but each time that he is driven off, he comes forth from this stream, like the ancient son of Neptune, stronger

and stronger, until, after many days, he at last triumphs, and enters his haven in safety—though in this contest he sometimes falls, to rise no more, for it is terrible!"

Such, in brief, is the cause, the purpose, and some of the phases of this river of the sea. We must pass on to other features as wonderful and strange—although, before doing so, we cannot help remarking, that if these currents which flow through the surface of the waters are awe-inspiring, how much more so are the still more mysterious "under-currents," some of which, rolling over the rugged surface of the earth's crust beneath, bear up the surface waters which are super-imposed, and occasion those strange "overfalls," or "ripples," whose waves, even in calm weather, will throw their crests upon the decks of tall ships, and the force and direction of which the inquiring mariner may occasionally ascertain, by lowering objects down through the ocean, until they are gripped and swept away in the submarine river.

Capitally do the officers of the United States brig Dolphin describe such a recent experiment. They sent a log of wood five hundred fathoms down in the Atlantic, and attached a cask as a float to the upper end of the line. Down sinks the loaded log of wood through the still depths of the upper waters, until it strikes a seam of under-current. It is then at once grasped by mysterious hands, and, to the astonishment of the sitters in the boat, the float moves off at the rate of a mile, and sometimes two miles an hour, up in the eye of the wind, and in spite of the wash of the sea! Well might the blue jackets rub their eyes, and wonder what monster of the deep had swallowed the tough bait, and doubt the explanation given by their officers; for even we, who may daily witness two currents of air overlaid, carrying the clouds in opposite directions, or observe the mountain tops lashed by a storm, whilst the valley rejoices in calm, cannot help expressing admiration and wonder at a system of circulation in the ocean, more grand, because more mysterious than the circuits of the winds.—Blackroot.

The Zodiacal Light.—This phenomenon, to which M. Faye has recently called the attention of the French officers now in Mexico, consists of a cone of whitish light, having the sun for its base, and generally perceptible at sunrise and sunset, during the equinoxes. In our latitudes, it is of rare occurrence, but the nearer we get to the equator, the more remarkable is the splendor of the phenomenon. Within the tropics it is almost permanent. The most singular theories have been imagined to explain the appearance of this cone in the heavens. Some have considered it a kind of perspective projection on the celestial canopy of one or more rings of cosmoal matter, circulating round the sun, much in the same way as Saturn's rings revolve around that planet. According to others, the zodiacal light is simply an immense solar atmosphere, strongly depressed, of a lenticular form, and constituting the matter which feeds the sun. This is the theory of Messrs. Mayer, Waterson, and Thomson. Others again, consider the phenomenon to be purely terrestrial. Lastly, G. Jones, of the United States, imagines the zodiacal light to be owing to the existence of a very fine ring of nebulous matter circulating round the earth, and within the orbit of the moon. Which of all these views is the true one, further observation will decide.

Creating power drew the world out of nothing, but converting power frames the new creature out of something worse than nothing.

Cause for Sorrow and Heaviness.—Our little Society has been from the beginning, as a garden enclosed by our wholesome discipline, but how have we slept whilst the enemy has made great encroachments, and broken down our wall in many instances, and caused the living to go heavily on their way. The spirit of a suffering Lord in the hearts of his people, leads to an inward exercise for the salvation of mankind. Thus, when we be held a visited people, entangled by the things of this world, and thereby rendered incapable of being faithful examples to others, sorrow and heaviness are often experienced; and so, in measure, it filled up that which remains of the sufferings of Christ. Can our hearts endure or our hands be strong, if we desert a cause so precious, if we turn away from a work in which so many have patiently labored.—Mary Hagger. F. L., vol. 7, p. 449.

Natural Wonders of Kentucky.—The geological formation of the country is singular. Ponds with no visible inlet or outlet are very frequent. Holes in the ground, called "sink holes," are very common; and some of these lead to the great caves which abound in this region. Boys pick up lead-stone from the ground at most any point. Surveyors are often troubled from this cause. "Sink Holes" extend into the earth from ten to three hundred feet, with sometimes a spring or small stream at the bottom. Two of these, near Moundsville, excite a good deal of curiosity. One, on an eminence called the Frenchman's Knob, has been descended two hundred and seventy-five feet without discovering any indication of a bottom. Another, near the town, is some seventy-five feet in diameter at the top, and inclines like a funnel to the depth of thirty feet. At this point is an aperture twelve feet in diameter, leading to unknown depths below. A stone or rock cast in returns no sound indicative of having found bottom. Near the same place is a spring that rises some twelve inches at noon every day with as great regularity as the sun passes the zenith.

Shoddy Explained.—A London correspondent of the New York Letter writes: "You have heard not a little about 'shoddy.' J. Rhodes, of Merley, near Leeds, England, exhibits in the International Exhibition a compact machine for performing the first process toward converting old rags into new cloth. The stuff here produced is called 'Mungo,' a better kind of 'devil's dust.' The fibre of the latter is extremely short, so short as to give it the name of dust. The mungo is larger fibered. It enters largely into the composition of all the commoner cloths now made in England, and mungo may be said to be the principal wear of seven-tenths of the English people. Any body who buys a ten dollar suit buys mungo. The rags being cut in pieces three or four inches square, and placed in the hopper of the rag-grinding machine, are torn in shreds and gradually turned into short fibres by means of strong toothed combs which cross one another, rollers and blowers. Thus it comes out not unlike cotton batting, or more like the stuff that accumulates in the corner of your pocket, being the soft surface rubbed off the material of which your pocket is composed. Then it passes into picking machines, slubbing-horses, billys, tenderhook woolleys, and shake woolleys, and finally comes out 'this,' as the man in charge of the machine said, taking me by the sleeve of my black broadcloth coat, to my extreme disgust. Alas, alas, who ever more may put his trust in tailors!"

Attending Religious Meetings Carelessly.—Desiring to be with her father alone, she told him of

exercise of her mind, which she had felt for attending religious meetings so carelessly. She thought it was mockery to sit in such an indolent manner, and let the things of the world take up the attention of the mind; for which she had it uneasiness, as much, she thought, as for anything she had done amiss. She signified that, when times she endeavoured to be more gathered in her mind, the enemy got in and obstructed it; and that she found herself so weak through unwatching at other times, as not to be able to withstand his suggestions.—From a memorial of Abigail Knight.

Salt in Michigan.—The manufacture of salt promises to be a large business in Michigan. The existence of it on Sagamore River has been suspected for some years, but not actually discovered until last fall. The deposit is found along the river for twenty-five or thirty miles. It is found at a depth of from 300 to 500 feet by boring. Some enterprising individuals last fall sunk a shaft about 60 feet to a rock lying over the salt deposit, and then through the rock 200 feet more, and found the strongest and purest kind of brine. It does not rise to the surface, but is pumped up, and salt made from it of the finest quality. The high price of salt has stimulated enterprise, and now about 3,000 barrels are made daily, with a prospect that in a year the quantity will be doubled. It sells readily on the ground for one dollar per barrel, and is chiefly sent westward.—N. Y. Tribune.

For "The Friend."

William Hunt.

The awakening calls of Divine Grace are granted to the children of men at the third, the sixth, the ninth, and even at the eleventh hour of the day of their natural lives. Happy are those, who, like the individual of whom we now propose to give a biography, from very early years, give up to the heavenly visitations, and continue faithful to the loss of their earthly existence. The parents of William Hunt removed from New Jersey to Monocacy, in Maryland, where he was born about the year 1753. Some accounts of this friend, speak of him as being born in Pennsylvania; which error probably arose from the fact that the Meeting of Monocacy of which he was born a member, was then a branch of Philadelphia (Early Meeting). When about eight years of age, a powerful visitation of awakening Grace was granted him, which appears to have been under the ministry of Ann Moore. This eminent minister of the gospel, whose maiden name was Ann Herbert or Harbert, was born in Bucks county, Pennsylvania, in 1710. After her marriage she removed with her husband to Monocacy, where, after a few years she came forth in the ministry. William Hunt speaks of her as his spiritual mother, and she appears not only to have been made use of in his first awakening, but to have been a nursing mother to him for some years. His mother died when he was very young, and his father, when he was about twelve years of age. After this he was taken to reside with his brother-in-law, Thomas Thornburg, in New Garden, North Carolina, who with his wife were like parents to the young boy.

He was deprived of his earthly parents, but the Lord was as a father to him; and the extendings of Divine love, and the openings of the Holy Spirit were greatly manifested to his mind when about eleven years of age. It is related, that he had at that time clear views granted him, of the harmony of the creation, as well as of the wonderful working of the Creator of all, for the salva-

tion of his creature man. As he abode in faithfulness under the teachings of the Holy Spirit, his spiritual knowledge increased, and he was prepared for usefulness in the Church of Christ. Soon after he was fourteen years old, a gift in the ministry of the Gospel was committed to him, in the exercise of which, through humble watchful obedience, he became eminently useful.

He probably first spoke in this way, sometime in the year 1747. The first indication we find of his travelling abroad, was a religious visit to Virginia, in the year 1752, he being then about nineteen years old. After the close of that year, his mother in the Truth, Ann Moore, with her fellow-minister and companion, Sarah Bolton, visiting the churches to the South, gave William an opportunity of being again with her. Ann Moore and family had removed back into Pennsylvania, and she was, at the time she paid this visit, a member of Abington Monthly Meeting, as was also her companion.

After these Friends had finished their visit to the South, and were returning home, William Hunt committed to their care a letter to his friend, William Stanley, who resided at Cedar Creek, in the Province of Virginia. A few months afterwards, he addressed a second letter to the same friend, of which a copy has been preserved.

Tenth of Fourth month, 1753.

My dear and well-beloved Friend:—In the sweetness and oneness of spirit, do I salute thee at this time, and also acquaint thee, that I am reasonably well at present, through Divine favour; and the nearness and dearness that I feel to thee, cause me oftentimes to retire alone in secret, where my cup is made to overflow, and I am near in spirit, though absent in body, deprived of the sweet conversation one of another,—which seems, I think, the greatest enjoyment we have in this life. Oh! my dear and loving friend! great has been the travail and exercise of soul and spirit which I have had since I saw thy face. So great, that sometimes I am ready to give out, and conclude I never shall be able to go through so fiery a trial. Many bitter cups I have drank, but this seems the bitterest that ever I had; provings within and trials without. These bow me very low at times, so that I could desire, if it were my dear Redeemer's will, [that he would] take me away from this troublesome world, which would put a period to all my exercises and trials, where I might remain with Him forever. Indeed, I find little else but tribulation and trial in this life. But my loving friend, the Lord hath a glorious work for us to do for his holy name and truth's sake upon the earth. If we can be so wise as to be faithful to him, he will make us as valiants in Israel for the cause of Truth. Therefore, my dear friend, be not discouraged, because of trials that do abound, for know this, that the Lord will have a proved people upon the earth, who will not turn their backs in the day of battle. Therefore let us wait in true faith and patience to hear the still small voice that speaks when the mind is brought down into true silence of all flesh; drawn from earth heavenward, to wait upon the Divine Being,—to feel the arising of Light and Life with dominion, which will give power and victory over every unclean spirit;—and chain down the old accuser of our brethren. So my dear and well-esteemed friend, in the aboundings of love and love, I write this, not thinking myself worthy to advise thee on these things, [but believing that] we may communicate a little to each other concerning our pilgrimage through this vale of tears and tabernacle of grief, for the confirmation and consolation of each other in the everlasting Truth of our God, who hath made known the riches of

his goodness to us. My beloved in the Lord Jesus Christ! let us not think that he hath forsaken us, because he is pleased to bring us through the fiery furnace of trial, for the purifying the inward man, so that we may be made clean and fit temples for the Lord of Life and Light to dwell in,—and [be prepared] to receive the pure wine of the kingdom for the nourishment of the soul. So, my dear friend! in the love and life, I exhorted thee to be good cheer under thy trouble and exercise. Not [indulging] in folly, but bear about the marks of our dear Redeemer, in all meekness and humility, knowing that all that can happen to us here, is as nothing in comparison to the crown of immortality and eternal bliss,—which we shall receive as a reward,—if we are faithful and faint not.

The cause, in some measure, of my present exercise, is that Satan, who labours every way to lay waste the heritage of God, hath sown his seed and raised discord among the brethren, to the bowing down the faithful children of the Most High. Oh! the bitterness which he hath caused in some hearts against me. I know not for what, except it be for the trial of my faith.

I had not read thy letter, neither first nor last, when I wrote my letter to thee by Ann Moore. When I saw [thy letter] I greatly rejoiced, being thankful to God, that he was pleased to put it in thy heart to write for my encouragement. As for my coming to those parts next summer, I cannot tell; but it rests with weight and sweetness upon my mind to visit you again. But I must wait the Lord's due and appointed time, until then, I dare not move. I have written

"Much more than at the first I did intend,
And yet I scarce can freely make an end."

But I must conclude, Thy ever well wishing friend and brother in the tribulation and patience of Holy Jesus,

WILLIAM HUNT.

Remember my kind love to all your family;—in particular to young David Tyrrell, John Harris and his sister. I should be glad to receive a few lines from thee as often as opportunity permits.

(To be continued.)

Curious States.—The *San Francisco Alta California* publishes that on the ocean beach of Oregon, between Port Oxford and Goose Bay, the surf is continually casting up little rows of variegated stones, prettily rounded by the action of the sand and water, and exhibiting all the hues of gems. They average the size of common beans, and are generally transparent, scintillating in the sunlight with the colours of the ruby, the sapphire, the amethyst, and the emerald. Sometimes a perfectly round one is found, of an amber colour, and clear as glass. After a heavy gale they may be gathered by the bushel. They are only to be found along a stretch of coast about twenty miles in length. In a glass dish filled with water, and placed where the sun can strike obliquely upon them, they reflect a variety of beautiful rays, and create a miniature rainbow, or a combination of light resembling one, in their effects.

What is in the Moon.—The comparative proximity of our own satellite, the moon, has necessarily rendered it an object of the greatest interest, and it has, perhaps, in a greater degree than the other celestial orbs, been subjected to the scrutinizing observations of the telescope. Since the completion of the great instrument of Lord Rosse, that nobleman has frequently observed it, and its appearance, as seen by the great telescope, is thus described by Dr. Scoresby:—

"It appeared like a globe of molten silver, and

every object of the extent of one hundred yards was quite visible. Edifices, therefore, of the size of York Minster, or even of the ruins of Whitley Abbey, might be easily perceived if they had existed. But there was no appearance of anything of that nature; neither was there any indication of the existence of water, or of an atmosphere. There was a vast number of extinct volcanoes, several miles in breadth; through one of them there was a line, in continuation of one about one hundred and fifty miles in length, which ran in a straight direction like a railway. The general appearance, however, was like one vast ruin of nature; and many of the pieces of rock, driven out of the volcanoes, appeared to be laid at various distances."

We have here a strong, nay, a complete confirmation of the most interesting recent discoveries of the continental philosophers, Maedler of Dorpat, and Baer of Berlin. The result of their curious and elaborate observations has been a map of what may now, without a figure, be called the geography of the moon, in which the surface of that satellite has been laid out with as much accuracy as that of our own globe. Of this map, a singular triumph of human ingenuity, Dr. Nichol has given a reduced copy, besides a number of plates, representing on a larger scale special parts of the surface. The general character of the moon is highly irregular, marked by huge mountains and pits, the height and depth of which have been accurately measured. About a third part only of the surface presented to us is comparatively regular, this regular portion being plains, and not seas, as was formerly imagined. There is no appearance of water; and although astronomers are divided in opinion about the existence of an atmosphere, we are to conclude that the moon is not in its present state adapted for the abode of organized beings. With regard to the mountains, a great number of them are isolated peaks, such as Teneriff; mountain ranges, of which some reach a great elevation, are also present in the moon, though not a chief feature in its surface. At least three-fifths of its surface are studded with caverns, penetrating its body, and generally emergent at the top by a great wall of rock, which is serrated and often crowned by lofty peaks. These caverns or *craters* as they are called, vary in diameter from fifty or sixty miles to the smallest visible space. And it is also remarkable that as they diminish in size they increase in number.—*English Quarterly.*

He is truly good, who hath great charity; he is truly great, who is little in his own estimation and rates at nothing the summit of worldly honour; he is truly wise, who "counts all earthly things but as dross, that he may win Christ;" and he is truly learned, who hath learned to abandon his own will, and to do the will of God.—*Kempis.*

THE FRIEND.

ELEVENTH MONTH 15, 1862.

SUMMARY OF EVENTS.

FOREIGN.—LIVEROOL dates to Tenth month, 25th. The weather in Great Britain had been very stormy, and numerous marine disasters were reported. The Liverpool ship *Pencilwood*, had been wrecked, and twenty-eight of the crew perished. The insurance on American ships the ravages of the pirate Alabama. In consequence of Simon Cameron, United States Minister to Russia, has returned to the United States on a furlough. He says that the Russian nation continues friendly to the United States, but that in Europe generally, there is a growing

feeling in favor of intervention. It is generally understood in England, that a rebel naval attack on one or more of the British cities of the United States is in preparation. Three immense iron-clad rams, the most powerful ever constructed, are building in English shipyards, for this supposed purpose. There is an association in Liverpool, numbering nearly 200 members, who provide funds to furnish vessels to run the blockade of New Orleans. The Liverpool cotton market was steady. Sales of the cotton in the Fair Orleans, 2nd; uplands, 27d. Stock in port, 316,000 mark of which 16,500 were American. The quotations for breadstuffs were nearly unchanged.

It is stated that the French Emperor has assured his ministry that there is nothing re-actionary in his present policy respecting Italy, but that he has in any hurried step with regard to Rome. In consequence of these assurances, Persigny and Fould have consented to remain in the Cabinet. A letter received in Paris from St. Petersburg, dated the 13th ult., gives some details respecting the reforms introduced by the Czar into the administration of justice. Trial by jury is to be established as it exists in France. The administration of justice is to be completely independent of the Government. Magistrates have been appointed for the examination of criminal matters. All judicial proceedings are to be held in public. The judges hold their appointments for life, and are not to be removed from one bench to another without their own consent.

UNITED STATES.—The Army.—Gen. McClellan has been removed from the command of the army of the Potomac, and Gen. Burdise has been appointed to succeed him. It is stated in explanation of Gen. McClellan's removal, that he had failed to comply with the peremptory orders of Gen. Halleck, Commander-in-Chief, by whom he was directed, soon after the battle of Antietam, to cross the Potomac and give battle to the rebels without delay. Gen. Halleck, in a letter to the Secretary of War, states that adequate supplies of all kinds had been promptly sent to McClellan's army, and that in his opinion, there had been no such want of necessaries, as to prevent his compliance with the orders to advance to meet at Cincinnati, to inquire into the conduct of Gen. Buell, in reference to his permitting the invasion of Kentucky by the rebels, his failure to relieve Munfordville, and Tennessee. Gen. Hooker, Commander-in-Chief, of the command of the Army Corps, heretofore commanded by Gen. Fitz John Porter, who has been ordered to Washington to stand his trial upon the charges preferred against him by Gen. Pope, for misconduct at the battle of Bull Run.

Virginia.—The advance of the U. S. army in Eastern Virginia, has been attended by a number of partial engagements, in most of which the rebels were defeated. At the close of last week, the division of Gen. Pleasanton had reached Little Washington, in Culpepper County, and Gen. Bayard had reached the Rappahannock river, and held the bridge of the Orange and Alexandria Railroad. Nothing seems to be certainly known of the position of the main rebel army, and though it is believed to have left Winchester, and to be concentrated around Gordonsville. It is rumored that it has been reinforced from Bragg's army in Eastern Tennessee. The Kanawha Valley, Western Virginia, has been again occupied by the United States forces.

North Carolina.—On the 29th ult., an expedition of 1200 men, and several gun boats, left Newbern, partly by land and partly by water, and which it was conjectured, was destined for Goldsboro.

Tennessee.—Late advices from Port Royal, state that yellow fever was making sad havoc among the U. S. troops. Gen. Mitchell, and a considerable number of officers had died of the disease. Gen. Hunter has been ordered to South Carolina, as Gen. Mitchell's successor. **Kentucky.**—The rebels are reported as having crossed from Tennessee with a large foraging train into Whitley County, Ky., to forage that county, and along the Cumberland river. Seventeen hundred rebel prisoners taken by Gen. Buell, were about to be sent by water to Vicksburg. There were about 1000 more prisoners to be sent to the same place.

Tennessee and Mississippi.—A large rebel force, commanded by Gen. Johnston, and recently made an attack upon Nashville, but were repulsed. The rebel Maj. Gen. Cook's division of the army of Kentucky is reported to have since reached Nashville. A rebel army of 50,000 men is reported to be collected at Holly Springs, Miss. At the latest dates, a large portion of Gen. Grant's army is now moving in that direction for the purpose of dislodging them.

Missouri.—In consequence of the scarcity of forage in

Arkansas, the army of Gen. Schofield has moved back into Missouri. The rebels do not appear to be making attempts to repossess themselves of any part of Missouri.

The surrender of Harpers Ferry.—The military commission appointed by the government, to investigate the conduct of certain officers, and the circumstances attending the surrender of Harpers Ferry, have made their report. Col. Ford, who commanded on Maryland heights is severely censured, and his dismissal from the service is recommended. Col. Miles, the officer in chief command, and the other officers, are commended. The commission say the testimony of the surrender was made. The commission say, they failed to do so from the extreme tardiness of his movements.

The Minnesota Indians.—The military commission sitting at the Lower Sioux Agency on the cases of those Indians engaged in the late massacres in Minnesota, has found over three hundred of them guilty, and condemned them to death by hanging. Sentence it is said will be executed, unless the authorities at Washington direct otherwise.

The Telegraph to the Pacific.—On the 6th inst., a message was sent from New York to the associated press of California, which went direct from New York to San Francisco. The message was transmitted between four cities, and an answer was received in New York five o'clock, and an answer was received in New York between six and seven o'clock, being telegraphed direct from San Francisco without repetition. The distance is 3500 miles, being the largest circuit ever worked. The returning message was of considerable length, detailing the events of the day.

New York.—Mortality last week, 300.

Philadelphia.—Mortality last week, 247.

The Markets, &c.—New York.—The immediate effect of the News of Gen. McClellan's removal from the command of the army, was a rise in gold, and a fall in the price of securities, and a moderate subsidence. Gold rose two per cent., selling at 133½. Foreign Exchange rose at 146½ a 147; U. S. sixes, 1881, 163; 7/30 Treasury notes, 103½ a 104. On the 10th inst., cotton sold at 69 cts. a 62 cts.; Chicago spring wheat, \$1.20 a \$1.27; red winter western, \$1.40 a \$1.45; white Michigan, \$1.50 a \$1.51; corn, 60 cts. a 61 cts.; mixed corn, 75 cts. a 73 cts. **Philadelphia.**—Wheat, red winter, \$1.40 a \$1.46; southern, \$1.50 a \$1.52; white, \$1.65; 7/30 yellow corn, 75 cts.; barley, \$1.50; oats, 40 cts a 42 cts.

RECEIPTS.

Received from A. Garrettson, Jr, for Jos. Edgerton, \$2, vol. 36; from J. Alf. Elreth, N. J., \$2, vol. 36; from Smith Union, Mary Upton, A. M. Underhill and Esther Griffin, N. Y., \$2 each, vol. 36; from Phebe Griffin, N. Y., \$2, No. 27, vol. 37; from E. Hollingsworth, O., for Hannah M. Peckose, vol. 36; from Maria red, who sold \$1.40, 35, and from B. Taber, M. D., \$2, vol. 36; from J. M. Hill, O., for M. Willis, Jno. Hoyle and Jno. Hoyle, Jr, \$2 each, vol. 36.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)
Physician and Superintendent,—JOSUAH H. WORKINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 24 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, on the 4th inst., at Friends Meeting House on Sixth St., RICHARD W. BACON and ELIZABETH C. THOMAS, daughter of the late William Thomas.

DIED, on the 10th of Eighth month, 1862, in the sixty-fourth year of her age, MARGARET, wife of Joseph Heacock, a member of Greenwood Meeting, Columbia Co., Pa.

—, on the 10th inst., at his residence in this city, Dr. ISAAC REMINGTON, M. D., in the fifty-ninth year of his age.

—, on the 7th inst., in the eighty-seventh year of her age, JANE JOHNSON, long an elder of the Monthly Meeting of the Western District.

WM. H. PILE, PRINTER,

Lodge street, opposite the PENNSYLVANIA BANK.

SEVENTH-DAY, ELEVENTH MONTH 22, 1862.

NO. 12.

PUBLISHED WEEKLY.

Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

From "Peaks, Passes, and Glaciers."

The Pizzo Bernina.

By EDWARD SHERLEY KENNEDY, M. A.

(Continued from page 82.)

After an easy walk from the high road of about six hours, we reached at six o'clock in the evening the so-called chalet of Boval, situated at a height of some 9000 feet above the level of the sea.

We were but just in time; almost immediately a storm burst forth in all its fury. The vapours whirled to and fro, and writhing, as if in pain, beneath the blast, were contorted into the most fantastic forms: white lightning played and under rolled around. The chalet, erected in the latest *alto-montana* style of architecture, opened wide as it could its sheltering portals. It was lonely deserted. The wind whistled through the joints of the stony walls; the fir-beams creaked their uneasy beds; the wooden shingles rattled on the roof; the rain drops pattered on the earthen floor; the log-fire, freshly kindled, filled the dwelling with pungent smoke.

The five—guides and travellers—completely hid the hut; at least Hardy and I had indulged ourselves in that persuasion. Presently, however, two herdsmen of the spot appeared upon the scene—fine-looking fellows of the Bergamesque type, presenting a marked contrast to their brethren in the western parts of Switzerland, with bright ruddy eyes, wide powerful jaws, white prominent teeth, and manly independent bearing. They wore high conical hats on their heads, and clattering wooden sabots on their feet; short black pipes in their mouths harmonized with their dark brown trousers, and long black cloaks on their shoulders presented no violent contrast to their dark brown legs, their high conical hats and the long black cloaks were dripping wet. We could not refuse their offers the use of their own familiar home, and accordingly they entered in. The goat-herd and shepherd were followed by the goats and the sheep; they likewise entered in. These were closely followed by a she-ass and her foal. Hospitality would be stretched no further. There is a limit to everything, except it be to an infinite ascending series, to the love with which such a series is regarded by the members of the Alpine Club. Hardy is usually more impatient than I; he accordingly called his pole and charged the latest intruders.

His relatives fled; but lo! he made a discovery. The western sky was beginning to glow with the rays of the setting sun, and the thick darkness and vapour were slowly rolling away to the east.

We quickly emerged into the open; stores were unpacked and preparations made for the evening meal. For the first time we had now an opportunity of taking a survey of our position. Conspicuously in the foreground, rising from a bed of moss and Alpine roses, and partially clad with lichen of varied hue, a huge irregular mass of rock arrested attention. At a rough estimate it was 150 feet long and 50 feet wide, with a broken and partially level surface, cleft and indented with numerous fissures and depressions. Standing upon this "coign of vantage," our position was not dissimilar from that occupied by a visitor to the Montanvert at Chamounix, save that we were at a higher elevation, and that our prospect was of a more extensive character. Looking backwards towards the north, the eye, following the whole lower course of the Morteratsch glacier, could discern, at the distance of some six miles, the abrupt termination which marked the ridge of its final ice-fall, and beyond this spot, the high road of the Bernina pass winding between the bases of the Langard and the Diavolezza. Towards the west the rock upon which we stood rose some twenty feet above the general slope of the ground, forming a shelter to our hut, which, nesting against its side, seemed, from its prevailing colours and general appearance, to form but a portion of the whole. On the east, the rock went precipitously down, and almost overhung the glacier some 500 feet below. Turning our faces southwards, we could trace the upward course of the glacier, with its ice-falls and its bergschrunds, its broken moraines and its shattered islets of rugged rock; the whole enclosed by a grand irregular semicircle of snowy peaks. On the left this amphitheatre rose the peaks of Mont Pers and the Pizzo Cambrens; in the centre towered up Pizzo di Pali, Pizzo Zupo, and the crags of the Crasta Gùzza; while the shoulders and ridges that fell away on our right were the outlying buttresses of the Pizzo Bernina itself.

It was a fine sight to watch from this elevated spot the tempest's departing squadrons, as they fled before the rays of the western sun. Even in retreat they yielded not without a struggle, but hurled their Partisan missiles against their conqueror, as flash and report, though at ever longer intervals, proved that the artillery of the storm was not yet silenced. And now, even in the moment of victory, when all above is clear in azure-brightness, he who has driven off the hosts of darkness, the mighty sun himself, sinks to rest. We who have witnessed this manifestation of his power, are not admitted to behold the splendour of his imperial throne; but glorious radiants, glittering excursions from his triumphal crown, crimson and purple emblems stream with gold, strike upwards, and proclaim upon the battle-field itself, in the very zenith of heaven, to whom the glory of the day belongs.

The murky darkness of the storm has passed away, but even while we look around, the last lin-

gering light of day is rapidly waning. The mellow softness of the evening twilight, while the air is untroubled by the slightest breath and the sky is illumined by a thousand twinkling stars, is shed upwards upon the scene. Now another and a deeper darkness enshrouds us. The living lights of space that burn like ether-floating lamps, alone are visible; for even the whitened peaks around—the last to disappear—are hidden from our sight.

The guides now kindled, with the pine-logs that they have carried up with them, a huge bonfire in the centre of our rock. The whole party at this time consisted of seven; the three guides, the two herdsmen, Hardy, and myself, and all of us negligently threw ourselves down upon the rock, where, wrapped in cloaks and rugs, we formed a picturesque group. Here we proposed to pass the night. The fire crackled and sparkled, the men smoked their pipes, and, to add to the hilarity of the evening, soon broke forth into songs and merriment. It has been mentioned already that our associates were of Bergamesque extraction. Can it be, that the influence of Donizetti of Bergamo was thus widely diffused among his countrymen, and that through the herdsmen's strains there floated musically the master's melody? At times all would, with tacit consent, relapse into utter silence, and then it was that a soothing, and almost a melancholy feeling, would steal over us as we lay, far from the usual haunts of men, with every object in our immediate neighbourhood shrouded in impenetrable darkness. At times a film would arise and almost suspend the sense of vision, at times a shadowy light diffused itself in a vague, unearthly way; and then, while the lamps of heaven hung suspended from the deep dark vault above, around us there seemed to tower up to a preternatural height the weird and spectral forms of ghost-like mountains.

I was pensively watching a white and shapeless mass floating high up in heaven, and dreamily speculating whether it were a cloudlet, or a snowy peak deprived by darkness of all apparent connection with the earth beneath when suddenly its upper limit was edged with golden brilliancy. It was the moon herself; and soon the full orb arose, throwing a flood of light upon every object around. The expiring embers were rekindled; a dead juniper tree was thrown upon the burning pile, and ten thousand glittering sparks, red, yellow, and purple, were carried aloft. Our spirits rose, and all, thoroughly aroused, looked forward with hopes of success to our ascent.

All feeling of sleepiness had vanished, and accordingly the guides seized the favourable opportunity, and recommended us to turn in for the night. Under the circumstances it appeared rather a facetious suggestion. However, it was half-past ten, and we adjourned to the hut, one quarter of which was occupied by a kind of seafoat, that, raised about three and a half feet above the floor, did duty as a bedstead. Upon this couch Hardy and I reclined. It was certainly a change for the better. Our eyelids were becoming heavy, when we were startled by a plaintive whine. A small white dog, with three sightless puppies, nestled

in one corner of the apartment, and the cry had been elicited as one of the hinds, throwing himself down in too great proximity to the nursery, had threatened to destroy the rising canine generation.

In a short time we were again in a dreamy dozing state, and past scenes recalled themselves to memory. How many a time had I sought to stretch my limbs upon these uneasy trunks, dignified by the natives with the name of beds! Memories of many similar scenes thronged the mind, as I now found myself again in similar circumstances. How the features of these spots are again and again repeated—the old familiar low central-spiked stools,—the well-known dull humming sound of half-suppressed voices—the same fitful glare from the pipe-jug fire, as the untended embers crumble to gether!

I seemed at times to be at Doyal; at other times to be in spots far removed. The deluding power of the enchanter obtained the mastery, and, obedient to the spell of his resistless wand, I was transported to the now well-frequented hut upon the Col du Mont Rouge. It was the recollection of an excursion in 1854, during which we had there taken refuge for the night. Stevenson and I, having made ourselves comfortable, had commenced our evening meal; but our companion Ainslie had departed upon an exploring expedition. Time had however elapsed, and we began to think that he ought to make his appearance; the reflection, however, did not greatly disturb us, for we had confidence in his powers. But, while cogitating upon his absence, it unexpectedly became our turn to feel that some evil was about to happen to ourselves; for most fearful sounds—hollow, crackling, rumbling—surround us; while detached fragments of the roof fall in and sadly damage our steaming mess of hot bread and milk. Is it an avalanche? Is it an earthquake? Is it a tempest that has suddenly arisen? And what too has become of our poor friend Ainslie? Thick darkness has lowered down, without warning, upon the earth; and overhead we hear that pattering of heavy drops which presages a hurricane; while on every side yawn vast chasms and precipices of unknown depth. Ainslie, however, though quite ignorant of the peculiar features of the spot, well knows the true direction of the chaflet, and is slowly and carefully advancing. He is soon on treacherous ground, for the good alpstock penetrates through the rotten surface. A few seconds more, and further progress is impossible. In vain he probes ahead, to the right hand, and to the left; on each side the stock pierces the rotten surface, and in front, even at his very feet, it goes down into a precipice of unknown depth.

In the mean time we have gone forth, lantern in hand, in search of our poor lost friend; and find him—on the gable-end of the hut, unconsciously poking down the stones of the roof into our mess of potage. Thus we discover the cause of the threatened tempest.

(To be continued.)

A good word for the Skunk.—And now that we have taken it upon us to look up the humble helpers of the farm, we must say a good word in behalf of that much-abused animal, the *Mephitis Americana*. You think at once of his bad name, of the eggs he has stolen, of the setting hens and turkeys he has broken up, of the roosts he has invaded, and the breezes he has polluted. The skunk is guilty of some misdemeanors, as all useful animals are. The cat catches your chickens; the dog runs mad, and destroys man and beasts with his virus; the horse runs away, smashes the carriage, and breaks your bones; the cow breaks down the shrubbery with her wicked horns, and the hogs

get into the corn. They are all very good creatures in their place, not so good out of it. The same can be said of our hero. Possibly, the hen-roost might have been made proof against vermin, and the fowls might have been confined to a yard—to your profit as well as to the safety of the eggs. If the eggs were out of place, the wandering animal, whose instinct prompts him to eat eggs, wherever he finds them, is hardly so much to blame as the owner of the eggs. The eggs which you leave at loose ends are only a fair compensation for his services. All summer long he roams your pastures at night, picking up beetles and grubs, poking with his nose potato hills where many worms are at work. He is after the grubs, not the tubers. He takes possession of the apartments of the woodchuck, who has quartered himself and family upon your clover field or garden, and makes short work with all the domestic arrangements of that unmitigated nuisance. With this white-backed sentinal around, you can grow clover in peace, and the young turnips will flourish. Your beans will not be prematurely snapped, and your garden sauce will be safe from other vermin. The most careless observation of his habits shows that he lives almost exclusively upon insects. While you sleep he is busy doing your work, helping to destroy your enemies. In any fair account kept with him, the balance must be struck in his favour. Thus among the animals we often find friends under the most unpromising appearances, and badly-abused men are not unfrequently the benefactors of society.—*Am. Ag.*

Parkesine.—This article is so completely in its infancy, that it is now exhibited for the first time, and for that reason hardly attracts the attention it merits. It is a substance of grey aspect, with certain phases of character which suggest cheap and inferior confectionery. Parkesine is obtained by combining oil, chloride of sulphur, and colodion, in certain proportions. A hardened mass is the result, which solidifies immediately. It is then capable of being used for nearly every purpose to which India rubber and gutta-percha can be applied, with the additional advantages of being excessively hard and indestructible, besides being—in thin plates—perfectly transparent. It is susceptible of being coloured, either with an opaque pigment or a transparent colour. It forms a varnish coloured or not, which is perfectly hard and impervious to moisture. For buttons, combs, knife-handles, and all other articles for which horn and ivory are generally employed, it is singularly valuable, as it is not only capable of being moulded into any required form, but possesses a hardness equal to iron. Its insulating properties are very great, and it is said to be quite indestructible by damp. The inventor has not yet completed his experiments on its uses, but it seems difficult to put a limit to them, especially when it is remembered that parkesine can be made for a few cents a pound.—*Cor. N. Y. Times.*

Curiosities of Nature.—Among the papers published in costly style by the Smithsonian Institute at Washington, is one on the microscopic plants and animals which live on and in the human body. It describes quite a number of insects. The animal which produces the disease called itch, is illustrated by an engraving half an inch in diameter, which shows not only the ugly little fellow's body and legs, but his very toes, although the animal himself is entirely invisible to the naked eye. When Lieutenant Berryman was sounding the ocean, preparatory to laying the Atlantic telegraph, the quill at the end of the sounding line

brought up mud, which, on being dried, became powder so fine, that on rubbing it between thumb and finger, it disappeared in the crevices of the skin. On placing this dust under the microscope, it was discovered to consist of millions of perfect shells, each of which had a living animal

William Hunt.

(Continued from page 87.)

William Hunt, we may observe, speaks of 16 great trials and baptisms in this letter. It doubt, is consistent with the Divine will and wisdom, that a large portion of these should be met out to the strong minded, fervent-spirited labourer in his gospel. These are, no doubt, intended to keep such humble, to render them meek and watchful over themselves. Those who think as speak strongly, are apt to make themselves enemies, or at least to awaken unpleasant feelings in the minds of those who feel that their actions are reproved by them. Such have great need of being often in the Lord's softening furnace, that the manner of reproof may be mollified, their hearts softened, and in a sense of their own weakness that they may learn to exercise great charity towards those, for whose everlasting welfare they are constrained to labour fervently.

Either in the year 1752 or 1753, William Hunt was engaged in a religious visit to Friends an others settled on the Pedee, in South Carolina having for a companion, William Hoggatt. A part of the journey, at least, he had the company of that eminent minister of the gospel, Abiga Pike, of Cane Creek, who with Martha Thoroto were engaged on a similar errand of gospel love. Of this journey, the first part is lost, the part preserved commences the day they reached the Pedee.

Sixth month, 27th. "Next day we rode about fifty miles to the house of our friend, Thomas Moreman, who received us very kindly, he is his family having had a desire to see some Friends for a long time. Blessed be God, who was pleased to fill my heart with deep supplication and prayer for the preservation of his little seed which he has sown in the earth. Eternal praise to his worthy name. He was pleased to favour me with his overcoming love as I rode along the highway. I was pleased to seal it to my spirit, before I left my habitation, that if I would go, his living presence should go with me. We staid at Thomas Moreman's the next day, [28th] and had a meeting with the few Friends there. It was a closely trying meeting, until the Lord's power arose with dominion, and then we had a sweet solid time. After meeting, we went home with John Moreman and his wife, and lodged at their house that night. Next day, [29th], we had [another] meeting at Thomas Moreman's, which was large for the place. It was close and hard for some time, until the Lord was pleased to arise with his living presence, and give victory over the power of darkness. After meeting, I and my dear friend, William Hoggatt went home with Andrew Moreman, who came, tained us very kindly. The next day, [30th], we rode down the river about 43 miles, to the house of Anthony Pounce. He was not at home, but his wife entertained us kindly, and we lodged there that night. The next morning, [Seventh mo. 1st] I went to see him where he was at work; I told him my business; he was very willing to have meeting at his house; and we had some discourses with which he seemed well satisfied. The next day, being the first of the week, and 2nd of the Seventh month, we appointed a meeting at his house. There had never been a Friends' meeting in those parts before, and the people seemed ver-

ange and restless a good while, until the power God gave victory over all. The meeting ended with solid prayer. The man of the house, Anthony Pounce, expressed a great deal of satisfaction with the meeting. We then set off, and turned up the river about eight miles, to the house of one John Plowman White, who entertained us very kindly that night. Next morning, [4d,] we went up to John Crawford's, about eight miles, where we had a meeting. It was pretty good, and the people sat very still and quiet, considering there never had been one of our meetings held there before. It was a good solid opportunity, [which] the Lord's power gave victory over all. Praising praises to his worthy name, who gave to us an innocent boldness to declare his blessed truth, in the demonstration of the spirit and power thereof. After meeting, the man and his wife were very kind and civil to us, and seemed well satisfied.

We staid with them and dined, and then rode about thirteen miles and lay that night. The next morning, [4th,] we rode about twelve miles to Thomas Moreman's house, where we had a meeting, in which the people seemed to sit down in awefulness before God. It began with the sweet overflowing of the pure love of God, which sprang up heart to those assembled. After we had some time, there came a great cloud of darkness over the meeting, which lasted until a man whose name was John Newberry rose to speak. After he sat down, I was deeply concerned to speak just an corrupt ministry, and feeling sweet love in my heart to the people, I invited them to the care of the true Shepherd, which was to be heard through their own hearts. After the meeting, John Newberry came to us in a contentious spirit, and made many high swelling words, and went away satisfied. Blessed be God forevermore, who is able to make manifest the works of darkness, and set his glorious power over all. We staid next day, [5th,] with our friend, Thomas Moreman, and the evening went home with John Moreman, the miles, and lodged there that night. The next morning, [6th,] we went up the river about seven miles, to the house of one James Denson, where we had a meeting. The people sat very still, considering there never was a meeting there before. It was a solid good opportunity, and concluded with fervent prayer. Blessed be the Most High, who was pleased to give me the reward of peace and solid satisfaction, which caused sweet songs of joy and praise to spring in my heart, unto the everlasting Being, who had brought through many deep and grievous trials in this journey. He alone is over all, blessed in himself, and in his Son, both now and forevermore. After meeting the people seemed loving and kind.

We set off for home, rode about nine miles, and lay that night in the woods. Next day, [7th,] we rode about forty miles, and lay at night in the woods. Next morning, [8th,] we were all brought unexpectedly into pure silence before God,—and we renewedly owned with his overcoming love, and laid abroad in our hearts. Blessed be his worthy name forevermore! We then rode about twenty miles, and came to William Reynolds', and lodged there that night. The next morning, [9th,] we parted with our friends Abigail Pike and Martha Thornton, and rode fifteen miles to my dear Thomas Hunt's. It being the first day of the week, I went to meeting, where I met my dear friends in the fulness of the Heavenly Father's

"WILLIAM HUNT."

Towards the close of the year 1753, or the beginning of 1754, William Hunt was married

at Cane Creek, to Sarah Mills, who proved a comfort and helpmeet to him, during the few years of his earthly pilgrimage.

For "The Friend."

Captain Hall's Visit to the Esquimaux.

The return of Capt. C. F. Hall, who started for the Arctic regions more than two years since, in search of traces that might have been left west of Davis' Straits by Sir John Franklin and his ill-fated expedition, has excited great interest on account of the discoveries the returning explorer claims to have made, if not in relation to the main object of his voyage, at least in connexion with celebrated predecessors of Franklin.

The papers publish an outline of Captain Hall's report to the New York Historical Society, in the presence of a public meeting lately held in New York.

From the statements there made, it appears that the expedition, consisting of the bark *George*, H. O. Buddington, master, and the schooner *Rescue*, sailed with picked crews and eighteen months provisions, from New London, Connecticut, on the 29th of Fifth month, 1860, Captain Hall going in the first named and larger vessel. The expedition was fitted out by the liberality of H. Grinnell of New York, and other public spirited citizens. The vessels touched at St. John's, Newfoundland, and sailed from there in the Eighth month, 1860, pursuing their perilous northward route, through dense and continual fogs and tempests, into Davis' Straits, and finally reached a portion of Frobisher's Straits beyond Northumberland Inlet, and just within the Arctic circle, but five hundred miles to the west and southward of Dr. Kane's adventures. At this point, and in a narrow bay tending to the northward from Frobisher's Straits, a terrible storm, which lasted for several days in the Twelfth month, destroyed the *Rescue*, and also the small craft in which Captain Hall had intended to pursue his investigations. He was here assured by the resident Esquimaux that the season was too far advanced for his contemplated journey into the interior, and relying fully in the truth of their representations, he reluctantly consented to remain where he was. This circumstance, however, as the sequel proved, led to important and consoling discoveries, which may turn out to be the forerunners of a satisfactory solution of the gloomy problem of Franklin's fate. Owing to various causes, the detention, which was to have lasted only until spring, was prolonged for nearly two years, and, in the meantime, the stock of ship provisions running low, Captain Hall and his party were thrown upon the generous hospitality of their neighbours, the Es-quimaux. At this point in his narrative, the captain took occasion to pay an eloquent and feeling tribute to the simple and kind-hearted people of those frozen shores. Truthful, brave, honest, sincere, hospitable, they were, he said, a happy and uncorrupted race. They had no laws and needed none. During the two years he passed among them he had never seen a quarrel, and in many traits they were models for the imitation of more favoured communities.

Captain Hall's report embraced an elaborate description of the vicinity of Frobisher's Straits, which he became convinced was only a great bay, and not a channel extending through the main land. The result of his explorations during the two years' detention may be summed up as amounting to the accurate examination of one thousand miles of sea-coast, hitherto almost unknown, the identification of Prince William's Land; but most of all, the discovery of the fate of the lost party of Frobisher's men, who perished in that vicinity two

hundred years ago, and the traces of their habitations, their labours, and their attempts to escape.

By careful attention to the conversation of the Esquimaux, of whom he came in contact with some three hundred encamped near the *George Henry*, where she lay locked up in the ice, and a laboured compilation of their various traditions, the captain to his great delight, at length discovered on the Island of *Kadlanah*, or White Man's Land, as it was called in the language of the natives, indubitable traces of the *five men* who were lost by Frobisher in that neighbourhood. These men, as the old sea chronicle states, had been sent in a boat from Frobisher's vessel to land an Esquimaux. Their commander had enjoined upon them, from motives of prudence, not to touch the mainland, but to leave the Esquimaux upon one of the many adjacent islands. They, however, disobeyed him, and went to *terra firma*, where they were captured by the natives. On a subsequent voyage, Frobisher heard that they were still alive, but failed to rescue them. In the meantime they had fixed their residence upon the small islet now called *Kadlanah*, after them, and then endeavoured to establish themselves by the arts of civilized life. The island, said Captain Hall, was literally teeming with marks of their presence—pieces of brick and wood, coal, trenches for fresh water, and one for a ship-launch, with many other indications, convinced him that he had solved a problem of important interest. In this he was confirmed upon his return home, by a perusal of Hakluyt's *Collection of Arctic Voyages*, of which the rare old copy he then exhibited to the audience was the property of George Bancroft, and the only one, probably, in the country, with the sole exception of that deposited in the Astor Library. The captain's description of his repeated and protracted interviews with the natives in relation to this subject, and particularly his conversations with Ob-ki yox i-ni noo, (the White Bear), a dane more than a century of age, was graphic and vivid in the extreme. She had heard all about the five white men and Frobisher's fleet from her parents, and told how they built a ship and were completing it for departure, when they fell victims to the severity of climate, and in spite of the kindest care from the Esquimaux, miserably perished on the little island. Here the captain exhibited pieces of brick and broken bottles, covered with black moss, which, in the pure air of that region, must have taken centuries to accumulate. He also showed a semi-circular mass of what he had at first considered very fine iron ore, but afterwards concluded to be some of Frobisher's ballast. Captain Hall also presented many other curious relics for examination which he had brought from the scene of his discovery.

Near the close of the lecture, an Esquimaux family consisting of a man, his wife and their infant child, who had accompanied Captain Hall on his return, were brought before the audience and excited feelings of deep interest. The man was rather short in stature, being only five feet three inches high, but very robust and hardy, being, according to the captain's account, capable of enduring with impunity, if not comfort, hardships and privations under which men of any other race would surely succumb. His wife was about three inches shorter than her husband, and is described as quite good looking, having a mild, amiable and even lady-like expression of countenance. She understood the English language, and is said to be an excellent interpreter of Esquimaux. Captain Hall, at the conclusion, spoke in high terms of the christian Esquimaux at the Danish settlement of Holstenburg. Education is universal among them, every individual, except very young children, being

able to read and write. He brought with him a number of illustrated books in the Esquimaux tongue, all of them the work of these intelligent and interesting people.

Our Teeth.—They decay. Hence, unseasonably mouths, bad breath, imperfect mastication. Everybody regrets it. What is the cause? I reply, want of cleanliness. A clean tooth never decays. The mouth is a warm place—98 degrees. Particles of meat between the teeth soon decompose. Gums and teeth must suffer.

Perfect cleanliness will preserve the teeth to old age. How shall it be secured? Use a quill pick, and rinse the mouth after eating. Brush and Castile soap every morning; the brush and simple water on going to bed. Bestow this trifling care upon your precious teeth, and you will keep them and ruin the dentists. Neglect it, and you will be sorry all your lives. Children forget. Watch them. The first teeth determine the character of the second set. Give them equal care.

Sugar, acids, salaratus, and hot things, are nothing when compared with food decomposing between the teeth. Mercularization will loosen the teeth, long use may wear them out, but keep them clean and they will never decay. This advice is worth more than thousands of dollars to every boy and girl.

Books have been written on the subject. This brief article contains all that is essential.—*Dr. Lewis.*

I WOULD GO HOME.

Selected.

“ICH MOCHTE HEIM; MICHE ZIEHRT'S DEM VATERHAUSE.”
[Translated from “Karl Gerok” in *Sheppard's* “Words of Life's Last Years.”]

I would go home! Fain to my Father's house,
Fain to my Father's heart!

Far from the world's uproar, and hollow vows,

To silent peace, apart,

With thousand hopes in life's gay dawn I ranged,
Now homeward wend with chastened heart, and changed.
Still to my soul one germ of hope is come,
I would go home!

I would go home! Tired with thy sharp annoy,
Thou weary world and waste;

I would go home, dislithening thy poor joy;
Let those that love thee, taste!
Since my God wills it, I my cross would bear,
Would bravely all the appointed “hardness” share;
But still my bosom sighs, where'er I roam,
For home, sweet home!

I would go home! My happiest dreams have been

Of that dear fatherland!

My lot be there; in heaven's all cloudless scene,

Here, fits mirage, or sand!
Bright summer glows, the darting swallows spread
Their wings from all our vales revisited,
Soft twittering, as the fowler's wiles they flee,
Home, home for me!

I would be home! They gave my infancy

Gay pastime, luscious feast;

One little hour I shared; the childish glee,

But soon my mirth had ceased;
While still my playmates' eyes with pleasure shone,
And but more sparkled as the sport went on;
Spite of sweet fruits and golden honey-comb,
I sighed for home.

I would be home! To shelter steers the vessel;

The rivulet seeks the sea;

The nursling in its mother's arms will nestle;

Like them, I long to flee!

In joy, in grief, have I tuned many a lay;
Griefs, joys, like harp notes, have now died away.
One hope yet lingers! To heaven's paternal dome,
Ah! take me home!

NOT MINE, BUT THINE.

Selected.

Thy way, not mine, O Lord,
Howe'er dark it be;

Er lead me by Thine own right hand,
Choose out the path for me.

Smooth let it be or rough,
It will be still the best;
Winding or straight, it matters not,
It leads me to Thy rest.

I dare not choose my lot,
I would not, if I might;
But choose Thou for me, Oh my God,
So I shall walk aright.

The kingdom that I seek
Is Thine; so let thy way,
That leads to it, O Lord, be Thine,
Else I must surely stray.

Take thou my cup, and fill
With joy or sorrow fit;
As ever best to Thee may seem,
Choose Thou my good and ill.

Choose Thou for me my friends,
My sickness or my health;
Choose Thou my joys and cares for me,
My poverty or wealth.

Not mine, not mine the choice,
In things of great or small;
Be Thou my Guide, my Guard, my Strength,
My Wisdom, and my All.

Proportion of Sexes in States of Europe.—As it is always interesting to compare the statistics of this country with those of the kingdoms of Europe, the relative proportion of the sexes in a few of these may be mentioned. In Prussia, in 1858, there was 100.7 females for every 100 males. In Denmark, in 1860, there were 100.8 females for every 100 males. In Spain, in 1859, there were 101.5 females for every 100 males. In Holland, in 1858, there were 101.8 females for every 100 males. In France, in 1856, there were 101.9 females for every 100 males. In the combined States of the German Union, in 1856, there were 102.3 females to every 100 males. In Norway, in 1855, there were 104.2 females to every 100 males. In Sweden, in 1855, there were 106.3 females to every 100 males; while in England and Wales, in 1861, there were 105.2 females to every 100 males; the proportion of Scotland being 111.2 females to every 100 males. It is thus seen that Scotland far exceeds all these countries in the excess of her female population; and the fact deserves the serious attention of the legislature, as it cannot be doubted that such an excess must (all prejudicially against the prosperity of the country, though there is not the shadow of a proof that it affects its general morality.)—*Registrar General's Report for Scotland.*

Sobriety of Judgment.—A great help, which in the tender mercy of the Lord I have had experience of, is sobriety of judgment. Not to value or set up mine own judgment, or that which I account the judgment of life in me, above the judgment of others, or that which is indeed life in others. For the Lord hath appeared to others, as well as to me; yea, there are others who are in the growth of his truth, and in the purity and dominion of his life, far beyond me. Now for me to set up, or hold forth a sense or judgment of a thing in opposition to them, this is *out of sobriety which is the Truth*. Therefore, in such cases, I am to retire, and far before the Lord, and wait upon him for a clear discerning and sense of his truth, in the unity and demonstration of his Spirit with others, who are of him, and see him. And this will prevent the *revels which the want of this sobriety may occasion.*—*Isaac Pennington.*

Christ Our Leader.—Here is the beauty and

glory of Christ as a Redeemer and Saviour of man, that he goes before, and never behind his flock. He begins with infancy, that he may show a grace for childhood. He is made under the law, and carefully fulfils all righteousness there, that he may sanctify the law to us, and make it honorable. He goes before us in the bearing of temptations, that we may bear them after him, but tempted in all points like as we are, yet without sin. He taught us forgiveness, by forgiving himself his enemies. He went before us in the loss of all things, that we might be able to follow in the renouncing of the world and its dominion. His works of love that he requires of us, in words, a precept and illustrated by real deeds of love, which he gave up all his mighty powers from day to day. He bore the cross himself that he commanded us to take up and bear after him. I quiring us to hate even life for the gospel's sake, went before us in dying for the gospel; suffering death most bitter at the hands of his enemies, (despised only by his goodness, and that, when a word he might have called to his aid whole legions of angels, and driven them out of the world.) And finally, he ascended, and passed within the veil before us, as our forerunner, whom we are to follow even there. In all which he is our Shepherd, going before us, and never behind; calling us to bear driving; bearing all the losses he exacts for us; meeting all the dangers, suffering the cruelties and pains which it gives us to suffer, and drawing us to follow where he leads. *Lushnell.*

The Colony of Liberia.

We continue to see named some new locality a place of emigration for the colored people of our country. They are sought for as “field-labor” by the planters of Demerara and Jamaica; by sugar-cane growers of the Danish West India lands—because they have been checked in their progress “towards increased prosperity and full development of their agricultural resources the want of manual labour;” and the legislator of the Cape of Good Hope has voted £5000 to be paid as bounty or passage money for negro migrants, to be distributed as agricultural labor only.” Hayti has been tried and proved not to be adapted to this element of population. Central America has its advocates, but on the ground religion, habits, language and governmental education, it is unfitted for them and does not prosper. Florida and the low country of Georgia and South Carolina have been proposed, but impression this proposition can make is too feeble to be counted. All countries that want them all, want them to labour under some “rural code” that will effectually keep them down. They are kept as a permanent peasantry, working for bare subsistence and unable to rise.

Forty years ago Liberia was commenced as an asylum for the free colored residents of the United States, wherein they could be elevated and rewarded for self-support and usefulness to themselves and to their race. And it has more than equalled the expectations of its early friends. Its increasing numbers, commerce and material progress during the last few years has been marked and encouraging. It is now an independent republic, constructed after the model of our own, with the machinery of a free republican government presided over and administered in all its departments by colored men from this country. Its dependence has been acknowledged by the leading Powers of the earth, among which are France, Great Britain, Belgium, Prussia, Denmark, Portugal, Brazil, and by our own government. It is

congenial climate, great abundance and variety of minerals, and an ample territory productive of very luxury and necessary of life. The constitution guarantees to all "the right to worship God according to the dictates of their own conscience, without obstruction or molestation from others." Law, language, mathematics and science are well understood among the Liberians, and the press is ably conducted. Universal education is provided for. Slavery is not allowed. The style of building is good and constantly improving. In numerous instances the Liberian home is provided not only with domestic conveniences, but with music and the higher forms of literature.

The negro race is a promising race. It has great excellence, is numerous, tenacious of life, cheerful, easily civilized, progressive, and obedient to law and religion. What it demands is not the mere opportunity to labor for a bare subsistence, or subjection to or fusion with the whites, which would be the result in all the localities mentioned, were their ancestral land, but a good territory, where, enlightened and christianized, they may work out the great problem of their destiny. Providence seems to have kept Africa for the blacks, or a thousand years, by placing pestilence at her gates to guard them against the Caucasian or Anglo-Saxon.

When Columbus discovered Hayti, it is said to have had a population of three millions, of whom there is probably not one remaining. The aborigines of North America, were not to any considerable extent civilized and incorporated into the colonies. But the policy in Liberia has uniformly been to let the natives remain, to cast over them the yoke of government, to instruct them in the arts and sciences, and in the manners and customs of civilized life. The tribes of Africa are of one blood, of one color with the settlers from abroad, and they amalgamate with them. The blending of the two races together will become even more general as intercourse between them increases. Here lie homogeneity and freedom—elements of rare value.

Liberia invites the American people of color to field for honorable enterprise and political privileges, where they are free to yield themselves to that principle in human nature which prompts every one to desire to better his condition. It offers them for cultivation an almost boundless store of material for wealthy commerce. The exports from this region to Great Britain, as officially announced for the first six months of 1861, amounted in value to \$2,449,740. For the corresponding period of the present year it increased to \$3,537,320. The commodities were mainly palm oil, camwood, ivory, gold dust, gums and spices, which have happily taken the place of flesh and blood. For the sea-front of Liberia, until its purchase for settlement, was notorious for its many arracoon and shipping points for slaves. The export of British goods to the western coast of Africa amounted, during the first six months of 1860, to \$3,056,310, being a gain of forty per cent. on the export of a similar period in 1855. The present extent of the trade is not so remarkable as its rapid increase. New markets of immense extent are being opened, as was said recently by the Hon. John H. B. Latrobe: "virgin markets almost, at a time, too, when all existing markets are glutted with the products of a manufacturing skill whose facility of supply, exceeding very present demand, requires just such a contentment of consumers as Africa affords—a continent whose wants are capable of doubling even the extent of every loom, and the ring of every anvil in Europe and America."

Why should not our government turn the expedition originally designed for Central America to Liberia? In the former the American colored people are officially and formally forbidden to enter; the latter is very desirous to have them come. Why confine the efforts at colonization to one experiment, to an untried voyage and spot? It was stated, upon what seemed to be reliable authority, "that the colonists for Chiriqui were to be forwarded in steamships, which would be a week on the voyage, would be provided with all the necessary implements of labour, and also sustenance until they can gather a harvest." Such facilities would land emigrants at Monrovia within sixteen days, and induce large numbers to remove. The increased cost for the additional time consumed, and distance travelled, would be comparatively trifling, and would be far less than that required for either government or protection by the United States. By adopting Liberia we secure the only quarter where they will be exempt from molestation, and escape all complications growing out of this matter with Mexico, Central and South America. The proximity of these countries to our own and to one another, and the constant tendency of white emigration to the southwest, alike counsel us to this course. The true permanent interests of the blacks, urge to this line of policy. A wise philanthropy should prompt us to avert from them the fate of our Indians, who have been driven westward by the tide of white population, and have not yet made a stand against it.

What is required is a permanent refuge for the colored man. As such, Liberia has no rival worthy of notice. Having successfully withstood the sudden and unexpected influx of nearly five thousand recaptured Africans from the Congo coast, its capacity for receiving a people long in contact with intelligence and refinement in the United States must be many fold greater. "Treasure, and money and labour," forcibly remarks the Liberia Herald, "must not be considered in this enterprise, when it is to be remembered that these African people were originally Africans, pure and undefiled, that they have been kidnapped and stolen from the shores of their own loved homes, and ruthlessly hurried across the ocean into slavery. They did not go to the country in which they now live, but were forcibly and violently carried to it."

"Africans were not carried to America in a day, nor a week, nor a month, nor a year, but from the early formation of the American Union have they been going and going, and have not yet ceased to go. Yet it is now desired that they be colonized in a country not their own, and to which they have not the slightest claim; and it is desired, too, that this colonization be quick and expeditious—that they be sent to the nearest and most convenient point—so anxious to be rid of this burden of national sin. Since they were taken from their own land, Africa, and it is designed that they should be removed beyond the limits of the United States, it is no more than just and right, not counting cost and treasure, that they should be sent to their own home—a home from which they were stolen, and to which they have a better claim than to any other. A black nationality, in which exist all the elements of manhood and free republican institutions, stands on the west African coast, with arms extended to receive into a common brotherhood the despised of American slavery. The advantages that present themselves, and the inducements that are held out, are such as can never be attained by any black man while he is content to remain from the enjoyment of his own heritage—the bequest of his fathers. Africa is the land of the black man—the black man's home; and Liberia, struggling

to establish itself on these barbarous shores, has already afforded a home for thousands, and is a home for thousands more."—*North American.*

The *Watercours Reformer* gives an account of an accident which nearly proved fatal to— Bennett and child while crossing Black Lake, in St. Lawrence county. On the 21st of June, Henry Bennett, wife and infant, fourteen months old, wishing to cross Black Lake at Narrow's Ferry, drove on to the scow, securing the pole of the buggy by a chain, and we should infer, leaving the horses hitched to it. B. sat in the lake with her child. The wind blowing fresh, the lake became rough, and when about ten rods from the shore the horses got restive, pulled back, broke the chain, and backed off the scow into the lake, horses, B. and child, all sinking together in twenty-five feet of water. B. immediately dived after his sinking wife and child. When down about ten feet he caught his wife by the arm and brought her up, swimming with her to the scow. He again dived for his child, which he succeeded in reaching at the depth of some fifteen feet. Having, by the greatest exertion, again succeeded in reaching the scow, he placed the child on board, and clambering up himself, drew his wife after him. The horses were both drowned. The ferryman seemed perfectly bewildered, and rendered no practical service in the trying emergency.—*Advocate.*

Old Manuscripts Reproduced.—M. Silvy, of Paris, has recently reproduced photographically one of the curious old manuscripts of early literature. He states that not only is the copy more legible, than the original, but certain passages which could not be deciphered on the old parchment have been actually revived; and this is particularly visible on the last page, where a note, written in German under the signature, has become both visible and legible, while there is not a trace of it left on the original. This curious circumstance is explained as follows:—"During the photographic process, the brilliant and polished parts of the parchment reflect light much better than those where the ink has been deposited. However colorless it may appear, the ink has not lost its antiphotogenic qualities opposed to the photogenic ones of the parchment; and thanks to this opposition, black characters may be obtained on the sensitive surface, in return for much paler ones on the original.—*Late Paper.*"

How Bodies are Embalmed.—Embalming, which is coming much into practice of late, is thus performed:—The modern embalmer finds an artery into which he can place the nozzle of an injecting syringe. The artery in the upper part of the arm, called the brachial, or the artery in the neck, the carotid, answers the purpose. Into this artery the embalming fluid, consisting of alum, or corrosive sublimate, is injected, until it permeates every structure; the solution sometimes retains its fluidity, sometimes it is so constituted that while it is warm in the fluid, on cooling it sets, and becomes more or less hard. After the injection, the artery is closed, the opening through the skin is neatly sewn up and the operation is completed.

The *New Reservoir* in the upper part of the Central Park, New York, covers about one hundred acres of land, and will hold 1,000,000 imperial gallons. The entire cost of the reservoir and gate-houses complete, will exceed \$1,500,000. The reservoir is of an irregular shape, and about forty feet deep, and divided by a bank running through the centre thirty-three feet high. This

dividing bank will be covered with water when the reservoir is full, so as to present to the eye an uninterrupted lake of ninety-six acres. The gate-houses are so constructed that either section of the reservoir or both can be used at pleasure, thus affording facilities of cleaning one at a time without interfering with the supply of water. From the north gate-house two pipes diverge, one of which is intended for the supply of Harlem, and the other Manhattanville, Carusville, and other villages in the north-western section of the Island of Manhattan. From the south gate-house, six distributing pipes four feet in diameter diverge, to supply the city below that point. In consequence of the scarcity of water at Croton dam, the water will only be allowed to flow into the eastern section of the new reservoir at present, and at intervals when it will not interfere with the necessary supply to the city. The first rainy season will be taken advantage of for filling up the great reservoir, when the city will be provided with a supply for thirty to forty days in case of any accident occurring to the line of aqueduct or Croton dam. As it will probably require from one to three months to fill the new reservoir, according to the supply from Croton dam, our citizens generally will have an opportunity of witnessing the process of the filling.—*World.*

For "The Friend."

BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 83.)

"On Fifth-day, the 7th of Fifth month, 1772, the widow Elizabeth Wardell, sent her chaise, in which we rode to the meeting at —, where we found the boarders or scholars of four schools; which made up the principal part of the meeting. It is a pretty house, and was nearly full on the women's side. The labour in the meeting lay chiefly on my aunt, and she was particularly laid to the children. If my sense of things was right this day, they were the most worthy. The protestors with us here, as in some other places, are easy and contented with the good things of this life, of which they have an abundance. No wonder aunt had but little of the better life for them. We went back with the widow Wardell to dinner. She is a Friend in the ministry. Susanna Roe, and her two sisters, were with us. After dinner we visited the widow Horne, whose house and garden are fitter for a person of the world, than a truly self-denying christian. Such is the love of God, lest her affections should be too much centred in these outward things, a great alloy has been permitted her, and, I believe, she takes no delight in them. We lodged at the widow Wardell's. Her relation, Mary Sims, is a valuable young woman, something like Catharine Payton.

"On Sixth-day, the 8th, we dined at Thomas Phillips', a brother-in-law to Joseph Roe, a plain, kind man. Here Joseph Roe's family met us. At 3 o'clock, the widow Wardell and her cousin Mary Sims, came in her coach and took us to Thomas Corby's country lodgings in Kentishtown, a neat, pleasant, plain place.

"First-day, 10th, we went to Devonshire House Meeting, in which aunt was largely favoured. The meeting was unusually full. In the afternoon at Savoy, a large meeting; but chiefly silent. A few words were spoken by aunt and Sarah Corby to some individuals, which were accompanied with such power as I hope may fix them. We spent the evening at home with many Friends. It was passed mostly in silence, which concluded with a sweet

prayer by aunt. Second-day the 11th, aunt attended the Morning, or Two-weeks Meeting, where I understand she spake on the Queries to good purpose. I staid from it to do many trifling errands;—errands which I hope will never hereafter be given by any one to such as come on the service of Truth. I dined with aunt at the residence of Sophia Hume. I was much pleased with their good conversation. We drank tea with — Freeman; his wife is our good friend John Fothergill's grand-daughter. Her sister and aunt Nancy were there.

"Third-day the 12th, we dined at John Townsend's, and then went to the Devonshire House Meeting to attend a funeral. It was large, and aunt was much favoured. Here we met our good friend, John Griffith, who took us to Joseph Roe's to tea, and then accompanied us to our lodgings. We spent the evening in agreeable conversation. Fourth-day 13th, we rose by 5 o'clock, and by 7 took coach, being accompanied by John Griffith, and Susan and Sarah Roe. The day was fine and the roads were good. We took breakfast at a small town called Slough, having passed through many pretty villages on our way. We dined at Reading, and lodged at an inn near Newbury, which is a pretty town. The inn was large and well kept. A mile beyond is another inn, which was once the seat of a duke. In the garden is a high mount, supposed by some to have been erected over the dead in the time of the civil wars, and by others that they were made use of as fortifications. There are many mounds of different sizes still kept up on Salisbury plain. Between this tavern and Bath, there are beautiful prospects, both of nature and art. We reached Newbury at half-past six, 55 miles from London. On Fifth-day the 14th, we arose by 4 o'clock,—left Bath by 6,—breakfast at Marlborough, 19 miles, dined at Chippenham, took tea at Bath, where we changed our coach for a smaller one, and man for a churl, which we were loath to do. We reached Bristol by 7 o'clock in the evening, and at the tavern were met by our friend, Thomas Frank. He was a welcome messenger from the widow, Lydia Hawksworth, to whose house he took us. She received us and entertained us kindly during our stay in Bristol. This day's journey was 65 miles. On Sixth-day the 15th, went to their meeting. It was small, yet there were more in attendance than at the week-day meetings in London. Aunt, after a few words by other Friends, had a satisfactory and lively time in testimony. We spent the afternoon at our lodgings, where many Friends came. After a time dropping into silence, the spirit of prayer rested on aunt, and she sweetly supplicated for us. Afterwards she had a short exhortation.

"On the 16th, we dined at Andrew Dury's, with Jonah Thompson, John Griffith, Robert Willis, and the two Roe's. Catharine Payton came to us in the afternoon, which was spent agreeably. Catharine had a short exhortation to the youth present. She took up her quarters at our lodging during the — Meeting. On First-day the 17th, we went to the Meeting called Fryer's, it was very full, and although the people were gay, yet they were still and quiet. Catharine appeared in supplication, and then aunt was uncommonly favoured in testimony, after which, Catharine also spoke. We dined at Thomas Rutter's. Aunt was so much spent, that she was prevailed on to remain, whilst the others went to afternoon meeting, and I stayed with her. They took us to tea at the house of Robert Fry, after which we went to the evening meeting. It was very large. Jonah Thompson and Catharine Payton had the labouring oars at this meeting, and a favoured one it was. Jonah

Thompson, then 70 years of age, had walked from his own house to Bristol, 40 miles, to attend these meetings. Second-day 18th. This day was the Ministers' Meeting. I stayed at home and took medicine, being very unwell. Third-day we were at the Fryer's Meeting in the morning, dined at William Fry's, and in the afternoon, with Catharine Payton, Thomas Rutter, and others, we went to Temple Street Meeting, and a choice one it was, I believe, to all. Many of different societies were present. Fourth-day 20th, attended Fryer's Meeting in the morning. It was large and favoured. We drank tea at Shamah Bath, who's is a son-in-law to Andrew Dury. On the 21st, went to a meeting at Frenchay, five miles. A Friend from Ponty Pool, named Williams, first spoke, after which John Griffith and aunt were much favoured. Our landlady took us to dine with a cousin of hers named Rutter; she is a widow, and keeps a boarding-school. Leaving John Griffith there, who intended to stay for the benefit of the air for a day or two; we returned to Bristol. On Sixth-day, attended Fryer's Meeting, which was small, but good. Aunt was enlarged and others also. We dined Seventh mo. 23rd, at John Pedder's. His wife is a niece of Andrew Dury; their daughter Sarah, is the only one of the family that appears like a Friend. We then parted with Catharine Payton. In the morning, Mary Groth came to spend the day with us. She left her home in Essex on purpose to visit us at Bristol, [at least 100 miles], and she stayed with us until we left it."

"On First-day, they attended the three meetings at Bristol, all of which were favoured, although the afternoon is noted as being for a time heavy and dull. The one held in the evening seemed to be a crown to the labours of the day. On Second-day, the 25th, they left for London, John Griffith and Sarah Morris in one post-chaise, Deborah Morris and her younger friends, Susan and Sarah Roe, in another.

Singular Battle.—A singular combat took place at Pelham, (Conn.), a few days since, between a hawk and a black snake. Tristram F. Palmer, while walking in a field in Pelham, came upon a hawk and a black snake in a life and death struggle. From appearances, the hawk made a descent upon the snake, with the expectation of making an easy prey of it, but the result was fatal. The snake, which was firmly held in the talons of the hawk, had managed to get a coil around one wing and one leg in such a manner as to prevent the bird from disengaging itself, but the snake's body was pecked and torn by the hawk, whose head and neck were at liberty. Apparently the hawk stood the best chance of winning the fight, as the snake appeared to be pretty nearly used up; but the struggle would probably have proved fatal to both. T. F. Palmer ended it by despatching the combatants. The snake was three feet ten inches long, and unusually heavy for its length. The hawk was a large one, the extended wings measuring nearly four feet from tip to tip.

Old Eagles and Nests.—The Girard (Pa.) Union, gives the following interesting account of an old couple of eagles, their troubles and their constancy. It says:

"Sixty years ago, when the township was first settled, a pair of eagles, of the white-headed or bald species, had a nest in a tall tree on a farm of — Kelly. They were not disturbed, and for twenty years they occupied the nest annually, rearing and sending forth a brood of eagles, when a violent storm overturned the tree, and of course destroyed their habitation. They then re-

ult their airy house in a lofty and inaccessible eyecamore, on the farm of Riley Pettibone, adjoining Kelley's, and enjoyed aquatic happiness for forty ears longer, raising to eaglehood two or three hicks yearly. A few weeks ago a high wind reached off the limb containing the nest, and blew it to the ground with such energy that it was torn to atoms, and a very young and very old eagle killed. The nest was large, being made of about ten bushes of sticks and leaves. This aged and persevering couple are now making a bird nest on a sycamore near the one lately destroyed. How old these birds are is not known, but that they are the same pair found here by the earliest settlers there is no doubt. They are so long familiar with the presence of men that they are not approached within a few feet; and their great age, constancy and friendliness have given them the respect of the neighbours, who would turn it en masse and shoot the unlucky sport who could attempt to mob or despoil this royal nily.

One of the Useful Birds.

Much has been written lately about the birds, and their usefulness is becoming better understood. Early one morning a Baltimore oriole came to a tree near our chamber window, and by its notes, waked us to a consciousness of morning. Looking out, it was easy to see amongst the leaves the bright plumage of this beautiful bird. It was in pursuit of those leaf-curling caterpillars, that sometimes so much deform the foliage of our fruit trees. On a close examination the next day, it was found that these little insects could be found on that tree. The oriole passes the winter in the tropics; this one had probably just arrived, and flying from the immense number of these caterpillars it took from this tree in a single day, it must have been very hungry.

In the country, there is the orchard oriole—but in the cities we seldom see any other than the Baltimore variety—sometimes called the "hanging-ird," from the peculiar form of the nest.

Some would suppose, from the name of this bird, that it was found only in the neighbourhood of Baltimore. On the contrary, it is every where in North America, and derives its name from its plumage, black and yellow, resembling the livery of our Baltimore, who founded the city of that name.

A few days ago during one of our recent rain storms, we heard the importunate cries of a brood of young orioles. They probably had left the nest a few days before, and five neighbouring trees had but one of these birds upon it. It had rained all night, and the poor things were in a pitiable condition, looking, as we sometimes say, like "drowned rats." Parent pigeons will push the young out of their nests and starve them, when they think they are old enough to take care of themselves. Not with the parent oriole. Seldom have we seen such manifestations of parental care as on this occasion. The cry for "more" was incessant. We did to count the number of caterpillars caught, and it was impossible. It was raining in torrents, that made no difference. The presence of these eggs, or even men, seemed disregarded, and these birds in their labour of love, ventured into scrubby at the very door, and at other times they are to be found only on trees.

The Baltimore oriole may be considered a fair specimen of the insectivorous class of birds; and we saw the wren, blue-bird, cat-bird, thrush, and others, having beaks formed like hers, they are considered as belonging to this class; and

those who look upon insects as so great an evil, would do well to cherish these birds.

The perfection of the foliage of the trees of this city is greatly owing to the birds, and especially to this one. The "worms" we hear so much about in New York, Brooklyn, and Jersey City, are not here, nor will they ever be able to make any headway when there are so many birds.

Often, we could almost imagine, when in our old parks amongst the elms, that we were far in the country, such was the music of the birds—and the Baltimore oriole was one of the most common.

The music of this bird, like most others of brilliant and variegated plumage, is not the sweetest, and its notes when it first arrives from the South are particularly harsh; it has some mocking power, and this harshness may, in part, be owing to its still attempting to imitate the tropical birds it has left behind it; but amongst better songsters it soon improves, and on several occasions I could almost imagine that a thrush or wood-bird had ventured to the city; sometimes I have stopped, and attentively listened to catch the well-remembered notes of these charming songsters, but the reverie was generally broken by some very different sounds, such as—"Any rags to sell?" or "Fresh porgies."

The nest of the Baltimore oriole is one of the wonders of bird architecture. Whether we contemplate it as the work exclusively of instinct, or whether memory and judgment are brought into requisition, it is a study worthy of the naturalist.

The favourite trees for her nest are the weeping willow and the elm. The smaller branches of these trees are pendant, and she begins by uniting two or three twigs together with a cord, so as to be like a small hoop, and to this she suspends the framework. The nest, when completed, will resemble a long narrow pocket, open at the top, and about eight inches in depth. The variety of materials used is astonishing—nothing seems to come amiss—flax, hemp, cotton, straw, grass, wool, hair—sometimes thread and ribbons, or small pieces of lace, will be appropriated—horsehair two feet long will be sewed through and through, from the top of one side down to the bottom, and then up to the other side, and then back again—and when all this is done it will be so matted together as to be almost as firm as a felt hat. The nest of the hanging bird is, in fact, a combination of weaving, sewing, and felting.

We once knew a good old lady who was very fond of knitting, and as this did not interfere with her talking, she knit a great deal. Sometimes she would knit a pair of silk-stockings for some special friend. Once she lost a skein of her silk, and as a pair of orioles were building a nest in a high shade tree by the house, they were suspected of having taken it.

In a few weeks the well-known call of the young birds for "more" betrayed where their nest was, and as soon as they were gone, one of the boys had to go after it—and there was the skein of silk sure enough—but what a tangle! It had been made to thatch the entire nest—sewed or woven into every part of it—but Aunt Polly could not finish her stockings without that silk, and she went to work to unravel it. How she did work; but it was of no avail—it could not be done. We can almost hear her now saying "it was the pekiest tangle she ever did see."—*Newark Mercury.*

"*Coax Him, Boys, Coax Him.*"—Two boys passed my window one bright morning, carrying heavy pieces of furniture. One of them also held a string which was attached to a large dog's head. The dog was unwilling to trot very rapidly, and much to the lad's annoyance, would insist upon

resting every few steps. The large boy grew impatient, for it was hard work to carry such a heavy load, and at the same time drag the dog.

"Kick him, Jim, kick him," said he; and Jim sat down his burden and began to kick; but the dog only growled, and refused to stir. Then Jim took a stick and began to beat him; but the obstinate fellow only whined, and remained perfectly still.

What was to be done? The boys were beginning to despair, when Frank Gage came along. "*Coax him, boys, coax him,*" was Frank's manly suggestion. Some boys would have pouted, and thought Frank had nothing to say in the matter; but these seemed relieved by the advice, and began to pat "Trim," and speak kindly to him. What was the result? Why, "Trim" wagged his tail approvingly, and trotted off briskly.

Does not this little incident illustrate the power of kind words? There is a great deal of power and meaning in kind words and actions. A little hymn you all know, says, "Kind words can never die." Have you ever tried the experiment? There is scarcely a person living who does not like a little coaxing and encouragement, and scarcely a person who cannot be influenced by gentle words and treatment. Be kind to every body, and every thing about you, always remembering the text, "Be not overcome of evil, but overcome evil with good."—*Child's Paper.*

The Census of Great Britain.—Partial returns of the new census of Great Britain are given in the English papers. The population of Liverpool proper is 263,000; including the suburbs, 450,000. The number of sailors is 14,000, which is only one thousand more than there were ten years ago. The increase in the entire population of the city and suburbs has been a little more than twenty per cent. in the same time. Manchester has decreased in population, but the surrounding country has increased largely. The present population of the city and its suburbs is 375,000, a gain of forty thousand in ten years. The diminished population of the city is owing to the conversion of dwelling houses into places of business, and the reconstruction of narrow streets, crowding out the poor. The returns from the rural districts of England show a diminution in the agricultural population. This is noticeable in Norfolk, Suffolk and Essex counties, where the population has barely held its ground as compared with 1851; while in Yorkshire the decline has in many places been extraordinary. Glasgow has a population of 403,142, exclusive of the suburbs, which increase the number to 446,395, an increase of 86,257 in ten years. The district known as Staffordshire Potteries has a population of 120,000 and upward.

A Rain Glass.—The following may be depended upon as a rain-glass; I have used it for months. Get a common pickle-bottle, such as is sold at every Italian warehouse; fill it with any kind of water, to within two or three inches of the top; plunge the neck of an empty Florence oil-flask into the pickle-bottle. Before rain, the water will rise two or three inches in the neck of the inverted flask—often in three or four hours. If the weather is settled for fair, the water will remain not more than half an inch high, for days, in the neck of the flask. It never fails to foretell rain; and to-day, July 15th, rose as high as the rim of the pickle-bottle, in the neck of the flask. It may stand in or out of doors, in sun or shade, and the water never needs changing, so long as it can be seen through. Mine is now green through long standing. The oil-flask must be cleaned before the neck is

plunged in the water. Soda and warm water will clear it of oil.—London, *Athenaeum*.

Interior of the Earth.—The increase of temperature observed in mines is about one degree Fahrenheit for every fifteen yards in descent, and should the increase go on in the same ratio, water will boil at the depth of two thousand four hundred and thirty yards; lead melt at the depth of eight thousand four hundred yards; everything is red-hot at the depth of seven miles; gold melt at the depth of twenty-one miles; cast iron melt at the depth of seventy-four miles; soft iron melts at the depth of ninety-seven miles; and at the depth of one hundred miles there must be a temperature equal to the greatest artificial heat yet observed—a temperature capable of fusing platinum, porcelain, and, indeed, every refractory substance we are acquainted with. Thus it would appear that, according to the theory on which these temperatures are based, the earth must be in the condition of fluidity at the depth of one hundred miles from the surface.

THE FRIEND.

ELEVENTH MONTH 22, 1862.

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 6th inst. The *Times*' city article says that Lord Lyons, on his return to the United States, will be eager, in concert with other nations, to adopt any step to promote the permanent return of peace, she will, in the meantime, individually refuse to depart in the least degree from the course of non-interference. The *Times* is glad to see the democrats in America making a show of possessing some faith in the possibility of the English success will be promising for the establishment of peace. The British Consul at Charleston writes a letter to the Foreign Office on the cotton prospects. He estimates the whole stock in America, from careful inquiry, at about 4,000,000 bales, including the present year's crop. The *London Times*, speaking of the ravages of the rebel steamer Alabama, says it is to blame teaches to England. It says her ship yards are open to all. The *London Daily News* takes a different view of the matter, and declares the government should forbid the fitting out of vessels to be employed against a friendly power, or withdraw its proclamation of neutrality. The same paper furnishes evidence from Southern newspapers to show that the military resources of the Confederacy are nearly exhausted, and that internal dissensions prevail. The Great Industrial Exhibition closed without any formal ceremonies. The attendance and receipts, both exceeded those of the exhibition of 1851. The Bank of England, after a long period of discount on the part of the Government, has now resumed its ordinary course. The markets for cotton and breadstuffs were without material change. It is reported that Lord Elgin has retired from the governorship of India, owing to the effects of the climate. The Duke of Argyle will succeed him.

A revolution has broken out in Greece, and had so far been successful. King Otto abdicated the throne, and fled from Greece to Vienna. The Greek National Assembly was about to convene. It was reported that they would probably tender the crown to Prince Alfred of England.

UNITED STATES.—The Army.—The great army of the Federal Government, to have been inactive since the arrival of Gen. McClellan from the command. The major part of it has been divided into three grand divisions, respectively under command of Generals Sumner, Franklin and Hooker. Gen. Sigel has the command of another part as a reserve. The whole is under Gen. Burnside. The troops are said to be well provided with clothing, and in good condition. Gen. Halleck paid a visit to the army last week, and had a conference with Gen. Burnside in reference to its future movements. Later despatches state that on the 15th and 16th inst., the whole army went up the line of march for Fredericksburg. Large quantities of supplies have been sent to the U. S. forces have also been sent up Aquia Creek, and contrabands and mechanics set at work, building wharves and a railroad for army purposes. This base, it is said, was considered the best one for operating upon the heart of Virginia.

Virginia.—The location of the different portions of the rebel army does not seem to be clearly ascertained. It was reported within a few days that Jackson was in the Shenandoah Valley, near Winchester, with 40,000 men. Other portions of it are said to be between the Rappahannock and the Potomac. A detachment of the U. S. Cavalry entered Fredericksburg recently, and captured a number of prisoners. A rebel encampment in Hardy County, was surprised on the 10th inst. by Gen. Kelley. The rebels were routed and dispersed, and a number taken prisoners.

North Carolina.—The expedition of 12,000 men, under Gen. Foster, proceeded up Tarriver and made a demonstration within a short distance of Tarboro, at which point it was found a large rebel force had been collected. An extensive salt works near Wilmington, has been destroyed by one of the U. S. gun boats. The correspondence between Gen. Vance (Confederate) and Gov. Stanley (Union) of North Carolina, relative to a friendly conference, appears to have been brought to an unfavorable termination. According to the latest accounts, Gov. Vance declines any meeting between himself and Gov. Stanley. He also declines a conference of commissioners. He writes in a defiant tone to the Confederate Government, in positions to make, to treat directly with the rebel authorities at Richmond.

South Carolina.—Advices from Port Royal report that an expedition, consisting of 300 men, had gone to the Charleston and Savannah Railroad, and torn up the track for some distance. At St. John's Island, the correspondence between the rebels, who took their negroes with them. The health of the troops at Port Royal has improved. The British frigate *Racer*, by permission of Flag Officer Green, had entered Charleston Harbor, and brought away the British Consul. He says the rebels have just launched a powerful ram, and that two others are ready for plating with iron, which they expected to receive from England, in an iron-plated steamer. He also reports the steamer *Nashville*, lying at the mouth of Stooch Inlet, six miles from Charleston, waiting a chance to run out. He reports over 200 cases of yellow fever in Charleston when he left.

Louisiana.—A rebel force at Labadeville, in the Opelousas country, was recently attacked and defeated by the U. S. forces. The rebels had a number of men killed and wounded, and 208 taken prisoners. The U. S. troops lost 92 men, killed and wounded.

The West and Southwest.—The position of affairs in this region does not seem to be changed much during the past month. In general the rebels have avoided conflicts with the Federal forces, and have retreated as they advanced. Gen. Grant occupied Holly Springs, Miss., without opposition. The rebels were pursued, and about 120 taken prisoners, four miles south of Holly Springs. Gen. Rosecrans is at Nashville, and there are said to be some indications of a retreat. In Kentucky, an expedition commanded by Gen. Ransom, came up with a rebel force of 800 men near Garrettsburg. Many of the rebels were killed, wounded, or captured, and those who escaped were driven out of the State. The rebel armies in this section of the United States are not equal in the aggregate to the Federal forces opposed to them. Bragg and Smith's army in Eastern Tennessee, is estimated at 60,000, that of Price, Pemberton and Van Dorn, in northern Mississippi, 50,000 men. The rebel force in Arkansas is supposed to number 30,000, and probably smaller. The rebels in various sections would make up a total of more than 150,000 men.

Texas.—The entire sea coast of this State has been taken possession of by the U. S. naval forces. A large portion of the inhabitants in the northern and western counties are understood to be loyal to the Union, and anxious for the re-establishment of the Federal authority.

The Private Alabama, continues to capture and destroy U. S. merchant vessels. When last spoken she was about 200 miles east of Halifax, in a favorable position for capturing further captures.

Exchange of Prisoners.—Col. Ludlow, U. S. agent, received respecting the exchange of 926 U. S. officers, and about 24,000 privates. The number of rebel officers exchanged was 1596. The balance of privates due to the U. S., was about 6000.

The Territory of Nevada.—The estimated monthly produce of the Territory is about one million of dollars, with a capacity for being greatly increased by the application of machinery and labor. The Governor advises the Legislature to aid in the construction of a projected railroad from Sacramento to Washoe.

Southern Texas.—The Richmond *Whig* states that Gen. Van Dorn takes upon himself the responsibility for the

failure in his late battle at Corinth. He says it arose from no fault of his officers or men. Gov. Brown of Georgia, has sent a special message to the legislature, in which he makes strong objections to the course which the Confederacy has pursued, and submits the subject to that body for action. The Richmond *Examiner* intimates that startling events are rapidly approaching, and that there are indications of Virginia being the theatre of a sharp and decisive winter campaign. The Richmond *Examiner* says: "Like a snow-math. But a short time ago there were hopeful indications that England and France were about to take some action in this war that would be favorable to the South. This opinion was reflected, not only in the journals of the enemy, but in the minds of our intelligent foreigners on this side of the Atlantic. Our national existence being early recognized by England and France, transactions have been made to some extent by foreign capitalists in Confederate bonds, at eighty-three cents on the dollar. There is, however, no mistaking the significance of the speech of the British Secretary of War, in which he asserts that the South 'has not as yet accomplished her independence,' and must be regarded as a belligerent, holding an uncertain position in an undecided war. The British Government will in no way, and at no time during the continuance of this war recognize the Southern Confederacy as one of the independent powers of the earth, or interfere to limit the duration of this war."

Philadelphia.—Mortality last week, 295.
The Markets.—The following were the quotations on the 17th inst. *New York.*—Cotton has advanced to 68 cts. per pound for middling uplands. White Michigan and Ohio wheat, \$1.52 & \$1.56; red and amber wheat, \$1.38 & \$1.45; Chicago spring wheat, \$1.16 & \$1.22; rye, 80 cts. a 90 cts.; barley, \$1.50; western yellow corn, 72 cts.; oats, 67 cts. a 69 cts. The rate of interest is higher, money being worth 6 & 6 1/2 per cent. of call. Foreign exchange 145 & 146; gold 32 per cent. premium Government bonds, 100 & 101; U. S. bonds, 100 & 101. *Philadelphia.*—Red wheat, \$1.44 & \$1.46; rye, 90 cts. a 98 cts.; yellow corn, 71 cts. oats, 40 cts. a 42 cts.; clover seed, \$6.25 & \$6.37; timothy, \$2.00 & \$2.25; flaxseed, \$2.75. *Baltimore.*—White wheat, \$1.80 & \$1.93; red, \$1.48 & \$1.53; white corn, 74 cts. a 75 cts.; yellow, 71 cts. a 72 cts. *Cincinnati.*—Flour, \$5.25.

RECEIPTS.

Received from Dr. I. Huettis, O., \$2, vol. 36, and 6 Debby Dewees, 32, vol. 34; B. P. Beales, 32, to No. 1. 35 cts.; Micejah Emmons, 32, to No. 13, vol. 36, and J. H. Hiett, 32, vol. 35; from F. Maerka, Pa., \$3 to No. 2. vol. 35, and for Jas. Marsh, 32, vol. 35.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSHUA H. WORTHINGTON, M. D.
Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

DIED, on the 15th of Ninth month, 1862, at his residence near Chesterfield, Morgan County, Ohio, EDW. SWINN, in the thirtieth year of his age, a member Chesterfield Monthly Meeting. He was of an amiable disposition, and endeavouring to live a circumspect life; his friends have a comfortable hope that he is admitted into the mansions of everlasting rest.

—, on the 14th of Tenth month, REBECCA E., daughter of Amos and Abi Whitson, Chester Co., in the 14th year of her age. The great patience manifested during her long suffering, and her perfect resignation to the will of her heavenly Father, will be a comfort and help, that she was prepared for an entrance into his mansion.

—, at his residence in East Bradford Township Chester Co., Pa., on the 20th of Eighth month, SAMUEL WORTH, in the eighty-third year of his age, a member Bradford Monthly and Call Quarterly Meetings.

From "Peaks, Passes, and Glaciers."

The Pizzo Bernina.

By EDWARD SHIRLEY KENNEDY, M. A.

(Continued from page 90.)

So much for the transient dreams at the Châlet Royal. We are now no longer upon the Tête Noire, but upon the shoulders of the Bernina; and inexorable necessity quickly compels us to cast aside all dozing reveries, and to rouse ourselves up to stern realities.

Our attention was attracted by preparations for breakfast; and something less than an hour before daylight the guides suggested the propriety of starting. This process occupied but a short time. I adjourned to a moonlit sparkling rivulet close hand to perform our morning ablutions, an operation in which, to our great astonishment and delight, we were joined by the guides. Such an event almost unknown in the western parts of Switzerland, and it deserves, I think, to be chronicled in the pages of "Peaks and Passes." They had brought with them, too, for joint use, almost an entire comb—a really fabulous amount of luggage. However, with that and the loan of our bit of soap, I made a very decent toilet.

We partook of a sort of supper-breakfast at 8-past eleven P.M.; and at ten minutes past twelve, on the morning of the 23rd of July, 1861, we fairly under weigh. Slowly and carefully we worked our way over rugged lumps of rocks, generally at a level, but sometimes a little descending; leaving the terminal ice-fall of the glacier to come down from the Pizzo Tschervia close to our right, reached at 1.15, the side of the Morteratsch glacier. The ice was exactly vertical, but three steps out with the axe, and Jenni, a cat, had scrambled on to the surface. We were fully followed; and then went on at a rapid pace over the hard glacier, diagonally towards the base of the rocks that, bounding its channel on the left, separate it from the Vadret Pers. Thence our route led us, by steep zig-zags, over snow, alternating with stiffish rock climbing. Our speed not slackened; and, although no difficulty whatever presented itself, some little amount of caution was required, for we were in deep shadow. After while we found ourselves upon a ridge, with the Morteratsch glacier to our right, and the Vadret Pers to our left. The inclination of the ridge gradually increased, while the descent upon our

right became steeper, and the rock on our left seemed to fall away precipitously. As yet the ridge was of fair width, but it soon narrowed; and at a spot where additional care was required, our course was entirely barred by a rocky mass, that protruding like a huge irregular tower through the snow, broke the general continuity of the arête, and rose to a height of twenty feet directly in our path. If the reader, in momentary forgetfulness of his humanity, will imagine himself to be a venturesome member of the feline race, daintily stepping up the inclined hip of an exceedingly steep Louis XIV. roof, and unexpectedly encountered by a vast stack of chimneys, he will the better understand the nature of the obstacles that bade us defiance. To scale it was impossible; so that while slowly ascending the steep snow-slope through which it pierced, we were puzzled to determine what proceedings Jenni would adopt. The dawn fortunately enabled him to see what he was about. Bringing the rope into use he fastened it to his waist, and slowly climbing down, along, and around the face of the rock, he insinuated here and there into diminutive crevasses either a toe or the tip of a finger. He was soon out of sight. We carefully held the rope tightened upon him, and after about 150 feet had been paid out he called to us to follow. A rather novel arrangement was adopted. Jenni had provided for each of the party a leather cord, with a strong metal ring attached. The hinder end of the rope was now passed through one of these rings and firmly grasped by those who remained stationary, while the other end was held by the invisible Jenni. Each man then clambered round in turn, only one effecting the transit at a time. The man in motion could choose his own pace, while the tightened rope, passing through the ring, saved him from those disagreeable alternations of slack and tight-rope dancing of which all mountain travellers complain, and which would try the powers of even Biondina herself. The device proved most successful for the greater portion of this, our first *mauvais pas*. It has one drawback. At those points where a gully in the rock has to be passed, and where it is consequently necessary to follow this concavity, the tightness of the rope unavoidably makes it difficult to retain a foothold, and tends to drag the unfortunate traveller backwards into space.

All soon found themselves alone beside of Jenni, but how they contrived to find footing there remains a mystery. He again went ahead, now climbing up rocks, now cutting steps in ice, and we again followed. From the spot where we were standing it was necessary to step on to what, for want of a better term, may be called the foot of a couloir. But let it not be supposed that the couloir here rose from easy ground. On the contrary, immediately below this spot, it broke away precipitously in a cataract of ice, and allowed us to see the rugged glacier some 1500 feet beneath. Jenni, with his usual activity, scrambled up this steep slope of ice, and we, assisted by the rope, were not far behind. It led us up at right angles to our old ridge, where it terminated in a sort of gap, between the first tower and another massy protuberance.

Here a small piece of rock gave limited resting place for the foot. Turning at right angles to the couloir we had just ascended, we continued by another along the general line of the ridge. This was equally difficult to climb, while the abyss beneath yawned with more threatening aspect, and the way downward sweep that afforded us precarious footing floated seemingly in airy lightness, and now, seen only in plan, presented a beautiful Hogarthian curve, dangerously fascinating to those whose aesthetic perception is more intense than their faculty for glacial adhesiveness.

Once more upon our old ridge, and fairly at the summit of this second couloir, Jenni turned round, and triumphantly pointing to the vanquished giant at our feet, exclaimed, "*Das ist die Festung der Gemen Freiheit.*" "That is the fortress of the chamois' liberty!" an appellation bestowed on it because, if a chamois can place this bulwark between himself and the hunter, his freedom is secured. At this moment the sun rose. We were at a height of some 12,000 feet above the sea. During the last hour, the necessity of cutting steps had retarded our progress, we were consequently becoming chilly, and the warm beams of the sun were most welcome. It was a gorgeous sunrise. In the east, far beyond the broken Pers glacier beneath, level with the eye, and overtopping the distant mountains, floated bars of golden cloud, from behind which the imprisoned sun gradually forced his way until he shone clear and distinct above them all. A little to the north of east, rose the Ortler Spitz with Monte Crystallo; behind us, to the north, sank down the ridge and steep couloir by which we had ascended. Far away to the North-west we could discern the Bernese Oberland, the Finsterarhorn and Jungfrau being conspicuous; while comparatively in the immediate foreground, and yet at a distance of twenty-five miles, were lighted up the friendly features of our last new acquaintance the Schwartzhorn. Before us, toward the south, and embracing about a quarter of a mile, rose the peaks of the Bernina range, the Pizzo Cambrena, Pizzo di Palti, Pizzo Zuppo. A little to the west of these, beyond the corridor, and seeming to crown the long vista, Monte della Disgrazia caught the sun's rays. On our right, the snow-fleets, intersected by treacherous crevasses, gradually sloped away, and finally impended over the long corridor of the Morteratsch, a chasm which we were seeking some means of crossing, which divided us from the object of our hopes,—now seen rising in all his majesty through a cone of ice and snow,—the terminal peak of the Pizzo Bernina. Our shadows pointed directly towards the summit! Were we not right to hail this as a favourable omen? I called Hardy's attention to them, as they rested upon the snow: "Of what colour are they?" "Sky-blue," he replied. "And of what colour is the unshadowed snow?" Most Swiss travellers have admired sometimes the rosy, sometimes the golden hue, shed upon the snow at early dawn. But on this day, such tints were entirely absent, and their place was supplied by a beautiful dove colour, rich and bright beyond description.

Talking this matter over with my friend Isaac Taylor, we have been tempted to suggest some sort of explanation. I should imagine that these curious phenomena of blue shadows and dove-colour snow-fields, were purely subjective. The eye would naturally see those colours that are complementary to the sun-rise tints upon which it had just been so intently gazing. While the preponderance of the yellow over the red in the orange combinations, would cause the blue of the shadow to incline to purple rather than to green; purple being the tint also which dove-colour in shadow is seen to assume.

We went steadily forwards over snow-fields that presented no difficulty, but demanded only careful navigation in order to avoid open and concealed crevasses. Unfortunately we could find no means of descending upon the glacier-corridor on our right, and were therefore compelled to continue a course which led us, in a southerly direction, higher and higher above the snow-basin that we desired to reach. This perpetual tramp getting rather tedious, we whiled away the time by giving Jeann lessons in English. He was an apt scholar, but circumstances not being altogether favourable for studying a foreign tongue, he did not make any very great advance. I fear his acquisitions were limited to the expressions—"How do you?" "All serene!"

From English literature attention was easily diverted to the German language, or more correctly to the Romansch dialect. A subject was easily supplied. On our left hand is the Munt Pers, on our right hand is the Morteratsch glacier. Let us make a shot at derivation. Our inquiries are answered in this wise.

In the olden time a comely young shepherd from the Graubunden was struck by the charms of a Pontresina damsel of high degree. The Alp on the lower slopes of Munt Pers, a spot near the end of the Morteratsch glacier, was their trysting-place. According to wont, the maiden's parents, objected to the unequal match, and the swain must give up the calling of a herdsman. The lovers plighted their troth, and parted. He enlisted and obtained promotion. No tidings of his weal came to the ears of his betrothed, and she, goaded on by her parents to espousal with another, died broken-hearted. The soldier came home too late, heard the evil tidings, sought the familiar Alp, and was seen of man no more. His name was Aratsch.

Afterwards, in the still of the evening, the old folks at the Alp would note how the damsel's wraith would enter the dairy department, taste the cream with a wooden spoon to see that all was right, and then with stealthy tread melt away in the gloaming. So often as she came, so often there floated on the pulseless air the gentle moan, "Mort Aratsch." They soon learnt to welcome her approach, for her blessing sweetened the milk, and under her ghostly care the yearly yield of cheese waxed wonderfully.

But another herdsman arose in the land, who knew not Aratsch nor his maiden all-forlorn. This man was of a practical turn of mind, and, eschewing all milk-tasters save himself, he one night roughly broke in upon the spirit of the milky wench. She cast upon the practical party one mildly reproachful look, and disappeared amid the crash of a howling tempest. Thereafterward the once fruitful pasture has been barren, the cows forget to give their milk, and the butter will not come. The Alp is forsaken, the glacier has advanced with giant strides, and the soil once teeming with life is now riven by the wearing grind of desolating moraines. Hence "Mort Aratsch" and

"Munt Pers;" "Aratsch is dead," "The mount is destroyed."

Here ended our etymological inquiries.

(To be continued.)

William Hunt.

(Continued from page 95.)

Although William Hunt was now suitably married, he was not permitted, as the Hebrews of old were on such occasions, to stay at home a year. With them the newly married, even in times of conflict and war, had their twelve months' seclusion from outward contention, from all that called them from the duties of home. For the christian it remains, that those who have wives be as those who have them not. The Lord leads his own according to his own will and pleasure, as he sees well best promote his kingdom and their good.

Soon after his marriage a concern was raised in William Hunt's mind to pay a visit to some part of Virginia. With the unity of his friends he left home, taking his Quarterly Meeting at Perquimans in the way. On this journey, John Hoggatt, [a name afterwards softened to Heckett] was his companion. Of this journey he kept an account as follows:

"15th day of Fifth month, 1754. I parted with my dear wife and friends in great love and tenderness of spirit, to our mutual joy and comfort, and started with my dear companion, in order to go down to our Quarterly Meeting. Went 13 miles that evening, and came to William Hoggatt's, where we lodged that night. Next morning, [16th,] set off and rode about 17 miles to Cane Creek, and it being their week-day meeting, we went to it. It was a close, hard season for some time, but ended to satisfaction. Next morning, [17th,] we went to John Wright's, where we met Henry Mayner and John Pike, who were going to the Quarterly Meeting. From thence we went on our journey, and met with nothing particular, except some difficulty by [high] water. We reached in four days, the house of Thomas Knox, a kind Friend. We stayed next day and rested ourselves and horses. The next day, [22nd,] rode about 40 miles and came to Stephen Shepherd's. Next day, [23rd,] rode about 22 miles to Thomas Newby's, at Perquimans. Next day, [24th,] the Meeting of Ministers and Elders was held at the Old Neck Meeting House. After it was over we went home with Joseph Newby, an ancient worthy Friend, who entertained us with much freedom and kindness. Next day the Quarterly Meeting began, which lasted two days. After it was over, we went home with Christopher Nicholson, a young man, newly married. From thence we went to Newbegun Creek, on Pasquotank, and had a meeting. [27th,] From thence to Simon's Creek, and from thence to the head of Little river; from thence to Piney-woods Meeting. These meetings were generally pretty close, but, forever praised and magnified be the worthy name of the Most High God, he was pleased sometimes to set his blessed Truth over all, in the demonstration of the spirit and the power thereof, to our mutual joy and comfort.

"From Piney woods, we started for Virginia on the 1st of the Sixth month, and riding about 50 miles, came to Josiah Jordan's. He was not at home, but his wife was kind to us. We stayed there the next day, [Sixth mo. 2nd,] and the day following, [3rd,] had a meeting at the Western Branch. From thence we went to Blackwater Meeting. It often fell to my lot in this journey, to be baptized for the unfaithful professors of Truth, who stood in the form, and not in the life and power of religion. After meeting at Black-

water, we went to Hansel Bailey's, a dear ancient Friend. I hope I may never forget the goodness of God at that season. A most sweet and powerful time we had together;—the like, I hard ever know. We went home that evening with Wyke Honeycutt, twenty miles. Next day, [7th,] Sunday, [8th,] we stayed there, and went First-day to a Bowling Monthly Meeting, [9th,] which was a good good opportunity. After meeting, we went to Peter Binford's, a dear Friend, a had that evening a sitting in the family. Next day, being the 10th of the month, we were well some bound. We had a sitting with the family some other Friends, during the day, to our mutual satisfaction. The next day, being the 12th, continued our journey, crossed the Appamatock a James River, and came to Charles Woodson's, who gave us a kind reception. The day following had a meeting at Curles. After meeting, we went home with John Pleasants, and died. We returned in the evening to Charles Woodson's. The Lord was pleased in that meeting to set his precious Truth over all, to our mutual joy and comfort. There were many professors who had I the pure life of religion, and let fall the spirit weapons of warfare, (whereby our worthy ancients were enabled to go forth against spiritual wickedness,) and had run into fleshly liberty, pomp, pride and vain glory;—having shunned the cross a forsaken the way laid down for the redeemed the Lord to walk in. Against these, the contrary of the Lord, in my heart was great. Blessed be His worthy name, he was pleased to bear up in these times of great labour and travail spirit; so that I can say, by a living sense of Divine goodness, he requires nothing of his creature, but that he gives strength according to duty, (for them to perform it,) as they stand in his will. The work is altogether his own and to him belongs the praise, honour and glory his own work, though he is pleased to make us mean and foolish instruments, for bringing it pass. In retaliation for His strength-renew hand on this journey, my soul returns him thanks and praise to Him who is worthy forever more. The next day, the 14th of the month, set off from Curles, John Pleasants and his Samuel being with us as pilots. We rode about 20 miles to David Johnson's. The next day, had a meeting at the Swamp Meeting House. After meeting, went about 14 miles to Joseph Pison's. Next day we rode about 16 miles, to Jay Stanley's at Cedar Creek. Next day, being the 18th, we stayed the meeting, which was close and hard. From Cedar Creek, my companion went to his father's, and my dear friend, William Stan, went with me to Caroline, 18 miles, that evening Manoaah Chiles, where to my great joy, I met my dear worthy friends, Rachael Wright & Mary Jackson. We had a meeting together that evening, which was to our satisfaction. Next day, [18th,] I appointed a meeting, and my dear friend stayed with me. It was close and hard for some time, but the Lord was pleased to break in with his heart melting power, through the clouds, to our mutual joy, and the meeting ended to our satisfaction. After meeting, we went to Theoph. Cheagle's, and lodged there that night. The next day, [19th,] we went to James Stanley's at Cedar Creek, 16 miles, and had a meeting at his house, which was greatly to the strengthening and encouraging of Friends. After meeting, I parted with my dear friends Rachel and Mary, and company with Ann Child, and her husband, Noah, and Benjamin Harris, set off for Cedar Creek. We rode about 30 miles that evening, Phillip Hoggatt's, and lodged that night. M

morning, 20th, Jane Hoggatt went with us to Camp Creek, it being 24 miles. We had a meeting there that day. Next day, 21st, we had a meeting at the widow Clark's, about 14 miles. Next day, we went about 16 miles, and had a meeting at John Douglass', and rode about 12 miles that evening, to ———— Johnson's, and lodged that night. The next day being Seventh-day, we moved there, and went next morning, 16 miles, down to Fork Creek Meeting, which was sweet and powerful, the Lord's good presence being witnessed amongst us to the melting our hearts and tendering our spirits before him.

After this meeting, I found the motion of life also travelling cease. We went to Phillip Hoggatt's that evening, and stayed there next day to get provision in order to set off for home. I blessed the Lord to move upon the hearts of Friends at Fork Creek to come and see us, so that the members of that meeting came in general, and singing time we had together. The healing waters were poured forth to the joy and consolation of the weary mourners and weary travellers, and many wounded souls got ease. A time not to be forgotten by some, I believe, whilst we have a day to live in this life. Friends stayed there that night, and in the next morning we parted in great love and tenderness of spirit, feeling the good presence of the Lord. The enemy had laboured with subtilty to deprive us the heritage of God in that place, and to lead many who had been valiant in the Lamb's blood, to faint, and let fall their spiritual weapons, through which they overcame spiritual wickedness, and to be to the great grief of the faithful seed. With these, my soul was often deeply engaged, and forever blessed be that Ancient Arm of Divine Power, who was pleased to enable me to go through this weight thereof that was great and it bowed my soul very low many times. Oh! that my soul, with its melody, may always sing sweet praise, and ascribe endless glory unto the High and Holy King, who keeps his little ones under the shadow of his wings—and gives them power over all to stand.

From Philip Hoggatt's, we went 16 miles to the widow Walkin's, and next day had a meeting at the Meeting House. It was a good opening being. After it was over, we went to the widow Main's again, and had a lively, sweet, powerful meeting in the family, and some other Friends that evening. After it was over, we went home with the man Hutton. Next day, we went about 20 miles, and crossed James River at the Manakin Point. Strangeman Hutton piloted us about 20 miles further, and then turned. The way was difficult, but with much ado we got safe to Appa-
chocan River, to Benjamin Pateson's, who we visited very kindly. The next day, 26th, we had a meeting among the few Friends there, which was close and exercising for some time. The enemy had raised a monster among them, who pretended to be as highly inspired as any of the prophets. I had never heard anything of it, but it troubled me great exercise and travail of spirit. At some time I was constrained in the power of the Lord to bear testimony against that spirit that set itself above the pure witness of God, and raised contention and division among his people. Friends were greatly broken in spirit, and I felt sweet encouragement to spring in my heart to the seed of God who were bowed down in pain and travail of spirit. The meeting concluded to sweet satisfaction. We went to Benjamin Pateson's and dined there about 13 miles, to Joseph Butler's, where my dear Mary Keems, formerly Pateson's dear worthy Friend, went with us for guides. She had lived to the age of 42 years a single life, and took much pains to bear travelling Friends com-

pany, and was of good service therein. I thought her conversation was seasoned with the right savour of Divine life. Next day, 30th, we had a meeting at William Butler's, which was solid and good, concluding with fervent prayer for God. The people were profanely wicked and hardened, but the Lord was pleased to set his power in my heart over all. After meeting we went to Benjamin Pateson's, and the Friends in general being with us, we had a solid-good sitting together. We then took our solemn leave of each other in abundance of love. We lodged there that night, and in the morning, as we were about to take leave of the family, and some Friends who came to see us set off, we were struck with an awful silence, and had a sweet time together, to the joy and consolation of the poor mourners in Zion. We parted in great brokenness of spirit, with many tears, feeling the sweet presence of Divine Life. Benjamin Pateson went about eight miles with us, to put us on the road. He was a dear, honest-hearted Friend, and a great lover of the Truth. It was the first day of the Seventh month, 1754, that I set off for home, with a reward of sweet peace and satisfaction in my mind. My companion was taken sick with the ague before we came from Benjamin Pateson's, which remained with him on the road. In three days and a half, we came to Isaac Jackson's, and were kindly received by his wife and children. We lodged there that night and had an evening meeting, which was very living and powerful, the Lord's good presence being witnessed therein to our joy and comfort. Forever praised and magnified be the worthy name of the Most High God; he still continues his loving kindness to my poor soul, with the signet seal of his eternal spirit. Oh! the effects of pure peace which I felt on my return home, is beyond what I am able to express. I thought it was a full reward for all my various trials and exercises, which had been very great at times."

For "The Friend."

Agricultural and other Statistics.

The National Intelligencer has published a tabular statement, condensed from the preliminary report of the eighth United States census, and other official sources. The productions of the year 1860, are stated to have been as follows:

Indian Corn,	bushels,	830,451,000
Wheat,	"	171,185,000
Rye,	"	20,976,000
Oats,	"	172,554,000
Peas and Beans,	"	15,188,000
White Potatoes,	"	110,571,000
Sweet Potatoes,	"	41,606,000
Barley,	"	15,635,000
Buckwheat,	"	17,664,000
Cotton,	pounds	2,080,000,000
Tobacco,	"	429,300,000
Rice,	"	187,110,000
Wool,	"	60,511,000
Butter,	"	460,510,000
Cheese,	"	105,875,000
Hops,	"	11,010,000
Flax,	"	3,783,000
Silk Cocoons,	"	6,562
Maple Sugar,	"	38,863,000
Cane Sugar,	"	302,205,000
Beeswax and Honey,	"	26,386,000
Hemp,	tons	104,000
Hay,	"	19,129,128
Wine,	"	1,850,000
Cane Molasses,	"	16,337,000
Sorghum "	"	7,235,000
Maple "	"	1,945,000
Clover and Grass Seeds,	bushels	1,329,000

The value of animals slaughtered, is stated to be \$212,871,000; of orchard products, \$19,759,000; of market gardens, \$15,541,000; the number of horses in the United States, was 7,300,972; of asses and mules, 1,296,339; of sheep, 21,823,566; of horned cattle, 28,957,346; of swine, 36,022,276. The value of agricultural implements produced, was \$17,802,514; the cash value of farming implements and machinery in use, was estimated at \$247,027,000, and the cash value of farms, \$6,650,572,000.

The preceding figures may serve to give some idea of the immense value of the agricultural industry of the United States, which throws quite into the shade all the results of manufactures and commerce, highly important as they may appear when not placed in comparison with this great overshadowing interest.

MINERAL PRODUCTIONS.

From information derived from the same sources, it appears that the gold found in America in 1859, amounted to \$17,744,462; quicksilver, \$2,000,000; copper, \$3,316,576; pig iron, \$19,457,790; zinc, \$72,600; lead, \$977,281; nickel, \$28,176; silver, \$610,011; anthracite coal mined, 9,389,330 tons; bituminous coal, 5,775,000 tons; salt valued at \$2,265,300.

MANUFACTURES, &c.

Value of cotton goods produced in the year ending Sixth month 1st, 1860, \$115,137,926; of woolen goods, \$65,865,963; of leather produced, \$63,000,750; boots and shoes manufactured, \$89,549,900; steam engines and machinery, \$47,118,550; sewing machines, \$6,605,315; spirituous liquors distilled, \$8,002,983 gallons; malt liquors brewed, 3,239,545 barrels.

COMMERCE, &c.

Aggregate value of imports in the year 1860,	\$334,350,453
Aggregate value of exports,	248,505,451
Value of tonnage belonging to the United States,	221,502,902
Products of fisheries,	12,921,092

BANKING.

There were 1612 banks in the United States, with an aggregate capital of \$421,890,905 Their circulation amounted to \$207,102,477 The estimated amount of coin in the United States was from \$275,000,000 to \$300,000,000.

RAILROADS.

The aggregate length of railroads in 1860, was 31,196 miles, constructed at a cost of \$1,186,422,000

EDUCATION.

The number of principal colleges and professional schools in the United States in 1860, was 233. The system of common school education, has been adopted in nearly all the Free States. The number of children and older persons receiving instruction in the various educational institutions, was about 5,000,000.

POPULATION.

The total number of inhabitants of the United States in 1860, is returned by the census takers as 31,749,281, of whom 26,975,575 are classed as white; 331,950 Indians; 487,996 free colored, and 3,953,760 slaves.

RAILROAD TO THE PACIFIC.

By an act of Congress, passed Seventh month 1st, 1862, a charter was granted to the Atlantic

and Pacific Railroad company, for the construction of a railroad, with branches, from the Mississippi river to the Pacific ocean, a distance of 1800 miles. In aid of this colossal enterprise, Congress has made a very liberal donation, by grants of public lands lying on the route, and a loan of thirty-years six per cent. United States bonds, to the amount of about \$60,000,000 bonds, to be issued in instalments as the work progresses.

TRIFLES.

S.acted.

What are trifles—who may guess
All a trifle's meaning?
Scattered ears on life's broad field,
For a wise one's gleaming,
Naught but hath its work on earth,
Fought with pain or pleasure—
Links in nature's mystic chain,
Though of tiniest measure.

Trickling from the mountain height,
Through the beech roots stealing,
See, a thread of silver light
Sunbeams are revealing;
Drop by drop it gathers fast,
Never resting, never,
Till it swells and flashes forth
In a glorious river.

'Twas a single rain-drop fell
On a green bud thirsting—
Strengthened by the fairy draught,
Lo, a flower is bursting;
And an acorn, lightly flung
In a pathway dreary,
Spreads an oak's broad shadows out
To refresh the weary.

But a flower's perfume may bear
Back through years of sorrow,
The sweet sunny morn of life,
With a bright to-morrow—
And a tress of silken hair
On a young brow parted,
Wakes a fount of bitter tears
For a broken-hearted.

Just a look may warm thoughts
Full of proud resentment—
Just a look may fill the soul
With a glad contentment;
Little prayers of children fair,
By their mother kneeling,
Touch a worn and weary heart
With a child-like feeling.

But a trifle seems a word
All unkindly spoken,
Yet the life-heart walleth low
For a gold-string broken.
But a trifle seems a smile
On a kind face beaming,
Yet a faint heart growth strong
'Neath its gentle gleaming.

Trifles! each one hath a part
In our pain or pleasure,
Making up the daily sum
Of our life's brief measure;
All unnoted as they pass,
Sarcely worth our heeding,
Yet a trifle, it may be,
God's own work is speeding.
— *Churchman's Magazine.*

Selected.

WEEP NOT!

DR. JOHANN HOFEL. 1600-1683.

Oh precious word, by Jesus brought
To the poor widow—Weep thou not!
When other comforts all depart,
That memory stays to cheer my heart.

When sore privation is my lot,
My Jesus whispers, Weep thou not!
God is thy father; trust his care;
He listens to the ravens' prayer.

When feeble, faint, and sick I lie,
And ought can do but moan and sigh,

My good Physician comes unsought,
And says, poor sufferer, weep thou not!

When, plagued by persecution's hand,
I find no rest in all the land,
Then Jesus whispers to my thought,
Thou hast a home in heaven, weep not!

When death dissolves love's tenderest tie,
Weep not, saith Jesus, it is I
Who take away and give again;
Remember what I did at Nain!

When I, too, meet that mortal fight,
Lo, Jesus hails me in the night;
I am the life, weep not! he saith,
He that believeth tastes not death!

Oh precious word, by Jesus brought
To every sufferer—Weep thou not!
While in my heart those accents dwell,
I bid all gloomy grief farewell.

—*Religious Magazine.*

Are you much alone with God?

A confinement to the constant whirl of business is not favourable to the growth of piety. In order to grow in holiness, the soul must have much time for quiet and meditation. The love of God in the heart is a plant whose genial soil and locality are not in the thoroughfares of public life. This is one reason why a rich man shall hardly enter into the kingdom of God. Not only does the increase of wealth foster ungenial feelings in the soul; the pressing duties unavoidable in this pursuit of wealth engross his time, and keep him amid scenes chilling and blighting to his religious affections. He who would cultivate a likeness of spirit to God, must be much alone with God. When from his first rising in the morning till his lying down at night, the christian is enveloped with business, his spirit must be impregnated with worldliness to the exclusion of holiness. The attainments and spirit of the lawyer, of the physician, or of any professional man, can be acquired only by being long and closely domesticated with the persons and studies peculiar to that profession. By much time spent in communion with Jesus and meditation on his truth, the believer grows in grace and in the knowledge of Christ.

Nothing great, nothing good, can be accomplished without seclusion and meditation. Chrysostom says, "Solitude is the fittest place for philosophy." In the words of Richard Baxter—"We seldom read of God's appearing, by himself or his angels, to any of his prophets or saints in a throng, but frequently when they were alone. Isaac went forth to meditate in the field at the eventide. Jesus was so used to a solitary garden, that even Judas, when he came to betray him, knew where to find him. And though he took his disciples thither with him, yet he did separate himself from them for more secret devotions. And though his meditation be not directly named, but only his praying, yet it is very clearly implied." In retirement we gather the strength and recruited energy necessary to carry us through the struggles of active life. Meditation opens those springs of religious feeling which feed our holy emotions, as they flow on in a deepening channel, till our peace becomes as a river, and our righteousness as the waves of the sea. A river can as naturally exist without springs in the mountains or fountains in the wilderness, as a life of holiness without holy seclusion and meditation. It is in these scenes of loneliness that the Holy Spirit most generally gushes forth most freely, as a fountain of water springing up into everlasting life. Hence the flock of God's heritage so generally "dwell solitary in the wood." Micah vi. 14. The psalmist, speaking of the trials through which God leads his people, says, "Thou broughtest us

out into a moist place," Ps. lxxvi. 12, a place when the influences of the Holy Spirit were gushing like water-springs in the green grounds of meadow. There, where the Spirit is copiously shed abroad, "They spring up as grass, as willows by the water-courses;" Isa. xlv. 4. The man who "shalt be like a tree planted by rills of water, that bring forth fruit in his season, whose leaf shall not wither," is the man whose "delight is in the law of the Lord, and in his law doth he meditate day and night;" Ps. i. 3. John the Baptist was in the wilderness till the day of his showing in Israel. Jesus himself began to be about thirty years of age before he came forth from his seclusion to the active labours of his ministry. And during the years of his public ministry, he never passed a night in Jerusalem, but sought the loneliness of the mountain for meditation and prayer. To those same consecrated retreats must every follower of Jesus fall often withdraw to fill the eye of his soul with those living waters.

"When one that holds communion with the skies
Has filled his urn where these pure waters rise,
And once more mingles with us meaner things,
"Tis even as if an angel shook his wings:
Immortal fragrance fills the circle wide,
That tells us whence his treasures are supplied.
So when a ship, well freighted with the stores
The sun matures on India's spicy shores,
Has drop her anchor and her canvas furled,
In some safe haven of our western world,
"Twere vain inquiry to what port she went,
The gale informs us, laden with the scent."

Meditation is the secluding of ourselves from distractions, and the fixing of our thoughts at affections quietly on heavenly things, so as to move all impiments out of the way of the development of these affections and the operations of the Holy Spirit, thus doing everything in our power to co-operate with this divine influence in helping forward our holiness. So necessary is this quiet for the soul, that when God wishes to advance a believer, he will compel him to live alone, by driving him from the busy world through sickness, reverses in business, or defamation, or the company of enemies. Affliction is a means taken by God to compel reflection and retirement from our sorrows are the thorny hedges by which the Lord would set apart him that is godly for himself. Ps. iv. 3. If you are a child of God, and are living in the neglect of meditation on his truth, a retirement with him, be sure that he will shut you off by some sore affliction from the world you are loving too well, that you will be compelled to find your only comfort in fleeing to his promise and resting your weary soul on his truth. It is the secret of the confinement of many a believer for weeks and months to his chamber by infirm and sickness. Remember this in prosperity of health; and then affliction may not be so necessary so long. You are much alone with your business. You are much alone with your study. You are much alone with the duties of your office. You are much alone with your family. Are you much alone with God?—*Pacific Expositor.*

To be redeemed from the wisdom which is of beneath, and to walk in the light of the Lord, is precious state. Thus his people were brought put their trust in Him; and, in humble confidence in his wisdom, goodness and power, find a refuge in adversities, superior to the greatest outward helps, and a comfort more certain than any worldly advantages can afford.

The loss of goods and money is oftentimes a loss; if we had not lost them, they might perhaps have occasioned us greater loss.

For "The Friend."

BIOGRAPHICAL SKETCHES

Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 94.)

"On Fifth-day, (28th of Fifth month 1772,) we went to Savoy Meeting. Aunt was silent, and dull time it was. There Isaw poor May Drummond among the people. I was much affected with her mean appearance, and the remembrance of her former frame. We dined at Joseph Roe's, and spent the afternoon and evening agreeably with them. On Sixth-day, the 29th, we were at Gracechurch street Meeting. After several short testimonies, aunt was much favoured in exhortation. A good meeting it was. We dined with the widow Hannah Plumstead. She is a solid woman, and so her eldest daughter Polly; her other daughter is but young. Aunt had something edifying as well as comfortable for them, with which they were much tendered. Sophia Hume was with us, and accompanied us to our lodgings. In the evening, we went with our kind landlord and his family to their place at Kentishtown, where we remained on seventh-day.

"On First-day, (31st,) we went to Westminster meeting; it was pretty full. It was called 'large, solid and quiet,' but gay. Such (the gay) were mainly spoken by —, but not edited. Robert Cetchworth spoke, and my good aunt, by the power of the Word and Life, brought down all. I hope it will not be forgotten by many there. At Le Park Meeting, (in the afternoon,) which was easy for a time, but near the close was favoured. We drank tea at William Arch's, and afterwards with his wife, and some young people, aunt and Sarah Coblyn had a seasonable sitting.

"Second-day, Sixth month 1st, attended the morning meeting of ministers and elders, in which Aunt was favoured (in testimony), and Claude Jay, in prayer. We dined at Richard Chester's. His wife is a loving woman. From thence Zachariah Cockfield took us in his chaise to his house at Upton, three and a half miles from London. His wife is a tender Friend and kind. On Third-day, we attended Plaster Meeting. There was a small cove number present, yet aunt was favoured in supplication. Here I met with widow Coleman, a relation of Mordecai Moore's. She gave us a pressing invitation, but we returned with Zachariah to fine. In our way to Upton yesterday, we called at Thomas Atkinson's, who married a daughter of George Mason. They have three children, two daughters and one son, who, as yet, do well. At a o'clock we went to Bromly Meeting, three miles. The greatest part of those present seemed young, raw and untaught, but they were attentive to aunt when she spoke. She was admirably led to open her way to the kingdom of heaven.

"Fourth-day, in the afternoon, went to see a poor Friend, with whom we sat an hour in much sympathy and love, aunt having to communicate to her that which was comfortable. At Westham, we drank tea with the widow Coleman, and gave her some account of her relatives in America; Joseph Coleman and his sister Moore; after which we returned to our lodgings well satisfied. On Fifth-day, the agreeable old couple, (Zachariah Cockfield and wife,) took us to Wapping Meeting, four miles. It was a satisfactory time. We dined with Owen Weston, whose wife had formerly lived with my good friend, Mary Weston. She is a valuable woman, and treated us very kindly. Our kind friend, Zachariah, then sent us in his chaise to our lodgings in the city. Sixth-day, we were at the meeting in Gracechurch street. It was full,

many Friends from the country being there, who had come to attend the Yearly Meeting. There were several exhortations. John Stevenson was much in earnest, in enforcing his concern, declaring himself 'much strengthened to press the same by the foregoing testimony of Sarah Morris, of Philadelphia.' After meeting we received a packet of letters from home by Samuel Emlen, who arrived this day, by Captain Sparks. John Woolman came also, but he remained on board the vessel until it got up. We dined at James Freeman's, with William Hunt and others. We drank tea at Joseph Roe's, and had a comfortable sitting with many Friends, and the family. Aunt was engaged in testimony and prayer. We then returned home, and spent the evening agreeably with William Hunt and companion, Samuel Emlen, Robert Willis, and others. Tabitha Eckroyd as was, now Marriott, with her husband, made part of our family during the Yearly Meeting, and John Stevenson also. On Seventh-day, the 6th, at home, in the morning, in the afternoon at the meeting of ministers and elders, which was pretty well. On First-day, the 7th, we were at Peck Meeting in the morning, with William Hunt, Robert Willis, Samuel Emlen, &c. It was full and good. Aunt was favoured. We dined with John Elliot, and went to the afternoon meeting at Wapping, small, yet pretty well. Aunt concluding it in supplication. We spent the evening at home with the above-mentioned American Friends, and a religious sitting there, crowned the day. On Second-day, we were at Select Meeting, dined at Thomas Wagstaff's, and then went to the women's meeting at Devonshire House. It was very full, some of the company very gay, and some very plain. An epistle from the Welch Yearly Meeting, and from that of Pennsylvania were read. An account of collections was all the business they had. I wish they had more to do, and less time for trifling preaching. However, after reading our epistle, Truth began again to rise, and Frances Henshaw and my aunt preached the gospel in the demonstration and power of it, and Tabitha Marriott concluded in a lively supplication. We drank tea with William Storr Fry and his wife. Deborah Townsend and her sister Hansworth were there. Third-day, the 9th, we went to Devonshire House, which was crowded, and the whole service fell upon aunt, who was admirably strengthened to perform it. All was still, and it ended well. We dined at Bradly Barclay's, with Mary Farmer, and Sarah Bradley, a young woman, who, if she minds her guide, will be useful in society. The afternoon meeting at Horsleydown, was full and satisfactory, and aunt was employed therein also. We drank tea with that good woman, Hannah Plumstead, where were divers Friends. Mary Farmer is her husband's sister.

"On Fourth-day, the 10th, we were at Gracechurch street Meeting, at which were many strangers. Among the rest was Catharine Mancealey, the famous historian. Jonah Thompson had an excellent time, and so had some others. It was a good meeting. We dined at Richard Shewell's, with Samuel Emlen and John Griffith. They have a family of sober pretty children. At Savoy Meeting, in the afternoon, the service fell upon aunt and Tabitha Marriott. It ended well. We went home with Nancy Fothergill; but in the evening, returned to our lodgings. On Fifth-day, we went to the women's meeting at Devonshire House. It was a good meeting. The little business was well conducted. Twelve memorials were received of deceased Friends since last meeting. We dined with Nancy Fothergill, and spent the afternoon there, T. Marriott being with us."

(To be continued.)

From "The American Journal of Science and Arts."

On the Relations of Death to Life in Nature.

BY J. D. DANA.

1. The creation of a plant with "seed in itself," as Moses states in his concise description, was the simultaneous institution of life and death. It was the establishment of an incoming and outgoing stream, to be in constant flow as long as the kingdoms of life should last—an incessant renewal of youth, and rejection of age.

All life is a system of progressing change in cycles—the germ first, then the embryo, the young, the adult, and last, the seed or germ again, to continue the rounds; the adult sooner or later disappearing from the field of progress, and then from the sphere of existence. Death is implied in the very inception of the scheme.

2. Death is also in every step of the process of life. For the living being is throwing off effete matter during all its growth; the change is constant, so that with each year a large part of the material in our bodies has passed away and been replaced by new. Moreover, the force which had been expended in making a cell, or particle of tissue, goes to form a new cell or particle when the former dies, and was needed for the new formation going on. Force is not lost or wasted, but used again. There is unceasing flow, and in this flow is life; its cessation is death.

3. The kingdom of plants was instituted to turn mineral matter into organic, that the higher kingdom of animals might thereby have the means of sustenance; for no animal can live on mineral matter. Now this living of animals on plants implies the death of plants.

Again, the rocks of the globe arid, to a great extent, made of the remains of dead animals.

4. The chemistry of life, also, required death. Life in the plant or animal if sustained by means of nutriment, and continued consuming, with no compensating system, would evidently end in an exhaustion of any finite supply. A perfect adjustment was therefore necessary, by which nutriment should sustain life, and life contribute to nutriment. Now the plant takes up carbonic acid from the atmosphere, appropriates the carbon and gives back the oxygen. Yet there is no tendency to an exhaustion of the atmospheric carbonic acid, or an over-supply of the oxygen; for death strikes an exact balance.

The death of the plant ends in a change of all its carbon into carbonic acid again. Thus the plant, as it grows, decomposes carbonic acid to get carbon, and then ends in making, by its decay, as much carbonic acid, and restoring it to the atmosphere. Thus, through death the compensation is perfect. The atmosphere loses only what it receives. Again, as just now observed, the plant, in growing, gives oxygen to the atmosphere; but in the decay of the plant, the carbonic acid formed is made by taking up the same amount of oxygen. The same carbon that lost oxygen when becoming a part of the plant, takes it again at the decay. The system is hence complete. The parts play into one another in perpetual interchange. Take death and decay out of the system, and it would not work.

Animal life, as above stated, was made to subsist on plants. But the scheme is so well managed as not to disturb the balance made by the vegetable kingdom alone. For all the carbon of animals comes from plants. The plants which feed an animal, and which, on decay, would have turned into carbonic acid, become changed into carbonic acid in the course of the growth of the animal, so that the whole amount of carbonic acid which the animal makes, is only what the plants would have

made if left to natural decay. Thus the higher kingdom of life is introduced and sustained, and yet the balance remains undisturbed. The system is perfect.

5. Again, one part of the animal kingdom, through every class, is made to eat up the other part, or at least to live on it. The flesh-eaters are of all grades, low and high, from the infusorium and maggot, to the lion and man. Some take what is already dead or decomposing; others kill and eat. On this subject we observe:

(1.) Death is in the system of nature—death from earthquake, lightning, and all moving forces, as well as by natural decay; and the creation of carnivorous animals was hence in harmony with the system.

(2.) Various noxious animals are held in check by the carnivorous species.

(3.) By means of flesh-eaters, the diversity of animal species subsisting on a given amount of vegetation is vastly increased, and a wider expansion is given to the animal kingdom.

(4.) Putrefaction of the dead is prevented by a multitude of scavengers; who at the same time turn the flesh into food for the vegetable kingdom; and thus plants feed animals, and animals feed plants,—one of nature's circles again.

The last two principles mentioned are of profound importance. The vegetable kingdom is a provision for the storing away or magazining of force for the animal kingdom. This force is acquired through the sun's influence or forces acting on the plant, and so promoting growth; mineral matter is thereby carried up to a higher grade of composition, that of starch, vegetable fibre and sugar, and this is a state of concentrated or accumulated force. To this stored force animals go, in order to carry forward their development; and moreover the grade of composition thus rises still higher, to muscle and nerve, (which contain nitrogen in addition to the constituents of the plant,) and this is a magazining of force in a still more concentrated or condensed state. There are thus five states of stored force in nature—three in the *inorganic*, the solid, liquid, and gaseous; and two in the *organic*, the vegetable and animal.

Now what is the provision to meet this last and highest condition? Is this magazined force left to go wholly to waste by the death and decomposition of the plant eaters? Just the contrary: an extensive system of flesh-eaters was instituted which should live upon it, and continue it in action in sustaining animal life among successive tribes. The flow is taken at its height, and the power is employed again and again, and made gradually to ebb. What is left as the refuse is inorganic matter—the excreted carbonic acid, water, and excrements, with bones or any stony secretions present. Thus the flow starts at the inorganic kingdom, and returns again to the inorganic. Moreover, in the class of quadrupeds, (mammals,) the flesh of the herbivores (cattle) is among the means by which the animal type is borne to the higher grade of the carnivores. The true carnivores, beside, take the best of meat. Whales may live on the inferior animals of the sea; but the large forest flesh-eaters take beef and the like.

There is another admirable point in this scheme. The death and decomposition of plant-eaters would have rendered the waters and air, locally at least, destructive to life. It is well known that it is necessary in an aquarium to have flesh-eaters along with the plant-eaters and plants. And when in this way the living species are well balanced, the water will remain pure, and the animals live on indefinitely. If not so balanced, if an animal is left to decay, the waters become foul and often

every thing dies. Putrefaction and noxious chemical combinations follow death, because, in life, the constituents, carbon, hydrogen, nitrogen, and oxygen, are in a constrained state, at the furthest remove from what chemical forces alone can produce; and hence, when the restraint is taken off at death, the elements fly into new conditions according to their affinities. Now animals, dying yearly by myriads, are met at death by an arrangement which makes the dead contribute anew to animal life as its aliment, and in this very process the flesh ultimately comes out innocuous, and is at last so far changed to the inorganic condition as to be the best of fertilizers for plants. Part of the process of getting rid of the great fleshy carcasses, consists in their minute subdivision by the feeding of larvae of insects, and, further, an infinitesimal division of the insect as the food of the infusoria,—which again may become the nutriment of larger animals, to go the rounds once more. But the final result is, as stated, *plant-food*—largely through the processes of digestion and excretion, but part through the decomposition of animals that are too small and readily dried up to prove offensive.

Thus the carnivorous tribes were necessary to make the system of life perfect.

One word respecting the necessity of a check on the excessive multiplication of individuals. Nature, as just now observed, is a system of constantly varying conditions—of changing seasons, winds, clouds: of inconstancy, under law, in all forces and circumstances. At the same time, the growth of a species requires the nicest adjustment of special conditions in each case. On this account the reproductive powers in species is in many cases excessively large, so that the various accidents to which the eggs or young would be exposed, might not cause their extermination. This provision opened the way for occasional excessive multiplication, and required a check from carnivorous races.

6. Finally, could death be prevented in a system of living beings in nature without constant miracle? How should the earth be managed to secure it against death? It would be necessary to still the waves, for they are throwing animals and plants on the coast to die; to still the winds, for they are ever destroying in some parts of their course; to still even the streams and rains. With winds and waves, not only helpless animals and plants, but men's houses, ships and boats, would now and then be destroyed, in spite of prudent precaution and holy living. But if we still the waves, the winds, and the streams, the earth would rot in the stagnation, and here again is death!

We thus learn, that in life the fundamental idea of reproduction implies death; the processes of life are the processes simultaneously of death; the stability of the system of life requires death; the vegetable kingdom is made to feed animals, and the animal kingdom, while containing plant-eaters, demands flesh-eaters for its own balance, for the removal of the dead, and to make out of dead flesh the proper food for plants, thus to pay its debt to the vegetable kingdom. Hence death pervades the whole system of life in its essence and physical laws; and it could not be prevented in a world of active forces except by a constant miracle; and thus would be an annihilation of nature, that is, of a system of law.

The work of salvation is an individual work; and it is by a willing submission to the heart searching operations of the Lord's Holy Spirit, and faithful obedience to his requireing, that the spiritual life is maintained and advanced.

Believing that an opinion is entertained by many of the present day, that the forgiveness and remission of their sins is not to be expected, or looked for, until some advanced period of their lives, regarding it rather as a death-bed experience—I have been anxious that proof should be adduced from the Scriptures of truth, that to every believer in the Lord Jesus, to every soul, who, burdened with a sense of sin, has sought, and found the Saviour of sinners. He is able and willing to grant a *free and full pardon* of the sins that are past, and should they again fall into sin, is their ever living Advocate with the Father. "If we confess our sins He is faithful and just to forgive us our sins, and to cleanse us from all iniquity." 1 John, i. 9. "If any man sin, we have an advocate with the Father, Jesus Christ the Righteous, who is the propitiation for our sins, and not for ours only, but also for the sins of the whole world." 1 John, ii. 1, 2.

What did Jesus say to the man mentioned, in Lu. v. 21, who was sick of the palsy? for the purpose of showing that the Son of man had power on earth to forgive sin,—calling him "son," he said, "Be of good cheer, thy sins be forgiven thee," he did not wait until a death-bed, to receive this blessed assurance!

Is any sincere penitent now less likely to receive this blessed gift of reconciliation, through faith in the Lord Jesus, than was that woman, a notorious sinner, who came into Simon's house, and stood weeping, and anointing the dear Saviour's feet? What did Jesus say to her, and of her? Addressing Simon, he said, "her sins, which are many, are forgiven," and to her His gracious language was "Thy sins are forgiven,"—"She hath hath saved thee, go in peace." Lu. vii. "Thy waitest not for a death-bed experience.

What think you of the thief, the malefactor on the cross; must not his sins have been forgiven, and washed away, in consequence of the faith, which, in that hour called Jesus, "Lord"? It was said unto this justly condemned criminal, "This day thou shalt be with me in paradise." Lu. xxiii. 44.

The Apostle Paul says, "Be it known unto you therefore men, and brethren, that through this man is preached unto you the forgiveness of sins, and by Him all that believe are justified from all things, from which ye could not be justified by the law of Moses." Acts, xiii. 38, 39. "To Him give all the prophets witness, that through His name *widener* beareth in Him, shall receive remission of sins." Acts, x. 43; and not only the prophets, but the immediate Apostles of our Lord bear witness in their epistles, again and again, that those addressed had been forgiven and justified; using frequently the *present and past*, not the future tense. To the Ephesians Paul writes, "Be ye kind one to another, tender-hearted, forgiving one another even as God, for Christ's sake, hath forgiven you." Eph. iv. Again, to the same— "In whom we have redemption through His blood—the forgiveness of sins." Eph. i. 7. Almost the same words are used to the believers at Colosse. "In whom we have redemption through His blood, even the forgiveness of sins." A present possession is this—not "will have" but "have." Col. i. 14. Again, to the same church, Paul says, "Having forgiven all your trespasses." Col. ii. 13.

To the Hebrews, the words are used, "When He had by himself purged our sins, sat down on the right hand of the majesty on high." Heb. i. 3. "Forbearing one another, forgiving one another, if any man have a quarrel against any, even as Christ, forgave you, so also do ye." Col. iii. 13.

John writes, "I write unto you, little children,

because your sins are forgiven you for His Name's sake."

Peter says, on one occasion, "He that lacketh these things is blind, and cannot see afar off, and hath forgotten he was purged from his old sins."

Now seeing we have so great a cloud of witnesses, and considering the different degrees of religious progress the members of these churches must have attained—are we not safe in concluding that it was because of their living faith in the Lord Jesus Christ—they were thus washed, and forgiven; having been dead in trespasses and sins, they were reconciled to God, through faith in Him, who is able also to save them unto the uttermost, who none unto God by Him."

Let us then, when rejoicing that we live in a day when the prophecy is fulfilled, "I will put my law in their inward parts, and write it in their hearts, and will be their God, and they shall be my people"—remember that this language is added,—"for I will forgive their iniquity, and I will remember their sin no more."

Borrowing Trouble.—What a vast proportion of our lives is spent in anxious and useless forebodings concerning the future,—either our own, or that of our dear ones. *Present joys, present blessings* slip by, and we lose half their sweet flavour, and all for want of faith in Him who provides for the tiniest insect in the submoans. Oh, when shall we learn the sweet truth in God that our little children teach us, every day, by their confiding faith in us? We—who are so mutable, so faulty, so irritable, unjust; and He—who is so watchful, so pitiful, so forgiving! Why cannot we, slipping our hand in His each day, walk trustfully over that day's appointed path, thorny or flowery, trodden or straight, knowing that evening will bring us sleep, and peace, and home. Why toil industriously to gather up manna for days yet to come, when every dewy morning shall find it freshly sprinkled at our feet? When we do get near "Our Father," how wonderful seems this, our distrust—our eyes overflow, that we could make so mean return for that all-embracing, all-bountiful, generous kindness, which is measureless as the ocean, though our short-comings are numerous as its rising waves.

Rapid Growth of Vegetables in Norway.—In valuable treatise on the vegetable productions of Norway, which has been published by Dr. Muelr, in connection with the Norwegian department of the Exhibition, some extraordinary facts are related respecting the influence of the long duration of light, during the summer months, on the growth of vegetables in the higher latitudes in Norway. At 70 deg. N. it was found that ordinary grass grew at the rate of three and a half Englishches in twenty-four hours for many days in summer, and that some of the cereals also grew as much as two and a half inches in the same time, not only is the rapidity of growth affected by the constant presence of light, but those vegetable sections which owe their existence to the influence of active force on the leaves, are also produced in greater quantity than in more southern climates; since the colouring matter and pigment cells are laid on in much greater quantity and the tint of the coloured parts of vegetable is consequently deeper. The same remark applies to the flavoring and odoriferous matters, so that the fruits of the north of Norway, though not equal in saccharine properties, are far more intense in flavour than those of the south.

"It is no small grief to one that loves the Lord

Jesus in sincerity, to see how unlike the example and precepts of Christ, many men are who bear his holy name. He was humble and meek; they are proud and insolent. He commanded us to love our enemies; they can hardly love their friends. He that had the command of all, cared not to possess anything; they not having right to much, would possess it all. He bids us turn our cheek for the other blow; they will be sure to give two blows for one."—Hall.

The road to fashion and distinction in the world is not the road to christian simplicity and truth; nor is the same education promotive of both.

THE FRIEND.

ELEVENTH MONTH 29, 1862.

We unite with the doctrine advocated by the author of the communication in this number, on the forgiveness of sins; fully believing there are many who could testify in truth, that having given heed to the tendering visitations of Divine Grace to their souls, they have been brought thereby to see their blind and lost condition, and the exceeding sinfulness of the manifold transgressions of the Divine law of which they have been guilty. As these patiently abode under the dispensation of condemnation, they were favoured with the gift of repentance towards God, and faith in our Lord Jesus Christ, whereby they came to know their sins to be forgiven and washed away, and power received to follow Christ in the regeneration, and to walk blamelessly in newness of life.

But there is a fatal, and we fear at the present time, a prevalent error, which we think of the greatest importance to be guarded against, not alluded to in the communication referred to; and that is, that a mere belief in what the Scriptures assure us Christ has done for us without us, and the acknowledged fact that He is the Saviour of the world, and has made an atonement for our sins, are sufficient to secure this forgiveness of sins, and put the soul in possession of all the benefits of his coming, suffering and death.

But "living faith" is a very different thing from any result which man, by the exercise of his reason, or the cultivation of his natural affections can arrive at. It is a gift from God, and attests its divine origin and presence, by working by love to the purifying of the heart. Unregenerate man cannot command this faith, nor can he choose the time when it shall be bestowed upon him. The whole work of salvation, from beginning to the end, is done by Christ, and it is only as we wait upon and humbly submit ourselves to his Spirit in the heart that we can know the work begun, and carried on; or the proof of our owning and loving him, being our keeping his commandments. Thus the apostle tells us no man can call Jesus Lord, but by the Holy Ghost; and we may rest assured that flesh and blood is no more able in the present day to make a revelation of Christ as the Saviour of the world, which will be saving to the soul, than it could, in the days of his personal appearance among men. R. Barclay says, "That Christ, by his death, removed the wrath of God, so far as to obtain remission of sins for as many as receive that grace and light that He communicates unto them, and hath purchased for them by his blood; which, as they believe in, they come to know remission of sins past, and power to save them from sin, and to wipe it away, so often as they may fall into it by

unwatchfulness or weakness, if, applying themselves to this grace, they truly repent; for to as many as receive Him, He gives power to become the sons of God. So none are sons, none are justified, none reconciled until they thus receive him in that little seed in their hearts. And life eternal is offered to those, who, by patient continuance in well-doing, seek for glory, honour, and immortality; for, if the righteous man depart from his righteousness, his righteousness shall be remembered no more. And therefore, on the other part, none are longer sons of God and justified, than they patiently continue in righteousness and well-doing. And therefore Christ lives always making intercession, during the day of every man's visitation that they may be converted, and when men are in some measure converted, He makes intercession that they may continue and go on, and not faint, nor go back again."

In the individual cases referred to in the communication, we have no means of knowing how long and how powerfully the Spirit of Christ may have been at work in their hearts convicting them of sin, and leading them to repentance, before He graciously pronounced their sins to be forgiven. All power is in his hands, and He grants his merciful forgiveness when and as it pleaseth him.

The Ephesians whom Paul admonishes to forgive "one another even as God for Christ's sake hath forgiven you," he addresses as "the saints which are at Ephesus, and the faithful in Christ Jesus," and he tells them, "By grace are ye saved through faith; and that not of yourselves; it is the gift of God: not of works, lest any man should boast. For we are his workmanship, created in Christ Jesus unto good works, which God hath before ordained that we should walk in them." So also the apostle addresses himself "to the saints and faithful brethren in Christ, which are at Colosse," whom he prays, "may be fruitful in every good work;" "giving thanks unto the Father which has made us meet to be partakers of the inheritance of the saints in light; who hath delivered us from the power of darkness, and hath translated us into the kingdom of his dear Son, in whom we have redemption, even the forgiveness of sins."

The expression in the epistle to the Hebrews, "when He had by himself purged our sins," is the declaration of the atonement made by Christ for the sins of the whole world; the efficacy of which those he was addressing had doubtless experienced, inasmuch as Paul calls them "holy brethren, partakers of the heavenly calling."

The "little children" to whom John writes, must have been those, newly born of the incorruptible Seed, who were walking in the light; for he had previously declared, "If we say that we have fellowship with Him, and walk in darkness, we lie, and do not the truth: but if we walk in the light, as He is in the light, we have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin."

These portions of Holy Scripture amply prove the truth of the doctrine advocated by our correspondent, and also demonstrate the other gospel truth, ever maintained by Friends, that it is through obedience to the "unspeakable gift" of Divine grace to the soul of man, that he comes to possess that "living faith" in "the Lamb of God who taketh away the sins of the world," which brings forgiveness of sins that are past, and leads in the path of righteousness.

In the words of another approved writer among Friends, "Man being nothing as such but what God has made him, and possessing nothing but what He affords him, is wholly God's and not his own; and is, therefore, in duty bound to walk in

The Pizzo Bernina.

By EDWARD SHIRLEY KENNEDY, M. A.

(Continued from page 98.)

During the "Stanche" we had progressed so far, that six o'clock found us at a spot almost even with the southern or upper extremity of the Moratsch glacier, and immediately below the summit of the Pali. We now made a determined push for the glacier-bed, which we had to cross, and which was 1000 feet below us. An ugly-looking crevasse, running through the neve and parallel to the glacier, directly intercepted our path, and compelled us to make a long zig-zag before we could effect a passage. Another quarter of an hour brought us, at 7.20, to the top of the icy col, which being the lowest part of the ridge connecting the Bernina with the Pali, forms the snow-shed whence the ice flows in two opposite directions—on the north towards the Bernina pass, on the south making away precipitously over the Seersceen glacier that flows between the col and Monte della Grazzia. At this spot we made our second break, but were rather given to grumbling, as we recalled that the last two hours, although they had brought us thus far onwards, had not enabled us to gain a foot in height.

Breakfast over, we commenced to ascend a kind of snowy cone—a main buttress—that springing from the snow-shed, and becoming steeper as we rose, finally terminated in an arctic. It possesses all the usual characteristics—characteristics which peculiarly impress themselves upon the memory of who have seen them, and of which almost every arctic endeavour, more or less successfully, tends to the reader some idea. On our left the ice, which but few interruptions, went sheer down to the glacier of Seersceen; before us, and constituting our principal line of march, the ridge rose at an angle of 80°; and on our right, and suspended above the glacier far below it, there curled over a beautiful and changing cornice of driven snow. With the fall on our left, and the snow cornice on our right, we continued to ascend. Though the steepness of the incline might have caused difficulty, and the precipitous fall on each side have produced a needless dread, yet to all appearance we had a good and extent of snow, nearly two feet wide, upon which we might safely tread. But this was a

treacherous drift, masking a pit-fall of unknown depth. Unavoidably keeping as much as possible to the right, in order to avoid the ice-wall, we found it necessary at every step to probe with the alpenstock, so that we might not rest our weight upon the cornice. Thus we advanced, foot before foot, while at every thrust of the pole, a beautiful tunnel some two or three feet long, of blue snow, was pierced through the drift, and the eye, traversing its length, discerned the broken glacier deep, deep below. This is the oft-repeated tale. These are features familiar to every Swiss mountaineer. But they are features which all desire to reproduce.

The ridge at length became so steep that a rock, smooth and utterly impracticable cropped out before us quite bare of snow. We seemed at a dead lock; and, accordingly, a council of war was held. Jenni scanned the rock ahead, and an exceedingly queer-looking ice-fall to the left, which eventually wound round to a spot above the rock. He then peered over the cornice down towards the glacier, and finally looked at us with an exceedingly comical expression of countenance, whereat we all laughed. In the meantime Hardy and I had been speculating as to the best mode of proceeding, and had signally failed, in attaining any satisfactory result. The other guides were equally at fault. But

"Jenni, our guide, was a jolly old blade,
And a jolly old blade was he;
He called for his rope, and he called for his peade,
And he called for Hardy and me."

He then manfully went to work with his shovel, loosening the ridge, scattering the cornice, breaking down the icicles, destroying beauty, demolishing natural formations, dislodging the loose snow, and trampling the surface under foot. Before long, he had made a sort of platform, tolerably firm, and perhaps some two feet square. Upon this he quietly seated himself, rope in hand, and displacing poetic loveliness by the hard reality of prose, he substituted for the curling cornice of snow his own sturdy limbs, as he allowed them to dangle over the abyss beneath. He next beckoned to his brother, who was contemplating these preparations in astonishment. We could not discover the clue which Jenni, with allowable self-complacency, concealed within his own thoughts. There was evidently a little hesitation. "*Kommen Sie nur,*" "Come along then," said Jenni. And his brother, slowly advancing, soon stood beside him. The rope being securely attached to his waist, Jenni carefully lowered him down the face of the snow. I followed, supporting myself, as far as I was able, by digging alpenstock and heels into the wall of soft snow. Towards the right this wall went precipitously down any number of feet; but the spot at which we began to descend it was about thirty feet above a crevasse which, meeting this wall at right angles, swept from its commencement at its foot gradually round the cone of snow, and preserved for a considerable distance, a nearly level course.

At the bottom of the wall it was necessary to double oneself up so as to crawl under the over-

hanging icicles, and take refuge within the mouth of the crevasse itself. Numerous pinnacles of ice rose up within its jaws, like huge jagged teeth; a few of these pierced through the covering of snow, others were entirely concealed; while the deep hollow of the crevasse itself was partly exposed to view, and partly covered over by a treacherous mass of soft snow. It was necessary to tread with the utmost caution, seeking with our poles some solitary spire of snow-covered yet solid ice on which to rest either a toe or a heel. This, however, is our only place of safety; but how the last man gets down I do not pretend to say. It is Jenni; and his motions are seemingly not subject to the ordinary laws of nature. It is certainly a peculiar position. Here we are all in a row; with snow nearly up to his knees, each man is standing upon his own peculiar but invisible icy pedestal. On our right is the wall we have descended. On our left the crevasse extends away, following the curve of the cone. At our back the massive icy wall of the cavern rises irregularly some twenty feet, broken and split into fantastic forms of the most exquisite glittering blue, and reflecting from its shimmering surface, in prismatic hues, the direct rays of the sun. As if built with angular masses polished and glossy, the wall forms above our heads an overhanging vault of Moorish architecture. The greater part is in shadow, but pendants starting from obscurity are suspended like glittering stalactites from the roof, while down the cavern's sides

"Clear streamlets run,
Blue in the shadow, silver in the sun."

In front hangs a fringe of enormous icicles, beyond which we cannot pass. Like captive songsters of the grove, we are pent within our frozen cage, and gaze between its icy bars upon the wondrous world without. Deep, deep down beneath, is the corridor that we have passed; while groups of rocks and fields of snow, peaks infinitely varied in their form, and tumultuous glacier-oceans, each succeeding each in endless profusion, extend far away to the distant horizon.

In sport or wantonness we began to destroy the bars of our prison-house. Hardy and I laid about us lustily and ruthlessly with our poles, and the poor icicles came clattering down. The frozen fragments were at first scattered in every direction, but soon selected their own line of descent, and though they were immediately lost to sight, the ear long detected the peculiar sound as they rattled down the steep frozen snow before us. We thought it as well not to follow. Nor was it advisable to remain stationary. Time was valuable. Accordingly without further delay we proceeded on our march.

For a quarter of an hour we advanced without any alteration in level, following the line of the crevasse as it curved round the final cone, at a distance of about 250 feet below the summit. Thus on our right hand there fell away an exceedingly steep slope of snow and ice, while on our left the blue wall rose up with arching vault, overhanging cornice, and drooping fringe of crystals. At times we were upon the outer edge of the crevasse, and

separated by it from the wall of ice. At times with this wall quite close upon our left, we carefully traced our way along the mouth of the crevasse, seeking beneath the treacherous snow for a firm foothold upon some jutting piece of ice.

We soon arrived at a spot immediately below the summit. Here Jenni, who as usual was leading, paused, and directing all to sit down upon the edge of the crevasse, he spent a few minutes in examination. At this moment we entertained considerable doubt of final success, as it was necessary to go straight up at an angle of 52°, through deep snow lying generally upon ice. Jenni now said that he would only take one traveller to the summit. He was fearful lest a large number might cause an avalanche. Hardy kindly wished me to go, and when I urged him to accept Jenni's offer he proposed tossing up. I think Hardy had even a greater wish for the ascent than I had; and although our discussion assumed the form of one in which each desired to forego an advantage for the sake of the other, I am inclined to believe that the relinquishment of the ascent would have cost Hardy a greater effort of self-denial than it did his companion. Jenni's brother and I sat upon the snow and watched, not without anxiety, their proceedings. We could of course see every step that was taken. How vigorously Jenni drove his staff into the snow! How carefully he placed his foot! His object was to obtain the best possible hold, and at the same time to prevent the snow from becoming broken between the footsteps. If he had ascended together, no care would have prevented the footholds from merging one into another; they would then have lost their distinct separation; the whole track would have become a confused mass of soft snow, and the probability of an avalanche would have been greatly increased.

Jenni's brother was by no means a jovial companion. In fact, we were both rather down in the mouth as we sat in silence. At length the silence was broken. A rush of snow not far from us went slithering down a steep slope of ice. Thereupon, my companion spoke, and hazarded an observation that, under the circumstances, was not of the most cheerful character. "I have a brother," he slowly murmured, "and you have a good friend, up there; let us watch and see whether they get to the top, or whether they are killed. Look! there is an avalanche, and they are climbing a steeper slope!" Had they slipped, it would have been impossible for us to have afforded them the slightest assistance. I thought action better than inaction, and suggested the propriety of descending. He assented, and we pensively began to retrace our steps, and slowly descended until we reached the "*Festung der Genssen Freiheit*." At this *marais pas*, and in melancholy mood, we waited our companions. But how had they fared, as they continued their somewhat perilous climb? Let Hardy tell.

(To be concluded.)

Lecches can be raised to profit. A farmer, near Bourdeaux, has made a fortune by leech-culture. Formerly, it was a hard task for him to pay a rent of 300 francs for his bit of marshy ground; but now the land for which he gave that sum yields more than £1000 per annum. *Lecches*, after a time reproduce themselves, at the rate of about sixteen per annum; so that considering the prices obtained, the encouragement to breed is very considerable. Fifty millions of leeches were at one time required for the annual supply of France alone, and corresponding numbers were used in Britain. Three of the principal London dealers are said to import about eight million medicinal leeches annually.

For "The Friend."

Richard Jordan was born in Virginia, and at an early age removed into North Carolina, where he married, and became an eminent minister of the gospel. His father, as was the case with other Friends at that time, held slaves, and when Richard entered into life offered to present him with some, but conscientiously opposed to slavery, he declined accepting them.

In the year 1797 he undertook a religious visit to Friends in the Northern States, which took him from home about eleven months. His work in the ministry was extraordinary, in which many hearts were united to him in the fellowship of the gospel, and the foundation was laid for future near unity when he came to reside among his northern brethren.

On returning home from this first visit his mind appeared to have been brought under much exercise respecting the prospects of the country in relation to slavery, and other departures of the people from justice and right. He says, "Truly under the awful clothing of my spirit I was ready to cry out, O America, America; how wilt thou atone for the injuries thou has done to those of the nations of Africa? Hath not the universal Father of mankind testified, 'with what measure ye mete, it shall be measured to you again.' O thou land of my nativity, how wilt thou be able to stand, when He who hears from heaven the cries and grievances of the unjustly afflicted and oppressed, shall arise to plead their cause? Oh! for thee I tremble, when I see clouds, thick clouds arising over thee, and gathering blackness."

How unexpectedly have these clouds arisen over our hitherto prosperous and peaceful country. When we reflect upon the injustice, the cruelty and the gross abominations which have been committed upon the sable sons and daughters of Africa, by men of superior talents and education, professing the christian religion but holding in contempt those who are opposed to the slavery of the coloured race, we cannot marvel that the Lord's wrath should be kindled against us. But gross wickedness is not confined to one section of our country, nor does it only consist in the atrocities connected with the system of slave-holding; the dens of corruption and debauchery, swindling and profanity in other parts of our country, where slavery does not exist, and a disregard, in many, of the worship and reverence of Almighty God, are crimes which must draw down Divine judgment upon individuals and a nation, sooner or later. Men may think to conceal from the eye of the Almighty their sinful courses, but the period will come when God will answer such by terrible things in righteousness, and render to every man according to his works. "One day is with the Lord as a thousand years, and a thousand years as one day." Sooner or later the pride and wickedness of man and of nations will be punished.

Nebuchadnezzar was forewarned of the punishment of his pride and imaginary independence of the Ruler of nations, which would overtake him if he did not forsake his sins. His greatness was represented as a tree whose height reached unto heaven, and the sight thereof to all the earth, and in his vision he saw a watcher descend from heaven, saying, "How the tree down and destroy it; yet leave the stump of the roots thereof in the earth, even with a band of iron and brass, in the tender grass of the field." At the end of two months as he walked in the palace he said, "Is not this great Babylon, that I have built for the house of the kingdom, by the might of my power, and for the honour of my majesty?" while the word was in the king's mouth there fell a voice from heaven, saying, "O king Nebuchadnezzar,

to thee it is spoken; the kingdom is departed from thee; and they shall drive thee from men, and dwelling shall be with the beasts of the field, or thou know that the Most High ruleth in the kingdom of men, and giveth it to whomsoever he will.

He had been counselled to break off his sins righteousness, and his iniquities by showing me to the poor, if it might be a lengthening of tranquility. After his humiliation, when his judgment was fulfilled, he lifted up his eyes unto heaven and blessed the Most High, and praised a honoured Him that liveth forever; whose dominion is an everlasting dominion and his kingdom is from generation to generation—and all the inhabitants of the earth are reputed as nothing, and He do according to his will in the army of heaven a among the inhabitants of the earth, and none stay his hand or say unto him, What doest thou Now I, Nebuchadnezzar, praise, and extol, and honour the King of Heaven, all whose works I truth, and his ways judgment: and those that walk in pride he is able to abase.

For "The Friend"

Rain Glass.—In a late number of "The Friend" there was a short article with this heading, taken from the London Athenaeum. It describes a simple arrangement which, we are assured, never fails to foretell rain by the rise of the water in the neck of the inverted flask. Can this be true? A little reflection will convince every intelligent reader that the thing is simply a fallacy. The arrangement described forms an air thermometer; with the temperature of the flask is lowered, and the air therein contained reduced in volume, the water will of course rise in the flask neck, and on the contrary it must fall with every increase of temperature and consequent expansion of the air. Now unless a marked fall of temperature uniformly precedes rain, which we know is not case, the instrument can give no indication of approach. The barometer often falls previous rain, showing that the atmosphere has become less dense; this change should be accompanied not any rise in the flask mouth, but by a fall, though probably so very small as to be scarcely perceptible.

From "The American Journal of Science and Art"

Various Recent English Surveys in China.

Geography is already beginning to share in advantages derivable from Lord Elgin's treaty, conditions of which so greatly improve the position of the foreigner in China, whether traveller, official, merchant or missionary. Until that time came into operation, our countrymen could not penetrate the interior of this vast country in face of legal prohibitions, and with the liability of arrest at the hands of native authorities. The new treaty gives British subjects the right of travelling with a passport through the whole land, so readily has this permission been availed of, that in the first year after this right was obtained, twelve out of the eighteen provinces of China had been visited by our countrymen, together with Manchou Tartary, the cradle of the present dynasty.

First among these explorations comes the ascent of the Yang-tze-Kiang, so gallantly undertaken by Colonel Saker, Captain Bickerton, Dr. Bar and Mr. Scherer-heffsky, the details of which are familiar to us all; while the high sense entertained by this society of the services these gentlemen have rendered to geography has been markedly shown by the presentation of the Patron's Medal to Captain Bickerton. In tracing the great Yang-tze along 1800 miles of its course, these travellers crossed the six central provinces of Keangsoo, Nganhwuy, Keangse, Hoopih, E-

and Sze-chuen; and thus carried their explorations upwards of a thousand miles beyond any that had previously been openly visited by foreign travellers. The first seven hundred miles of that river's course is now made familiar to Europeans by the opening of the port of Hankow for foreign commerce, and there is every prospect of high expectations that have been formed of the capacity of that great central mart being fully utilized. Within eight months of the opening of that port it had been visited by nearly 200 foreign ships, consisting for the most part of small steamers, and the foreign trade thus conducted amounted during the first six months to two millions sterling. Some particulars of no less than seven other expeditions, undertaken by our countrymen in the north, centre, and south of China during the past year have been made public. In the north, Mr. Morrison, our Consul at the new port of Chefoo, accompanied Captain Harecourt as his companion, travelled overland to his post from Teentsin in the month of January, and profited by the opportunity thus afforded him to follow the Grand Canal along nearly 300 miles of its track, to visit the tomb of the great sage Confucius, which is to be seen at Kew-koo, in the charge of his own descendants, a family with a pedigree of 2500 years, dating from the time of the sage himself. Morrison also visited Peking, the capital, and other places in the hitherto unexplored province of Shantung, and the journey took these travellers over 700 miles of country, for the most part new to Europeans. Six months before, two other foreigners set out in an opposite direction, and travelled overland from Teentsin to Mukden, the capital of Manchoo Tartary. They were struck by the manner in which this once barbarous country has been virtually converted into a Chinese province by the superior energy of the Chinese emigrants, and report that the Manchooes, now in this their native land, have lost their ground entirely in all parts of the country where anything is to be made by agriculture and commerce; and that those who remain, by adopting Chinese manners, customs, and language, have become, to all intents and purposes Chinese, and have been absorbed into the predominant race. Later in the year, in November and December, an expedition through the northern provinces of China, Pe-chih-le, and Shan-se, was undertaken by Messrs. Richards and Bissin. Starting from the same point—Teentsin—they appear to have ascended the high plateaus of the north of Peking, and to have skirted the northern steppes until they reached Shan-se. They travelled in this province as far as its capital, Tai-yuen, and then, turning westward, entered Pe-chih-le, and visited Pau-king, the capital of the latter province, on their way back to Teentsin. The journey occupied the travellers 40 days, during which time they appear to have crossed the Great Wall four times, finding it in a state of decay that may be feared is typical of the country of which it is the chief monument, and they estimate the total length of their journey at 1800 English miles. The flourishing and populous condition of most of the country through which they passed accounts for the success of the trade of the northern part of Teentsin, the foreign trade of which, in the first year of its being opened, has reached the considerable sum of two millions sterling.

In the centre of China, four gentlemen—Messrs. Jackson, Thornburn, Beach, and Bonney—travelled in the month of April, from Canton to Hankow, a distance of 756 miles, which they performed in 18 days; their journey differing from those above recorded as being made entirely by water, with the exception of one day's land travel across the moun-

tain range that divides the province of Kwangtung from Hoo-nan. Following the course of the north river in the first named province, and the Seang river in the latter, they thus traversed both those provinces from south to north, and were the first modern explorers of the great Tung-ting lake, by which they reached the Yang-tze and Hankow. In Cheh-kiang, Mr. Baker having recently ascended the Teentsang river, and visited the celebrated green-tea districts of Nghanwu, has again gone over ground previously travelled by Mr. Fortune, but to find in this instance that the previous prosperous condition of those important tea-districts has disappeared before the rebel scourge, and that scenes of industry have been replaced by desolation and destruction.

In the south of China, Dr. Legge was the first foreigner to ascend, in April of last year, the east river in the Kwangtung province to a distance of about 300 miles; and Mr. Irwin and companions have penetrated up the west river in the same province to a somewhat higher point than that reached by the expedition under Captain McCleverty in the spring of 1859, for a description of which we are indebted to our associate Lieutenant Brine. The opening of Formosa to foreign trade gives promise also of our shortly obtaining further information from that island, which is interesting not only from its commercial productions but also from the presence of aboriginal tribes in its centre and eastern coast, of which little is as yet known.

It is satisfactory to hear from all these travellers that no serious obstacles were placed in their way either by the Chinese authorities or the people; and that, while uninvited at times by the not unnatural curiosity of the latter, when anxious to gaze on foreigners for the first time, they received from them, in most cases, friendly welcome and assistance. Our treaty-right to enter the country having thus obtained an effectual recognition, it will be seen that China is now thrown open to the researches of the traveller, subject, however, to the difficulties arising out of the deplorable disorders which are at present rife in so many of its provinces. Different parties of rebels or robbers, all acting independently of each other, were met by Colonel Sarel's party in Sze-chuen, by Morrison in Shantung, by Baker in Chehkeang, and by Irwin in Kwangtung; while Dr. Dickson's party, on the other hand, travelled from Canton to Hankow—or from the south to the centre of China—without falling in with any of these destructive hordes; and Messrs. Richards and Slossin traversed the provinces of Shan-se and Pe-chih-le under similar favourable circumstances.

A Saxon Emancipation.—A late celebrated writer gives the following animated description of the ceremony of manumitting a born thrall: "Kneel down," said the master. In an instant the slave was at his feet. "Theow, (a slave), and Esue, (property to be inherited), art thou no longer," said the master, touching him with a wand; "Folk-free, (free from being enrolled or claimed before an assembly or court), and Sackless, (free from payment of service as a kind of rent), art thou, in town and from town, in the house as in the field; a hyde of land give I thee, in my meads at ——— from me and mine, to thee and thine, for aye and for ever. God's malison on him who this gainsays." No longer a serf, but a freeman and a landholder, the late sullen, inactive clown sprang upon his feet, and twice bounded aloft, almost to his own height from the ground. "A smith and a file!" he cried, "to do away the collar from the neck of a freeman! Noble master, doubled is my strength by your gift, and doubly will I labour and fight for you! There

is a free spirit in my breast; I am a man, changed to myself, and to all around."—*Copley's History of Slavery.*

For "The Friend."

BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 103.)

"On Sixth-day, 12th of Sixth month, we went to Devonshire House Meeting, which was full. Aunt had an excellent time, and Tabitha Marriott also. Aunt then appeared in supplication, and the meeting ended well. We dined with the widow S. Hanbury, a gay Friend, but a solid woman. I think her leaves are falling. Jonah Thompson was with us. A few words from aunt to her made an affecting impression. She went with us in the afternoon in her coach to the Peel Meeting, which was crowded, and the gospel was preached therein with life and power by aunt and others. We drank tea with Deborah Townsend.

"On First-day, the 14th, we were at Grace Church Street Meeting, wherein aunt was favoured; it was a good meeting. Dined with Daniel Mildred, who took us to the Park Meeting. Tabitha Marriott was much favoured, and aunt concluded in supplication, in which she was excellent. On Second-day, 15th, we were at the Morning Meeting, which concluded this Annual Meeting. Aunt dined at John Wallis', but I went home to prepare for our journey to attend the Yearly Meeting in Essex. At 7 o'clock we set off for the dwelling of Zachariah Cockfield, at Upton, five miles, in company with Frances Griffith. On Third-day, the 16th, we left the dwelling of these generous kind Friends, dined at the White heart in Brentwood, with Richard Marriott and wife, and in the evening reached our good friend's, John Griffith, at Chelmsford, 96 miles. Here we all joined in an innocent cheerfulness, like Friends of one heart and one mind. I thought at the time, we should not again enjoy all of us together so agreeable a season.

Fifth-day, the 18th, we attended their Monthly Meeting, and visited a few families. On Sixth-day, the 19th, we set off early for Coggeshall; where we took some refreshment at the house of Richard Ludgater. He and his wife are an ancient, innocent, kind couple. We went to their week-day meeting, where both aunt and Tabitha Marriott had a good time. There are but few Friends in the town. Seventh-day, the 20th, we set off for Colchester with Richard Marriott and wife. We were received kindly by John Kendall and wife. He keeps a generous house for his friends. Colchester is a large town. On First-day, 21st, we attended two meetings there, wherein aunt was much favoured. Second-day, 22nd, we went to the Little Meeting House,—once a Romanish chapel,—the place where women met for business at 7 o'clock, to attend a select meeting. At 11 o'clock we went to the other meeting-house for worship, at which aunt was much favoured, and many others. William Hunt and companion were there. In the afternoon at three it was very full, but not so satisfactory as the morning one. I went to see the castle built by the Romans, a dismal place it now appears in parts. The part which was a prison to our good Friend James Parvall, is turned into a chamber, and the hole from which he fell in fetching his food, whereby he lost his life, is filled up. The other parts that were prisons to our Friends are altered. It has the thickest, coldest walls I ever felt. One part is now a library.

"Third-day, 23rd, we went to meeting at 9 o'clock.

clock, which was a satisfactory one. At 4 in the afternoon, we went to the Little Meeting-house where the women were to hold their Meeting for business. It was properly the business of the Quarterly Meeting. The Queries were read and answered, and some good remarks were made. Tabitha Marriot came at a seasonable time, and William Hunt came in and was much favoured amongst us, or rather, we were favoured through him. We sat until 5 o'clock, and then drank tea near the meeting-house, with Elizabeth Kendall, mother of the Friend at whose house we lodged. On Fourth-day, the 24th, we went to meeting at nine, at which aunt was favoured. After the meeting for worship was over, the ancients selected and finished the business of the meeting. By one, we packed up and went to Francis Freshfield, a mile, on our way to Manningtree. We dined there, and viewed his salt works. We then, with Mary Burdock, started for her house at Manningtree, 10 miles. She is one of the kindest, most honest-hearted, sweet-spirited ancients, I have met with. One of my eldest sisters!—a motherly, humane woman amongst her neighbours. Here I bunned at home.

"On Fifth-day, the 25th, went to their Week-day Meeting. There are but few Friends in this town, but there were several from other places. Aunt was favoured, and William Hunt and companion, William Fry and Elizabeth Robinson. We stayed with our friend Francis Freshfield, but the other Friends went to Harwick Evening Meeting. Sixth-day 26th, our Friends returned from Harwick, and then we all went to Ipswich in Suffolk, and took up our quarters at the house of Thomas Hemmings. His wife is a first cousin to John Head. We went to their Evening Meeting, to which the people of the town came. John Griffith was much favoured, and aunt concluded in supplication. Seventh-day, we went with John Griffith, his wife and sister Sheldon, to Woodbridge, where we were kindly received by Benjamin Evens.* A pretty family of children,—three daughters, solid young women. On First-day, 28th, we attended their three meetings, that in the evening crowned the day to my aunt, who was filled with love to the people who filled that pretty large house. Friends here are few in number, as they have been at both the last places. Second day 29th, many Friends belonging to this quarter came to the Meeting for Business, which held from 9 to 1 o'clock, and from 3 to 6. It was a heavy day to us. We dined at Joseph Peckover's, with Joseph Oxley. William Hunt visited the Women's Meeting in the afternoon, and was favoured among them. We drank tea at Benjamin Evens', jr. We called to see a Friend, where many Friends sat down immediately, as if for a meeting, and aunt was presently spirited to set them to digging, and I believe, convinced them of the necessity thereof. We took supper at our lodgings with William Hunt and eighteen other Friends. Third-day, the 30th, we attended the Meeting for Worship at 10 o'clock. Three-fourths of the people assembled were not Friends. Aunt had a favoured time, and William Hunt followed in supplication. It was a good meeting. We went again at 3 o'clock. The house was crowded; John Griffith had a good time in testimony, and sang a universal prayer. The people were remarkably still and attentive. We dined at Joseph Ricketts, with all our company, drank tea with the widow Peckover, a daughter of Joseph Peckover.

We spent the evening at our lodgings with many half Quakers; aunt's conversation was edifying. On Fourth-day, Seventh month 1st, we went to Meeting at 9 o'clock. Few besides Friends were there, and aunt was silent. We dined at our lodgings, and had a comfortable sitting in the family. Then we parted with our tender young Friends, our fatherly landlord, and his motherly wife. William Fry, William Hunt, Thomas Thornburg and Elizabeth Robinson, went one way towards Norwich Quarterly Meeting, and John Griffith, his wife and sister, aunt, Joseph Oxley and myself, another way. We drank tea with our good Friend, Thomas Hemmings, his wife and agreeable daughters, Ann and Elizabeth, at Ipswich, eight miles, and from thence went to Needham, eight miles, and lodged at the house of Dykes Alexander. Fifth-day, the 2nd, had a meeting there to good satisfaction, dined and proceeded that night to Little Burrough, 20 miles, and lodged at the house of William Blakely, a public Friend. The next morning at eight, we set off and reached Joseph Oxley's at Norwich, 17 miles, to dinner. In the evening we were at their meeting, at which aunt was much favoured. On Seventh-day, the 4th, we dined with the widow Elizabeth Gurney, and took tea with the widow Sarah Gurney, with all our other friends who had reached Norwich this day.

(To be continued.)

ANNIVERSARY MARRIAGE DAYS. Selected.

Lord, living here are we—
As fast united yet
As when our hands and hearts by Three
Together first were knit.
And in a thankful song
Now sing we will Thy praise,
For that Thou dost as well prolong
Our loving as our days.

Together we have now
Begun another year;
But how much time Thou wilt allow
Thou mak'st it not appear.
We, therefore, do implore
That live and love we may,
Still so as if but one day more
Together we should stay.

Let each of other's wealth
Preserve a faithful care,
And of each other's joy and health,
As if one soul we were.
Such conscience let us make,
Each other not to grieve,
As if we daily were to take
Our everlasting leave.

The forwardness that springs
From our corrupted kind,
Or from those troublous outward things
Which may distract the mind,
Permit Thou not, O Lord,
Our constant love to shake—
Or to disturb our true accord,
Or make our hearts to ache.

But let these frailties prove
Affection's exercising love
And that discretion teach our love
Which wins the noblest prize.
So time, which wears away,
And ruins all things else,
Shall fix our love on Thee for aye,
In whom perfection dwells.

—George Wither.

HOW TO LIVE.

BY B. BOSAR.

He liveth long who liveth well !
All other life is short and vain ;
He liveth longest who can tell
Of living most for heavenly gain.

He liveth long who liveth well !
All else is being flung away ;
He liveth longest who can tell
Of true things truly done each day.

Waste not thy being ; back to him
Who freely gave it, freely give ;
Else is that being but a dream ;
'Tis but to be, and not to live.

Be that thou seemest live thy creed !
Hold up to earth the torch divine ;
Be what thou prayest to be made ;
Let the great Master's steps be thine.

Fill up each hour with what will last ;
Buy up the moments as they go :
The life above, when this is past,
Is the ripe fruit of life below.

Slow truth, if thou the true wouldst reap ;
Who sows the false shall reap the vain ;
Erect and sound thy conscience keep ;
From hollow words and deeds refrain.

Slow love, and taste its fruitage pure ;
Slow peace, and reap its harvest bright ;
Slow sunbeams on the rock and moor,
And find a harvest-home of light.

Trust.—A merchant's wealth is only his faith in the solvency and honesty of his debtors. Certificates of stock represent the amount of faith we have put in states, or banks, or railroad companies. In temporal things we all live by faith on some body. The question is between trusting in God or man, things visible or things invisible, things transient or things durable. The present trouble of us all should do us good. When the nest-broken up the young bird learns to fly. Our net is deeply stirred now ; perhaps it is, or will be to pieces. If we love God, we know that no eye can come upon us; and if he permits us to suffer suffering will prove a good. Let us strive to cooperate with him, loosen our ties to earth, and in our souls :

"Nearer, my God, to thee!"

Domestic Economy and Habits in Paris.

In this land of abundance the blessings of Providence are in general enjoyed in such profusion that most people are little able to understand it minute and careful economy which persons in moderate circumstances are compelled to practise in most parts of Europe. American families may know that the expenses of a year amount to about a certain sum, be it hundreds or thousands of dollars, but European families of the class alluded to, are told, are able to calculate, and perhaps do habitually calculate, the cost of every meal. A paper gives the following curious account of observations of an American in Paris.

"In Paris, the city of luxury, of the arts, of home of science and the seat of learning, in this city claiming to be the first in civilization, there yet no aqueduct or anything resembling one. The fountains of the city belong to the Government and the water is sold by barrels and pails full-water carriers, who supply families at so much gallon. In a house of five stories, there are ten families on each floor, making ten who ascend the same staircase, up which all articles for family use must be carried. It is the rule that water, and all heavy articles must be taken up before noon, as about that time the concierge cleans the halls and stairs, and they must be kept clean fallers in the afternoon. In every kitchen is receptacle for water, consisting of an oblong wood box, containing two or more pailsful, according to the means of the family or their ideas of cleanliness. In one corner of the box is a small partition of porous stone, which serves as a filter, at

* Of this family, father, mother and several children, some interesting particulars are to be found in the 3rd vol. Piety Promoted.

which is a separate faucet. The *porteur* brings to large pails full of water for three cents, and comes every morning. It is therefore very easy to draw how much the water costs in which the dinir is boiled.

"In the same kitchen is a box for coal which contains the quantity for which they pay forty cents, and they know exactly how many meals can be cooked with this quantity. If they have guests to dinner they use an extra quantity of water and coal, and they know how many cents worth are added to each guest, and then of course they are wroth if they can afford to invite anybody again! "They know as exactly how much of every article is used every day. The streets of Paris are crowded with small groceries, where every thing is sold by the cent's worth, and are certainly very convenient for people who earn only a few cents per day. If a family comes into the neighborhood who does not patronize these small shopkeepers, it is considered a great injustice, and we live known them to commence a regular persecution of such a family, annoying them in every possible way. They keep coffee burned and ground, sugar, powdered and lumps, tobacco in quids, and every household article in infinitesimal quantities.

"We have no idea that our customs and habits are peculiar or different from those of anybody else. We see them described by some one to whom they are not familiar. In France it is more unusual, perhaps, than elsewhere, in families, hotels, restaurants and all places where meals are served, to furnish any person with a *serviette* at table. If this is a place one is in the habit of frequenting, he is expected to fold his *serviette*, and mark it in one way to be retained for him till he comes again, this saves a washing and a sou. But if one is invited to dine once or only occasionally, it is almost an insult to fold his *serviette* on leaving the table, as this is the same as to say he expects to be invited again soon. A man who did not know this custom, dined and returned home without suspecting that he had failed in any point of etiquette. The next day a servant came to tell him that dinir was waiting. "Dinner," he exclaimed in surprise, "but I did not know that any one expected me to dinner. I have received no invitation."

"Why, you folded your napkin yesterday." "This information only increased his amazement, he had no idea what the act had signified. In one part of the country it would not have been thought that he expected to come again the next day, at only that he hoped to come soon.

"I was sared from such a mortification by hearing a family exclaim one day after some guests had parted:

"What vulgar people; did you not see they folded their napkins?"

"I had not remarked it, of course, as I did not know that it was a matter of any consequence, and could certainly have done the same myself the next day, where it would have been almost a disgrace, had I not been thus put upon my guard. In speaking of it to a lady who had been in America, he said it was a custom similar to ours of putting the tea spoon in the saucer, if one wished another cup of tea, and leaving it in the cup to signify the contrary. Not knowing this she had been served with two or three cups of tea more than she wished, the first time she had been invited among strangers to partake of this beverage; yet it never occurred to us before that it was anything peculiar.

Fresh Maple Molasses.—A correspondent of the *Field Notes* gives the following:—Maple molasses, well made and put up in cans right from the kettle, and hermetically sealed, as you would can and

seal fruits, will keep as fresh as when first boiled from the sap; and this is decidedly the best plan for keeping, as when made in cakes, if exposed to the air it will lose somewhat of the peculiarly delightful flavour for which it is so prized, and is often injured by insects. All this is obviated by canning while hot. To many families who do not make it on a large scale, this need be but little expense, as the cans that have been emptied through the winter can be used until autumn fruits demand them again. Put up your best in this way. Where large quantities are made for market, the buyers must select and can for themselves.

Sea Birds.—The question is often asked where do sea birds obtain fresh water to slake their thirst? But we have never seen it satisfactorily answered till a few days ago. An old skipper with whom we were conversing on the subject, said that he had frequently seen these birds at sea, far from any land that could furnish them with water, hovering round and under a storm cloud, clattering like ducks on a hot day at a pond, and drinking in the drops of rain as they fell. They will smell a rain squall at a hundred miles, or even further off and send for it with almost inconceivable swiftness. How long sea birds can exist without water is only a matter of conjecture; but probably their powers of enduring thirst are increased by habit, and possibly they can go without for many days, if not for several weeks.—*Wilson.*

William Hunt.

For "The Friend."

(Continued from page 99.)

Towards the close of 1753, Catharine Payton and Mary Peisly were at New Garden, North Carolina, where they recommended the establishment of a Meeting of Ministers and Elders, which appears to have been acted on. They found some formal professors there, and a "flashy, wordy ministry." Such a state of things must have been trying to William Hunt, and no doubt, he was often brought thereby under deep exercise. In the year 1754, he appears to have been little from home, but in the year 1755, he paid another visit to the Friends and others on the Pedee, having Nathan Diels for a companion.

Of this journey he kept a brief account:

"The 6th of the Second month, 1755, I left home in the service of Truth, for Pedee, with my friend and dear companion, Nathan Diels,* accompanied by William Beeson and John Mills. We rode 10 miles that evening, and lodged at John Beals'. Next morning, set off and rode about 40 miles, and lay that night in the woods. Next day, rode about 40 miles, and lay in the woods again. Next morning, rode about 10 miles, to their Week-day Meeting at Pedee, which was held at Thomas Moreman's. It was close and exercising, but ended to satisfaction. We went that evening to Francis Clark's, three miles, where we had an evening meeting, in which our friend, William Beeson, appeared in the ministry, much to our satisfaction. Next day, went down the river about 35 miles, to one William Killingsworth's, a Baptist, we had some discourse with him that evening about religion. The next day, we had a meeting among them wherein Truth was exalted, and the name of our Great Lord and Master glorified. We taught them more by example than precept, showing them the true worship that stands in spirit and in Truth. We rode about 17 miles that evening, and lodged in the woods. Next day we rode about 18 miles to the house of Francis Clark, and lodged there that night. Next day,

the 13th of the month, we had a meeting. This was the third at this place wherein my Master made me an example of silence,—thereby directing the people to the Great Teacher in themselves. After meeting, we went over the river with other Friends, to the house of Christopher Clerk, a Friend,—where we had a meeting. The Lord was pleased to open our mouths to declare his precious Truth to them in the power thereof. We came back that evening, and lodged at William Harley's. The next day, we had a meeting, wherein we were deeply engaged to stir up Friends to their respective duties. We went eight miles that evening, to Enoch Thomas'. Next morning, we rode 10 miles, to William Touchstones', and had a meeting, wherein the Lord was pleased to set his Truth over all, to my great satisfaction. From this meeting we started for home; with the reward of sweet peace and solid comfort in our bosoms. We rode 18 miles that evening, and lodged at Tobias Brille's. Next day, we rode 36 miles, to William Coxes'. The next day, we had a meeting at his son, Harman Coxes', over Deep River, in which the Lord enabled us to declare the testimony of Truth. It was to me a good solid meeting. We stayed and dined, and then returned back to William Coxes', and lodged that night. Next morning we rode nine miles, and had a meeting at John Allred's, wherein the Lord owned us, and crowned our assemblies with his living presence; to whom be dominion and praise, now and forever, amen. After meeting, we rode 12 miles, and got to William Reynold's, and lodged that night. Next morning, we rode 17 miles home, where I found all well to my great satisfaction. We rode on this journey, according to computation, 273 miles."

We have no account of the further labour or travels of William Hunt for several years. About the year 1760, a committee having been appointed by one of their religious meetings, on some important matter, William addressed this brief epistle to his friend and fellow-labourer in the gospel, Zachariah Diels, who was one of that committee:

"Zachariah Diels:

"My Dear Friend, companion and true yoke-fellow.—In a degree of that Love which works a feeling of nearness under every circumstance of mind, do I salute thee, with an earnest travail of spirit, that thou with the rest of the committee, may be gathered down to the pure root. [May you] remember that every service in the [Lord's] house, is solemn and awful, and needs our strictest attention to the Head for wisdom, counsel and direction. But dear child, thou hast learned of the Lord wherein strength lies under the habitation of true silence, and inward quietude.

"With dear love to my brothers, I remain thy friend,

"WILLIAM HUNT."

A Hindu Paper on the Bible.—The Bengali papers seem to be becoming most liberal in their views. The *Sajjana Rajana*, advocating the introduction of the Bible into Government schools, describes it, in remarkable language as coming from a heathen, as "the best and the most excellent of all English books, and there is not its like in the English language. As every joint of the sugar cane from the root to the top is full of sweetness, so every page of the bible is fraught with the most precious instructions. A portion of that book would yield to you more of sound morality than a thousand other treatises on the same subject. In short, if any person studies the English language with a view to gain wisdom, there is not another book which is more worthy of being read than the Bible."

*Nathan was also a minister of the Gospel.

"It was a noble praise given to a wise heathen, that he so conducted himself as if he thought himself born for all the world. Surely the more universal a man's beneficence is, it is so much the more commendable, and comes so much the nearer to the bounty of that great God, who openeth his hand and filleth all things living with plenteousness. There are too many selfish men, whose spirits as if put into a close retort, are confined within the compass of their own concerns; whose narrow hearts think they are born for none but themselves. Others that would seem good-natured men, are willing enough to enlarge themselves to their kindred, whom they are careful to advance to the neglect of all others, however deserving. Some, more liberal-minded, can be content to be kind and open-handed to their neighbours; and some, perhaps, go so far as to profess a readiness to do all good offices to their countrymen; but here their benevolence finds its utmost bounds."—*Hall.*

Narcotics.

The *North American Review* for October contains a valuable article on Narcotics. We shall do our readers a service by presenting some of its most important facts in a popular form. The use of narcotics is universal. Every people—from the savage, sunk in the lowest depths of pagan barbarism, to the highly enlightened christian—has its favourite weed or gum, which is chewed or smoked for the purpose of producing that dreamy state in which worldly cares may be temporarily forgotten, and visions of happiness enjoyed. The Eastern nations have opium, hemp, and the betel-nut. The North-American Indian, and the European with him, next after the necessities of existence, cherish their beloved tobacco. Other tribes seek excitement from the coca and the stramonium; and the poor Siberian and Kamshakian, in their frozen homes, out of the reach of these luxuries, find in a fungus which grows upon the steppes, the means of soothing the irritation of the nervous system. We use them in our daily food. It is the narcotic principle which has made tea and coffee the standard leversages of civilized countries; and it is not unlikely that if lettuce were deprived of its opiate juices, it would cease to be a favourite dish upon our dinner and tea-tables.

The use of narcotics is as ancient as it is universal. The seeds of the poppy, indeed, were first used as food, being ground in the same manner as wheat. This flour is said to have been quite nutritious. At the present day, a great deal of what is sold as olive-oil is made from poppy-seeds. Making so common use of this plant, mankind were not long in discovering that a state of delightful unconsciousness could be produced by tasting the juices of the capsule. Herodotus relates that the Scythians were accustomed to produce intoxication by the vapours of the hemp. It has been suggested by some one that the *nepenthes* of Homer was the Indian hemp. If not this it must have been opium. Drugs of this kind might have produced the vapour which inspired the Pythia of the oracle at Delphi. The author of the *Hash-eeh-eater*, judging from his own experience, thinks that the reasonings and mysteries of the Pythagorean philosophy were the fruits of narcotic intoxication.

The principal narcotics in use are opium, hash-eeh, and tobacco. Opium is the dried juice of the poppy-head. It is produced by making incisions into the capsules of the poppy, when they are nearly ripe, allowing the milky juice which exudes to thicken for twenty-four hours, and then scraping it off. It is chiefly collected in Asiatic Turkey, Persia, and India. The average yield to the acre

is twenty-five pounds the highest yield is forty-one pounds. To produce the desired excitement, opium-takers use it in three different ways. They swallow it in a solid pill, as in Turkey and Persia, or drink it in the form of laudanum, as in christian nations, or smoke it, as do the Chinese. Its effects are first stimulant, then narcotic:—

"Taken by a healthy person, in a moderate dose, it increases the force, fullness, and frequency of the pulse, augments the temperature of the skin, invigorates the muscular system, quickens the senses, animates the spirits, and gives new energy to the intellectual faculties. Its operation, while thus extending to all parts of the system, is directed with peculiar force to the brain, the functions of which it excites sometimes even to intoxication or delirium. In a short time this excitation subsides; a calmness of the corporeal actions, and delightful placidity of mind, succeed; and the individual, insensible to painful impressions, forgetting all source of care and anxiety, submits himself to a current of undefined and unconnected, but pleasing fancies, and is conscious of no other feeling than that of a quiet and vague enjoyment. At the end of half an hour or an hour from the administration of the narcotic, all consciousness is lost in sleep. The soporific effect, after having continued for eight or ten hours, passes off, and is generally succeeded by more or less of nausea, headache, tremors, and other symptoms of irregular nervous action, which soon yield to the recuperative energies of the system. Other important effects are a diminution of all the secretions except that from the skin, the lessening of the peristaltic motion of the bowels, the allaying of pain and muscular contraction, and the composing of nervous irritation. It is probable that the active principle of the drug is conveyed into the circulation, and operates upon the brain, and upon the nervous system at large, by immediate contact."

The character and duration of the excitement vary with the quantity taken, with the race, social surroundings, and education of the subject, but especially with his intellectual power. Nor are the sensations always agreeable. The chances are about even, that they will be of an opposite kind. As its use is continued, it loses its power to affect the system, and larger doses are necessary to produce the same effects. De Quincy, after some years' indulgence, required nine ounces of laudanum, equal to one ounce of opium, daily. Once a slave to the habitual indulgence, the sufferings of one deprived of his customary dose, are terrible. So terrible are they, that there are but few who have been able to wean themselves from it. It is related of Coleridge that he struggled desperately to break this vile habit.

"At one time he hired porters to guard the doors of the druggists' stores, with orders to prevent his entrance, for replenishing his stock of opium. But when they strove to obey his orders and force him away, this poor slave of narcotics would command his directions, and imperiously bid them to admit him, for that was his will and that he paid them to obey. Subsequently he put himself into the hands of a medical man, but here again he failed. For while he pretended to be gradually lessening the dose under medical instruction, and while his friends were congratulating themselves that he was in the process of cure, he was all the while buying laudanum secretly, and drinking it in as large doses as before. A deception so base and degrading as this, well illustrates the state to which his moral sense was reduced. Yet he was fully conscious of his condition, and had not lost his desire for relief; for he writes:—

"There is no hope. O God! how willingly

would I place myself under Dr. Fox, in his establishment! for my case is a species of madness only that it is a derangement, an utter *impotence of the will*, and not of the intellectual faculties. You bid me rouse myself. Go, bid a man paralytic in both arms, to rub them briskly together, and that will cure him. "Alas!" he would reply "that I cannot move my arms is my complaint and my misery."

Even greater misery he describes in another letter:—

"Conceive a poor, miserable wretch, who for many years has been attempting to beat off pain by a constant recurrence to a vice that reproduces it. Conceive a spirit in hell, employed in tracing out for others the road to that heaven from which his crimes exclude him! In short, conceive what ever is most wretched, helpless, and hopeless, and you will form as tolerable a notion of my state, as it is possible for a good man to have."

A story is told of a Malay, who was apprehended on some criminal charge, and, in jail, deprived of opium for some days. Although he entered the jail a strong and muscular man, when released he could not leave the place for weakness, but had to be carried out. Nor are the dreams of him who continues the indulgence for ever charming. Horrible visions, mournful remembrances, and all the agonies of a low form of delirium tremens may attack him when his health has begun to fail."

The effects of continued indulgence in opium eating are not as fatal to life as is generally supposed. There are many instances of persons fifty and sixty, and even of seventy and eighty years of age, still in the enjoyment of moderate good health, who have used opium for many years. But such lives are not to be envied. The misery and agonies, the fatal deprivation of all active life and energy, and the thousand other horrors graphically described by De Quincy and other ought to be sufficient to deter one from entering upon a life which is worse than death.

Hash-eeh is the product of the Indian hemp, plant which, though differing somewhat in appearance from our own hemp, is probably the same altered by climate. A green resin exudes from the stalk of the plant, which is powerfully narcotic and is collected in much the same way as opium; this is called *churrus*. The whole plant, gathered while in flower, and dried, is called *gunyah*; the larger leaves and seed capsules are called *bang*, while *hash-eeh* proper is prepared by boiling the leaves and flowers in water, with butter to a thin syrup. This drug is used in Eastern Asia, in Persia and Turkey; in the greater part of Africa and by the Indians of Brazil. In its physical effects it differs considerably from opium, but produces an exhilaration of mind far exceeding an opium-dreams of which we have any account.

It is probable that the followers of the Old Man of the Mountain, in the twelfth century, owed their contempt of death to the intoxicating influences of this drug. Indeed, some authorities assert that these men were called *Hashishins*, because of use of hash-eeh was common among them in the performance of their rites. This term has been corrupted into the English word *Assassin*, which the name by which this band is now called. The author of the *Hash-eeh-Eater* suggests that the highly imaginative stories of the *Arabian Nights* are merely the recordings of hash-eeh vision. The features of the two are so similar, the annihilations of space and time, the vast exaggeration and a thousand odd fancies, common features both, suggest, with some plausibility a similar origin. Both opium and hash-eeh are considerably used

his country, and it is painful to add that the use is increasing. There are no satisfactory statistics, however, by which we can arrive at the amount and the rate of increase.

The most universally consumed and least injurious of narcotics is tobacco. From the time of its first introduction to the civilized world, it has constantly enlarged its circle of consumption, and it is probable that there is not now a people on the earth which does not enjoy the luxury of the quid, the pipe, and the snuff-box. It has been estimated that the human family spends annually 1,250,000,000 dollars for tobacco. In 1851 the city of New York spent 3,650,000 dollars for cigars, or 43,500 more than was spent for bread. Notwithstanding the protests of moralists, the denunciations of physicians, and the frightful formulas of medical analysts, the world continues to smoke and chew. Undoubtedly total abstinence from all artificial stimulants is the best course for morals, for health, and for long life. The world would be better off in more respects than one if neither tobacco nor any other artificial stimulant had ever been invented. But the evil effects of tobacco have perhaps, been exaggerated. Whether its use be good or not, it is evident that if men will seek narcotic indulgences, it is best that they should use those which are least injurious to them. If we can persuade the majority of our race to stop with substance so comparatively innocuous as tobacco, we may well be thankful that we are saved the horrors of a universal indulgence in opium, hashish, intoxicating drinks.

"All a man's wealth or poverty is within himself; it is not the outward abundance or want that make the difference. Let a man be never so rich in estate, yet if his heart be not satisfied, but is still scraping and pining for more, that man miserably poor; all his bags cannot make him better than a mere beggar. On the other side, let me be a man of small means, whose mind is thoroughly content with his little, and enjoys it to the quiet and thankful heart—that man is exceeding rich; all the world cannot rob him of his health. It is not having by which we can measure riches, but enjoying. Oh! my soul, be not troubled away with the common error, to covet and admire those things which have no true worth in themselves. O God, give me to covet that my mind may be rich in knowledge, that my soul may be rich in grace, that my heart may be rich in contentment.—Hall.

The Largest City—Population and Commerce Jeddah.—A very erroneous idea is indulged in by many people in relation to the largest city in the world, many confidently asserting that London, or, it is frequently termed, the Great Metropolis, is superior, both in size and number of inhabitants, to such is not the case. Jeddah, the capital of Arabia, is, without exception, the largest and most populous city in the world.

It contains the vast number of 1,500,000 dwellings, and 5,000,000 of human souls. Many of its streets are nineteen jansenas in length, which are equivalent to twenty-two English miles.

The commerce of Jeddah far exceeds that of any other city in the world, and the sea along its coast constantly white with the sails of ships. "Their vessels sail to the southern portion of the empire, there they are laden with rice, tea, sea-coal, tobacco, silk, cotton, and tropical fruits, all of which find a ready market in the north, and then return freighted with corn, salt, oil, sisalana, and various other productions of the north, which have a market in the south."—Late Paper.

Review of the Weather for Eleventh month, 1862.

The first four days of the past month were alternately clear and cloudy, with the wind generally from the westward; the 5th and 6th were cloudy, and on the morning of the 7th, at about half-past 7 o'clock, snow commenced falling, but as it was so early in the season, we supposed it would soon be over; it, however, continued falling faster, and the storm lasted until after dark, by which time between 5 and 6 inches of snow had fallen. The 8th was clear, but on the 9th we had another snow storm, which continued nearly all the morning; from the 10th to the 15th inclusive, the weather was generally clear, with the exception of the afternoon of the 12th, when we had a light shower of rain. On the 16th, the weather clouded over, and on the 17th, a north-east storm of rain set in, which lasted five days, during which time, I believe, the sun was not visible; the amount of water that fell during that time, was 3.1 inches. From the 22nd to the 30th, there was a succession of clear and cloudy weather, with a slight sprinkle of snow on the 23d, and some rain on the 26th and 29th, and heavy white frosts on the mornings of the 25th, 26th and 30th. The last day of the month was very pleasant, and the atmosphere presented the usual hazy appearance of the Indian summer. The temperature was highest on the 1st of the month at noon, being 65°, and lowest on the 5th, being 25°; mean temperature for the month 44½°; the amount of rain and snow that fell was 4 inches.

Progress of Telegraphing.—According to the *London Mechanics' Magazine*, there are now ten thousand miles of telegraph lines in Great Britain, and nearly thirteen thousand miles of submarine cable laid in various parts of the world. Between London and Algiers there are six hundred miles of cable laid, which conveys messages regularly at the rate of fourteen words per minute. There are eight submarine cables in operation between England and the continent of Europe; these contain thirty conductors, and are of the aggregate length of one thousand miles. A message may now be sent to St. Petersburg, and a reply received in four minutes. An unbroken circuit of wire, five thousand miles in length, has been formed at London to communicate with Vienna, Berlin, Brussels, St. Petersburg, Moscow, Trieste and Venice, and through this great distance the electric message is flashed in the space of two seconds.

The Two Characters.—There is a negativness of character which is often mistaken for amiability, or impartiality or some other kindred virtue. The person possessing it never takes sides on a question of importance enlisting the interest and action of men, and is equally well pleased whichever party wins in the contest. The future of the church, of government, of society, of man, are of but little account to him, so that he is left undisturbed in his quiet, plodding, aimless journey through life. He avoids the opposition, strife, and bitterness encountered by the positive man, but then he is practically, and for all useful purposes, nobody; accomplishes nothing in life, and dies to be forgotten as soon as he is buried.

On the other hand, there is a positiveness of character not unfrequently mistaken for hardness, selfishness, arrogance, querulousness. The positive man has a purpose in life, and in all questions of great interest firmly plants himself on one side or the other, and will make himself unmistakably felt, whether the decision be for him or against his cherished views. All matters of public interest engage his best powers, and find in him either an earnest advocate or an active persistent opponent. Men will call him hard names, and some will heartily hate him. But then he is a force in the world, and all there is of science, art, education, government, is attributable to him. While he lives he is the only useful element in society; and after his death even his enemies will rejoice at his virtues, and vie with his friends in their efforts to perpetuate his memory among men.

The Two Crowns.—A French officer who was a prisoner on his parole, met with a Bible. He read, and was so struck with its contents, that he was convinced as to the truth of Christianity, and resolved to become a Protestant. When his gay associates rallied him for taking so serious a turn, he said in his vindication, "I have done no more than my old schoolfellow Bernadotte, who has become a Lutheran." "Yes, but he became so," said his associates, "to obtain a crown." "My object," said the christian officer, "is the same.—We only differ as to the place. The object of Bernadotte is to obtain one, if possible, in Sweden; mine to obtain one in heaven."

Singular Facts in Human Life.—The average length of human life is about 28 years. One-quarter die previous to the age of 7; one-half before reaching 17. Only one of every 1000 persons reaches 100 years. Only six of every 100 reaches the age of 65, and not more than one in 500 lives to 80 years of age. Of the whole population on the globe it is estimated that 90,000 die every day; about 3700 every hour, and 60 every minute, or one every second. These losses are more than counterbalanced by the number of births. The married are longer lived than the single. The average duration of life in all civilized countries is greater now than in any anterior period. Macaulay, the distinguished historian, states that in the year 1655—not an unhealthy year—the deaths in England were as one to 20, but in 1850, one to 40. Dupin, a well-known French writer, states that the average duration of life in France from 1776 to 1853, increased 52 days annually. The rate of mortality in 1781 was one in 29, but in 1853, one in 40. The poor only live on an average 42 years, but the rich only 30 years.

Toil and trial are grim school-masters; but a flush of hope can make them beautiful, even as a subseam the rude mountain frost.

Fresh Beef Forty Years Old.—The *Newellist* of Hamburg says:—"At a banquet just given at Tronisee, in Norway, a dish of fresh beef was served, which had been found last summer, in some tin cases, buried at Spitzbergen. According to indisputable indications, these cases were placed there by the Parry expedition in 1826. The meat was perfectly fresh, and had not contracted any smell."

THE FRIEND.

TWELFTH MONTH 6, 1862.

SUMMARY OF EVENTS.

FORNERS.—The French Emperor has made a distinct proposition to the Queen of Great Britain and the Emperor of Russia, that the three courts should endeavor, both at Washington and in communication with the Confederate States, to bring about a suspension of arms for six months, during which time every act of hostility, direct or indirect, should cease at sea as well as on land. Lord John Russell replied on the part of the British government, and declined joining in the measure at the present time. The British minister says, "After weighing all the information which has been received from America, her Majesty's Government are led to the conclusion that there is no ground at the present moment to hope that the Federal Government would accept the proposal suggested, and a refusal from Washington at the present time would prevent any speedy renewal of the offer. Her Majesty's Government think, therefore, that it would be better to watch carefully the progress of opinion in America, so far as there appears reason to hope, it may be found to have undergone, or may undergo hereafter, any change, the three courts might then avail themselves of such change to offer friendly counsel with a greater prospect than now exists of its being accepted by the two contending parties. Her Majesty's Government will continue to watch France and intelligence they may receive from Washington or Richmond, bearing on this important subject." The Paris Monitor says the answers of England and Russia are an adjournment of the question of mediation in American affairs. The Journal of St. Petersburg says that the European Powers have no right to interfere with the civil war in this country, except by offering such advice as Russia has offered throughout the contest.

Trade at Manchester was very dull. Breadstuffs and provisions in the Liverpool market dull, and prices rather lower; cotton unchanged. A later arrival brings Liverpool dates of the 20th. "It is reported that a steamer has left Liverpool with a view of capturing or destroying vessels and cargoes sailing under the United States flag, and that another will shortly follow." The leading papers reiterate the argument that the U. S. Government has no grounds for complaint in the case of the pirates Alabama, and that she is a perfectly lawful taken advantage of all opportunities offered. The stock of cotton in port consisted of 292,000 bales, including 24,500 American. New Orleans fair was quoted at 26 $\frac{1}{2}$; middling uplands, 26 $\frac{1}{2}$.

FRATERNITY STATES. The Congress of the United States assembled on the 1st inst., that resides in its annual message, repeats the views heretofore expressed by him respecting the necessity of preserving the territory of this country for our government. He recommends constitutional amendments, allowing compensation to every State which shall voluntarily abolish slavery before the year 1860. All slaves who shall be enjoyed actual freedom by the incidents of war, are to remain free, but by owners to be compensated for their loss. This, he thinks, is a plan of mutual concession, which will avoid the evils of sudden emancipation, and be a prudent and economical measure, compared with war. This plan is recommended, not as excluding any measures for the redemption of the Union, but as auxiliary to that end, and the President thinks it would secure peace more speedily and maintain it more permanently than by force alone, while its cost would be less than that of war. The expenditures of the United States for the fiscal year ended Sixth month 30th last, amounted to \$474,744,788. The chief part of this enormous sum was for military purposes, the cost of the War Department being \$394,368,407, and that of the Navy \$42,676,363, a total for war purposes of \$434,042,971. The receipts of the year amounted to \$487,788,924, of this sum, \$49,066,307,

were derived from customs, and \$175,953,11, from the direct tax, the balance chiefly from loans and issues of the public lands have ceased to be a source of revenue.

Political Prisoners.—The prisoners who for some time past have been confined in Fort Warren as dangerous persons, have been released by order of the President.

Southern Items.—The Georgia Legislature has passed a bill for ordering a premium for the raising of bides. The Southern army in great need of sewing blankets also are much needed, and gifts of carpeting to supply their place are urgently solicited. The Richmond *Enquirer* states the number of cases of yellow fever at Wilmington, N. C., was 1505, and the deaths reported, 441. There are, however, no reports as yet when the fever has at its height, which would be a more reliable and actual mortality was considerably greater. A naval officer who has just returned to Washington from a captivity in Richmond, states that the New York papers were regularly three or four days old, and to regular subscribers there were sold for ten cents. The *Richmond Republican* gives a detail of the losses suffered by the Confederate forces in numerous engagements the present year, and comes to the conclusion that the number of men, killed and permanently disabled by wounds or sickness, is not less than 75,000, and may probably reach 100,000, including the deaths from disease during that time.

Virginia.—No further advance of Gen. Buraside's army has taken place. The threatened bombardment of Fredericksburg was not carried out. It would not have injured the rebel forces, who are entrenched behind the river bank, and the loss of cartridges, which is said to have been delayed in his forward movement for want of supplies and means of transportation. President Lincoln, last week, made a visit to the army at Falmouth, probably to ascertain for himself what was the real state of the case. The rebels had but a small force in or near Fredericksburg when the Federal army reached the north bank of the river, but a large force was immediately collected there, and extensive earthworks thrown up in various directions. A body of rebel cavalry crossed the Rappahannock on the 25th, and surprised two companies of U. S. cavalry near Hartwood, capturing nearly all of them. Five of the Federal gun boats are reported to have been destroyed by the rebels, and the rest are to the right wing of Lee's army. Northern Virginia appears to have been nearly abandoned by the rebels, most of their troops having been withdrawn for the defence of Richmond.

The West and South West.—The rebels have fortified Port Hudson, 150 miles above New Orleans. It is said that it will be made as strong as Vicksburg. The rebels are now running steamboats from Port Hudson to Lake Providence, a distance of more than three hundred miles, and are also running boats on Red river, bringing supplies of cattle from Texas, and large quantities of salt from the salt works on the Red river, about fifty miles above its mouth. It is stated that the rebels produce 10,000 bushels daily, all of which is sent east, via Vicksburg. One object of the fortifications at Port Hudson, is to prevent the U. S. forces reaching these salt works. Gen. Johnston has, it is stated, assumed the command of the army heretofore led by Gen. Bragg. On the 25th ult., the armies of Gen. Grant and Gen. Sherman were advancing upon the rebel forces in Mississippi. At the latest dates the latter were falling back towards Grenada, destroying the railroad and bridges as they retreated. Some collisions between the hostile forces have occurred, but none attended with important results. It has been ascertained that the rebels had \$405,000 in specie to the rebel government within sixty days. This specie had been previously reported to Gen. Butler as having been sent away, which was not the fact. A cavalry reconnaissance, sent out from Sherman's camp, on the 14th inst., captured a rebel train of four miles of Bates Rouge. Military Governor Slocum has issued a proclamation calling upon the loyal electors of the First and Second Congressional Districts of Louisiana to choose Representatives to Congress, and to appoint the 2d as the day of holding the election. The electors of the Lafourche and Terrebonne parishes, Gen. Butler for the return of their slaves, but the General had refused, except on condition that they should be paid a fair amount of wages, and a guarantee given that one-

half of the produce raised to be turned over to the United States. Gen. Butler is about to place overseers on the confiscated plantations, in order to save the cotton an agent. The new cotton crop was coming in quite freely.

A naval expedition on a large scale was being fitted out, the destination of which was up the Mississippi, to clear it of the rebel craft engaged in contraband trade and of the batteries erected by the rebels at Port Hudson and elsewhere, ultimately, perhaps to operate at Vicksburg. The expedition was to consist of one iron-clad river. On the 28th ult., the rebel forces at Oneida, Ark., were attacked by Gen. Blunt's division, and defeated, after a severe engagement.

Philadelphia.—Mortality last week, 228.

New Jersey.—The number of votes polled in this State at the late election for Governor was 165,029. Parker was the Democratic candidate, received 61,314, and Ward Republican, 46,715.

The Markets.—The following were the quotations of the first inst. New York.—Chicago spring wheat, \$1.1 a \$1.21; winter red, \$1.35 a \$1.39; amber Michigan \$1.40 a \$1.43; rye, 95 cts.; barley, 1.40 a \$1.00; oats, 64 cts. a 66 cts.; mixed corn, 71 cts. a 72 cts. Philadelphia.—Pennsylvania red wheat, \$1.41 a \$1.42; South corn, \$1.40; white wheat, \$1.50 a \$1.75; rye, 94 cts. a 96 cts.; yellow corn, 73 cts.; oats, 41 cts. a 42 cts.

RECIPTS.

Received by W. C. Cope, for Sarah Cope, Sarah A. Cope and B. Gilbert, Pa., and J. Megral, U. S. cad. 36; from Mt. Pleasant Boarding School, O., per J. Hall, \$2. 55; from Israel Cope, Jr., O., per N. I. Hall, Agt., \$2 to No. 14, vol. 37; from J. C. Cope, Agt., O., for Rachel Arnold, \$4, vol. 33 and \$4. J. L. Kie, Sarah A. Cope, J. F. Monson, and Josiah Fawcett, \$2, vol. 35; D. Parry, \$2 to No. 14, vol. 36; J. W. Hend, J. Painter, I. Carr, I. R. Carr, Ind., and S. C. Carr, \$2 each, vol. 36.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSIAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, or to CHARLES ELLIS, Clerk of the Board of Managers, No. 44 Market Street, Philadelphia, or to any other Member of the Board.

NOTICE.

A situation is wanted for a youth, (a member) about seventeen years of age, who has had a good education and writes a good hand. Enquire at this office or at No. 204 Arch Street.

DIED, at his residence near Tecumseh, on the 21st of Eighth month, 1862, in the seventy-third year of his age, SAMUEL SATTERTHWAITE, a much esteemed elder and member of Adria's Monthly Meeting. Fully conversant with the principles and testimonies of the religious Society of Friends, he was in entire accordance with the precepts and teachings of our Lord and his Apostle; he was earnestly desirous that they should be maintained in their primitive purity and simplicity. Of a liberal, cheerful and hospitable disposition, his house was at all times freely and cheerfully opened for the entertainment of Friends especially strangers. He was a true and upright man, and he frequently left his own comfortable home to aid and assist such on their journeys, proving to be a truly sympathizing and acceptable companion. With great integrity and uprightness fulfilling the various duties of life, in the spirit of kindness and good will to all around him, he possessed in an eminent degree love and respect of his friends and neighbours, on though his loss is deeply felt, both by his bereaved family, his friends and society, we have the consoling belief that "his end was peace."

On the 12th ult., DEBORAH P., wife of Elton I. Gibson, in the forty-sixth year of her age, a member of the Monthly Meeting of Friends of Philadelphia. This dear Friend endured the sufferings of a protracted illness with patience, which were sanctified by her producing entire resignation to the Lord's will, and for her expressions near her close, her friends have the consolation of believing that she was peacefully departed, on the 6th of the Eighth month, 1862, MARRI MORRIS JONSON, in the eighty-fifth year of her age.

W. M. H. PILE, PRINTER,
Lodge street, opposite the Pennsylvania Bank.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "Peaks, Passes, and Glaciers."

The Pizzo Bernina.

By EDWARD SHIRLEY KENNEDY, M. A.

(Concluded from page 106.)

HARDY'S NARRATIVE.

When Jenni, after some minutes' consideration, informed us that we were ready to proceed to the summit, both Kennedy and I considered it to be fatal as to the impossibility of the whole party going further, and I at once suggested that we should toss up for that which I knew we both desired, the chance of completing the ascent. Kennedy, however, refused to toss, and most generously gave way to me. Looking back now, I fear I was selfish and greedy in allowing him to do so, for the "Excelsior" spirit is not always one of self-interest, whatever Longfellow may say or sing to the contrary.

Jenni and I now commenced the ascent of the very steep slope of snow, which was in anything but a satisfactory condition. Had we attempted to go, we should probably have loosened the whole surface snow, and been swept away with it to the abyss beneath. Jenni, therefore, made a slight running for the summit, going hand over hand, kneading and kicking each step into solidity as we advanced. This mode of ascent brings a great deal of hard work upon the leader, as I discovered a week or two later when heading a party on the slopes of the Breithorn; but in those that follow, steadiness and caution alone are necessary, and labour for them being much the same as that required in going up the rounds of a ladder.

More than once or twice during the next half-hour Jenni was glad to rest for a few seconds; but at 1.5 we stood together on the top, and looking back saw Alexander following by himself, though contrary to Jenni's express orders. From the point, where we stood, a narrow ridge stretched away at the same level for about thirty feet, and then, turning at right angles, descended at a small inclination for about the same distance, where it abruptly terminated in a tremendous precipice, at the edge of which Jenni had fixed a flag-staff in 1858. As soon as Alexander had joined us, I expressed a desire to proceed to this point. However, had satisfied myself that we were all ready at the summit, for I looked down easily upon the whole surface of the ridge, and laying

my alpenstock level upon the snow on which we were perched, and bringing down my eye to it, I found that the whole of the outlying arête was concealed by this. As this arête was singularly narrow and ugly-looking, I endeavoured to persuade Jenni to remain where he was; but he had a reason, as it afterwards appeared, for pushing on further. Fastening the extremity of the rope, therefore, round his waist, we let it out by degrees, as he crawled forward upon his hands and knees, or sometimes slipped along with his legs on either side. As soon as he reached the flag-staff, he began poking about amongst the snow in a most mysterious manner, till at last, with an immense amount of exultation, he produced a bottle, whence he extracted a two-centime piece, that had lain there *perdue* since 1858, and in lieu of which he inserted a fragment of paper inscribed with the names of all our party; then carefully returning, but not without an awkward slip just at the angle, from which he cleverly recovered, he presented me with the two-centime piece with all due formality.

"The view from the top was unfortunately not so extensive as that which we had enjoyed lower down. The clouds had gathered rapidly, and though far beneath us, they concealed all but the highest peaks in our immediate neighbourhood. While discussing, the advantage of going along the ridge I have described, Jenni represented that though the point on which I decided to remain might be the "*Wichste Spitze*," the *ausicht* was better from the foot of the flag-staff; this, however, in the then state of the weather did not prove sufficient inducement for me to change my determination. After spending nearly an hour on the summit, we commenced our descent, by the old steps, with our faces to the slope. I led the way, and found that great caution was necessary, especially towards the lower end, as we approached the crevasse. Landing safely upon its edge, we crept along by our old friends the icicles, and ascending the snow-wall, we had but to retrace our morning route (growing a good deal, by the by, at the ascent we had to make on leaving the corridor,) till at 3.30 we rejoined Fleurin and Kennedy, whom we found seated in melancholy, not to say sulky, solitude, the one at the top of the coils, the other on the single rock that separates them."

The time had passed heavily, but when Hardy arrived, the high spirits of our successful companions proved contagious, and as they recounted their exploits with good humoured chaff the descent continued cheerily. It was relieved by one or two animated discussions as to the correct route, and as every one had his own opinion upon the point, of course the worst one was selected; but it mattered not; we were not in the humour to be stopped, and it would have required an unusual obstacle to have turned aside those who had conquered and reconquered the "Festung." After one or two steep and rapid glissades, we reached the head of the glacier, and, entirely avoiding Boval, selected the right or eastern bank. According to Jenni's experience of the previous year, this line ought to have presented easy travelling; but since that time, an extraordinary change had

taken place, so that after many fruitless attempts, now backwards, now forwards, now right, now left, we found the ice wholly unpracticable, and were therefore compelled to take the centre. Here, however, we were once more bewildered with the extent and intricacies of the crevasses. Darkness was rapidly drawing on; we began to fear the chance of a night upon the glacier. Alexander and Jenni's brother rebelled against the authority of our chief, and counselled retreat, with the view of reaching the left bank at a higher point and thence forcing our way up the rocks to the chalet of Boval. They urged the absolute impossibility of further advance down the glacier from the spot where we stood, and, by way of additional weight, threw in the consideration that even the accommodation of the hut was preferable to night quarters upon the ice. If this course were to be adopted, there was not a moment to spare, for during our short consultation the evening gloom had perceptibly deepened.

Then it was that Jenni's resources and the determination of his character were conspicuously disclosed, while we—somewhat moodily contemplating a nasty-looking shingly ice-bridge which we had no desire to cross, unless it were absolutely necessary,—allowed him to get some distance ahead. Save those who have been placed in such positions of emergency, none know how hard a thing it is, after a long day of incessant toil and watchfulness to persevere against opposition, in a right but difficult course. To adhere, through good report and through evil report, unflinchingly to the path of duty, to be not unduly elated by approbation, nor depressed one jot by censure—is an attainment to which all aspire. And surely it is not among the least of the merits of these our Alpine excursions that they inevitably call into action this noble quality of the mind: where hitherto absent, it is created; and where nature has already been lavish in her gifts, it becomes most highly developed. Dare any one say that Jenni's bright example shall be barren of good results? And who shall limit the beneficial effects thus produced? May we not believe that Jenni's conduct shall yield fruit, not merely unto those who were witnesses of it, but also unto many to whom the knowledge of it shall be brought? Not a thought did he give to the idea of retreat, except indeed when we forced it upon his notice, and then he treated the suggestion with the scorn it merited. "Onwards," was his word; "*Wir* MUSEN vorwärts." "We must forwards." There is something grand in the efforts made by this uneducated and unpolished son of the valley. Having evinced considerable hesitation before venturing upon the ascent, when he has once determined upon it, he throws his whole soul into his task, he provides every possible requisite and he carries through the undertaking to a successful issue. Watch him! Nothing stops him; leaping wide chasms—winding with a slight balancing twist of the body across narrow bridges, cutting with a single swing of his axe a couple of steps in the steep side of a crevasse, accompanied with an upward spring and a jump down upon its opposite side, onwards he leads at

a most rapid pace. He bids us follow and so indeed we do. He has at last cleverly obtained the clue to this intricate maze.

Night is rapidly closing in, and it seems doubtful whether, even with all the rapidity and decision of our guide, the glacier network will not prove triumphant, and hold us within its meshes until the morning light. One thing at least is evident—that had we turned back at the doubtful point, a night on the glacier would have been inevitable, as darkness would have overtaken us long before the bank had been attained. And now we are compelled to move more slowly; for the varied shades are most deceptive, and the nature of objects is almost unrecognizable. We see a level space before us; it turns out to be a steep projection, and we stumble forward upon our shins. A dark spot offers a rocky foundation for the foot; it is a piece of shale at the bottom of an ice-pool, and we are up to the knees in water; but there is no time for thought, and we scarcely know whether the water is cold or hot. But "What is that ahead?" We can feel that Jenni smiles as he replies, "That is my beacon-light; I ordered it—it was wanted for the ascent. I promised to provide everything."

Another half hour, and we are off the glacier; the beacon-light is dancing upon the welcoming faces of Jenni's friends, and upon the shining surface of the wine-bottles that they carry. Again Jenni's voice is heard—"These are my friends—this is my wine—I promised to provide everything." Is not Jenni a brick of a guide? And do we not all shake hands?

A quarter of an hour was agreeably spent in congratulations, and then, following the little foot-path, we soon found ourselves once more upon the high road. Here a carriage awaited us. Nothing loth, we quickly jumped into the car. It was a gorgeous contrivance, drawn by a white pony, with Jenni and his friend Walter seated on the low bar in front. We started at a good pace, but in ten minutes a boy made his appearance and told the driver to proceed slowly. The idea immediately struck us that some kind of ovation was in preparation. This idea was confirmed when Jenni produced two brilliant bunches of artificial flowers tied with flowing white ribbons, which he proceeded to fasten upon our hats. It was Jenni's carriage; they were Jenni's ribbons. He promised to provide everything. In five minutes Herr Saratz, the President of the Republic of the Ober-Engadin, and his brother greeted us, one on each side of the carriage, and presenting us each with a bouquet of fresh flowers, congratulated us upon being the first strangers who had made the ascent of the Pizzo Bernina.

The whole population had turned out to meet us. They fell in behind the carriage, and then passing in single file on each side it, every man raised his hat and saluted. As we neared the village of Pontresina the carriage stopped before a huge bonfire, and the band played "God save the Queen." Hardy and I felt that our triumphal entry was wholly undeserved, and were quite unable to express our sense of the kind feelings that had suggested it. All that we could do was, with a bouquet in one hand and a decorated hat in the other, perpetually bow to the assembled multitude. We afterwards ascertained that it was to the kind consideration of Herr Saratz that we were indebted for the ovation.

Proceeding slowly onwards, with the band in front playing lively airs, we at length reached our hotel. Here the crowd became thicker, for every one seemed anxious to congratulate and shake hands with the Englishmen.

A capital supper was ready. We invited the guides to partake. The band played cheerily during the meal. As we recalled the incidents of the day, and dwelt upon the difficulties that, in mutual trust and with mutual aid, we had together overcome, we felt that a kindly feeling had been established. Hardy and I will always look back with satisfaction upon the excursion, and our three guides will never regret the day on which, with so much skill and determination, they assisted the two Englishmen to scale the heights of the Pizzo Bernina.

William Hunt.

For "The Friend."

(Continued from page 109.)

William Hunt having for some time felt a religious concern to pay a religious visit in some of the more northern colonies, laid his prospect before the Friends of his Monthly Meeting early in the year 1761. The Monthly Meeting held Third month 28th, 1761, granted him a certificate of its unity, as did his Quarterly Meeting, held at Cane Creek, Fifth month 9th, of the same year. In this journey he was accompanied by his friend, Bowater Beals.

We give his account of this journey.

"On the 7th day of the Fifth month, 1761, I set off on my journey, having for my companion, Bowater Beals. We had the company of our wives and many Friends to our Quarterly Meeting at Cane Creek, which lasted three days; after which, taking our solemn leave of each other in the love of Truth, our wives returned homeward with other Friends, and we proceeded on our journey to Joseph Mattock's. The next day, being the 12th of the month, we had a meeting at Enoe, which was small, by reason of a great rain. After meeting, we parted with Jeroniah Piggott, a kind friend who came with us from Cane Creek, and went to Isaac Jackson's. In the evening we had a meeting to satisfaction, and lodged there. Next day, we were stopped from proceeding by high waters. The day following, being the 14th, accompanied by our dear friends, Isaac and Mary Jackson, we had a meeting among a few Friends on Little River, to our comfort. After meeting, with Enos Elemon for a guide, we set off and came to William Jay's. We had a meeting in his family, in which Sacred Goodness owned us. Next day, we rode to Joseph Davenport's, who, though not of our Society, entertained us very kindly. Here we were stopped two days by high waters. One of them being First-day, we had a meeting there, in which Truth prevailed so far, as to bring true peace to our minds. Although it was something strange to many present, there never having been a meeting of the kind there before, yet they behaved decently, and were very attentive whilst I was speaking. Our landlord was very tender and kind. The next morning, the 18th of the month, we continued our journey. Our landlord went with us a piece, and parted from us with singular observations on the true satisfaction which he had had in our company. This day we crossed the Roanoke, which was very rough. We came at night to John Jordan's and lodged. The next night, we lodged at a tavern. In the morning, rode to William Butler's, a Friend, and had a meeting. The day following, we rode to Benjamin Patten's, on the Appamattock River. The next day, had a meeting there, which was close. Set off in the evening with said Patten for our pilot, and lay that night in the woods. The next morning crossed the James river at the Mannikin town, and came to Strangeman Hutchin's. Next day, we had a meeting at Genito, which was large and satisfactory. Returned from meeting to Strangeman's, and had a meeting in his family.

Next day, we rode to James Stanley's. On the next, we had a meeting at Cedar Creek, which tended to strengthen the rightly engaged. Next day, went in company with many Friends, to On line meeting, which was a proving season;—but Truth gained ground, so as to bring peace. We that evening to Nicholas Stone's, and had a good opportunity with several Friends, to our advantage. Now we take leave of Virginia, and steer our course for the cliffs in Maryland, being the 25th of the month, in company with Nicholas Stone, Zacharius Stanley. We crossed the Rappahannock River at Port Royal, and the Potomac John Hoos. Lodged that night at Allens ford; next day, crossed the Patuxent at Benedict, and reached William Harris' at the Cliffs. The following rested ourselves, being the Seventh of the week. We were at their meeting on First-day, which was comfortable. Many weighty truths were opened in the life and ability which the Almighty was pleased to give at that time. We rode to Samuel Robinson's that afternoon and had meeting there. I cannot but acknowledge the glorious dealings of our God, who gave us many refreshing seasons among a scattered remnant. The next day, we had a meeting at Herring Cove, which was a painful exercising time,—and, y through the goodness of God, it was a profitable season to some. We rode to the wood of Sand and dined. Then rode to Philip Thomas' at W. River. The next day, had a meeting there, which was very close for some time, but through the glorious goodness of our God, it concluded well; the seed being in real dominion, to my comfort. We went to Joseph Richardson's to dine, where we had a refreshing season. We then rode the widow Plummer's, over the Patuxent River, accompanied by Joseph and Rebecca Richards. The next day, we had a meeting there, and the day following, one at Indian Spring. From there we rode to Sandy Spring, where we had a meeting, and lay by one day, at Roger Brooks'.

Whilst here William Hunt wrote to his beloved friend, Zacharius Dieks:

"Respected Friend,

"I intend by this little paper messenger to form thee of our progress. I gave thee an account from Flat River, if thou hast received it. From that place we set off for Roanoke, and were stopped two days by high waters;—but met with kind entertainment and had a meeting there to our satisfaction. From thence we came, in two days, to Friend's house, within 12 miles of the Point. We had a meeting, and then came across through Virginia. We had five appointed meetings, besides evening meetings, and many refreshing seasons families, to our comfort. We then steered our course for the Cliffs in Maryland, where we arrived safe in two days. There we had many meetings. The variety of exercises which I have passed through, are too tedious to mention [particularly], but I have to say, to the praise of Him who engages me to leave my near enjoyments,—my wife and little babes,—more precious to me than life, I hath supported me beyond my expectation, a given me ability to deliver many weighty truths to the comfort of the honest hearted. Indeed, satisfaction I have received in the lower part of the Province, is more than I expected. Let this suffice. I am in weakness, in fasting and watchings—in great straits and poverty often, yet in these things I rejoice, through him that hath called us unto a lively hope in his dear Son. Now I dear hearts, I will inform you, that my life of moves within me towards you, with many more that I had. I often remember, dear Zacharias, t

factory moments that thou and I have had together. The desire of my mind is that we may live in that Life, that sympathized in adversity and partaketh in consolation;—so that if it be our lot to meet again, it may be in our Heavenly Father's love;—in the fulness of which, I take my leave, and bid you both farewell.

“WILLIAM HUNT.

Please give my dear love to Christopher [?]. I am induced once more to remind thee of my usage. [Not having received a letter from [?].

From Sandy Spring Meeting, the 6th of the Sixth month, 1761.”

Perils of Chamois-Hunting.—Three expeditions of Appenzel were hunting on the Juggleron, that lofty wall rising south-east from the See Alp, which one passes on the way from the village over the Meglis Alp. One of them went to this lower pass, a second higher up over Marys, and the third hunter over a narrow grassy ledge on the rocky wall between the two first mentioned. The chamois were driven along this icy ledge. The highest and lowest had easier going, and came earlier to the place where the combined shooting was to begin. The first saw the beasts coming to him, coming directly towards him with rifle, and waited, looking out constantly for the third, who was driving them along the grassy ledge. The chamois came gradually nearer; he is afraid of losing his shot, lies in a feverish state of excitement, fires, and frightened at the report, the beasts turn and fly hurriedly along the ledge the way that they had come. Just at a narrow opening place, scarcely broad enough for a man to pass where it bends round a projecting rock, they come in their wildest flight upon the hunter climbing tollously upwards. If the two parties had not kept upright on this giddy rim of the rock, the hunters must infallibly have been dashed over a cliff striking for more than one hundred feet, as the chamois would instinctively in the agony of despair have tried to squeeze themselves between the rock and the hunter. The man prudently observed this, and to save his life, threw himself down and let his whole herd rush at a flying leap over him. Another hunter in Glarus, in a similar position at a perilous place, thought that he might secure his booty by a quick resolve, and cowered down sitting, edged firmly against a rock, and shot. The charge missed, the chamois jumped over him, and leaped in his bounding elastic spring with one of his hind hoofs on the jacket, and tore its highest buttonhole; a hesitation would have infallibly sent him over a crushing fall.—*The Alps, by H. Bernsch.*

Theories of Peace.

Ridicule is much easier than an honest, earnest search after truth; and thus it is that most men, even while claiming to be followers of the Prince of Peace, undervalue the cause of peace through an inexcusable ignorance of what it really is. They have few definite ideas of its principles, its object or its means. They talk flippantly about quietism, its visionary, impracticable schemes, and as if they contained no reason or practical reality. But what are “the theories of peace?” We will state in brief some of the most important:—One is, that war is an unchristian, irrational, and unwise method of settling disputes, that ought, especially in such an age as ours, to be discarded, and ought to be, and will be just as fast as public opinion of the subject shall be recast in the mould of the Gospel. Another is, that the principle of legal, peaceful

justice, such a system of laws and courts as every civilized community provides for its individual members, is equally applicable to nations, ought to be applied for the settlement of their controversies without resort to arms, and might, if used in season and in good faith, be made to supersede all necessity of appealing to the sword.

We insist, also, that war, after ever so many years of mutual slaughter and devastation, really decides nothing, but still leaves the whole original matter of dispute to be settled in the end by the very same means that might have been employed far better before fighting than after it.

We urge, moreover, *specific substitutes for war*; substitutes much more likely than the sword to secure the great ends of international justice and safety. We say, as a clear dictate of common sense, that controversies, whether between individuals or communities, can be settled only in one of two ways—either by amicable agreement between the parties, or by reference to a third party as umpire; and hence our substitutes for war would be mainly the following:

1. *Negotiations*, by which the parties adjust their own difficulties; and, if nations, or their rulers, would always keep their passions under the control of reason, would discard the illusions of national honour, and abstain from all commitments in the way of menace or defiance, waiting patiently till mutual forbearance and concession should be exhausted in vain, they could hardly fail in any case to secure between themselves a peaceful adjustment.

2. *Reference in different forms.*—If the parties cannot agree between themselves, they must, either before or after fighting, refer the points in controversy to umpires in one of the following ways:—*Meditation*, where a third party, friendly to both, interposes with the offer of its services as mediator. *Arbitration*, where the parties unite in submitting the matter in dispute to the decision of umpires. This has been for ages an occasional expedient; but we wish to make it a *permanent substitute for war*. We therefore urge nations to stipulate *expressly* for this in their treaties, hence termed *Stipulated Arbitration*; and just as soon as this shall become the *usage of all nations*, the whole war-system must gradually pass, like the judicial combats of a former age, into entire and perpetual disuse.—*A Congress of Nations*, designed to provide, in its code and its courts, essentially the same means of peaceful justice for nations, that every civilized society has provided for individuals and minor communities.

Such are the chief “theories of the Peace Society.” Is there in them anything absurd, visionary or impracticable? If so, we challenge you to show it. It does not profess to cure all the evils of society, but merely to prevent, or mitigate, and eventually do away, those which come from the custom of nations settling their controversies by the sword. Here is its precise and sole mission. Is it not a proper, a necessary, a most important work? Are not the means proposed both rational and feasible? Does not the whole enterprise commend itself to the christian, the philanthropist, the patriot, and every man of sense?—*Advocate of Peace.*

A Few Words to a Father.—Take thy son for a companion whenever thou conveniently canst.

1st. It will relieve the already overburdened and anxious mother of so much care.

2d. It will gratify the boy; it will please the mother; it certainly *ought* to be a pleasure to thee.

What mother's eye would not brighten when her child is kindly cared for? And when his eye

kindles, his heart beats, and his tongue prattles faster and faster with the idea of “going with father,” does she not share her little boy's happiness, is not her love deepened by her husband's consideration, so just, and yet too often so *extraordinary*?

3d. It will keep *him* and *thee* out of places, society, and temptations, into which *separately* you might enter.

Did it ever occur to thee, that thy boy, deprived of thy society, eluding his mother's watchful care, and rambling the streets with the “lowest of the low” or with those who, *seeming* to be unexceptionable are therefore only the more dangerous, is learning all manner of rovdysism and crime? And why should thou blame him for seeking such congenial associations, when thou so unnecessarily withholdst from him thy own companionship? Dost thou say that thou cannot possibly take him among “men” with whom thou associates? Is thy society, then, more pleasant, more profitable, more necessary than his? Why not give up thy society for his? Alas! I am afraid that many fathers would hesitate to introduce their innocent boys into their own associations!

4th. It will establish confidence, sympathy, esteem and love between you.

On the 22d of Twelfth month, we came to Oakhampton, and having a day to spare, myself and companion visited three young women, sisters, who had been members of our Society, but were unhappily led away by the Kanters; whose self-righteousness and delusions cause much uneasiness to the truly concerned, showing how dangerous that spirit is, when given way to. Satan, the accuser of the brethren, tries all ways to disunite from the body, and cause a separation, rents and divisions being the strength of his kingdom; and as his insinuations are adapted to all people in their different states, finding out the weak side, there he plants his battery, trying one temptation after another; sometimes as an angel of light, and sometimes (as he really is) an angel of darkness.

But let a faithful examination be entered into, and a query raised, Am I influenced by that Spirit which governs by love in the believers? Is there no root of self-love or self-sufficiency? Is there no zeal kindled by the accuser of the brethren, that would introduce contention and discord, pride and high-mindedness? This cannot be (from) that Spirit that baptizes into the one body, and makes us one in Christ; no, there would be bearing and forbearing, a forgetting and forgiving, a persuading and travelling in soul to be of one heart, to love as brethren. This will manifest whose disciples we are, and who is our Master.—*The Life of Samuel Neale, Friends' Library, vol. xi., p. 11.*

For “The Friend.”

“Contrabands.”

If any of our friends in city or country have old comfortable or blankets, which could be repaired so as to be worth sending to the contrabands, they will be promptly forwarded to them if sent to the warehouse of Alfred H. Love, 212 Chestnut street.

Disappearance of the Truffle in France.—The truffle is said to be disappearing in France. This curious production has neither stem, fibre nor root; and no researches have succeeded in discovering the germs from which they are developed. The truffle will not grow in land that has been manured; it loves a wild, uncultivated soil, enriched only with the rotting leaves of the forest, and demands both moisture and sun for its development. The truffle can only be cultivated indirectly by planting groves of the peculiar species of oak, among whose roots it is found.—*Late Paper.*

TRUST AND REST.

Selected.

Trust not, poor soul; while doubt'st and fear
Disturb thy breast,
The pleasing angels who can see
How vain thy wild regret must be,
Slay, trust, and rest.

Plan not, nor scheme—but calmly wait,
His choice is best.
While blind and erring is thy sight,
His wisdom sees and judges right,
So trust and rest.

Strive not, nor struggle, thy poor might
Can never wrest
The meanest thing to serve thy will;
All power is His alone, he still,
And trust and rest.

Desire not; self-love is strong
Within thy breast;
And yet He loves thee better still,
So let Him do His loving will,
And trust and rest.

What dost thou fear? His wisdom reigns
Supreme confessed;
His power is infinite; His love
Thy dearest, fondest dreams above—
So trust and rest.

THE EVENING STAR.

Selected.

Though joy attend thee, orient, at the birth
Of dawn, it cheers the lofty spirit most
To watch thy course when daylight, fled from earth,
In the grey sky hath left his lingering ghost
Perplexed, as if between a splendor lost
And splendor slowly mastering. Since the sun,
The absolute, the world absorbing One,
Relinquished but his empire to the host,
Embodyed by thy guidance, holy star,
Holy as princely, who that looks on thee,
Touching, as now, in thy humility
The mountain-borders of this seat of care,
Can question that thy countenance is bright,
Celestial power, as much with love as light?

Wordsworth.

For "The Friend."

BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members
of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 108.)

"On First-day, Seventh month 5th, went to the meeting, held at the old house [in the morning.] It was very full, and aunt and others were much favoured therein. In the afternoon, we went to the meeting, held at 3 o'clock, in the new house. This is the best meeting-house we had yet seen in England. I thought it held nearly as many as our Market street house, the galleries being larger, and extending over the preachers. Aunt and others were also favoured here, and the people were quiet. Our Society is left without excuse, if any of them are lost, it is because they will [not heed the call]. Norwich is the prettiest town we have yet seen.

"Second-day, 6th, we went at 10 o'clock to the morning meeting of ministers and elders. It held until after 1. It was a favoured meeting. We dined at John Gurney's, and at 4, went to the afternoon meeting for transacting the business of the Quarterly Meeting. There were present many young people, very pretty, gay and thoughtless. Elizabeth Robinson and aunt were much favoured, and her service was to these [young people] in a particular manner, and tendered some of them. The widow, Sarah Gurney, spake tenderly. She is a pretty minister. It was a favoured time on the whole, and held till after 8 o'clock.

"Third-day, 7th, went to meeting at 10 o'clock, in the new house. It was full, many of other societies being present, and aunt was much favoured. We dined at John Wagstaff's, with Thomas Wag-

staff and wife. The meeting was held again in the same house at 4 o'clock, and held until 7. The meeting was much crowded, and the people quiet although for some time it was silent. At last John Griffith had a seasonable and favoured time, and aunt was excellent in prayer. We spent the evening at John Oxley's, with William Hunt and others. Aunt and William had a good time with the young folks in that family.

"Fourth-day, 8th, we went to meeting at the small house at 10 o'clock. It was crowded, and a favoured time to aunt and some others. The meeting for worship broke up a little after 12 o'clock, and then we went up stairs to finish the business of the Quarterly Meeting, men and women sitting together. Here several testimonies were borne livingly and suitably to the meeting, by aunt and others. We dined at Henry Kitt's, brother to the widow, Elizabeth Gurney. We then went to an adjourned meeting of ministers, which concluded this meeting. There our certificates were read and minuted. This was the last meeting we were at with William Hunt and Thomas Thornbury, who took their way towards Hull, in order to embark for Holland. We drank tea with Hannah Ellington, a sister to Elizabeth Gurney, and spent the evening at her house with the above Friends and many others, beside a number of young ones. I believe we should have had a solemn parting, had not a certain person come and engaged some of the men Friends in unprofitable conversation. William Hunt and Thomas Thornbury attended us to our lodging, and had a solid parting with us there.

"Fifth-day, the 9th, busy writing, &c., until 4 o'clock in the afternoon, when Mary Oxley went with us to North Welsham, fourteen miles. We were received in a kind manner by John Ransom, a nephew to our good friend, Mary Kirby. A worthy friend he is. I hope the dew of heaven, and the fatness of the earth may be his portion, and the God of Jacob, the lot of his inheritance, for his tender and affectionate care to his aunt, who, though worthy of it all, has not of her own to make her life comfortable, under the infirmities of age. We went to see Michael Ransom and his wife, Mary Kirby's uncle. We lodged at the nephew's.

"Sixth-day, 10th, we went to breakfast with Mary Kirby, who lives in a small pretty house, built on purpose for her close by the meeting-house, wherein is every convenience her contented mind can ask, by her above-mentioned nephew. There, I enjoyed myself, and thought her, under all her weaknesses, the happiest woman I ever knew, and I was favoured to experience a good share of that sweetness in which she dwells. Here aunt seemed like herself. At 10 o'clock we went to the meeting-house, which was a small place; about one hundred filled it. Aunt was so led as to make me admire, considering the appearance the company made. But on looking over them, I found a clergyman was there. William Fry, of Bristol, afterward spoke very comfortably to a bewildered low state, to which aunt had spoken a little, and he concluded with something for herself: 'If thou knowest not where to go, follow the footsteps of the flock, and feed thy sheep beside the shepherd's tent.' Mary Kirby, after him, spoke short and sweet, aunt then followed in prayer, and the meeting ended. It was the best meeting to me, we have as yet been at in England. We all dined at our lodgings, and spent the afternoon with Michael Ransom. There we had a comfortable sitting, in which Mary Kirby had to tell us of her experience and exercises. She returned with us to our lodgings, and there we parted on Seventh-day at 10 o'clock. This has been most peaceful, pleasant visit since our arrival. Got to Joseph Oxley's,

fourteen miles, safely, and felt more like myself than when I left it.

"On First-day, 12th, went to meeting. The aunt was carried out on baptism, beyond what she had ever been, and so convincingly, that sever spoke to me about it. Dined at the old widow Gurney's, the only one of the old stock. The afternoon meeting was very heavy, until towards the latter of it, when it arose, and aunt spake a few words. We returned to the widow's, and sever young people being there, aunt had something reasonable for them and the widow. We spent evening at Henry Gurney's, where I was much satisfied with the conversation of the young people that of the two eldest daughters, Lucy and Pat, especially.

"Second-day, 13th, in the afternoon, we were John Roper's, whose residence is on the wall of T. His contrivances in the fire-place, for cooking, and in his gardens, are extraordinary.

"On Third-day, 14th, we attended the marriage of Elizabeth, a daughter of John Gurney, and Samuel Alexander, of Needham. It was a much crowded meeting, but it was highly favoured. I ward the latter end, the people were very still and quiet. We drank tea with Joseph Oxley's sister, Mrs. Hawks, and spent the evening solidly with Sarah Gurney, William Fry, John Griffith, and some young people.

"Fourth-day, 15th, we went to Yarmouth, twenty-two miles. John Roper and Mary Oxley's company us. Yarmouth is a large town, we built, but their rows, as they call their streets are very narrow, indeed. There are a few Friends most of them being of Edmund Peckover's family, fifty including the strangers, were all who were meeting. Aunt was much favoured, and encouraged them to keep up their little meeting.

l lodged at Joseph Sparshall, whose wife is a daughter to Edmund Peckover. The meeting was on Fifth-day at 10 o'clock. We dined at Edward Fuller's, where John Oxley was staying for health. I think he is not likely to recover. After dinner we rode to Norwich. The Friends of that place are very kind, and with their assistance a our good friend John Griffith, we parted with a heavy chaise, and bought a lighter one. The finding it up detained us to Sixth-day, the 17th, which employed myself in refurbishing our clothes. I went to the week-day meeting, which I held at 6th hour in the evening. It was a favoured meeting, many Friends and others being present. After supper we had a solemn parting.

"Seventh-day, the 18th, we rose by 5 o'clock and with our guide, William Cerch, a plain, honest-hearted Friend, rode to Dereham, sixteen miles, baited, had our horse shod, and set off for Swinham, where we were kindly received by Abraham Sewel and wife. She is taller than Mary Peckover.

"On First-day, 19th, we went to their meeting and though that family is the only one of Friends the town, (which is a pretty place), there were above one hundred persons present, several whom were Methodists. Here we met with William Fry, and had a favourable time. Directly after dinner, we went together to Lynn, the meeting in Norfolk. We had one in the evening there, much to satisfaction. We lodged at Rich Hallom's. Here, Second-day, 20th, we part with our friend, William Fry, to meet no more these parts, and having no acquaintance, it felt lonely."

(To be continued.)

Every thing that is done in religion and worship without the guidance of the Holy Spirit, is worship and idolatry.

From the Methodist.

Cotton-Looms.

IMPROVEMENTS DURING THIS CENTURY.

The distress so generally prevalent in the English cotton-manufacturing districts on account of the failure of the cotton supply, and the intimate connection of its cause with our own affairs, make peculiarly fitting at the present time a sketch of the improvements in cotton-looms during the present century, and a notice of the great impulse which has been given to manufactures, in consequence of these improvements. We find in a late number of *Facmillan's Magazine*, the history of these improvements, and of the present development of the cotton-manufacturing interests in England.

The use of cotton and the art of weaving cloths of it were known and practised in India as far back, at least, as the earliest periods of authentic history. For many centuries previously the art may have been carried on, we have no means of knowing. At the time of the Christian era the growth and manufacture of cotton had spread to Persia and Egypt, and, to a limited extent, to adjoining countries. But the superior skill of the Hindoos in the manufacture of fabrics of fine texture enabled India, until a recent date, to maintain her supremacy in the markets of the world. The very name of calico, as well known, is derived from Calcutta, where the kind of goods known by that name was first manufactured, and until a few years since, the traffic in shicoes was the chief trade that was carried on between that city and the English ports. During the seventeenth century the annual value of cotton goods received in English ports from India was about £160,000. During the eighteenth century, it rose to £1,250,000, and in 1806, had attained the amount of £2,000,000. From 1806 the amount of imports began to decline, and in a few years England began to export cotton goods, even to India itself, which is now supplied with English cottons to the rate of £12,000,000 a year.

The cause of this wonderful turning of the tables to be found in the improvements in machinery, by means of which English and American manufacturers of the present day have been enabled to reduce goods with such marvellous rapidity, and of such a quality that no other people on the earth can compete with them.

The old hand-loom, in which every operation had to be performed singly by the hand, was awkward and slow, and inadequate to the execution of good work. The first step in its improvement was the invention of the fly-shuttle, which relieved the hands of one portion of their task, and at one step trebled the amount of work that could be accomplished. Next, was the invention of the "friction-pace," by which still more hand-work was saved, and uniformity of tension of the warp obtained. Previous to this, as the cloth grew, it had to be wound up, and a corresponding portion of the warp drawn off. When the tension was to be restored by means of rakes and ratchet wheels. Besides the trouble of this was so frequently stopping and re-adjusting this double system of rollers, the machinery for restoring the tension was necessarily imperfect, and uniform texture of the cloth could not be obtained. The "friction-pace" was self-acting as to the roller on which the warp was wound, and was so adjusted as to render the tension constantly uniform. This about was still further abridged by the "Dandy-loom," afterwards invented, by which the beam was made to take up the cloth as it was woven.

Following these improvements came the first attempts at the construction of the power-loom, to the merit of originating which two competitors present their claims. Dr. Cartwright, a clergyman of the Church of England, is one. At a tea-table at

which he was a guest, the conversation having turned upon the recent invention of spinning-machinery, and of the erection, by Arkwright, of a spinning-factory in the neighbourhood, the question was asked, Cannot machinery be as successfully applied to weaving as to spinning? Cartwright's attention was turned to the subject, and he soon devised a machine, which, though so imperfect as to be almost useless, was the germ of that wonderful, seemingly intelligent machinery which at the present day scatters so profusely over the earth its gifts of fabrics so admirably suited to the wants of man in every condition of life. Dr. Cartwright's first patent was taken out in 1785. Improvements were made from time to time, and the machine gradually assumed a useful form. After having spent some £30,000 or £40,000 in this and other mechanical projects, the doctor was rewarded by a government grant of £10,000 in consideration of his invention having led to the successful adaptation of machinery to weaving.

Contemporaneous with Cartwright's invention was that of Dr. Jeffrey, a physician of Paisley. It was very similar in principle, but was superior in some respects to Cartwright's. Neither of these inventions could, in practice, be advantageously employed. They possessed inadequate contrivances, or none at all, to stop the loom whenever the shuttle should be caught in the shed, or any accident might happen to the fabric, by the breaking of a thread, or otherwise. The occurrence of such accidents involved great liability to a "smash," or that a portion of the work would be spoiled, and have to be taken out and done over. Dr. Jeffrey, in his machine, provided for the stoppage of the loom when the shuttle should be caught in the shed, but his contrivance was so unreliable as to be of no practical value.

Robert Millar, of Edinburgh, in 1796 perfected an improvement, self-acting, by which the loom would surely be stopped, and a "smash" effectually avoided, whenever the shuttle should be caught in the shed. By this and other improvements of R. Millar, power-weaving was at length made practicable. His inventions are prominent features of the looms now in use. Another accident which it was still necessary to provide against, was the breaking of the weft thread. In this case, so great was the rapidity which had been attained in the process of weaving, unless the machinery was instantly stopped, horrid flaws would be produced in the cloth. In a loom working at the rate of one hundred and fifty shots of the shuttle a minute, making, in the same time, an inch to an inch and a half of cloth, the detection by the eye and correcting by hand of such flaws became a serious task.

The subject attracting the attention of mechanics, from 1834 to 1841, an invention was made and perfected by which, by the most exquisitely adapted attachments, the loom could be thrown out of gear and stopped the instant a breakage occurred in the weft-thread. It was necessary to "dress" or "size" the yarn, in order to give it strength and stiffness to withstand the strain to which it is subjected in the process of weaving. The doing of this by hand was a very tedious process. In the early part of the present century, an arrangement was devised for sizing by power. This has since been developed into a very complete self-acting machine called the "slasher." Other improvements have from time to time been added, among which may be noticed the attainment, by self-acting rollers, of uniform tension, and another self-acting apparatus for preserving uniformity of width. The result of all is the marvellous machinery of the present day, working apparently with almost human intelligence, with more than human

delicacy and quickness, and which has contributed so greatly to the wealth and comfort of mankind and to the spread of civilization.

On the old hand-loom, a good weaver, of full age and strength, could produce two pieces of printing-cloth a week. In 1800 he could produce four, and in 1851 twenty-six pieces of the same kind of cloth with equal facility. His remuneration in 1800 was 2s. 9d. a piece, which he made his weekly earnings 11s. In 1851 the operative received 6d. a piece, but was able to earn 13s. a week. In 1813 there were in use, in the United Kingdom, 2400 power-looms; in 1830 there were 60,000; in 1850, 221,360; and in 1861, 366,822. In 1803, 52,000,000 pounds of cotton were consumed in manufactures; in 1823 the amount consumed was 186,000,000 pounds; in 1833, 294,000,000 pounds; and in 1861, one thousand million pounds. In the year 1861, there were 2472 spinning and weaving factories in England, which gave employment to 383,929 persons, upwards of three fifths of whom were females. The greater part of this business is centred in Lancashire. This county contained, in 1861, 1563 factories, which gave employment to 309,082 persons, of whom 133,525 were males, and 175,557 were females.

From these figures the greatness and importance of the cotton trade of England may easily be seen. By the failure of the supply incident to the American war, this trade is wholly stopped; all of these 300,000 operatives are thrown out of employment; they and their families, together with the hosts of tradesmen who depend upon them for support, amounting, in the aggregate, to about one million, are reduced from comfort to extreme poverty. This is the occasion of that distress in Lancashire, which has furnished so many heart-rending details to the English papers. These people from their noble bearing in the hour of their distress, are doubly entitled to the sympathy of the world. They are especially entitled to ours, for among them only, of all the English people, has sympathy with the rebels never been encouraged.

For "The Friend."

The Sky and Clouds.

Ruskin writes of the sky and clouds in such eloquent glowing language, that I have been tempted to transcribe some passages, trusting there are not a few of our readers, who will appreciate and admire the truth and beauty of his remarks.

"It is a strange thing how little in general people know about the sky. It is the part of creation in which nature has done more for the sake of pleasing man, more for the sole and evident purpose of talking to him, and teaching him, than in any other of her works, and it is just the part in which we least attend to her. There are not many of her other works in which some more material or essential purpose than the more pleasing of man is not answered by every part of their organization; but every essential purpose of the sky might, so far as we know, be answered, if once in three days, or thereabouts, a great ugly black rain cloud were brought up over the blue, and everything well-watered, and so all left blue again till next time, with perhaps a film of morning and evening mist for dew. And instead of this, there is not a moment of any day of our lives, when nature is not producing scene after scene, picture after picture, glory after glory, and working still upon such exquisite and constant principles of the most perfect beauty, that it is quite certain it is all done for us, and intended for our perpetual pleasure. And every man wherever placed, however far from other sources of interest or of beauty, has this doing for him constantly. The noblest scenes of the earth

can be seen and known but by few; it is not intended that man should live always in the midst of them, he injures them by his presence, he ceases to feel them if he be always with them; but the sky is for all; bright as it is, it is not 'too bright, nor good, for human nature's daily food,' it is fitted in all its functions for the perpetual comfort and exalting of the heart, for the soothing it, and purifying it from its dross and dust. Sometimes gentle, sometimes capricious, sometimes awful, never the same for two moments together; almost human in its passions, almost spiritual in its tenderness, its appeal to what is immortal in us, is as distinct, as its ministry of chastisement or of blessing to what is mortal is essential. And yet we never attend to it, we never make it a subject of thought, but as it has to do with our animal sensations; we look upon all by which it speaks to us more clearly than to brutes, upon all which bears witness to the intention of the Supreme, that we are to receive more from the covering raiment than the light and the dew which we share with the weed and the worm, only as a succession of meaningless and monotonous accident, too common and too vain to be worthy of a moment of watchfulness, or a glance of admiration. If, in our moments of utter idleness and insipidity, we turn to the sky as a last resource, which of its phenomena do we speak of? One says it has been wet, and another that it has been windy, and another that it has been warm. Who, among the whole chattering crowd, can tell me of the forms and the precipices of the chain of tall white mountains that girded the horizon at noon yesterday? Who saw the narrow subnævum that came out of the south, and smote upon their summits until they melted and mouldered away in a dust of blue rain? Who saw the dance of the dead clouds when the sun-light left them last night, and the west wind blew them before it like withered leaves? All has passed, unregretted as un-seen; or, if the apathy be ever shaken off even for an instant, it is only by what is gross, or what is extraordinary; and yet it is not in the broad and fierce manifestations of the elemental energies, not in the clash of the hail, nor the drift of the whirlwind, that the highest characters of the sublime are developed. They are but the blunt and low faculties of our nature, which can be addressed only through lamp-black and lightning. It is in quiet and subdued passages of unobtrusive majesty, the deep, and the calm, and the perpetual, that which must be sought ere it is seen, and loved ere it is understood,—things which the angels work for us daily, and yet vary eternally, which are never wanting, and never repeated, which are to be found always, yet each found but once; it is through these that the lesson of devotion is chiefly taught, and the blessing of beauty given. * * *

"It seems to me that, in the midst of the material nearness of the heavens, God means us to acknowledge His own immediate presence as visiting, judging and blessing us. 'The earth shook, the heavens also dropped at the presence of God.' 'He doth set his bow in the cloud,' and thus renews, in the sound of every dropping swathe of rain, his promises of everlasting love." In them hath he set a *tabernacle* for the sun; whose burning ball, which, without the firmament would be seen as an intolerable and scorching circle in the blackness of vacancy, is by that firmament surrounded with gorgeous service, and tempered by mediatorial ministries; by the firmament of clouds the golden pavement is spread for his chariot wheels at morning; by the firmament of clouds the temple is built for his presence to fill with light at noon; by the firmament of clouds the purple veil is closed at evening round the sanctuary of his rest;

by the mists of the firmament his implacable light is divided, and its separated fierceness appeased into the soft blue that fills the depth of distance with its bloom, and the flush with which the mountains burn as they drink the overflowing of the day-spring. And in this tabernacle of the unendurable sun with men, through the shadows of the firmament, God would seem to set forth the stooping of His own majesty to men upon the *throne* of the firmament. As the Creator of all the worlds, and the Inhabiter of eternity, we cannot behold Him; but as the Judge of the earth and the Preserver of men, those heavens are indeed His dwelling-place. 'Swear not, neither by heaven, for it is God's throne; nor by the earth, for it is his foot-stool.' And all those passages to and fro of fruitful shower and grateful shade, and all those visions of silver palaces built about the horizon, and voices of moaning winds and threatening thunders, and glories of coloured robe and cloven ray, are but to deepen in our hearts the acceptance, and distinctness, and dearness of the simple words, 'Our Father, which art in heaven.'"

THE FRIEND.

TWELFTH MONTH 13, 1862.

Erroneous and hurtful opinions respecting the presence and value of the coloured population in the United States, continue to be much more generally entertained among our citizens than we should expect in a people so well informed, and usually so shrewd in the promotion of their self-interest. It shows the power of educational bias, and the exceeding difficulty with which wide-spread and long-cherished notions that minister to the self-esteem of a proud and dominant class, are eradicated or kept in abeyance.

Because the superior intelligence and power of the whites have been prostituted, for centuries, to enforce a tyrannical, degrading and barbarous servitude upon the descendants of African savages, stolen from their native land, and brought here to labour and live like the beasts that perish; and that this cruel and inhuman bondage has paralyzed the energies, and dwarfed the intellect of the great body of its victims, the opinion has been promulgated, and now widely prevails, being accepted by politicians, legislators and the thousands who rarely give any such subject serious examination, that it is good policy on the part of the community and the Government to prevent these sons and daughters of Africa,—athletic, enduring and docile labourers as they are known to be,—as they throw off the shackles which have so long crippled them, from spreading throughout the country; and that it is wise to induce or force them to expatriate themselves, and rid those parts of the land of their presence, where they have for a century, and do yet compose nearly the whole of the labouring, producing class.

Such a course appears to us to require only a statement of it in plain terms to demonstrate its absurdity. To propose to drive out of a community, notoriously addicted to the acquirement and love of wealth, four millions of sturdy hard-working members of it, or to refuse to allow any portion of them to come freely into any part of that community's territory, in order to dispose of their labour, while every year's experience teaches that that labour is needed, and may be made more and more profitable, merely because their skin is of a darker hue than that of those called white, and that popular ignorance has branded them as an inferior race, is so contrary to the polly proven, by the teaching of history, to be wise and profitable,

and so opposed to the laws of political economy, that its advocacy can be accounted for only on the ground of inveterate, unreasoning prejudice, ignoring the dictates of common sense, and preventing the perception of the true interests of the country; while it sets at naught the precepts and commands of the gospel.

It is a great favour for the United States that the circumstances under which they are placed, and under which they are likely to be placed for many years to come, render it impossible to carry out, to any great extent, the various schemes on trial, or proposed, for depriving the country of so large a portion of its working population. It is to be hoped that before any perceptible diminution of their number can be effected, those now held as slaves will have become established on the soil they till, as free labourers; and that ere long self-interest will break down the barriers, that have been erected by several of the States, to keep out a class, whose help is becoming more and more necessary for the development of the prime sources of national wealth.

But it is not our intention at the present time to advert to this subject as connected with political economy, interesting as that connection is, but rather to glance at the causes which have brought about the present degraded condition, intellectually, of our coloured population, giving rise to the false and vicious notion of their being an inferior race; and also to notice the cumulative evidence, brought incidentally before the public, of their capacity for moral and mental improvement, and the rapidity with which improvement manifests itself whenever the surrounding circumstances are favourable thereto.

It is one mark of the progress of truth and knowledge that the many theories broached at different times, by men—some of them erudite and philosophical—to account for the origin and characteristics of the negro, based upon the assumption of his being of a different race from the Caucasian, are very generally discarded, and men of science, as well as the less profound thinkers, are mostly content with accepting the truth of the plain declaration in the Holy Scriptures, that God "hath made of one blood all nations of men to dwell on all the face of the earth." Men are sometimes so bent upon exhibiting their profundity or their research, by looking afar off for the causes of striking effects generally observed, but not as generally investigated or understood, that they overlook the plain and more simple explanation, afforded by events of every-day occurrence bearing directly upon the subject, and which satisfy those of less penetrating vision. We are persuaded that something like this is the case in regard to the question of the mental and organic inferiority of the negro, and the various far-fetched theories to account for it.

Man is a compound being, consisting of body and soul; the one material and perishing, the other spiritual and immortal. What either matter or spirit may be in its essence is known only to Him who created them; but it has pleased Him in the formation of man, to bring them into such intimate and perfect union, that it is impossible to discriminate with certainty the point where they cease to act and react on each other. In consequence of this union, every intelligent act which we perform requires the agency of both body and mind, and as the latter obtains all its perceptions of the external world through the former, it must needs be that it will be greatly influenced by the things around it, as well as by the corporeal medium through which it perceives them.

Though all men are in this respect composed alike, yet it is probable no two are exactly the

me in respect to their mental and corporeal com-
ponents; nevertheless the most degraded slave who
assess all his time in the humblest drudgery, pos-
sesses a soul endowed with faculties precisely simi-
lar in character—though it may not be in power—
with those which in the man of high cultivation
have enabled him to explore the heights and depths
of science, and gain the applause of the world;
while the latter exercises and manifests his intel-
lectual power in and through a body possessing no
greater number of senses than that of the slave, and
subject to the same infirmities, wants, passions, and
physiological laws as his.

The potent influence—increasing throughout life—
which the mind and body exercise upon each other,
well known by all who observe the working of
their own composite systems, or have occasion to
become acquainted with the thoughts and feelings
of others. Where the two co-operate harmoniously,
we may hardly be aware how entirely dependent
they are upon each other; but when the healthful
relation is violently or persistently destroyed, we
see the most extraordinary consequences often re-
sult. Emotions of joy or grief suddenly called
forth by accidental circumstances, or the commu-
nication of unexpected tidings, have repeatedly
produced death. Sorrow, unduly indulged, impairs
the nervous system, deranges the digestion, and
sometimes so nearly arrests the assimilation of food
as to result in slow starvation; while fear has been
known to stop the action of the heart, to change
the colour of the hair, or to produce a copious
eruption, like warts, over nearly the whole sur-
face of the body. Every observant physician sees
constant evidence of how much the mind has to
do with the presence, the force and the cure of the
diseases his patients suffer under.

On the other hand, we know how slight a devia-
tion from bodily health, and sometimes merely an
long continued habit, will at once interfere with
the ordinary moods and force of the mind, so
sometimes completely to metamorphose the char-
acter. Living upon unwholesome and indigestible
food weakens the mental perceptions, and often in-
duces melancholy; the indulgence in alcoholic
stimulants or narcotics, soon gives rise to a state of
frenzy, incoherent vagaries, often followed by fu-
rious excitement or maudlin stupidity. A blow on
the head has repeatedly changed the whole percep-
tions, taste and intellectual capabilities, obliterating
the consciousness of previously acquired knowledge,
and destroying all sense of moral accountability.
We have ourselves repeatedly seen instances where
in men and women of strong minds, well developed
education, and stored with diversified knowl-
edge, under the continued pressure of bodily dis-
ease, have lost the use of their reason, become vio-
lently passionate or causelessly distressed, intol-
erant of the presence of their dearest relatives or
friends, ceased to recollect past events, and gradu-
ally sunk into imbecility, ending in idiocy. Where
the physical cause of these phenomena was too ob-
scure to be discovered, or it was not relieved by the
means employed, the eye gradually parted with its
share of intelligence and became dull and heavy,
the muscles of the face were relaxed or distorted,
it ceased to express any emotion, or even the
presence of mind, and the whole person indicated
that the spiritual existence was no longer capable
of manifesting its presence and endowments through
the body to which it was joined. Still life went on
about their interest in anything passing around, but
without suffering; all the organs, except the brain,
performing their functions uncomplainingly. These
results were the same, whether the original cause
of the change operated primarily on the mind and
secondarily on the body, or *vice versa*.

In other cases, where the physical derangement
was discovered, and the proper remedial measures
adopted, the mind regained its original vigour, its
long cherished affections and its former enjoyments,
as the disease was removed, and the health of the
body established. There can be no more striking
evidence of the mysterious union of mind and body,
and their mutual dependence on each other in con-
stituting man as he exists in this world, than such
transformations of character as we have adverted to,
and others often witnessed, where from the same
causes the diffident and taciturn become bold and
talkative, the modest, indelicate and wanton, and
the religious, irreverent and profane. With these
well-known facts constantly before our eyes, and the
knowledge of the treatment inflicted on the slaves of
our Southern States from one generation to another,
it seems little worth while to look for any other cause
of the present general mental inferiority of these
children of Africa, than the powerful influence of
that treatment and their mode of life, acting upon
both body and mind throughout the whole term of
their existence upon earth.

The most essential feature in our system of slav-
ery has been, and continues to be, that as the
slave, as a human being, was endowed by his
Maker, with the faculties of a man, which under
favourable circumstances might become so far de-
veloped as to enable him to comprehend his rights
as a man, and successfully struggle to obtain them,
it was absolutely necessary in order to keep him as
a mere working machine, dispossessed of every
right, but such as he obtained in common with the
ox or the horse that he worked with, and content
with the coarse, and often insufficient food and the
rough clothing provided for him; that his mind
should be called into action as little as possible—
no more than was necessary to enable him to per-
form his daily task—that every ray of light which
might stimulate and strengthen his intellectual facul-
ties should be carefully excluded from him; that his
mental emotions and his natural affections should be
constantly disregarded or crushed out; and that he
should be invariably taught to believe he was of a
race so far inferior to his master, that to administer
to that master's wants or pleasure it was right and
proper he should labour and suffer through life un-
ceasingly, and without profit to himself, and aspire
to little if any higher position than the beast that
perisheth. To render this policy more effectual in
attaining the end desired, the system clothed the
master with absolute and irresponsible power, and
taught him that his slave must enjoy no family
ties which should not be broken at his pleasure,
and that the utmost amount of labour might be
extorted from male or female by the lash; while
faults, whether real or supposed, were to be visited
by the most cruel and brutalizing punishment.
Thus have the minds of the poor slaves been kept
continuously in darkness and gross ignorance; the
bodies connected with those minds have been con-
signed by those who claimed to own them, to ex-
hausting toil and suffering, while their food and
raiment, their domestic and social relations, their
barbarous punishments and hopeless abasement,
have all combined to render many of the finer
feelings of our nature undeveloped or obtuse, to
stunt their intellect, and to shut out all ambition if
not all hope to rise above the wretched lot in which
they find themselves placed.

Now, if our own consciousness teaches us that
external circumstances, or bodily sensations, so
greatly influence our own mind, and modify our
capacity for mental exertion; if comparatively transi-
ent emotions or slight physical derangements often
produce such entire changes in the manifesta-
tions of mind, and in character, among those origi-

nally endowed with strong intellectual powers, well
trained and highly cultivated, as we know they do,
reducing those highly gifted to stolid imbecility or
morning idiocy, what other effect could be expected
from a system of slavery, such as that carried out
from generation to generation in the Southern
States, upon the mental powers and physical or-
ganization of the descendants of kidnapped savages,
than what they now exhibit, and for which they are
taunted as being an inferior race? Is it not
rather surprising, that under the circumstances, so
many among this crushed and down trodden people
have shown so much mental vigor and manly im-
provement as have been displayed by them?

We have before adverted to the rapid improve-
ment made by our colored population when placed
under favourable circumstances, which is the cor-
ollary of the truth of the views we have been pre-
senting. The closest investigation made in places
where, when free, they most congregate, shows that
they are generally moral, industrious and self-sup-
porting, glad to obtain instruction, and apt in ac-
quiring literary knowledge, willing to do their
share in bearing the public burdens, and rightly
solicitous to perform all the duties, as well as share
in all the rights of good citizens. This has been
conclusively shown to be the case in Philadelphia,
by the examination made a few years ago under the
condition of its colored inhabitants, by a committee
of the Meeting for Sufferings, appointed for the
purpose, and by similar inquiries made by other bod-
ies. The statistics published by them prove the
correctness of the statement, and afford ample
reasons for believing, that if once freed from the
depressing, injurious, and unjust prejudice of the
whites around them, and allowed to enter the
arena of life upon the same terms, and with the
same privileges as others, they would, in the course
of no very long time, give sufficient evidence of
their mental as well as their physical ability to
prove they are no inferior race.

The length of our remarks will not allow our
dilating upon this most satisfactory aspect of this
interesting subject, and we will merely subjoin two
extracts showing that this good work of mental
and moral improvement is going on quite as fast
as we could reasonably expect, and to a far greater
extent than many are aware.

The first is taken from a communication in the
Christian Recorder, relating to the progress of
education in Ohio. "The colored teachers of Ohio
are taking hold of the work in earnest. In 1860
they convened at Xenia and formed the Teachers'
Association. Their first annual meeting was held
at Springfield in 1862. The next meeting will be
held at Cincinnati, commencing on the 25th of
December, and will continue in session three
days. The object of this association is nothing
less than the elevation of our oppressed and down-
trodden people, and the education of Ohio's 14,000
colored youth. The work is a vast one. Yet will-
ing hearts and strong hands can do it. Already
the number of colored schools in Ohio is 168; the
number of colored teachers, 160. During the last
eight or ten years the number of our schools and
the number of our teachers has rapidly increased.
Our schools are now better organized and better
attended; our teachers are better qualified and
more in earnest."

The following is from the narrative of the State
of religion in the District of Columbia by the Pres-
bytery of that district. "In Washington, the col-
ored people number now some 12,000, or about
one-sixth of the population. As a community,
they compare most favorably with the poor labor-
ing class of this city or any city. Indeed, when
we consider the peculiar disadvantages under which

From "The Leisure Hour."

The New Drainage for London.

Whoever has been in the habit of perambulating London and its suburbs any time for these two or three past and more, can hardly fail to have entered from time to time an obstacle to his progress of more than ordinary character. In town has been found the highway heaped with cordilleras of clay, and the footways encumbered with mounds of brick, for the half mile together; and in extending his walks beyond the remotest suburbs, he has met the same phenomena in the open fields—always attended by swarms of navvies and workers in brick and mortar, of labourers and overlookers, whom the earth swallows and vomits forth at regular intervals, for a season of greater or less duration—and then they disappear altogether, leaving no visible sign or token of their labours. One day last summer, we came in an army of these moles busily at work farly in the northern meadows, in the act of digging a broad burrow deep down under the bed of the New River, whose channel they had diverted the occasion; and it was but the other day that some thousand of them were mining for a week or so, and burning bricks enough to build a tower of Babel, at the foot of Highgate Hill; and now they have all vanished from both places, and left behind them no observable memorial of their doings. The same thing is going on simultaneously throughout the whole circumference, the centre too, of the modern Babylon, to the temporary obstruction and inconvenience, there is no doubt, of the inhabitants of the districts thus summarily invaded and as it were worked inside outwards; yet to the great final advantage, let us hope, not of them only, but of all present and future dwellers in the vast and ever-creasing metropolis.

The old drains have been very incompetent to perform the function they have to perform; and, independent of the fact that they poisoned the river, they were a nuisance, unwholesome, dangerous, and in fatal. An enormous proportion of the ground which London stands is so low, that the drains in connection with the houses empty themselves to the river at a level considerably below high-water mark. In some places the outfall is so low, that it is stopped by the tide for sixteen hours out of the twenty-four; in other places it is still worse, stoppage enduring for twenty hours out of

twenty-four. During all these hours of every day, the sewers in these localities are a sealed up mass of waste matter, which, accumulating with its own flow, and being forced back by the rising tide, not only sends forth poisonous blasts of the foulest air into the streets and dwellings, but frequently overflows in fluid filth into the cellars, basement-floors, and low-lying garden-grounds of densely populated districts. The health of these neighbourhoods, of course, suffers in proportion, and thousands annually sicken and die of fever and cholera, whose lives would be spared were the drainage what it ought to be. Independent, too, of these awful defects, the existing drains, owing to their being so long hermetically sealed up at their outlets, are not safe to enter. It has happened repeatedly that men who have gone down to repair them, have not come up again alive, and that others who went down to look for their companions have not come up either. In some cases, the refuse from factories or chemical works has filled the culverts with carbonic acid gas, which has been fatal to the workmen entering them, and in others, thousands of rats have been asphyxiated from the same cause, and their bodies have been seen swarming forth at the outfall, at the ebb of the tide. There is a class of men who enter the sewers with lanterns, to raze for what they can find—taking terriers with them for protection against the rats—and remaining within the whole day, or night, as the tide compels. Some of these men have perished in their dismal prison, and their bones have been picked clean by the legions of hungry rats. Practically, however, the grand objections against the existing drainage are its inefficiency, which is most evident in rainy seasons and sudden floods, and the fact that it poisons the river, both which objections it is expected will be met by the system of drainage now in course of construction.

The carrying out of an effective system of drainage has been under the consideration of parliament at various times since the year 1848, and the present plan, the execution of which has been committed to the Metropolitan Board of Works, appears to comprise the best practical suggestions of scientific men most acquainted with the subject. From the circumstance that so large a proportion of the area of London lies so low as to be near the level of the Thames, it is impossible to drain the whole surface effectively without finding a much deeper level than the river presents. For all these low-lying districts, therefore, main sewers at a very low level are in course of construction, which will receive the drainage and carry it eastward, as far as Barking Creek on the north bank, and to Halfway Reach on the south bank of the Thames. From the low-level sewers, the soil will have to be pumped out by pumping engines, and may either be received in reservoirs for deodorization and the formation of saleable manure, or discharged into the river at a point so far from the metropolis as to leave it unpolluted. On the other hand, where the ground is sufficiently elevated to allow of it, the main sewers are constructed on levels high enough to render the drainage self-acting, so that pumping will not be necessary.

A glance at the annexed plan, [plan omitted,] will give the reader an idea sufficiently accurate of the extent of the works now in course of construction. It will be seen that they provide for the whole of the area under the metropolitan jurisdiction, with an extension outside that area on the north-east to Barking Creek, and that they consist of a number of main drains at different levels. In order to secure a sufficient inclination, some of the new drains dip gradually to a depth below the main tunnels, before they join them. Where this is the case, pumping stations will be erected, and the sewage pumped up into the outfall drains, as fast as it accumulates. Provision is also made for storms and sudden falls of heavy rain, or thaws, by outlets (one at Kennington and another at Deptford) communicating with the river, and where any abnormal deluge from the clouds will discharge itself, over the ordinary flow of sewage, into the Thames. In the western division, extending as to the river, from Queen's Road nearly to Chiswick, as the level of the ground is very low, there will be no outfall for the sewage, but the drain will converge to a point opposite Battersea, where deodorizing works will be established, and the fluid of the drains, after purification (?), be discharged into the Thames. We can but regard this as an undesirable part of the plan, as tending to perpetuate the defilement of the Thames.

The works were commenced at the close of the year 1858, and it was then anticipated that they might be brought to a conclusion in the course of three years. Various causes, however, such as a difficulty in obtaining materials, strikes, failures of contractors, etc., have given rise to unexpected delays, and he would be a bold speculator who should pretend to determine the precise time when the grand undertaking will be completed. Meanwhile, the contractors appear to be busy enough; and although they do work underground, they make at times appalling demonstrations of the nature of their operations. Never was such a demand for bricks made before upon the beds of London clay—one contractor alone buying them at the rate of a hundred thousand a day.

Pending all this hard work, people are speculating as to the probable result when it shall be finished. It seems doubtful whether, with the general outlet for the drainage so near as Barking Creek and a little below Woolwich, London river will be really freed from the nuisance which at times renders it intolerable. The tide may force it all back in a half diluted state, and we may be little the better for all the money we shall have spent. The original proposition was, to carry the drainage in vast tunnels right out to sea, at a cost of ten millions sterling; but it is questionable, even if the money were forthcoming, whether that plan would answer: sea-water, being so saturated with salt, will not take up other matters readily, and, as every one knows who has fallen in with a sewer which empties itself into the sea, throws off gaseous impurities into the air. The drainage of London discharging itself into the mouth of the Thames might prove a cordon the reverse of sanitary, and a terrible plague to navigators. What is wanted, if

the idea of deodorizing and consolidating be abandoned, is that the sewage be conveyed into a mass of fresh water sufficient to dissipate its noxious qualities before it is borne back by the tide. Experience has shown that purification by dilution is often effected both in tidal rivers and in rivers not tidal, without any interference on the part of the dwellers on their banks. Thus, the drainage of the city of Bath is received by the Avon; but an analysis of its waters a few miles below the city differs in no important degree from the same analysis made a mile above the city, before a particle of the sewage has entered the river. The same thing was observed at Leicester, seven miles above, and a few miles below the town, were made by a well-known professor for scientific and sanitary ends. It would follow that, independent of anything we know or can calculate upon, there is a purifying power in nature continually at work, which compensates the heedless recklessness of man, and keeps her machinery in order, and that, therefore, with the most moderate attention on his part to the requisitions of cleanliness, he will be preserved from harm.

For "The Friend."

Diary of Samuel Scott.

Notwithstanding that the peculiar constitutional temperament of Samuel Scott influenced him to set a very low estimate upon his growth and stability in the Truth, and often to take very humiliating views of his daily walk as compared with the perfect example set by his blessed Lord and Master, yet there is much deeply instructive matter contained in the diary which he believed himself required to keep for some years, and which, after his death, was published, and has received the sanction of the Society. In reading it over recently, we have been impressed with the peculiar force and general application of some of the views and feelings recorded, and believing they may be interesting and instructive to many of the readers of "The Friend," we have marked them for insertion in its columns.

In the memorial concerning him, prepared by the Monthly Meeting of Hartford, his friends and fellow-members say:

"This our beloved friend was born in Gracechurch street, London, on the 21st of the Third month, 1719; and, as appears by an account left in writing by himself, 'was, in the seventeenth year of his age, remarkably favoured with a divine visitation; by which his understanding was enlightened, and the great beauty, heavenly order and economy of a truly religious life, at seasons even ravished his soul;' and having walked in conformity thereto till about the thirty-fourth year of his age, he then came forth in the work of the ministry, in which his gift was truly edifying and convincing; tending much to awaken the attention of the careless and formal professor to the weighty concerns of truth and righteousness.

"He was a man fearing God and having covetousness, deep in divine things, of a humble mind and benevolent disposition, extensive in christian charity, and unfeigned love to the brethren; very useful in the discipline of the church among us, for which he was well qualified; yet very diffident of himself, ready to forgive, and seek forgiveness even of the meanest.

"During the latter part of his life, we were frequently deprived of his company at our meetings, especially those for discipline, by reason of the prevalence of a disorder which had attended him for several years; notwithstanding which he was often in deep travail of soul for the restoration of inward rectitude, not only among us, but mankind in gene-

ral; as also for himself, that he might find a place of rest and peace.

"A few days before his decease, being in a tender frame of mind, he expressed himself to a friend that visited him, in these words,—'I have done with all things but one, and that is, working out my soul's salvation with fear and trembling, through Him that worketh in me, both to will and to do of his own good pleasure.'

"His removal was rather sudden; and considering his anxious concern respecting that awful event, we believe, to him a favour; and we doubt not he is entered into that rest which his soul so ardently longed for."

"To this theodist of the Diary adds the following:—
"Such is the testimony to the character of the author of the following diary by many of his friends and neighbours, who appeared best qualified to delineate the same.

"Those who read the diary will probably observe the difference, which apparently exists between the foregoing account, and the description he has given of himself. His friends were chiefly guided in their judgment by his general conduct and actions; but his spiritual eyes being opened to a more extensive view of his real situation, his judgment of himself appears to have been formed by a comparison thereof, with that state of purity unto which all are called, and where all is beautiful, and not a spot or wrinkle can be discerned. It was for this state that his spirit panted, and short of which his soul refused to take lasting rest; for he saw the 'one thing needful,' and in dejectedness of that peace which prevails in Zion, the city of the saint's solemnity.

"For the attainment thereof, for obtaining the unsearchable riches which are found in Christ, and largely possessed when He becomes in man his only hope of glory, his solicitude appears to have been nearly unremitted; as not small was his anxiety, when the Beloved of souls withdrew his animating influence; fearing that it was not for the trial of his faith, that seasons of poverty and abstinence were allotted to him, and deep baptisms and conflicts his frequent portion; but that it proceeded from just displeasure, and that the Lord had therefore ceased to be gracious: whereby his soul was cast down and disquieted, without ability to adopt the encouraging language, 'Hope thou in God, for I shall yet praise him, who is the health of my countenance, and my God.' Thus desolate and disconsolate he expressed himself in the pathetic language of the prophet Jeremiah: 'Is it nothing to you, all ye that pass by? behold and see, if there be any sorrow like unto my sorrow.' But this is a path not frequented by the regenerate; who having attained to the state of young men, are fed with strong meat; when for weaning their affections from all sublunary objects, from everything that has not endurance, but perishes with the using, and for enabling them to receive and retain, without mixture, the perfectly refined wine of the kingdom, the Bridegroom withdraws his presence, the sensible saviour of the Spirit is not felt, and the earth with her bars is closed upon them. Thus is poor frail man apparently left in his weakness, without a hand extended which is competent to succour, or able to save; that his dependence may be fully proved, and his faith rendered more pure than the fine gold of Ophir. But, though for a trying time unfeared and unseen, yet there is a hand, an Almighty hand, stretched out for the preservation of the children of the bridechamber, which preserves them in afflicting extremities, and manifests itself when necessary for salvation, or reward. This is a path wherein the regenerate have trodden, and wherein our

friend, Samuel Scott, had his faith proved, purified and increased. But who are, even in this respect, so blind as the Lord's servants, as the children the Most High? Humbled to the dust under sense of their own unworthiness, pressed upon by an increased view of their frailty and entire inability for any good thought, word or work, towards promoting their soul's salvation, they a more prone to view dispensations of this kind, marks of divine displeasure, than for the trial of the faith; and therefore fear, lamentation and mourning, is their portion, until their hopes are revived, the sensible renewing of that grace, which gladdens the whole heritage of God. Then 'the wilderness and solitary place shall be glad, and the desert joy and blossom as the rose. It shall blossom abundantly, and rejoice even with joy and singing.' 'The natural abilities of Samuel Scott were above the common rank, and he was versed in literature. Yet these he counted but as dung, he might win Christ, have a fellowship with his sufferings, he made conformable to his death, a experience the power of his resurrection.'

DIARY.

"Fifth mo. 14th, 1780. I went up to the Year Meeting at London, and attended divers of the meetings both for worship and discipline; the former were in general large and solemn; much peace presided the latter; brotherly exhortations were in love imparted and a concern expressed for the manifold deviations from our ancient Christian testimonies, respecting 'speech, behaviour, and apparel.' Babylon is within; but from her very outlinings were our ancestors called forth, and these testimonies were committed to them and their children, as increasing testimonies, until they have filled the earth the customs of the people are vain; but honour the most unmeaning ceremony, the merest phantasm that ever pride and folly obtruded on their dead votaries."

"27th. I cautioned a neighbour against dressing me with a flattering title; the caution I received in a friendly manner, and the propriety the remark allowed."

"Sixth mo. 3rd. It is written, 'The voice, rejoicing and salvation is in the habitation of righteous; but for many days past my soul has been far from peace; the roll written within; without, with mourning, lamentation and weep, seemed to be the sole furniture of my solitary habitation.'

"7th. I was particularly condemned for expressing unnecessarily respecting politics and religion, 'Peace is thy profession. Labour to live peace with all men.'

"8th. I went to Ware with Samuel Spav, and visited five families; I had in one of the remarkable opening respecting my own state, these words, 'It is only the Lion of the tribe of Judah, that can cause the 'Lion and the lamb lie down together;' my lips were sealed in silence."

"12th. I am convinced from a daily heartfelt sensation, stronger than ten thousand arguments, that until we cease to do evil, we cannot learn to well. No acceptable worship can be either internally or externally offered to the God of truth while we are acting contrary to the dictates of Truth in our own consciences. There is no path to the wicked.' 'If we regard iniquity in our hearts, the Lord will not hear us.' Let him name the name of Christ depart from iniquity. These testimonies were formerly borne by the grace men, who lived by grace; and they will ever battle the efforts of antinomianism. The inability to cease to do evil is in a divine and substantial principle,—the grace and truth which comes by Jesus Christ; or, in other words, in a

forter, the agent and representative of the Holy Head, by which he is present with his people to the end of the world; 'Christ in them, hope of glory.' Some days have been spent under a sense of his presence, who said to his servant formerly, 'Walk before me, and be thou perfect; be all the glory ascribed to him through Christ Jesus, our only Mediator. Amen.'

Some Interesting Facts for the Farmer.

The atoms contained in a corn or wheat plant adapted to form another plant of the same kind, after the first plant is decomposed by rotting, the carbon locked up in the form of carbonate of lime would cover the whole globe with a stratum of pure coal four hundred feet deep.

The stock of available carbon in the soil is continually consuming and renewing. When crops on the ground they renew the carbon.

Sixteen parts oxygen, combined with six of carbon, form twenty-two parts carbonic acid. This is formed by all decomposition of vegetable matter, fermentation and breathing.

When animals or plants are undergoing decomposition, hydrogen combines with nitrogen, in proportion of three parts hydrogen to fourteen nitrogen, forming ammonia.

The first ten inches of earth is called *soil*; the next ten inches is called *subsoil*. The soil on an acre weighs one thousand tons; of this four and a half per cent. is carbon, one-fourth of one per cent. nitrogen, and one and three-fourths of one per cent. oxygen, and one-fourth of one per cent. ammonia; or, putting it in weight, thirty-six tons carbon, two tons of hydrogen, twelve tons of oxygen, two tons of ammonia. This is the analysis of good wheat land. One hundred parts of it give six thousand, seven hundred and eighty-five of dry combustible mold.

One thousand pounds of wheat yield twenty-four tons of nitrogen. In the formation of five tons of clover, two hundred and forty pounds of nitrogen are consumed.

Wheat straw yields only one-eighth as much nitrogen as wheat.

The proportions given above are not chemically exact, but sufficiently so for practical purposes. Before a soil can produce a good wheat or other crop, it must contain, in an available condition, a substance consumed or required in forming the stems and seeds of the plant.

If the fertility of land depended on the amount of vegetable matter in the soil, then black mud would be the best for wheat, instead of the poor-

light, sandy soils, almost destitute of mold, as been made to produce good crops of wheat or corn, by the application of plaster and lime. This shows that plants can draw oxygen, hydrogen and carbon from the atmosphere.

There is, probably, not an atom on the face of the globe, capable of organization, that has not, by various times, been endowed with vitality.

Ammonia is worth ten cents a pound, for manure.

Sixty-seven per cent. of the ash of the straw of wheat, rye, oats, barley, maize and sugar cane, is soluble.

The sand east of the Alleghenies, is the *debris* of igneous rocks. West of these mountains it is siliceous. The first is barren, the latter productive, being animal remains.

Land lead is productive in proportion to the amount of fossils in the rocks of which the sand is made; but it is, in all cases, leached, and requires lime, clay and ashes to puddle it; otherwise manure will soak through, and do but little good.

Zuyder Zee, a lake in Holland, some forty miles in circumference, has been drained by the government, and made tillable. The soil, at the bottom has ten per cent. red oxide of iron and four of lime. It is very productive.

Four per cent. of lime would be forty tons per acre.

Carbon, oxygen, hydrogen and nitrogen are indispensable in the growth of plants.

It is generally characteristic of strong soils to abound in the peroxide, or red rust of iron.

If a soil has one per cent. of potash, there are ten tons to the acre.

There is usually about two per cent., or twenty tons of soda to the acre.

The principal source of ammonia in the earth is in the decay of organic matter in the soil—such as plants, insects, &c.—though a portion of it is derived from the atmosphere, being beat down by rain and warm suns.

Protoxyde and peroxide of iron figure largely in soils. The protoxyde is the first rust of iron, and consists of one atom of iron chemically combined with one of oxygen. The peroxide is the red rust, and consists of two atoms of iron chemically combined with three atoms of oxygen.

If land has too much iron and sulphur, by the application of lime, the sulphuric acid, formed by the combination of oxygen and sulphur, is attracted by the lime, for which it has a greater affinity than for the iron, and forms gypsum, or plaster. The protoxyde of iron, thus deprived of its sulphuric acid, is soon changed into peroxide; in which it is not only harmless but a condenser of fertilising gases.

When sulphuric acid combines with soda, it forms glauber salts; combined with magnesia it forms epsom salts.

If bone earth does not exist in the soil, it can be formed by applying lime, which will combine with phosphoric acid, in combination with iron, or alumina, drawing it from the alumina, or iron, producing phosphate of lime, or bone earth. It is this which forms the bones of animals, and which is procured by animals, through their food, from the earth.—*Journal of Agriculture.*

Cems from Andrew Grep.
BORN 1634, DIED 1656.

1. One of the most soul-enriching exercises that a christian can fall upon it, is to wait for returns of prayer. There shall never be a word that he speaks to God, but he shall know what worth it is of. A christian not waiting for the returns of prayer, doth obstruct many precious returns. Know this, if we had been waiting for answers to our prayers, there are many sweet returns from God which we would have had, in comparison of what we now have.

2. It is much to pray, as though we prayed not; to use the means, as though we used them not; to pray, and not to trust to our prayers.

3. A christian should watch before prayer, in prayer, and after prayer. Is it not certain that a christian will be serious the first ten words he speaks to God, and yet ere the end he may be dead as a stone?

4. Ere long the praying christian shall be a praising christian. We should long for that day when Christ shall say, Come up hither, and I will give thee a new name: thy name while thou wast below upon earth was a praying and a complaining christian; but now I will give thee a new name: thy name shall now be a praising christian.

5. There is no rod which the christian can bear worse than the rod which strikes at the root of his

predominant idols, so a proud man can bear any cross better than reproach, and a worldly-minded man can bear any cross better than poverty.

6. This is the house of complaints, heaven is the house of praise; this is the house of sorrow, heaven is the house of joy; this is the house of our pilgrimage, heaven is the house of our abode; this is the house of our misery, heaven is the house of our eternal solace, where there shall be no end of our joy and rejoicing. Wait, then, for behold He cometh with ten thousand of his saints.

7. Here there is much weeping and fretting at God's dispensations; but believe it, the day is approaching when ye shall write upon the posts of the doors of heaven, He hath done all things well.

8. Love puts a tie upon the omnipotency of God to be forthcoming to his people. If a christian have Christ's heart, he shall also have his hands; if a christian be beloved of Christ, he will give him the precious out-lettings of his power to help him to overcome the strong enemies that meet him in the way; love and compassion in Christ make him give his hands to us when we are straitened.

9. A christian who does not observe his victories, wants many excellent songs.

10. We must not expect two heavens; it is enough if we possess one. We must not travel to heaven through a bed of roses; it is not much that we go to heaven in a fiery chariot, having afflictions and calamities our companions all the way.

When our feet shall stand upon the threshold of the door of our everlasting rest, then our chains shall fall from our hands, and our fetters from our feet, and we shall lift up our heads with joy.

11. Do not say thy wound is incurable, and thy stroke grievous; but comfort thyself with this, that there is balm in Gilead, and a Physician there. Let thy case be never so broken, bring it to Christ, and he will heal it; commit it to the Advocate that never lost a cause. Oh! how many broken and desperate-like cases has Christ pleaded in heaven! Believe this, he can invent things for the clearing of our cause that we never could invent ourselves!—*Christian Treasury.*

"Chalk your Bobbins."

Every one knows that old Sir Robert Peel, father of the late Prime Minister of England, and the grandfather of the present baronet, made his money by cotton spinning. In the early part of his career his business was not remarkably extensive, but suddenly he made a tremendous start, and soon distanced all his rivals. He grew immensely rich, as we all know, but we do not all know the lucky accident to which he was indebted for all his enormous wealth.

In the early days of cotton-spinning machinery a great deal of trouble used to be caused by filaments of cotton adhering to the bobbins or tapes, which then formed portions of looms. These filaments accumulating, soon clogged the wheels and other parts of the machinery, and rendered it necessary that they should be cleared, which involved frequent stoppages and much loss of time.

The great desideratum was to find out some plan of preventing this clogging; by the cotton, and Sir Robert, or Mr. Peel as he was then, spent vast sums in experiments. He employed some of the ablest mechanists in the kingdom, among them James Watt, who suggested various corrections; but spite of all they could do the inconvenience remained, the cotton would adhere to the bobbins, and the evil appeared to be insurmountable.

Of course these delays seriously affected the wages of the operatives, who on Saturdays generally came short in proportion to the stoppages during the previous days. It was noticed, how-

ever, that one man always drew his full pay, his work was always accomplished, in fact his loom never had to stop, while every other loom in the factory was idle. — Peel was informed of this, and knew there must be a secret somewhere. It was important that it should be discovered if possible.

The man was watched, but to all no purpose; his fellow-workmen tried to "pump" him, but they couldn't; at last Peel sent for the man into his private office.

He was a rough Lancashire man—unable to read or write—little better indeed than a mere animal. He entered the "presence" pulling his forelock, and shuffling on the ground with his great, clumsy, wooden shoes.

"Dick," said Peel, "Ferguson, the overlooker, tells me that your bobbins are always clean; is that so?"

"Ee's master, 't be."

"Well, Dick, how do you manage it; have you any objection to let me know?"

"Why, Master Pill, 't be a soart o' sacret loike, ye see, and if ye told 't others 't know's moch as yo'," replied Dick with a cunning grin.

"Of course, Dick, I'll give you something if you'll tell me, and if you can make all the looms in the factory work as smoothly as yours."

"Ev'ry one'n them, Master Pill."

"Well, what shall I give you? Name your price, Dick, and let me have your secret."

Dick grinned, scratched, and shook his great head and shuffled for a few minutes, while Peel anxiously awaited his reply. The cotton lord thought his servant would probably ask a hundred pounds or so, which he would most willingly have given him. Presently Dick said:

"Well, Master Pill, I'll tell 'e all about it if you'll give me—a quart o' beer a day as long as I'm in the mills; you'll save that ten."

Peel rather thought he should, and quickly agreed to the terms.

"You shall have it, Dick, and half a gallon every Sunday into the bargain."

"Well, then," said Dick, first looking cautiously round to see that no one was near, "this 't be," and putting his lips close to Peel's ear, he whispered: "Chalk your bobbins!"

That indeed was the great secret. Dick had been in the habit of furtively chalking his bobbins, which simple contrivance had effectually prevented the adherence of the cotton. As the bobbins were white the chalking had escaped detection.

Peel was a sagacious man, and saw through the affair at a glance. He at once patented the invention, had "chalking" machinery contrived, and soon took the lead in the cotton-spinning department. This was the foundation of his princely fortune. It is but right to add that he pensioned off Dick handsomely.

"It is not so much the work, that God regards, as the mind of the worker. The same act may be done with the thanks and advantage of one agent, and with frowns and disrespect towards another. If we do our business grudgingly, and because we must in order to our subsistence, we shall be entitled as much to thanks as if we sat still. It is our own need that sets our hands to work, not our obedience. In this, therefore, we are our own slaves, rather than God's servants. But if we go about the labours of our calling cheerfully, offering them up to God as a willing sacrifice, in an humble compliance with his commands, and an awful and comfortable expectation of his gracious acceptance, we are blessed in our holy endeavours, and cannot fail of recompense from our Master in heaven."—Hall.

For "The Friend."

Musings and Memories.

THE SPIRIT'S TEACHING.—A SKETCH OF C. H. STEINHOEFER.

The Lord is ever ready to instruct his children in righteousness, if they will but be obedient to that which he unfolds to them as a duty. Now, as of old, they who do his will, know his doctrine. To those who wait upon him in faith, the openings of the Spirit are still granted, and as these are received, believed in, and obeyed, his humbled self-adoring followers, are prepared for greater degrees of knowledge, for higher spiritual attainments. Through faithfulness, children may become, in things pertaining to life and salvation, wiser than their earthly teachers. My Musings this morning, have been on some incidents in the life of C. G. Steinhoefer, kindly furnished me by one of his children.

C. G. Steinhoefer was born in the kingdom of Wurtemberg, in the year 1779. His parents were religious people, his father being a clergyman, a minister of the Lutheran church, which is the established profession in that country. Although his parents were both pious, and without doubt acquainted in measure with the restraining, sanctifying operations of the Holy Spirit, preparing them through the offering of the Lord Jesus Christ, for an admittance into the kingdom of grace and of glory, they had not seen into the fulness of the spirituality of the gospel. They knew not that the Lord Jesus Christ bestows spiritual gifts, qualifying for the ministry, on whom he will, without respect to their outward learning, or what might be esteemed amongst men their educational preparations. They thought they could educate their son for the office of a minister of Christ, and did what they could to further him in the acquisition of the knowledge they deemed necessary for that occupation. The son, submitting to the visitations of Grace, came under the teachings of the Holy Spirit with an obedient heart, and was brought into a further state of christian attainment than his beloved parents. He saw into the proper call and qualification for the ministry, and when his father would have placed him in the University, as the finishing step of a regular qualification for the Lutheran priesthood, and preparation for the established ministry in Wurtemberg, he declined entering it for that purpose. He told his father, that he could not. That to preach a routine of sermons every year, according to the rule, which the Wurtemberg theology called for, was not in accordance with his conviction, as to what was the duty of a minister of Christ. He could not perceive if a man studies a few hours, and then goes to his place of worship and preaches what he has thus determined on, how he was to receive the influence of the Holy Spirit, which the Lord Jesus has promised to give his disciples, to furnish them wisdom, and the convicting authority of true gospel utterance. His belief was, that the Lord Jesus Christ, was the alone qualifier of his true ministers, through his Holy Spirit furnishing them, according to their needs, "mouth and wisdom, tongue and utterance." This was his faith as a boy, and he, in after life, was enabled to give sensible evidence thereof, when he felt called upon to preach the gospel, which he was enabled to do, through the preparation of the Holy Spirit, to the tendering and convicting of his hearers.

The boy's determination, occasioned him the displeasure of his father, who told him, that he was neither able nor willing, to spend money to educate him for any other profession. Being thus thrown on his own resources, he bound himself to a mer-

chant, and on becoming free, followed for some years a mercantile profession. The Lord, who he had endeavoured to serve from his youth, was with him, and the instructions of the Holy Spirit being received and faithfully followed, its unfoldings were not withheld from him, so that I grew in grace. When he left his father's house his mother handed him a little book full of sentences taken from the Holy Scriptures, saying, "wherever thou findest thyself in danger, or temptation through thy path of life, open this, and thou wilt find a guide." This book, as the present of a pious mother, he always carried with him, and through the Lord's blessed overruling providence, he has sometimes found the precious promises therein recorded made strengthening to his mind.

In the year 1817, a great famine prevailed throughout Wurtemberg. During this period distress, of privation, and indeed to the very peak of starvation, a charitable friend of C. H. Steinhoefer placed a sum of money in his hands for the relief of some of the suffering inhabitants. Among the incidents which he witnessed during that sorrowful season, he used to narrate the following. He went forth one day into the neighbourhood, desiring to find some place where help was needed. As he went along, he felt drawn to enter a house, and giving heed to the impression, passed through the door. As he did so, he perceived a woman standing before a fire, over which hung a kettle of boiling water. Her hands were folded and there were tears in her eyes. He asked her how times fared with her? To this she answered "Hard enough! my husband has tried hard as cannot get work. We ate our last morsel this morning, and my children are hungry, and I have nothing more for them. I have read in the bible 'Ask and ye shall receive;—now I put the key on and prayed earnestly the Lord might only do in some dumplings, which would be an easy matter for Him, that I might keep my poor children from starving; but he has not heard my prayer.'" At the time she was thus simply relating their sufferings, and her disappointed faith, she was weeping. Her visitor then told her, the Lord had heard, and had sent relief; although not in the way she had expected. So he told her to send child with him, and that in half an hour she should have flour, which would enable her to drop in some dumplings herself. This providential assistance furnished by C. H. Steinhoefer, was sufficient for the preservation of that family. The husband afterward obtained work. The faith of woman was sincere, and although some may be disposed to smile at the manner of its action, undoubtedly, it was well accepted of Him, who loveth at the heart, and who for her faith, blessed poor despised Canaanitish woman, and healed him but crept and touched the border of his garment. His compassion is as great now, as the reviving efficacy of Truth is as certain now, as when the Master said, "Great is thy faith; but unto thee even as thou wilt." "Be of good comfort, thy faith hath made thee whole."

The Lord makes use of various means to relieve his suffering children, who, in living faith, cry to him for help. Many are the interesting incidents recorded, in which, in the very moment of extremity, succour has come from unexpected sources, while the Lord by his controlling providence, has commanded to relieve his faithful ones. Many will not fall from heaven, ravens may not minister their necessities,—but if the Lord, as in the above case, leads one of his children by the mouth of his spirit, together with the needful help, or opens the heart of any to send it, it is as if it came from him, as though an angel had conveyed it,—

ough he beheld it fall from heaven, or as though the unclean fowls of the air had brought it. John the Baptist, that meeting a poor beggar, he felt the expression raised in his heart, "the Lord help thee;" and he was passing on, when the query arose, how shall the Lord help but by putting it into the heart of his children to administer the help? which he felt constrained to return and bestow something. Yes, it is often thus that the Lord works.

There are many instances recorded in the life of Henry Erskine, of Cornhill, Northumberland, wherein the providence of the Most High, in the face of great extremity, interfered in a remarkable manner for his relief. One evening, when residing at Dryburgh, in Scotland, with his large family, they had eaten the last morsel of food, and he was without a penny to purchase more. Morning came, the children were clamorous for something to eat, but there was none. After a time a knock was heard at the house door, and a man requested assistance to take from a horse a very heavily loaded sack, which he was to leave there. (A doubt being expressed as to its being intended for them, and that it might be for another of that name, the man very gruffly said, he knew it was to be left there, and if they did not help, he should throw it on the ground and leave it. In the sack was a large supply of provisions. On another occasion, being in Edinburg without the means of buying food, he was stopped in the street by an individual who enquired if he was not Henry Erskine, and being satisfied of his identity gave him money and led him. The letter contained a considerable amount of money, "from a sympathizing friend." There were but eight words in the letter, and no clue as to the donor. So the Lord ministers when it seemeth him good, to the necessities of his children.

Belgium.

The last number (Tenth month,) of the London Quarterly Review contains an article on Belgium, that gives considerable information respecting the productions, resources and condition of that little State; which is highly interesting; portions of it will probably be acceptable to the readers of "The Friend," we therefore have selected a few short extracts.

"Many of the physical peculiarities of Belgium have originated in the very singular geological changes which its surface has undergone. Like Holland, from which its north-eastern portion is scarcely distinguishable, a part of it has in former ages suffered from a series of cataclysms. The coast is even now undergoing a change similar to that of Scandinavia, in some places being subject to a slow elevation, in others to a gradual depression. From Nieupoort, the axis of this change, to the mouth of the Scheld, the sea is insensibly but regularly gaining upon the land; while southward to the Pas de Calais, it is receding. These alterations in the coast line are also caused to some extent by the actions of rivers. Depositions of mud take place wherever the streams are stagnant; banks are formed which gradually rise above the water-level; the channels continue their course through them, and, with some artificial aid, their length established a permanent accretion to the land. Thus the town of Damme once possessed a harbour, and carried on an extensive maritime trade; it is now many miles inland, and there is scarcely a trace of its former connexion with the sea. The tract between Antwerp and Nieupoort, though now dry land, and supporting a large population, has within the historical period been covered by the ocean. This region consisted in

the time of the Romans, of woods, marshes, and peat-mosses, protected from the waves by a chain of sandy hills which were broken through by storms supposed to have occurred during the fifth century. The sea in the course of these irruptions deposited upon the peat a bed of fertile clay in some places three yards thick, full of recent shells, and containing pottery and other fragments of the works of man. The inhabitants, by means of embankments, have succeeded in finally securing this tract, which is now one of the most productive and highly cultivated parts of Belgium.

"The history of the Low Countries contains many records of inundations, not the effect of storms or of currents, but probably of a subsidence of the land. The known existence of peat at a considerable depth under the sea, off the coast of Belgium, confirms the supposition that the area of dry land was once very much more considerable than it now is. The movement of depression seems to have been from south to north; for Holland has been much more subject than Belgium to these disasters. The streets of Calais are five feet, those of Gravelines and Dunkirk three feet, those of Ostend one foot, above high-water mark; whereas those of Amsterdam and Rotterdam are very considerable below it. The whole Flemish coast has, in the course of centuries, lost a portion of its maritime border varying from one to two leagues in breadth.

"Such variations of the surface level of the Low Countries, originating doubtless in frequent oscillations of that portion of the earth's crust, seem to have been of periodical occurrence. In the year 1110, a fearful irruption of the sea covered a large portion of the Flemish territory, destroying numerous villages, and converting a rich and cultivated district into a sandy waste. The population, according to Van Brussel, found a refuge in England, and settled in Northumberland on the shores of the Tweed; but afterwards removed to Pembrokeshire, and fixed themselves in the neighbourhood of Haverfordwest. It is remarkable, as proving the subterranean origin of these movements, that in the year in which these great disturbances of level occurred, we are informed by English chroniclers that the rivers Trent, Medway, and Thames were greatly affected, and that their beds became almost dry. The extent of land which has been permanently flooded by the ocean in Holland is enormous. The Zuyder Zee rolls over a submerged tract that was once a populous and well-cultivated plain. The sea would long since have covered Holland and a part of Belgium, but for that vast system of embankments and sluices by which the persevering ingenuity of man has 'set bars and doors for the deep.' During the prevalence of north-westerly gales the tide at Katwyk, at the mouth of the Rhine, rises eleven feet; at Leek, near Vianen, it rises seventeen feet above the Amsterdam level. Holland is therefore perpetually threatened by inundations; and unceasing vigilance is necessary to avert the most terrible catastrophes. It had an escape in 1825, when the sea flowed into Over Yssel, Friesland, North Brabant, and Guelderland, producing a dreadful sense of insecurity in the minds of the inhabitants, and an impression that Holland might any day suddenly disappear from the face of the earth. With all its precautions against the sea, Holland can scarcely be considered secure. The subsidence of large portions of its territory in comparatively recent times, as well as at remote geological epochs, is an ascertained fact; and if, as is asserted, a slow movement of depression may be detected still in operation, the submergence of the country might be predicted as inevitable within a given time.

"Belgium has been less exposed than Holland

to these visitations, but it has suffered severely from the encroachment of the sea. An arid and sandy character has thus been imparted to many extensive districts. Violent geological dislocations must have happened in remote times. The strata in which some coal deposits are found present peculiarities rarely seen elsewhere. Instead of being horizontal or inclined, they are vertical; but as Belgium presents no indication whatever of volcanic action, this extraordinary tilting up of the beds must have been caused by a sudden subsidence of the crust of the earth long after the deposition in lakes or estuaries of those vast masses of organised matter of which coal is everywhere composed."

"The Netherlands in the fifteenth and sixteenth centuries monopolised, as is well known, the commerce of Europe. Bruges was the great mart of nations. The cause of this remarkable arrangement was the then imperfect state of navigation and the convenient position of the Low Countries. The use of the mariner's compass was far from general, and merchant ships crept timidly along the coasts. The Levant trade, the most important in Europe, passed from the Black Sea through the Russian territories to the Baltic; but when this trade began to decline, the Crusades having opened a new channel of communication through the Mediterranean for Indian merchandise, the Netherlands naturally became the emporium for the north and the south. The Baltic ports were frozen over in winter, and as ships could not in that age accomplish in a year the long voyage from the Mediterranean to the stormy coasts of the north of Europe, they availed themselves of a convenient intermediate port. Possessed of a great river fed by numberless tributary and navigable streams communicating with the continent behind and the ocean in front, no country was better adapted for concentrating the commerce of the world. Several of the principal towns in the low countries thus became great marts. Every commodity of Europe and Asia was to be found in them. They were thronged with merchants and speculators from every region. Banks, guilds, and great corporations sprang up as the necessary results of accumulated wealth. Bruges alone contained fifteen trading companies. Antwerp is said to have transacted more business in a month than Venice in the height of her prosperity in two years. A tourist who enters Belgium by the Scheld finds some difficulty in believing, while his eye rests upon its broad expanse, that the noble stream once bore on its bosom daily five hundred ships which entered or departed with each tide. The Scheld was then what the Thames is now, and Antwerp was, as it were, a Manchester and a Liverpool combined."

"The very peculiar and remarkable agriculture deserves our first attention. The husbandry is unlike any that elsewhere exists. On ascending one of the steeples or belfries in Flanders, that of Bruges for example, one of the most remarkable of landscapes is presented to the eye. A vast expanse of the richest cultivation stretches far and wide to the horizon; no hedge-rows—little lines of sportive wood run wild—break the level of the plain; few trees encumber the soil but those which bear their annual tribute of fruit. For hundreds of years this remarkable country has borne the appearance of a garden. The rich aspect which Belgium presents arises from two causes, the density of its population and the minute subdivision of its soil. Its cultivated area amounts to 6,232,477 acres, of which 43 per cent. consist of small holdings, not exceeding one acre and a quarter; 12 per cent. not exceeding two acres and a half; and the remainder is divided into what in England would be regarded as very inconsiderable farms.

But this extreme subdivision of property gives to the country some of its most pleasing characteristics. Fields or rather patches of bright verdure contrast everywhere with the golden colours of the flowering colza, or of the ripening corn, or of beds of bright poppy, or red and white clover, or fruit-bearing trees arranged in picturesque avenues or clumps. The number of products gives that variety to the landscape which in other countries is generally the effect of irregularity of surface. The glittering waters of the numerous canals, the comfortable homesteads and picturesque wind-mills, subserving many of the purposes of the steam engine, add their interest to the scene. The whole of the northern and western portion of Belgium, and much of Brabant, can only be compared to a vast garden—

'Blooming in bright diversities of day,'

and whatever impression it may make on the agriculturist of England, whose business has assumed the character of a manufacturer, it is calculated to impress an unprofessional observer with a high sense of the capabilities of the soil and of the industry, skill, and well-being of its population. Flemish husbandry, indeed, must be regarded as a species of horticulture; and with respect to tillage, can only be compared to those large unenclosed market-gardens with which the neighbourhood of London abounds. Agriculture in Belgium nowhere assumes that imposing character which it displays in England. No tall chimney towers over the homestead, and clouds the fair landscape with its frequent volumes of smoke; no steam plough is observed simmering among the furrows; the reaping machine does not rattle through the cornfields, and even the whirl of the threshing-machine is only occasionally heard. The agricultural economy of the country is generally of the very simplest description, and perhaps resembles that of a part of England in ancient times, 'where every rood of ground maintained its man,' and the custom of gavelkind led to a similar minute subdivision of the property.

"But the results of this elaborate cultivation are not less extraordinary than the manner in which it was effected. In the northern portion of Flanders, and especially the neighbourhood of Antwerp, which now presents an almost unparalleled picture of agricultural wealth, the soil is naturally a poor loose sand, blown into hillocks, and only kept together by the roots of a stunted shrub. The sandy heaths which lie between Antwerp and the Maas are of the most barren character, and a considerable portion still remains in a state of nature. If it were not for the mud or clay which is found intermixed in layers with these sands, the whole would have been hopelessly irreclaimable. Where on digging a few feet below the surface a stratum of marl is found, the process of improvement begins. The roots of heath keep the sand together; a small portion of the irregular surface, is levelled and surrounded with a ditch. A patch of broom, potatoes, or clover form the first crop on the spot to be reclaimed from the waste; compost gradually accumulates, and liquid manure is preserved and abundantly supplied to the succeeding crops. The effect of this stimulant is not only rapidly to increase the fertility, but to change completely the very character of the soil. Clover and potatoes reappear in increased luxuriance and quantity. Improvement follows upon improvement, and the boundary of the little farm is gradually enlarged. From such small centres cultivation has radiated until it has covered one of the most unpromising districts in Europe with crops which command universal admiration."

(To be concluded.)

Family Government.

BEGIN EARLY.

Obedience is a matter so important in the training of children that we must dwell upon it a little longer. Some think the *rod* should be dispensed with altogether in the management of children.

Let us not be wise above what is written. The scriptures are clear on this point. "The *rod* and reproof give wisdom; but a child left to himself, bringeth his mother to shame." Prov. xxix, 15. "Foolishness is bound in the heart of a child, but the *rod* of correction shall drive it far from him." Prov. xxii, 15. "He that spareth his *rod* hateth his son; but he that loveth him, chasteneth him betimes." (Prov. xiii, 24,) and many other passages might be cited.

The Lord's government over us is a perfect model for us to follow in the government of our families. He uses the "*rod*" as a last resort, when milder means have failed; so should earthly parents do. At a certain age the *rod* is necessary for most children. But children should never be corrected in anger. This will always do harm. The correction should always be adapted to the magnitude of the offence; the smaller the offence the lighter the punishment. An honest confession of the whole truth on the part of the child should be encouraged by the parent; and when there is deep penitence and promise of amendment, the correction should be light, or perhaps passed over altogether.

The subduing of the *will* of children at an early period is of untold importance in their education. Does the parent tell the child to pick up that piece of bread, or that apple, or shut the door, or rock the cradle? See that the word is obeyed or you lose your authority, and the child is in a fair way to be ruined.

You teach it to disobey *yourself*. If you are half an hour about it, you must correct it till it obeys, or you need not expect it will mind you again, unless it pleases so to do. I once knew a mother that told one of her daughters, about five years old, to rock the cradle while one of her younger children lay in it. The child refused. She spoke the *second* time. It still refused. The contest had now fairly begun. The child had often rocked the cradle before, and knew perfectly what it meant. The mother well knew that her authority over the child was gone if it conquered this time. She used the *rod* *lightly*, and repeated the word again to rock. But it stubbornly refused. She corrected it *severely* the second time; but still the child refused to obey her. The mother said her heart began to ache for the child, but she knew it would not do to stop. She corrected the third time *very severely*, and spoke the word, "Rock the cradle," and then the child immediately took hold and rocked, and was completely subdued; and the mother said from that time she had no difficulty to make that child mind ever after.

There is an easy step from obedience to parents to obedience to God; but how difficult for a child who has had its own will, and has not been properly disciplined and curbed, to submit to the yoke of Christ. These are the ones who, when they experience religion, so frequently backslide, having had no proper training, and whose wills have never been subdued when young. They have been accustomed to do as they please, and they will not now be brought under any discipline to God or man. With but few exceptions, these are the unsteady, captious, schismatic members that give much trouble to the church while in it, and frequently leave it in a pet, and run off and join some other society, or set up for themselves and endeavour to draw disciples after them.

One great difficulty with parents is, they do not

begin early enough. They think their children too young to correct and discipline, whereas that is the precise time to commence with them, and *subdue the will* while it is comparatively an easy matter, and then they would be rearing children that would bless instead of curse the world, and save themselves a great deal of trouble also. Adonijah the son of King David, who aspired unlawfully to obtain the kingdom from Solomon his brother, was a spoiled youth, "whom his father had not displeased at any time in saying, Why hast thou done so?" 1 Kings i, 6.

But it requires much *wisdom, grace, and firmness* to correct in the *right spirit*, and begin early, and adapt the *kind and degree* of punishment to the offence.

I once knew a boy about ten years old, who when told by his mother to sit down and eat his breakfast, got into a pouting fit from some cause or other, and refused to obey. The mother commenced coaxing the boy, till the father spoke and said, "Let him alone; say no more to him. Nothing more was said. At dinner-time the law was willing enough to come and eat his dinner when the father spoke and said, "My son you would eat no breakfast to please *yourself*, now you shall eat no dinner to please *me*;" and the boy got nothing to eat till night. That cured him of ever pouting again at meal times.

There is much wisdom to be exercised in the various methods of punishing children for faults and disobedience, especially when they are somewhat grown. Above all should parents pray, *earnestly*, that God would give them wisdom and grace to bring up their children in the fear of the Lord; like the mother of John Wesley, who said she "never nursed a child in her life but that she offered a silent prayer to God that she might not nurse a child for the devil."—*Christian Advocate and Journal*

London.

This great centre of wealth and population, continues to grow and expand far more rapidly than any other city in the old world. It seems difficult indeed, to assign any limit to the size it may ultimately attain, if no obstacles, physical or political should arise to interfere with its present rapid progress. One source of apprehended trouble is the comparatively small volume of water and fresh flow in the river Thames, the great sewer of London, and which, it has been feared, may, in the course of time, prove quite inadequate to carry off the continually increasing mass of impurities discharged into it. The offensiveness of the stream at some seasons has already been the subject of serious complaint. If scientific intelligence, aided by ample means, can find a remedy, for this inconvenience, a great point will be gained. A late paper gives some of the results of the census of 1861 as follows. By the census return it is divided into five districts; the Central, the East and the South are the districts of trade and commerce, while the North and West are the districts of residents who either do business in these districts or in the other districts and parts of the country adjacent to the city.

The grand Central district shows a decrease of population amidst a most extraordinary increase about the great centre. This may be accounted for in the fact that there is no more room for building, and that many small houses and inferior structures have been demolished in widening street and for the purpose of other public improvement.

The increase of the Eastern Districts during the last ten years is 85,636. These localities form the seat for the principal traffic of the port of London, and include the sub-divisions of Shore-ditch, Bell

Green, White Chapel, St. George-in-the-East, Spencey, Mile-end, Old Town and Poplar.

The Southern districts show a greater increase than the Eastern. They embrace everything to the south side of the Thames, from Greenwich to Wandsworth. In 1851 the population was 6,635, while now it is returned as 773,175, giving the large increase of 156,540.

The North district being distant from the river, much better adapted for residence than trade, has rapidly increased, the population now being 8,210 against 490,396 in 1851. Mary-le-bone, Hampstead, St. Pancras, Islington, and Hackney are favorite residences of mercantile, professional and thriving tradesmen, whose business places are the more central portions of London.

The Western Districts—the “West end” of London, exhibits a very great increase. In 1851 they contained 376,427 inhabitants, and in 1861, 463,988. Kensington, Chelsea, St. George, Hanover square, Westminster, St. Martin-in-the-Fields, and St. James’, constitute a large portion of these districts. Here are the most fashionable squares and streets of London. Here are the principal parks, the Houses of Parliament, and the Queen’s magnificent palaces.

The following table exhibits the decennial increase of London during the present century. The population of London at each decennial period of the present century, has been as follows:—

1801,	958,863
1811,	1,138,815
1821,	1,378,947
1831,	1,654,994
1841,	1,948,417
1851,	2,362,236
1861,	2,803,989

The amount of increase at each of those periods will be seen from the following table:—

1801 to 1811,	179,952
1811 to 1821,	240,132
1821 to 1831,	276,047
1831 to 1841,	287,390
1841 to 1851,	406,205
1851 to 1861,	441,753

Adding these sums together, we have an aggregate increase in sixty years of 1,845,126, raising the population of the metropolis at the latter date to 2,803,989. If we take the population of the Metropolitan London police district, we find that contained, in 1861, 3,222,717 inhabitants, dwelling in 434,529 houses.

The area of the Metropolitan district of London 77,997 acres. In 1861, the number of inhabited houses in the metropolitan districts was 359,421, the number of uninhabited houses was 15,774, and the number of houses building was 4027. The population, as already mentioned, amounted in 1861 to 2,803,989 persons, of whom 1,307,781 were males, and 1,496,208 were females, the females being thus in a majority of 190,000.

The number of public institutions for benevolent useful purposes amounted, on the 8th of April, 61, to 243, affording relief or accommodation to 1,090 persons. The number of persons on board vessels in the port of London on the same day was 84.

The number of inhabited houses within the metropolitan city of London police districts, in 1861, was 434,529, and the population was 3,222,717. The metropolitan police district extends over the whole of Middlesex, (exclusive of the city of London,) and the surrounding parishes in the counties of Surrey, Kent, Essex and Hertford, of which any part is within twelve miles from Charing Cross, and those also of which any part is not more than fifteen miles in a straight line from Char-

ing Cross. The area of the district is 439,770 statute acres, equal to 687 square miles. The city of London, in the midst of the district, is 1-13 square miles.

Women.—Associations in polite life would almost lead one to suppose that, in our refined days, women were all dead; and that the only class of modern females noticeable, were “ladies.” I remember that John Quincy Adams, on one occasion said that, “his mother was a woman; and that he still was very partial to the name.”

The more unwaveringly our eye is fixed upon the Sun of righteousness, the less we shall notice the shadows that cross our pathway, and the motes that float in the air.

THE FRIEND.

TWELFTH MONTH 20, 1862.

Among the various benevolent institutions originated and conducted by members of the religious Society of Friends in the City of Philadelphia, there are perhaps none which confer benefits more extensive and lasting, than those that are devoted to the literary and moral education of children, who from their position in life, and the unfavourable circumstances that surround them, but for these schools and the kind care and oversight of those conducting them, would probably be left to grow up in ignorance, or at least would never obtain the same valuable course of instruction and training.

Our columns annually contain reports of associations carrying on two or three such schools exclusively for coloured children; and we have taken occasion repeatedly to call the attention of our readers to them and to speak in commendation of them and the great good they are doing for that portion of our population.

We have now before us a small pamphlet giving brief information relative to an unpretending seminary for white girls, which, for more than sixty years, has been conducted by a small association of women Friends; and throughout all that time has been bestowing the blessing of a guarded and good—though elementary education—on the younger members of very many families of the struggling but deserving poor.

The pamphlet is entitled “Some account of the Aimwell School, instituted by the Society for the free instruction of female children, now incorporated under the title of ‘The Aimwell School Association.’”

Of the origin of the Association and School the “Account” says:—

“During one of the severe visitations of yellow fever towards the close of the last century, Anne Parrish, a sister of the late Dr. Joseph Parrish, lost several relatives, while her parents, to whom she felt strongly attached, were dangerously ill. She earnestly desired they might be spared to her, resolving if such were the case to devote the remainder of her life to benevolent works.

“They did recover, and one of the results of her dedication was the gathering of a few neglected children around her for instruction. For some time she taught them alone; but as her health was delicate, some assistance became desirable, and she was joined by other Friends.

“Mary Wheeler and Hannah Hopkins, jr., were her first coadjutors. In their minds also, commiseration and sympathy had been aroused on account of the condition of the children of the poor, in the city of Philadelphia, and believing ‘that

ignorance was one great cause of vice and the calamities attendant thereon,’ and that a guarded education would tend greatly to the future usefulness and respectability of the rising youth, they associated with A. Parrish, in 1796, for the purpose of assisting her in instructing a few of these ignorant, neglected ones, hoping their endeavours might have the happy effect of rescuing some from the vortex of misery into which they seemed in danger of being drawn. They therefore, without pecuniary assistance from others, and notwithstanding many discouragements, entered on their arduous undertaking, and opened a small school for girls in which were taught some of the most useful branches of learning, viz: spelling, reading, writing, arithmetic and sewing.”

“The school was maintained, for more than two years, by the daily attention of the members, who alternately engaged in the business of instruction, two attending a week at a time. The number of scholars had so much increased, that a person was employed in the Second month, 1799—at first at a salary of \$5 per month, but in less than a year raised to £50 or \$133.33 per annum,—to take charge of the sewing; the members still continuing to attend to all the other business of the school. Until the Third month, 1803, the school was in session during the mornings only.

“In this manner the labours of the Association were carried on for twelve years, when, believing that another permanent instructor would accelerate the progress of the children,’ they concluded, in the year 1808, to relinquish the plan hitherto pursued. They accordingly employed another teacher to take charge of the writing, and some other branches, the committee still continuing to attend at the school frequently, and to render assistance when necessary. The salary of each teacher at this time was \$213.33 per annum.”

The school met with vicissitudes during many of the earlier years of its existence, sometimes receiving as many as sixty pupils, and sometimes being obliged, by the limited means of the Association, to diminish the number one half; but it was perseveringly kept up, paying rent for a room when it could not be accommodated with one by the ‘School Corporation,’ and receiving the efficient attention of the members of the Association under every change.

Of the pecuniary means at their command the “Account” says:—

“The school, for several years, was supported by an annual subscription among the members of the Association, aided by occasional donations; but believing that benefit had arisen to many destitute children, the members were desirous of establishing their little seminary upon a more permanent basis. An annual subscription was therefore opened, in 1802, amongst some individuals friendly to the undertaking. These, together with interest from some small legacies—appear to have been the only means of defraying the expenses of their school of sixty children until 1805, when \$1000 were given in trust to the school corporation by a committee of a society instituted in this city for improving the condition of the poor, the interest of which was to be paid to this Association as long as they supported a school.”

Between the years 1811 and 1822, the Association appears to have received several legacies, and by these legacies the funds of the Society were so much increased that, in 1822, the income being deemed adequate for expenses, the subscribers were informed thereof, and the annual subscriptions discontinued.

Other legacies having been left for this charitable institution—mostly by those who had long been

members of the association, and knew the good it was effecting—in 1825 a lot was purchased and a school-house erected. "In the Twelfth month of that year, the school was removed to these pleasant and commodious rooms, and in about a year after, the income of the Society having increased, the number of scholars was enlarged to seventy-two, and another teacher employed.

"Here the school has since been conducted. An additional class of eight scholars has been, a part of the time, admitted, and during the past few years, an assistant teacher has been employed in the sewing-school, and a part of that time one in the writing-school. Some other branches of study have, from time to time, been introduced, such as Geography, Grammar, and Physiology. Notwithstanding the number of public schools, this continues to be well attended. The number of pupils is limited to eighty, and it is almost constantly filled, and many still waiting for admission. Many parents prefer this school for their children as being more select, and also on account of their being taught sewing. Any who are unable to pay for their instruction, are considered suitable objects for this school, except members of the Society of Friends; these being otherwise provided for."

By the exertions of the members a library has been added to the school, from which the pupils are encouraged to take books to read, care being taken that none shall be introduced but such as are calculated to be instructive and to promote virtuous conduct.

"Thus, this school which, through the exertions and faithfulness of a few individuals, was commenced sixty-four years ago, has been sustained to the present time, and been blessed, we trust, for the good of many. We desire that it may continue to be supported and watched over, and that the present and future members, on whom may devolve the responsibility of its management, will keep in view that the primary object of this Association has been, from its establishment, to inculcate principles of piety and virtue."

We commend the last paragraph of the "Account" to the serious consideration of such of our readers as are in affluent circumstances, such an institution being worthy of their liberal aid.

"As the present income of this Association is not sufficient much longer to continue the schools on the present extended plan, and feeling desirous that their increased usefulness should not be diminished, we here allude to the subject with the hope that some of the Friends of education will remember 'The Ainnwell School.'"

SUMMARY OF EVENTS.

FOREIGN.—News from Liverpool to the 29th ult. The popular feeling in Greece in favour of Prince Alfred of England, as King, continued. Contributions for the relief of the distressed operatives in the cotton manufacturing districts of England, were progressing on a large scale. A general meeting of the Atlantic Telegraph Company has been called, for the purpose of considering a proposition for the issue of £600,000, new capital, in preferred shares of £5, each bearing 8 per cent. interest, guaranteed by the British Government in the event of success.

The Italian Chamber of Deputies, continued to debate the Roman question. Among the propositions adopted was one that the Parliamentary session of 1863 should assemble at Naples.

The stock of cotton in Liverpool was estimated at 272,000 bales, including 23,500 American. Fair Orleans was quoted at 26½; middling uplands, 2½. The market for breadstuffs was steady but inactive. The prices from the manufacturing districts were unfavorable.

Cape of Good Hope mails to the end of Tenth month, had been received. Very stormy weather had prevailed at the Cape, doing much damage to shipping.

A letter from Egypt states that the smaller Suez canal has already been opened to the waters of the Mediter-

anean, half way across the Isthmus. It is confidently expected that the large ship canal will be completed within four years. The company have twenty millions of francs, (four million dollars,) unexpended capital lying in the bank of France. They are now importing specie in Egypt. This is a new railway route to connect Alexandria and Cairo with the Red Sea, by way of Kench and Kossair, terminating at the port of Berenice. Kench is not far north of Thebes, so that the traveller's journey to the upper country of Egypt will be materially abridged by this route. The Viceroy has ordered one million of *Acacia* and *Land* to be planted in the *cotton*. If the requirement is carried out, as doubtless it will be, the next year's crop will be two-thirds greater than any that has been raised there heretofore.

UNITED STATES.—Congress.—The House of Representatives has passed the Senate bill for the admission of Missouri into the Union, on the 27th inst. The bill is 96, nays 55. A resolution, offered by Yeaman of Kentucky, declaring the emancipation proposition of the President unwarranted by the Constitution, and an assumption of power dangerous to the perpetuity of free government, was promptly laid on the table, by a vote of 100 yeas to 50 nays. The Missouri question is moving toward the immediate abolition of slavery in that State. It proposes that on the adoption of a system for the termination of slavery in Missouri, on or before the first day of the year 1864, the United States will provide for the compensation to the loyal owners of slaves therein to the extent of twenty-millions of dollars in United States bonds.

Arkansas.—A battle between the rebels and the U. S. troops, was fought on the 7th inst. on Crawford's Prairie, ten miles south of Fayetteville, in which the former were defeated with a supposed loss of 2000 men. About 1000 of the Federal troops were killed, it is estimated, and 1000 of the rebels. After the engagement, the rebels retreated to Van Buren, on the Arkansas river.

Mississippi.—At the latest dates the main rebel army is still retreating to the southward, and the Union forces advancing in that direction. Severe skirmishes occurred on two occasions. Gen. Grant had captured 1200 of the rebels on the 14th inst.

Tennessee.—Gen. Morgan has paroled 2300 Union troops, captured at Hartsville. The rebel army in East Tennessee is said to be now commanded by General J. Johnston. Gen. Bragg having gone to Mississippi. It was believed that Morgan was preparing for another raid upon the Tennessee River. He is estimated to have 10,000 men, the 11th inst; he afterwards proceeded to Murfreesboro, in the vicinity of Nashville.

Louisiana.—Advices from New Orleans, say that the election there for two members of Congress, passed off quietly. In the first district 3,222 votes were polled, and in the second, 2,973.

The Alabama.—This piratical cruiser arrived at Martinique on the 17th ult., with the officers and crews of two ships she had captured and destroyed. The same afternoon the U. S. steamer *San Jacinto* arrived, and finding the *Alabama* there, returned outside the harbor, and awaited the appearance of the pirates. On the following night the *Alabama* was destroyed by a channel unknown to the officers of the *San Jacinto*, and was again at large. Capt. Semmes stated that he had burned twenty-three vessels, and at one time with seven millions of stacks of powder.

Virginia.—No movement of Gen. Burnside's forces took place on the 11th inst., on which, and the following day, the Federal army crossed the Rappahannock. Gen. Sumner's corps crossing at Fredericksburg, and Gen. Franklin's about three miles lower down the river. The latter met with little opposition, but a fierce resistance was opposed at Fredericksburg, during which the city suffered much from the artillery on both sides. It was soon found that the rebels had made most formidable preparations to resist the further progress of the Union forces. The whole mass of their army, under Lee, Jackson, and others, was strongly entrenched upon a ridge of hills just outside of Fredericksburg, the entrenched positions being defended by a chain of batteries of artillery and rifle pits in front of infantry. On the 13th, the rebel entrenchments were attacked and stormed by Sumner's troops, but the concentrated fire of artillery and infantry, was so fierce, that they were compelled to fall back. Another attempt with a body of fresh troops was alike unsuccessful. Gen. Franklin, who commanded the attack on the left succeeded, after a

hard day's fight, in driving the rebels about one mile. The loss of the Federal forces in this sanguinary contest, which continued throughout the entire day, is understood to be very severe. A great number of officers, including six brigadier-generals, were either killed or wounded. At the close of the day each army held first position, except a slight advance in the left wing of the Union forces. On the 14th and 15th inst., the position of the two armies remained nearly the same, except occasional firing between the advanced troop on either side, there was no renewal of the conflict. Many thousands of the wounded had been brought to Fredericksburg, and most of them removed to the north side of the river, as on the renewal of hostilities the rebel artillery would be likely to complete the destruction of the town. Over seven hundred rebel prisoners were taken; their loss in killed and wounded is not ascertained, but is believed to be so large that the U. S. troop which it is feared, amounts to nearly or quite 10,000 men.

North Carolina.—Important movements appear to be on foot in this State. Twelve regiments of U. S. troops left Newbern recently. The *Enterprise* announces the landing of a large Union force in Gates County, a detachment from Norfolk, stating that Plymouth, N. C. (the capital of Washington County, has been destroyed by fire, but by what division of the U. S. forces is not stated. A free labor movement is progressing in Eastern North Carolina, and it is understood a plan is on foot for the establishment of a loyal Government, to accept President Lincoln's proposition of compensated emancipation.

Philadelphia.—Mortality last week, 207. **The Markets.**—The exports from New York last week amounted to \$4,233,800, and the imports to \$692,420. The specie in the New York banks on the 15th inst., amounted to \$36,708,754. The money market was easy, at 6 per cent. for loans on call. Gold, 3 premium. Government stocks without material change. **Philadelphia.**—Uplands cotton, 70 cts.; white yarn \$1.70 a \$1.85; Southern red, \$1.50; Pennsylvania \$1.47 a \$1.48; rye, 98 cts.; old corn, 50 cts.; new, 48 cts.; 80 cts.; oats, 42 cts.; 44 cts. The cattle market continued fully supplied. On the 15th, the number beves offered was 2,516. Prime cattle sold at the late week's prices, while common slightly declined. The highest prices paid, were \$9.50 per 100 lbs., but the bulk of the sales were at much lower rates; some inferior selling down to \$6.00.

RECEIPTS.

Received from Danl. Williams, O, \$2, vol. 35, a for Jos. Williams, Ind., \$3 to No. 27, vol. 36; from W. C. Tabor, Mass., \$2, vol. 35; from Samuel Chadbourne, N. Y., \$2, vol. 35.

WEST-TOWN BOARDING-SCHOOL.

A Stated Meeting of the Committee, who have charge of the Boarding-School at West-Town, will be held on Fourth-day, the 24th of the Twelfth month, at 10 o'clock.

The Committee on Admissions will meet at 10 o'clock the same morning, and the Committee on instruction, at half past seven o'clock the preceding evening.

The Visiting Committee attend at the School on Saturday-day, the 20th of the month.

For the accommodation of the Committee, concerts will be at the Street Road Station on Seventh a Third day afternoons, the 20th and 23rd inst., to see the trains that leave Philadelphia at two and four o'clock Twelfth mo. 16th, 1862. JOEL EVANS, Clerk.

DIED, at his residence near Tecumseh, Michigan, the seventy-second year of his age, AARON COBURN, esteemed and beloved Friend. Aged Manly and upright, whose times during the last few months while in about usual health, he expressed the belief that he should live through the coming winter; and manifested a resignation to the will of his Heavenly Father. He was a diligent attendee of our religious Meetings, and evinced an earnest concern for the advancement of the benevolent testimonies of our religious Society in their local sphere. Although he expressed but little during latter part of his illness, quietly passing away with much apparent suffering, those present at his close, a consoling assurance that his end was peace.

PHILADELPHIA.

postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; for part of the United States, for three months, if paid in advance, six and a-half cents.

From "The Leisure Hour."

The Spider Family.

This family is a very singular and interesting one, in spite of the ugly appearance of some of its members, and of the general dislike which is inspired by them. I do not wish to insinuate that the habits and manners of spiders are altogether as pleasant and amiable, or even proper as those of many other animals; yet I do think that they ought not to be viewed with such loathing and abhorrence as they too frequently are; they have been created good and beneficent purposes, and their organization, habits, and instincts were given them by the infinite wisdom and divine presence. To the well-ordered mind, the "meaneast things" that are so much despised, furnish matter for profitable contemplation, and afford an observant spirit.

Spiders hang in trees, books in the running brooks, and in caverns in stones, and good in everything. Profitable lessons may be learned by an observation of the curious ways and contrivances of these. Tradition informs us, for instance, that Robert Bruce persevered, and inspired his men with hope when well-nigh conquered by sickness and disaster. Confined to his bed at Inverary, after his seventh defeat by the English, Bruce asked the spider, foiled in seven attempts to reach the ceiling of the room, succeed on the eighth. "Why may not I," said the Scottish monarch, "do likewise?" He rose from his couch of sickness resolved to make the eighth attempt, and succeeded.

A careful investigation of the habits, in different parts of the weather, of one of these insects which is called the "dungeon gloom," is said to have afforded Dumourier the hints for the plan of operations by which he invaded and subdued Holland, in 1797. Another problematical service to the human race, although undoubtedly a service to the individual most concerned, was that rendered, according to Popish miracle-workers, to St. Felix of Nolaso, who was pursued by enemies who thirsted for his life, and sought to come to him. He sought safety by creeping through a hole in the wall. This hole spiders crept over with their webs, before the pagans came up to it; and there, adds the legend the saint was preserved for six months, miraculously supported.

Spiders are often the allies of man, by keeping other insects within due limits. For instance, we sometimes have to choose between spiders and flies;

and Betty's broom occasionally proves an enemy instead of a friend. Their webs, also, have been converted into useful articles of dress; they have been made to envelope the shapely leg as a silk stocking. This has been done by an ingenious Frenchman, M. Bon, of Languedoc, who ascertained that three ounces of spider's silk would make a pair of stockings for legs that required between seven and eight ounces of that of the silkworm to encase them. Such stockings, however, it must be confessed, are never likely to become common. The little spinners are too ferocious to form peaceable communities; besides, it was computed that it took twelve spiders to produce as much silk as a single silkworm, so that one pound of the material would require the united labour of more than twenty-seven thousand of these spinners. Then, again, it is not the common web woven by any kind of spider which can be so manufactured, but one of peculiar strength and thickness, which the female of a short-legged garden species spins into a covering for her eggs.

This is not all that has been done by spiders for the benefit of mankind; their web has served to determine the distance of the heavenly bodies; and by the movements of what were till lately considered as fixed stars, have been ascertained; for accuracy of observation has been greatly promoted by the use of the exquisitely fine fibres of which the web is composed. Measuring to a hair's-breadth will not do for the astronomer: his measurements must go to the breadth of a spider's thread, through a network of which he looks at the starry heavens.

Cobweb, in the olden time, used to be applied to cut fingers as a styptic, as Bottom the weaver, in "A Midsummer Night's Dream," tells us: "I shall desire of you more acquaintance, good master Cobweb. If I cut my finger, I shall make hold with you." A recent French chemist has asserted that it possesses an anodyne quality, and might be rendered available as an internal remedy for diseases.

Our poetical observers of nature have not neglected this insect. Young says:—

"The spider's most attenuated thread
Is cord, is cable to man's tender tie
Of earthly bliss; it breaks at every breeze."

Various are the purposes for which an all-wise Providence has bestowed on spiders the power of spinning silk from their bodies. By this they can construct for themselves a place of concealment from their enemies, a sheltering canopy from rains and storms; nets, snares, and cells, where, "hushed in grim repose," they "expect their insect prey;" and a protective covering for their eggs. The thread is, originally a glutinous secretion drawn out from certain reservoirs on the body of the insect.

If a spider be examined minutely, there will be perceived four or six little teat-like protuberances, or spinnerets, surrounded by a circle; these are the machinery by which by a process more singular than that of rope spinning, the thread is drawn. Each spinneret is studded with regular rows of minute bristle-like points. These points are so exquisitely fine, that a space often not much bigger than the sharp end of a pin is furnished, according

to Reaumur, with a thousand of them. From each of these tubes proceeds a thread astonishingly slender, which immediately after issuing from it, unites with all the other threads into one; hence, from each spinneret proceeds a compound thread, and these threads, at the distance of about one tenth of an inch from the apex of the spinnerets, again unite, and form the threads we are accustomed to see, which the spider uses in forming the web. Leuwenhoek, in one of his extraordinary microscopical observations on a young spider not bigger than a grain of sand, in enumerating the threadlets in one of the threads, calculated that it would require four millions of them to be as thick as a hair of his beard. Of such delicate cordage is the web constructed! But how is this network interwoven? What are the instruments required for the elaborate work? The spider uses only the claws of its feet, nature's instruments. With these the creature guides and arranges the glutinous threads as they are drawn from the spinnerets. In some species of spider, two of the claws are furnished underneath with teeth like a comb, by means of which the threads are duly separated and disposed. When the spider has to ascend by the line which has enabled it to drop from an elevation upon the ground beneath, it winds up the line as it proceeds into a little ball. In this manoeuvre, a third claw between the other two is provided.

A singular sight belonging to the autumn, is the occasional showers of *gossamer* that fall from the upper regions of the air, and cover everything as with a veil of woven silver. You may see them descending through the sunshine, and glittering and flickering in it, like rays of another kind of light. Or, if you are in time to observe them before the sun has dried the dew from off them in the early morning, they look like robes of fairy tissue-work, gemmed with innumerable jewels. This beautiful sight has thus been accounted for. "An immense swarm of small spiders take advantage of the moisture of the air, to carry on their operations, in which they are so industrious that all the stubble-fields and hedge-rows are soon covered with the fruit of their labours, in the form of a fine network. They appear exceedingly active in the pursuit of the small insects, which the cold of the night now brings down, and commence this fishery about the time that the swallows give it up and quit our shores. Their manner of locomotion is curious: half-volant, half-aeronaunt, the little creature darts from the organs adapted to that end, a number of fine threads which float in the air. Mounted thus in the breeze, he glides off with a quick motion of the legs, which seem to serve the purpose of wings, for moving in any particular direction."

Gilbert White, of Selborne, in a letter to Daines Barrington, writes thus on this interesting subject:—"On September the 21st, 1761, being then on a visit, and intent on field-diversions, I rose before day-break. When I came into the enclosures, I found the stubble and clover grounds matted all over with a thick coat of cobweb, in the meshes of which a copious and heavy dew hung so plentifully that the whole face of the country seemed, as it

were, covered with two or three setting-nets drawn one over another. When the dogs attempted to hunt, their eyes were so blinded and hood-winked that they could not proceed, but were obliged to lie down and scrape the incumbrances from their faces with their fore-feet; so that, finding my sport interrupted, I returned home musing in my mind on the oddness of the occurrence. As the morning advanced, the sun became bright and warm, and the day turned out one of those most lovely ones, which no season but the autumn produces—cloudless, calm, and serene. About nine, an appearance very unusual began to demand our attention—a shower of cobwebs falling from very elevated regions, and continuing without any interruption, till the close of the day. These webs were not single filmy threads, floating in the air in all directions, but perfect flakes or rags, some near an inch broad, and five or six long, which fell with a degree of velocity that showed they were considerably heavier than the atmosphere. On every side, as the observer turned his eyes, might he behold a continual succession of fresh flakes falling into his sight, and twinkling like stars as they turned their sides towards the sun. How far this wonderful shower extended would be difficult to say; but we know that it reached Bradley, Selborne, and Arlesford, three places which lie in a sort of triangle, the shortest of whose sides is about eight miles in extent. Neither before nor after was any such fall observed, but on this day the flakes hung on the trees and hedges so thick, that a diligent person sent out might have gathered baskets full."

The "Liverpool Mercury" of 1826, narrates a similar phenomenon as occurring in the neighbourhood of that town, and for many miles distant, on Sunday, the first of October. Countless myriads of spiders are necessary to produce this abundance of gossamer; for, according to Buffon, it would take nearly seven hundred thousand animals to produce a single pound of thread.

Sometimes these creatures and their chariots are wafted very considerable distances. "One day," says Darwin, in his "Journal" attached to the "Narrative of the Surveying Voyages of H.M.S. Adventure and Beagle," "the weather having been fine and clear, the air was full of patches of the flocculent gossamer-web. The ship was quite sixty leagues distant from the land, in the direction of a steady though light breeze. Vast numbers of a small spider, about one-tenth of an inch in length, and of a dusky red colour, were attached to the webs. The little spider, when first coming in contact with the rigging, was always seated on a single thread, and not on the flocculent mass. This latter seemed merely to be produced by the entanglement of the single threads. The spiders were all of one species but of both sexes, together with young ones. The little aeronaut as soon as he arrived on board, was very active running above, sometimes letting itself fall, and then reascending the same thread; sometimes employing itself in making a small and very irregular mesh between the ropes. It could run with facility on the surface of the water. Its stock of web appeared inexhaustible. While watching some of these tiny creatures that were suspended by a single thread, I several times observed that the slightest breath of air bore them away out of sight in a horizontal line, with a rapidity that was quite unaccountable."

(To be continued.)

Fault-Finding.

One of the most common vices that we meet with among men is that of fault-finding. Its prevalence is so extensive that almost everybody seems to be infected with it. It is found among all des-

criptions of people. Those who make no pretensions to a religious character practise it without compunction, and even with a sort of malignant delight; while those who profess and call themselves christians are frequently and sometimes habitually guilty of it, apparently without imagining that it is incompatible with their avowed principles.

The practice is as odious as it is common. Indeed, few things are more disgusting and repulsive to a right-minded person. The individual who is addicted to it renders himself in the highest degree offensive to men and women of reflection and sensibility. Such a one becomes a nuisance in society—a sort of plague-spot, spreading moral contamination and disease wherever he goes. He may be tolerated where he cannot be avoided, but he can never be respected and loved. Full-blown specimens of this character may not be very numerous. But it is quite easy to find an abundance of those which are sufficiently developed to prove at once loathsome and noxious.

The habit of fault-finding is an exceedingly pernicious one. Its reflex influence upon him who is guilty of it, is in the highest degree injurious. Hatred, envy, jealousy, censoriousness, and all those malignant dispositions and tendencies which lead to the practice are daily strengthened by exercise, and eventually acquire an almost uncontrollable power, rendering the individual sour, uncharitable, and misanthropic. Accustomed to the display of his ingenuity in the detection of what is faulty in human characters and actions, and habituated to dwelling upon what is deformed and unlovely in spirit and conduct, he acquires a morbid appetite for that which is morally diseased and unwholesome. He becomes insensible to the presence and charms of the virtuous and lovely. Like an unclean bird he fattens upon the corrupt and putrescent, and nauseates that which is sound and health-giving. In addition to this, he renders himself distasteful to the virtuous and truly refined, and forfeits the possession of that kind of society which would tend to cure him of his unhappy propensity to fault-finding.

Besides this, the habitual fault-finder inflicts untold pain and injury upon others. He does a vast deal of mischief. He is truly a sinner who destroys much good. No one can estimate the amount of agony which he produces in many a sensitive mind. Long experience has given him consummate skill in the work of lacerating the feelings. Now, the unnecessary infliction of moral pain is an evil, which engenders other evils, and is not easily or readily remedied. The fault finder alienates the affections of friends from each other. He sows discord in families and among brethren. He creates confusion, division, and strife, among those who, but for him, might have lived in continued and delightful harmony. His function is, not to unite, but to sever and disorganize—to produce not peace and good will, but contention and bitterness. Such an individual is the bane of any church or community, and no organization can be prosperous which harbors such a member within its bosom.

We would by no means condemn indiscriminately all kinds of fault-finding. In a world where there is so much that is wrong and blameworthy, in ourselves and others, it would be impossible not to perceive many faults, and it would not be improper occasionally to notice and denounce them. But we must unhesitatingly pronounce as unjustifiable the disposition which finds pleasure in incessantly exposing them for no good and valid reason, and chiefly with a view to the wounding of the feelings and reputation of others. There is a wretched species of fault-finding which lays bare the fault in order to its correction. It wounds in

order to heal. It applies the cautery, and punishes the invalid. There are times certainly when it becomes an imperative duty, though a painful one, to point out with the greatest particularity the faithfulness the faults of those whom we respect and love. But it is a task which requires to be performed with the utmost skill and delicacy, and utmost tenderness and judgment. If the work is thoughtlessly done, more evil than good will be inevitably result. Indeed there is scarcely anything in the whole circle of human duties which demands so much ability of every kind as the management of the faults of others. And in nothing, perhaps is there displayed so much of unskillfulness, kindness, and consequent ill-success. We heard of a couple of college students, (rooming together), who, desirous of improving themselves both morally and intellectually, resolved mutually that they would tell each other of their failings. They entered upon the prescribed work with youthful alacrity, and with a zeal which was not tempered by prudence. The result of their injudicial dealing with each other's faults was, that each came so uncomfortable in his companion's society that they both came to the conclusion that it would be better for them to occupy separate rooms. This resolution, which might have been anticipated, was carried into execution.

One of the best remedies for a fault-finding disposition is a thorough knowledge of our own imperfections. A good degree of self-acquaintance will always prove a certain corrective of any tendency that we may have to harp upon the shortcomings of others. He who knows himself well, not only just amount of accuracy, must perceive that he will find enough to occupy his attention and exert his exertions, in his own frailties and errors. A just rigor towards his own faults will be accompanied with charity towards those of others. We should therefore strive to become better cognizant of ourselves, more truly acquainted with every thing within us that is wrong and defective. Especially should we hold up before ourselves the brightness of the divine law, and seek from above the light, which, let into our souls, will reveal to ourselves what we are. Thus learning our own turpitude, we shall be made more anxious to eradicate the evils which we clearly perceive in ourselves than to expurgate the faults of others, of which we must necessarily have but a partial and inadequate knowledge.—*Late Paper.*

Clouds.

The first and most important character of clouds is dependent on the different altitudes at which they are formed. The atmosphere may be conveniently considered as divided into three spaces, each inhabited by clouds of specific character, though different, though, in reality, there is distinct limit fixed between them by nature, clouds being formed at every altitude, and partaking, according to their altitude, more or less of the characters of the upper or lower regions. The section of the sky is thus formed of an infinitely graduated series of systematic forms of clouds, each of which has its own region in which alone it is formed, and each of which has specific characters, which can only be properly determined by comparing them as they are found clearly distinguished by intervals of considerable space. I shall, therefore, consider the sky as divided into three regions,—the upper region, or region of the cirrus; the central region, or region of the stratus; the lower region, or the region of the rain cloud.

The clouds which I wish to consider as including the upper region, never touch even the highest mountains of Europe, and may, therefore, be loc-

as never formed below an elevation of at least 15,000 feet; they are the motionless, multitudinous lines of delicate vapour with which the top of the open sky is commonly streaked or speckled after several days of fine weather. Their chief characters are—First, Symmetry: They are ordinarily always arranged in some definite and evident order, commonly in long ranks, reaching sometimes from the zenith to the horizon, each rank composed of an infinite number of transverse bars, but about the same length, each bar thickest in the middle, and terminating in a traceless vaporous dot at each side; the ranks are in the direction of the wind, and the bars of course at right angles to it. The groups of fine, silky, parallel fibres, terminating in a plummy sweep, are vulgarly known as 'mare's tails.' Secondly, Sharpness of Edge: The edges of the bars of the upper clouds, which are turned to the wind, are often the sharpest that the sky shows, no outline, whatever, of any kind of cloud, however marked and energetic, ever approaches the delicate decision of those. Thirdly, Multitude: The delicacy of those clouds is sometimes carried into an infinity of vision. Nor is nature content with an infinity of lines alone—each bar is in its turn severed into a number of small undulatory masses, more or less connected, according to the violence of the wind, and their division is merely effected by undulation, and each exactly resembles sea sand ribbed by the wind; but when the division amounts to real separation, we have the mottled or "mackerel" skies. Fourthly, Purity of Colour: The nearest of these clouds—those over the observer's head, being at least three miles above him, and nearly all entering the ordinary sphere of vision, farther from him than those of their dark sides are much grayer and cooler than those of other clouds, owing to their distance. They are composed of the purest aqueous vapor, free from all foulness of earthy gases, and of this the highest and most ethereal state in which it can be, to be visible. Farther, they receive the light of the sun in a state of far greater intensity than lower objects, the beams being transmitted to them through atmospheric air far less dense, and wholly unobscured by mist, smoke, or any other turbidity. Hence their colors are more pure and vivid, and their white less sullied than those of any other clouds. Lastly, Variety: Variety is never so conspicuous as when it is united with symmetry. The perpetual change of form in other clouds, is so common in its very dissimilarity, it is difficult to striking no connection is implied; but through a range of barred clouds, crossing half of heaven, all governed by the same forces, and being into one general form, there yet to be a marked and evident dissimilarity between each member of the great mass—one more finely drawn, the next more delicately moulded, the next more gracefully etched—each broken into differently modelled and variously numbered groups, the variety is doubly striking, because contrasted with the perfect symmetry of which it forms a part.

Under all, perhaps, the massy outline of some other cloud moves heavily across the motionless serenity of the upper lines, and indicates at once its elevation and their repose.

A fine and faithful description of these clouds is given by Wordsworth in "The Excursion."

"But rays of light
Now suddenly diverging from the orb,
Retired behind the mountain tops, or veiled
By the dense air, shot upwards to the crown
Of the blue firmament—slow—and wide;
And multitudes of little floating clouds,
Where we, who saw, of change were conscious, pierced,
Through their ethereal texture, had become
A vivid as fire,—clouds separately poised,

Innumerable, multitude of forms
Scattered through half the circle of the sky;
And giving back, and shedding each on each,
With prodigal communion, the bright hues
Which from the unapparent fount of glory,
They had imbibed, and ceased not to receive,
That which the heavens displayed the liquid deep
Repeated, but with noity subline."

Their slow movement Shelley has beautifully touched:—

"Underneath the young gray dawn
A multitude of dense, white, fleecy clouds,
Were wandering in thick flocks along the mountains,
Shepherded by the slow, unwillful wind."

If you watch for the next sunset, when there are a considerable number of these cirri in the sky, you will see, especially at the zenith, that the sky does not remain of the same colour for two inches together, one cloud has a dark side of cold blue, and a fringe of milky white; another, above it, has a dark side of purple and an edge of red; another, nearer the sun, has an underside of orange and an edge of gold; these you will find mingled with, and passing into the blue of the sky, which, in places, you will not be able to distinguish from the cool grey of the darker clouds, and which will be itself, full of gradation, now pure and deep, now faint and feeble; and all this is done, not in large pieces, nor on a large scale, but over and over again in every square yard, so that there is no single part nor portion of the whole sky which has not in itself variety of colour enough for a separate picture, and yet no single part which is like another, or which has not some peculiar source of beauty, and some peculiar arrangement of colour of its own.—*Ruskin.*

BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 116.)

"Lynn is a large seaport town, and like other large towns it is much curbed up. Yet it has a fine large square for a market, with a good brick house, and stalls in the form of a half moon. After dinner, Second day 20th, Seventh month, we took our leave of these kind friends, (Richard Hullem and wife,) who have gone through much affliction, poverty within and without, but are now blessed with the dew of heaven, and the fatness of the earth, and are willing to do good with it. His son went with us to Wisbeach, on the Isle of Ely, in Cambridgeshire, sixteen miles. Here we were kindly received by Tillyet Goddard, who, on Third day, 21st, provided us a guide, his son, to Spaulding, (in Lincolnshire,) twenty-four miles. On the way thither, we saw twelve steeple houses, and many pretty dwellings. At Spaulding we were kindly received by old John Massey, an innocent, good looking Friend and public. A Friend lives with him as housekeeper who, also, appears in public, Hannah Fines. These two valuable Friends made our time passed there, agreeable. Fourth day 22nd, we were at their week day meetings, at which were but twenty persons, including ourselves. It was a heavy time, and yet aunt was strengthened to encourage them to keep up their meeting, and the opportunity was to satisfaction. Dined at young John Massey's; his wife Elizabeth is a solid, kind Friend. They, with others, spent the evening with us at his father's, and he on Fifth day the 23rd, went with us to Welbourn, a small village, instead of going to Broughton, as we had intended. We found, that although the meeting house was in Broughton, there was not one Friend lived in it, and those who belonged to it lived very distant. The meeting was held at times

in the village of Welbourn, at which place a few Friends lived. To the house in which the meeting was kept, we went, and lodged there two nights. The Friends were very kind. Thomas Burt, who is master of the house, is a young man, one sister at present lives with him, and an aunt who is seventy-two years of age. She was never married, but took a motherly care of him and three or four more of his brothers and sisters, who all treat her with much respect, and render her age comfortable. Her name is Ann Burt. Elizabeth Burt, her niece, is, as a daughter to her. If sudden thought, made a transition to some similar circumstances in my own life, it was not to be wondered at. On Sixth day 24th, we had a meeting there in the afternoon, to which came Mary Dollin, a sister to Richard Marriott, who is a valuable Friend in the ministry, but at this time in a singularly low spot. To my poor aunt this was her first appointed meeting, and a memorable one it was, for she was made an instructing, comforting instrument to Mary Dollin, and all the others, who were but eighteen. Many of them staid to tea, and the conversation afterwards terminated in a better meeting than the appointed one. In our way to this place, we baited at Swineshead, and dined at Skesfan, a very small town. We had seen twenty-nine steeples on our way.

"Seventh day 25th. We set off early with two young Friends, Thomas Hubbard and John Broadbank, for Nottingham, thirty-three miles. We passed on our way, first a little village in a valley, which looked beautiful as seen from the top of the hill, then Buckingham village, Coddington, and Newark, a large post town, with good streets, houses of brick with tiled roof. At Newark we breakfasted at a very good inn. Most of the houses we passed, are thatched, but looked neat and good. Two miles from Newark we passed a remarkably large wooden bridge over the river Trent; near it is a small village, the seat of Lord George Suttan. We then passed Harraw, a larger village; Upton; Southwell, a large market town, houses mostly thatched. In this last is a large cathedral of a Roman structure. There are no Friends in any of these places. Oxen is a pretty village, where there are a few Friends, but for want of knowing who they were, and where to find them, we went six miles farther, and dined at an inn called Redland. About 6 o'clock we reached Nottingham; there we were received kindly by our friend John Leaver and wife, both ministers, who were remarkably tender of us. First day the 26th, were at their meeting, where we were glad to meet our good friend John Woolman, who was much favored in testimony, as was aunt in supplication. It was a good meeting, about one hundred and thirty Friends present. In the afternoon, curiosity brought more than the house, which was not a small one, could hold. They were solidly quieted, as aunt and John Woolman were particularly led to them. It was a favoured meeting indeed. We went with John Woolman to John Storer's, where we spent the evening, and fixed on 6 o'clock the next evening to have a meeting with all the Friends of the town by themselves. Second day 27th, I was busily employed with my pen, when I was interrupted by a person, who would be thought a lover of America. She hindered me an hour about nothing. She talked of the sisters Silence, Patience and Temperance, whilst I wished she had all three. I begged to be excused, left her and went to dine with the widow Colsten and others. On my way saw the 'Castle,' as it was called. It was a castle in King Edward's days. It was built on a rock on a high hill. In the hill there are surprising subterranean works, containing all man-

ner of conveniences for dwellings, slaughter houses and stables, all cut in the rocks. It is now much contracted, and has been repaired for the Duke of New Castle, and is called his palace. The furniture is rich and plain. It has thirty-six large rooms above stairs. It has a grand court yard, and commands a beautiful prospect, it being a vast height above the meadows. The rock extends from the castle so far that two or three dozen houses have been cut in it, with fronts of brick built to furnish a convenience for doors and windows, which is all the light the houses have, for the garden of the castle is on the rock above them. Near by is a passage called Mortimer's hole, because that traitor was betrayed into it in order that he might be deceived. This town which lies between two hills, is supposed to contain 40,000 people.

"At 6 o'clock we went to the appointed meeting with John Woolman. There were about fifty persons present, all called Friends, and we had a favoured time. Third day the 25th, we went with several friends to Oxen, nine miles, to an appointed meeting. The house was nearly full, although there are few Friends here. John Woolman and aunt both spoke, and the meeting ended to satisfaction. We dined at a poor Friend's, and John Woolman was prevailed on to ride with us to Mansfield. So we parted with our loving friends, [from Nottingham,] and the tender Friends of Oxen, thanked us, and wished us a good journey. We reached Mansfield, nine miles, by 7 o'clock, where we were received kindly by William Marriott and wife. Fourth day, 29th. This is a market town, not very small. Some of the streets are builded along the side and foot of the hill with good fronts. The hill makes part of the house, which have no cellar under them, but they have them behind or along side of the house, in the hill. On the top is the garden. There are but few Friends, and the people of the town are not fond of coming to our meetings. A few, however, did come, and sat solidly. Some of them were affected by the truth delivered, especially by aunt, who was so clear and so powerfully led, that I could but admire at it, considering the number, which was but eighteen, and they mostly of the unthinking sort. But observing one young woman much affected, I thought it was worth our while coming, if only for her sake. Our trouble in getting to that meeting was uncommon, and we were a sight to the people, who flocked to stare at us.

"We dined at our lodgings, and about three set off for Chesterfield, eleven miles, where we were received kindly by William Storr and his wife, although they knew nothing of us. But Friends are friends if they keep their places, the world over. The wife is a valuable woman, and treated us like her children. Fifth day 30th, we were at their week-day meeting, which was large, both of Friends and the better sort of other people. It was a good house and nearly full. Abiah Darby was here, and in the early part of the meeting appeared in prayer. John Woolman spoke most of the rest of the time. He was deep in his gift, and few of those there could understand him. Aunt sat silent under her exercise. If she should return here again I should not wonder. It pleased her great Master to admit her in mercy to draw near him in humble supplication, to the affecting of many,—so she came away from the meeting easier than I expected. On the whole, it was a good meeting. After dinner we set off for Handsworth Woodhouse, in Yorkshire, a small village, fourteen miles, to visit our friend John Haslam. We spent the evening pleasantly with him. He is in a loving, innocent, childlike state, and although there is a great defect in his memory, he yet retains the best and most valua-

ble sense. I thought he seemed out of reach of the tempter. Sixth day, 31st, we went to the meeting, which was held in a smallish house. There were very few Friends, yet the place was full of some sort. They were still, and aunt had a pretty instructive time, and John Woolman had close work. Twelve public Friends once belonged to this meeting, and now, not one, as John Haslam is past attending. After dinner we took a last leave of him, and went five miles to John Barnard's whose wife Hannah is Rachel Wilson's sister, at Upper Thorp in Yorkshire. Theirs is a pretty family of children. Their two daughters, Mary and Deborah, are solid lasses. There undesignedly four Deborah's sat at dinner on one side of the table. The first time I ever met so many at once."

WATER-LILY.

Selected.

By ANNE G. HALL.
Over the dark lagoon
Beneath the willow tall,
And the long black moss from the pine's bare bough
Waves like a funeral pall.

Seldom the sunshine fair
Pierces that smould'ring gloom,
And naught is heard save the screech-owl's cry,
And the lonely bittern's boom.

As if of this gloom afraid,
Or, sick of its noisome air,
The flowers that frank the meadow's breast
Never have ventured there.

But, sometimes, up from its depths,
Out in the morning cool,
A beautiful lily, pure and fair,
Floats on this stygian pool.

Never a messenger-leaf
Cometh before to tell—
Never a herald-bud peeps first
Out of its dreary cell.

Yet, under the waters black,
Maybe with the gloom at strife,
That sweet, fair blossom had dwelt, till dawned
The morn of its higher life.

Thus out from the slough of sin—
A fair white soul may rise—
And, parting the waves of its misery,
Look up to heaven's clear skies!

For the unseen spirit, there,
With his Almighty power
Wakens to life, and hope, and joy
A never-fading flower.

Ye who have marked with fear
The tide of crime's fierce flood,
Take courage! the blackest bosom holds
The hidden gems of good.

Go forth in patience—work;
And with thy love illumine
The heart o'shadowed by sin and woe,
Till the flower unfolds its bloom.

Belgium.

(Concluded from page 126.)

"The importance attached by Belgian farmers to liquid manure is well known. The extraordinary triumph of industry over nature has been attained by the combination of incessant labour with the most lavish expenditure of this fertilizing agent. Such garden cultivation is of course only to be obtained by garden labour: there is, however, much in the economy and application of liquid manure which our farmers may yet turn to their profit. A great depth of soil is produced by the united action of the plough and the spade. Mr. Burn in his minute and careful delineation of Belgian agriculture, corrects a popular fallacy that throughout Flanders the spade is alone used—that in fact, Flemish and spade husbandry are equivalent terms.

The plough is universally used, spade husbandry being exclusively adopted in only one or two districts. Throughout Flanders the spade is generally used, but almost always in connection with the plough. In some districts spade labour is so applied that it takes the round of the field every three years; and many landlords stipulate that a sixth or a seventh part of the land shall be dug every year, thus going over the whole farm with spade labour in six or seven years. Deep ploughing is effected to the depth of from 15 to eighteen inches one plough following the other in the same furrow the spade being occasionally substituted for the second plough. The care with which these and all the other operations of agriculture are conducted gives to Belgium husbandry that peculiar neat appearance which strikes every observer, the object being to obtain a deep, friable, and rich soil, equally and uniformly manured.

"It is to the excellent market which England affords for its produce that Belgium owes much of the present flourishing and prosperous state of its agriculture. Flanders may be almost regarded as an outlying market-garden, orchard, and dairy farm of Great Britain. The quantity of farm and garden produce annually raised for English consumption is astonishing. In 1860 we took from our Belgian neighbours butter to the value of 467,65*l.*; fruit and vegetables to the value of 150,000*l.*; seeds to the value of 36,764*l.*; 11,656,577 eggs, and poultry to the value of 40,270*l.* The exportation of fruit to England is now carried on to so great an extent that this branch of horticulture has become of much importance to Belgium. In West Flanders the orchard districts lie chiefly in the neighbourhood of Bruges and Dixmude. A well managed orchard will produce annually 30,000 worth of fruit per acre. The average number of fruit trees to an acre is 160, of which cherry, pear and apple, are the chief. Nothing, perhaps, more strikes a tourist than the almost total absence of cattle from the fields; in fact almost the whole of every estate is under the plough, but it is not unusual for thirty milch cows to be kept on a farm of one hundred acres. They are stalled, and fed upon oil-cake, beans, clover, roots, and cut straw. The average quantity of milk which a cow gives, when fed in the stall, greatly exceeds that of our best dairy farms; and the quantity of butter made from a given quantity of milk is also greater. Barley is a grain of much importance in a country where the vine does not thrive, and beer is principal beverage. Turnips were cultivated in the Low Countries for more than a century before they were introduced in British agriculture, and the excellence of the Belgian carrot, and the conditions of its successful cultivation, have been long and justly appreciated and understood on our best farm. The colza-plant is allied to the cabbage, and produces an oleaginous seed from which is extracted the oil now in such general demand, and of which Belgium supplies about a third of our consumption. One of the most important of Belgian production is the beet-root, and the quantity of sugar which annually made from it is enormous. All the various products of Belgian agriculture are, however, secondary to that of flax, for which many of its crops are considered chiefly as preparatives. Belgium is the country where the cultivation of that plant is best understood, and for which the soil, in reason of its careful preparation and the great richness produced by incessant manuring, is probably the best adapted in Europe. Belgian flax appears to great advantage in the display of agricultural productions of the country in the International Exhibition. This excellence is attained only by extreme care. Flax is the cultivation

primary importance on every well conducted farm. The importation of Belgian flax into Great Britain amounted in 1860 to the value of 434,079*l*.

Although small farms, and even patches of land that would be considered in England rather field allotments, form the general character of Belgian husbandry, there are in the western and north-western provinces extensive and well watered farms, where agriculture is carried on upon a larger scale and with some of the most approved modern appliances. Most of the farms in this district are provided with straw-cutters, root-cutters, and oilcake crushers; and improved ploughs and threshing machines are gradually coming into use.

As Belgium possesses peculiar facilities for the manufacture of farm machinery, it ought to be in a better position in that respect than most other countries. There is one peculiarity in Belgian agriculture which is highly characteristic of the people, namely, the raising of simultaneous, or, as they are termed, stolen crops on their farms. Usually, not content with obtaining alternate annual crops of cereals and roots, the Flemish farmer obtains two crops from the same soil in the course of the year. With the flax he will sow, for instance, clover, and by careful manuring, weeding, hoeing, and thinning, will obtain a valuable root crop, while the flax, or the hemp, or some other description of crop, are sown in the intervals between the crops that are termed in Belgium the industrial plants, arriving at maturity. There is a general desire throughout Belgium to improve the native stock, through the introduction of the Durham breed, by enterprising proprietors, among whom Baron Peers of Oostcamp, near Bruges, is the most eminent. Flemish stock is said to have increased one-third in value by the system of crossing with improved breeds. The breeding and rearing of horses is also an important branch of business, and the prices obtained are increasing in proportion to the improvements effected. In no country in Europe is the attention of the rulers so systematically directed to the encouragement of agriculture. The territorial divisions of the kingdom have been taken advantage of for the purpose of collecting and diffusing useful information. The Superior Council of Agriculture forms one of the departments of the State. A permanent committee, composed of practical men nominated by the king, sits in each province, and reports annually on its agricultural condition and prospects. Each district possesses a committee which meets twice a year. Every successful experiment in cultivation is certain of being reported to the government, and is immediately made generally known. This attention of the state is well seconded by the intelligence of the people, who have established agricultural societies throughout the country. A grand agricultural exhibition is held every five years at Brussels, and prizes of considerable value are awarded.

Belgium is only one-eighth of the size of England and Scotland, and one-third of the size of France, yet on this small space it maintains a population of 4,420,202, which is thus classed according to the last census:—

Roman Catholics	4,439,196
Protestants	6,578
Jews	1,336

Although almost the entire people are Roman Catholics, religious equality is established by one of the fundamental laws of the state. The constitution of Belgium, indeed, may be said to be based upon almost the broadest principles of liberalism. The liberty of the press, the right of petition, the independence of the judges, the responsibility of ministers, the power of taxation, the dependence of the army upon an annual vote, assimilate the

constitution of Belgium to the British; but in its representative system it departs widely from that model. Numbers form its basis, not the qualification of an elector is the annual payment of forty-two francs in direct taxation, and one deputy to each 40,000 inhabitants is the proportion fixed by the constitution. The second chamber is elective, and is chosen by the same voters who elect the first.

The coal-fields and iron mines of Belgium have made it a manufacturing country capable of competing successfully with Great Britain in some of the most important of its staples. Belgium is almost traversed from east to west by beds of coal. The estimated extent of the western basin alone is 222,400 acres. All varieties are found, from anthracite to the richest gas coal. It has been estimated that Belgium contains 140 workable beds, the total thickness of which amounts to 90 metres, or 296 feet. In 1860 the quantity raised was 9,610,895 tonnes, nearly equivalent to our tons, of the estimated value of 107,127,282 francs, or about 4,285,080*l*. There were employed 78,237 colliers, of whom 59,954 worked underground. To raise this amount of coal, and pump the water from the pits, 783 steam engines were in operation, representing a total force of 45,969 horses. All the collieries of France did not produce, in 1859, more than 7,500,000 tons of coal, including lignite. The productive capability of Belgium in coal, although small in proportion to our enormous produce (50,000,000 of tons in 1861), is, it will be seen, greater than that of France. Iron ore is almost equally abundant. Searing the great manufactory for machinery, is one of the wonders, not of Belgium only, but of the world. Coal mines are worked within its walls? iron ore is raised and smelted; canals and railroads intersecting the town in every direction, convey the rude materials from the mines to the forge, from the forge to the workshop, and from the workshop the finished articles are transported to warehouses, or despatched direct to the countries for which they have been made. Iron rails are now being made in large quantities for Russia and Spain, and thirty locomotives have recently been turned out for the Saragossa railway by one firm, which has also contracted for supplying the whole rolling stock of the Russian line now in course of construction to the Sea of Azoff. Iron ore and manufactured iron compose the principal exports of Belgium, and her natural advantages in these productions, joined with the comparative lowness of wages and moderate taxation, make her a formidable rival of England. In 1860 the manufactories of Liège turned out 563,279 stand of arms, of which 179,000 were for troops, showing an increase over the preceding year of 60,512, occasioned chiefly by the demand from Italy. The value of the productions of the Liège gunsmiths for eleven months in the year 1861 is estimated at 15,635,000 francs. The manufacture of arms is one of the most successful branches of Belgian industry.

The oldest industry of Belgium is her cloth manufacture, in which she for a considerable period commanded the markets of Europe, and still maintains a respectable position. The looms of Verviers are now fully employed in supplying a cheap uniform for both the Federal and Confederate armies of America. Belgium has attained a considerable development in cloth manufacture by carefully adapting its productions to foreign markets. A manufacturer of Verviers recently obtained almost a monopoly of the American market by sending out light and cheap cloths, fabricated to last only one season. The productions of Verviers are well represented in the International Ex-

hibition. Whether they equal those of Leeds and Somersetshire, or of the Zollverein, and of Austria, which is making rapid strides to perfection in this branch of industry, we must leave to the judgment of those conversant with the manufacture and experienced in the trade. There is a branch of industry, in which Belgium possesses an undisputed superiority, namely, in the production of that wonderful fabric known as Brussels lace. The artistic taste and minute labour employed in this texture are amazing. The specimens which adorn the Belgian department of the Exhibition have probably never been surpassed. Fairy fingers seem to have woven tissues of surpassing beauty out of the lightest gossamer that floats on the summer air.

The cotton manufacture of Belgium has been long in a deplorable state of depression. It has felt, in common with our own, the inconvenience of being deprived of cotton from America, but the loss has been in some degree met by the substitution of linen for cotton yarn in mixed fabrics. This branch of national industry although highly protected, has long since ceased to show any real vitality; nevertheless the relative advantages of the Belgian producers, in light taxation and low wages, are so decided that their manufactures, if really good, ought not to fear competition in any market of the world. They are, however almost everywhere undersold. It needs but a glance at the cotton fabrics of Belgium, as displayed in the International Exhibition, to discover the cause of this disappointment. It is evident that, while other countries have rapidly advanced in the art of calico-printing, Belgium has stood still. Anything more unattractive than the cotton prints of Ghent and other manufacturing towns of Flanders can scarcely be conceived; and when seen by the side of Manchester goods, with their bright dyes and tasteful patterns, they are positively repulsive. The art of design has greatly contributed to diffuse a taste for British cottons and muslins over the world. Nature has been imitated in her most brilliant colours and beautiful forms, to give variety and attractiveness even to the cheapest fabrics of our looms. The monopoly of the home market, which the Belgian manufacturers have long possessed, must have made them indifferent to improvements in design; and the Flemish peasantry having nothing better presented to them, by necessity whatever is offered. The long monopoly of the home, and during the incorporation of the country with Holland, of the colonial trade, has doubtless been one of the principal causes of this inferiority.

The geographical position of Belgium not only was the cause of its former commercial greatness, but made it often the field on which the great powers of Europe brought their differences to the arbitrament of war. In close proximity to, or in actual contact with England, France, and Germany, it forms the point of intersection of those three great states. The neutrality of Belgium has now been made the condition of its independence. Formerly, on the breaking out of a European war, it was the unhappy fate of this country to be almost necessarily allied to one or the other of the contending powers, and to have its harvests trodden under the foot and its soil saturated with the blood of their armies, in contests of which it seldom knew the objects or cared for the results. A neutrality, protected by Europe, now relieves it, as far as human arrangements can, from the possibility of again falling under a similar misfortune. Two small states are thus exempt from the calamities of war, and permitted to pursue without anxiety their peaceful career, develop their natural resources, and

enjoy their free institutions. The inviolability of the Belgian territory is guaranteed. Exposed by its geographical position to the action of powerful neighbours, its independence is not secured like that of Switzerland by stupendous natural barriers; but in aid of its own manhood, it must rely chiefly on those political and moral outworks which treaties afford, and on the integrity and good faith of the powers that have imparted to it a national existence. Belgium is not burthened with those responsibilities which weigh so heavily on greater states. The rivalries of nations need not greatly disturb its repose unless they should threaten its independence. This exemption from the perturbations of the exterior world may, perhaps, be felt at times as irreconcilable with political dignity; but such an attribute might in a small state well be resigned for the solid advantages of peace, security and freedom. Belgium will confer an important benefit on the world if it should demonstrate, for the instruction of aspiring nationalities, that constitutional monarchy is not only compatible with the most comprehensive liberty, but is its safest depository and its surest guardian."

For "The Friend."

It becomes the duty of every seriously concerned Friend, to ponder well, and often very often, to wait upon the Lord, for light, help, and direction, at so important an era as this at which we have arrived; and first seriously to examine whether we are living according to our high calling in Christ Jesus—"dead unto the world," "but alive unto God." If so, our hearts and affections are not engrossed with earthly things, but our main desire is to be able truthfully to say with the Apostle, "for me to live is Christ;" thus we shall be truly "Lights in the world," lights that cannot be hid. This can only be accomplished by waiting for and receiving Christ's holy anointing, which, from the uniform testimony of holy scripture, He waiteth to bestow upon the truly sincere seeker; for it is out of his fulness we may all receive, upon his own terms. Although it is the duty of all Friends to be desirous of being so situated, (if conformable with the Divine will,) as to be in close communion with such as are born of and live in by the Spirit, and not to be surrounded by such only as are carnal, and mind chiefly carnal things, yet if placed in such circumstances, not of our own seeking, for earthly things, it becomes us then, as the Jews in Babylon, to seek the good of those among whom our lot may be cast. For it hath often pleased the Father that his children should be strown "as a seed of life in the earth." The responsibility of such is great, and they must necessarily constantly feel very dependant on the Most High for that wisdom which is profitable to direct. Truly consistent Friends are few, and it hath often appeared clear to my mind, that where the lot of such is cast in larger or smaller meetings, instead of seeking for something inconsistent in others, in order that they may be excused from their share of labour and travail, in the body, or as is the case in many places, to separate, and cause divisions; when the same evils may again take root, and grow, and then another, and still again another separation take place, and yet no remedy found adequate to stop the progress of evil, it is rather the duty of faithful Friends, "to sigh, and when He bids, to cry;" and to suffer, meekly, patiently and willingly, until the Lord pleases to arise, who in his own time will scatter such as refuse to be gathered in Him. But as "He willeth not that any should perish, but that all should return to him and live," so all they who are born of the incorruptible seed, suffer long and are kind; and although the Seed

Royal, now, as formerly, cannot bow to any likeness of men's setting up, yet there must be a religious travail for such as differ from us, that they may be given to see the truth for themselves; that so we may all walk by the same rule, and mind the same thing, in the spirit of Jesus, "bearing all things, believing all things, hoping all things." It was the testimony of one of our early Friends, that if only one in a meeting is gathered to Christ, the witness will be felt to go through the meeting, although a word be not spoken. So that I felt it my duty to endeavour to stir up my Friends who may read this, not to be cast down, not to be discouraged, but to follow the example of the *Early Friends*, in *faithfulness*, and *in suffering*; *there is no other way*. May you then my Friends, in larger meetings, seek to assist by every way the Spirit may be pleased to adopt, by epistle, ministry, and friendly correspondence, to help your brethren in less favored circumstances, in the true spirit of love, and not to stand aloof; neither fear the adversary, for this was never the way of true Friends, but seek to restore, (whatever you may have to go through for the Truth's sake,) in the spirit of meekness, so shall you save yourselves and those you commune with. This must first begin in the church, and then it will spread in the nation. Instead of force and coercion, it will enlighten and convince. But it is with me to add, that if those whose more particular duty, this is; those who stand as at the helm of affairs in society, refuse to do this, they may jeopardize themselves and others; for this high spirit must fall, yet the Lord will be glorified by such as He will call as from the highways and hedges, to follow and serve him.

East Shelby, Orleans Co., N. Y.,
Twelfth month, 1862.

Barrenness of Palestine.—Dr. Unger, the well-known naturalist of Vienna, has published an account of the scientific result of two journeys which he undertook in 1858 and 1860 into Greece and the Ionian Islands. He devoted himself entirely to the botany of the country through which he passed, including an inquiry into the fossil Flora of Euboea. The distinctive characters of the most remarkable new species that he found are delineated by the system of nature-printing, which is a good deal used upon the continent. He closes the work with an interesting chapter on the question whether, from a physical point of view, there is in Greece and the East a capacity for returning to its ancient prosperity. By a full comparison of its ancient accounts with present facts, he arrives at the conclusion that there has been no essential change in the physical conditions of the country. But there is a very serious accidental change. So far as the mere forces of nature go, there is nothing to hinder Greece, Palestine, and Asia Minor from returning to their old fertility. It has been destroyed by man, and could be restored by man. The wholesale destruction of the woods has been the sole cause of the barrenness with which those countries have been smitten. The vast wood fires, kindled partly by the hordes of invaders, who, in the course of centuries, have followed each other upon that soil, partly by the shepherds to gain fresh pastures, have gradually deprived the climate of its moisture, and the ground of its fertility. The instrument by which the barrenness of those regions is perpetuated is still more insignificant than its original cause. It is the goat. The ordinary operations of nature would, in the course of time, restore the woods that have been destroyed, but for the large number of goats the scanty population maintains. These have no pasture to live on in

summer, for the arid climate dries it up, and they consequently cut off the shoots of trees just springing out of the ground. But if, by the operation of any causes, the woods were ever to be suffered to grow again, Dr. Unger's view is that fertility would return, and the old prosperity of the East would be restored.—*Saturday Review*.

For "The Friend."

The Women's Aid Association of Friends in Philadelphia, organized to alleviate the sufferings and improve the condition of the Freed Color persons commonly called "Contrabands," having nearly expended all the funds entrusted to them for the relief of these poor people, believe that the time has come to render to their friends a statement of the assistance afforded through their liberality. Since the first public appeal made in the spring of 1862, the treasurer has received the following sums from the various quarters named.

Account of the fund of the Women's Aid Committee of Friends, by S. W. Cope, Treasurer, to Twelfth mo. 18th, 1862.

To cash received as follows, viz:	
From Friends of Philadelphia and its vicinity, including a few contributions from persons not connected with our Society,	\$3,339.56
From Friends of New Jersey,	137.56
" " Ohio,	68.00
" " Indiana,	107.85
" " New York State,	131.85
" " Wilmington, Del.,	95.00
" " New England,	67.50
" a Friend in England,	30.00
" various other places,	101.00

\$4,079.22

By cash paid as follows,	
For dry goods and shoes,	\$3,376.85
" making up garments,	211.72
" meal and medicines,	47.63
" freight, boxes, &c.,	76.69
	\$3,712.89

\$4,079.22

Balance on hand \$965.41

Twelfth mo. 18th, 1862.

The Committees appointed by the Association, have faithfully endeavoured to appropriate this money judiciously. The large amount of clothing to be prepared, rendered it necessary to procure some assistance in making up the garments, as it was impossible otherwise to do this with sufficient speed to meet the emergency of the demand upon them.

The following statement, giving the number of garments made, and their destination, will show that it has been no small labour to prepare and forward the amount of relief furnished. The committee have received an ample return in the assurance from several quarters, that the article sent by them were exactly what were needed.

Garments made in the Third and Fourth months, 1862,	2,500
Garments made since Ninth month last,	2,119

Total, 4,619

Of these 2500, five boxes were sent to Por Royal, and to Leavenworth, Kansas, containing 1400 garments; one box was sent to St. Simon's Island, containing 30; one to Washington, containing 200, in the Sixth month. One box to Washington, in the Eighth month, containing 270 garments and bed-quilt. One box to Washington in the Ninth month, containing 270 garments and a piece of muslin, with groceries for the sick. One box c

medicine and one of clothing were sent to Hampton in the Ninth month. One box of piece goods sent to Washington, Ninth month. Burlap sufficient for 50 beds, corn-meal, oatmeal, and rice sent to the sick at Hampton, also medicine, and a box of clothing, in which the last of the 2500 were sent. A box sent by Friends at Salem N. J., was forwarded to Hampton, also clothing sent from Newport, in Tenth month. Three bales and four boxes of clothing were sent to Hampton and Fort Monroe, containing 6 pairs blankets and 6 comfortable, groceries for the sick, and 311 garments, new and second-hand, sent in the Tenth month. 100 dollars worth of shoes and two more boxes of Burlap for beds, for Washington and Alexandria, in Eleventh month; 2 barrels of clothing from Ohio; 600 pounds of clothing and 6 barrels of Indian meal from Indiana, of which the larger portion was sent to Fortress Monroe and neighborhood, and part to Alexandria, in the Eleventh month. Six barrels Indian meal and three boxes from Indianapolis, with boxes prepared by us, amounting in all to 17 boxes and barrels, containing 2 pieces of burlap, clothing (753 garments), 100 shoes, sent to Alexandria, Fort Norfolk, Forts Monroe and Craney Island, in the Twelfth month.

The accompanying extracts from letters recently received from Alexandria and Fortress Monroe, will inform the friends of these afflicted people how much is still needed in this their extremity. Shall our labours of the Association cease while such a state exists! Shall we have to meet the charge, "I was naked and ye clothed me not?"

Signed on behalf of the Association,
ELIZA C. COLLINS, Sec'y.

Philadelphia, Twelfth month 22nd, 1862.—Extract from a letter from C. P. Day:

"Tyler's House, Dec. 3d, 1862.
The boxes sent by you were distributed at Craney Island and Norfolk. There were so many wanting at those places, that C. B. Wilder and myself were most needed there.

Your donations have been the most valuable any sent to us, and have gone far to alleviate distress among the people.

We have responsible and earnest men now at Craney Island, and hope soon to have some one at work at Fort Norfolk and Suffolk. May God bless you for your generosity!"

"Tyler's House, Dec. 10th, 1862.
At Fort Norfolk there are 690 contrabands, mostly women and children, in charge of Captain Lawson. I think he is humane, and will prove a worthy man to distribute anything sent to them.

The men are mostly away at work, in Government service. The women and children are in a wretched condition. I talked with the women. They told me they had no clothing for four months. They have cut up their blankets to make frocks for their children, and now they have no covering nor shoes. There were quite a number lying sick on the soft side of a plank, with an old tent thrown over them. No fire, except such as was made on an open ground before them, so that the smoke from the fire came right in the faces of the sick ones.

Such wretchedness it has not been my lot to witness before. They told us they expect to go to Craney Island before long. They have a school kept by a contraband. He has some sixty scholars, about half of whom can read. They had primary books."

From A. Gladwyn.

"Alexandria, Dec. 12th, 1862.
The two boxes and bags sent by your Society, arrived in good order. The contents are very well

adapted to the necessities of the poor ones, and will be faithfully distributed. Many have been this morning, and could you see and hear the thanks on their reception, I know it would abundantly repay you for your labour and expenditure on their behalf. Could some clothing for boys and girls of a larger size be sent, much suffering might be relieved. Bed covering of some sort is very much needed. Old quilts would be of much use as they are warmer than a single blanket. Much sickness prevails among them."

"We have about completed the organization of a Society for sewing, which is to meet every Saturday, for the purpose of learning."

"Any old quilts or bed covering of any description, if left at Alfred H. Love's, 212 Chestnut St., will be promptly forwarded."

Influence of Sunlight upon Stock.—How few, even for a moment, are willing to give this subject the attention it deserves. To suppose that an animal confined in a dark, damp, unventilated stable will thrive, and be able to yield the same profit that it would if occupying a place the reverse of these, is to suppose an impossibility. Disease, though it may not at first be apparent to the eye, is, nevertheless, doing its work, and in some way will make itself felt to the loss of the owner.

Hogs that have their pens so made that the sunlight can be freely admitted, thrive better and are more easily fattened than when confined in pens where the rays of the sun never penetrate. So with horses. Serious diseases are engendered from badly constructed stables. The horse is fond of fresh air and light, and his stable should be provided with the means of thorough ventilation and the admission of the sun's rays. He enjoys these quite as much as his master, and it seems thoughtless and cruel to deprive so good a servant of that which costs nothing, but yet serves to make him happier and more contented with his lot in life. Doubtless animals, like men, have their gloomy days, in which things are turned topsy-turvy; and could their feelings be expressed in words we doubtless should hear sad stories of their being compelled, under the whip, to do heavy and exhausting work when sick, and of being deprived of comforts through the ignorance and thoughtlessness of those who have them in care.

If any one doubts that sunlight has a beneficent influence on health and spirits, let him compare his feelings during a long term of cloudy, wet weather, and then again, when every day is pleasant with warm, bright sunshine. The difference, we think, will be observable, at least with most persons.—*Dairy Farmer.*

THE FRIEND.

TWELFTH MONTH 27, 1862.

We cannot but believe there are thousands among our fellow countrymen who deeply lament the deplorable strife, which, for nearly two years, has been carried on between parties once united in the same commonwealth, but occupying different sections of our favoured land; producing such an abundant harvest of death, of bloodshedding, and of misery; and who in their sore distress and their fervent love for their suffering country, are often ready to query—as did Abner of Joshab, when a similar fratricidal war was desolating the Israelites—"Shall the sword devour forever? Knowest thou not that it will be bitterness in the latter end? how long shall it be ere thou bid thy people return from following their brethren?" But it is to be feared that all, of even such a nature, have not

been sufficiently careful to inculcate a spirit of peace and goodwill in their intercourse with each other, to teach the lessons of love even to enemies, in their families, and to enforce the christian precept, "To live peaceably with all men," throughout the sphere over which their influence extends.

One cause for this—and it is a cause that has done much harm in other ways—has been the opinion sedulously inculcated by many persons professing to be peace-men, that there is a peculiarity about our civil war, which renders it less opposed to the benign spirit and precepts of the gospel, than other wars; so that those who conscientiously believe that ordinary warfare is contrary to the teachings and commands of Christ, may nevertheless consistently sanction the gigantic effort to put down rebellion by armies and fleets, constantly engaged in the destruction of human life, and the infliction of whatever suffering they may be able to bring on all opposed to them. We venture to say, there can nothing be found in the New Testament to authorize or support such a notion. This, as well as all other wars, has its origin in the evil lusts of man's unregenerate heart; it is carried on in the same murderous and vindictive spirit; and its battle fields have lacked none of the direful passions and horrid carnage which have marked all others, as the scenes of Satan's work and triumph, and rendered them revolting to the christian rightly imbued with the meek and loving Spirit of his Master. That Master's commands to "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you;" that "All things whatsoever ye would that men should do to you, do you even so to them," are binding on his disciples under all circumstances, and fully forbid our present war, as they do every other.

Some of the younger members of our religious Society, have been deluded by the erroneous opinion referred to, into an active support of the war, and are liable to lose their right of membership therefore; but have all others, from whom we might expect more consistency and firmness, been sufficiently careful not to sanction or palliate it indirectly, by the expression of their opinions, their hopes or their wishes, relative to its conduct or its events? It is so natural, when speaking of its immediate or more remote causes, its wicked initiation, and the unjust and unfounded accusations of the rebels; or when contemplating the hoped for termination of slavery through its agency, to use expressions that imply its being unavoidable, or expedient; forgetting that all war prevents the extension of the kingdom of Christ, and that the plea of necessity for our government engaging in this, is a confession of disbelief on the part of the nation, and a consequent absence of faith and trust in the overruling providence of that omniscient and almighty Being, who has promised to those who unreservedly obey his law, that He will cause all things to work together for their good.

How deeply is the nation now feeling the reverse of this providential overruling for its good. War continues to prove its evil origin and its unchristian character, by the sad effects it produces on all the prime interests of the community. Its enormous cost, and the necessary financial changes and expedients it requires, soon make fearful inroads on property, whether fixed or moveable. The usual productive employments of the industrious and enterprising are greatly crippled, or entirely destroyed. The mechanic arts, little called for in the prosecution of peaceful labour, are neglected, or busied in contriving and fabricating new, and more deadly weapons, for destroying human life; while com-

stage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if in advance, six and a-half cents.

having received through the attention of Judge Ly, M. C., a copy of "The Preliminary Report of the Eighth Census, (1860)," we find it contains much matter of interest to the citizens of the United States.

The labour of collecting the statistics arranged in this report, was performed by sixty-four marshals, four thousand four hundred and seventeen assistants, at a cost of a million and a quarter dollars.

We shall make such extracts for "The Friend," as will be likely to interest its readers.

The actual increase of the entire free and slave population from 1850 to 1860, omitting the Indian race, was 8,225,464, and the rate per cent. is shown at 35.46; while from 1840 to 1850 the whole increment of all classes was 6,122,423, the rate of gain was 35.57 per cent. No striking evidence can be given of the rapid advancement of our country in the first element of national progress than that the increase of its inhabitants during the last ten years is greater by more than 1,000,000 of souls than the whole population in 1810, and nearly as great as the entire number of people in 1820. That the whole of this is not from natural increase, but is, in part, derived from the influx of foreigners seeking here for themselves and their children, is a fact which may justly enhance rather than detract from the satisfaction wherewith we should regard the augmentation of our numbers.

Thus far in our history, no State has declined in population. Vermont has remained nearly stationary, and is saved from a positive loss of inhabitants by only one-third of one per cent. New Hampshire, likewise, has gained but slowly, her increment being only 8,097, or two and one-half per cent. on that of 1850. Maine has made the satisfactory increase of 45,110 or 7.74 per cent. Solid agricultural states may be said to be filled up so far as regards the resources adapted to a rural population in the present condition of agricultural science. The conditions of their increase undergo a change upon the general occupation and advancement of their areas. Manufacturers and commerce, then, come in to supply the means of subsistence to an excess of inhabitants beyond what the ordinary cultivation of the soil can sustain. This is the progress of population has been reached, and perhaps, passed in most, if not all, of the

New England States. But while statistical science may demonstrate within narrow limits the number of persons who may extract a subsistence from each square mile of arable land, it cannot compute with any reasonable approach to certainty the additional population, resident on the same soil, which may obtain its living by the thousand branches of artificial industry which the demands of society and civilization have created.

"South Carolina has gained during the decade 35,201 inhabitants of all conditions, equal to 5.27 per cent. Of this increase 16,825 are whites, and the remainder free coloured and slaves. It is perhaps a little remarkable that the relative increase of the free coloured class in this State was more considerable than that of any other. As their number, 9,914, is so small as to excite neither apprehension or jealousy among the white race, the increase is probably due both to manumission and natural causes. This State has made slower progress during the last term than any other in the south, having advanced only from 27.28 to 25.72 inhabitants to the square mile.

"Tennessee, it will be observed, has made but the moderate gain of 10.68 per cent. for all classes. Of this aggregate increase the whites have gained at the rate of 9.24 per cent. upon 1850, the free coloured 13.67, and slaves 15.14.

"The next lowest in the rate of increase in the list of Southern States is Virginia, whose gain upon her aggregate population, in 1850, was 174,657, equal to 12.29 per cent. The white class gained 152,611, or 17.06 per cent., the slaves 18,337, or 3.88 per cent.

"These are examples of the States wherein the population has advanced with the slowest progress the past ten years. Turning now to the States which have made the most rapid advance, we find that New York has increased from 3,097,394 to 3,880,735, exhibiting an augmentation of 783,341 inhabitants, being at the rate of 25.29 per cent. The free coloured population has fallen off 64 since 1850, a diminution to be accounted for probably by the operation of the fugitive slave law, which induced many coloured persons to migrate further north.

"The gain of Pennsylvania has been in round numbers 595,000. In that state the free coloured have increased about 3,000. The greater mildness of the climate and a milder type of the prejudices connected with this class of population, the result of benevolent influences and its proximity to the slaveholding States, may account for the fact that this race holds its own in Pennsylvania, while undergoing a diminution in the State next adjoining on the north.

"Minnesota was chiefly unsettled territory at the date of the Seventh Census; its large present population, 173,855, as shown by the returns, is therefore nearly clear gain.

"The vast region of Texas ten years since was comparatively a wilderness. It has now a population of over 600,000, and the rate of its increase is given as 184 per cent.

"Illinois presents the most wonderful example of great, continuous, and healthful increase. In

1830 Illinois contained 157,445 inhabitants; in 1840, 476,183; in 1850, 851,470; in 1860, 1,711,951. The gain during the last decade was therefore, 860,481, or 101.06 per cent. So large a population, more than doubling itself in ten years, by the regular course of settlement and natural increase, is without a parallel. The conditions to which Illinois has attained under the progress of the last thirty years is a monument of the blessings of industry, enterprise, peace, and free institutions.

"The growth of Indiana in population, though less extraordinary than that of her neighbouring State, has been most satisfactory, her gain during the decade having been 362,000, or more than 36 per cent. upon her number in 1850.

"Michigan, Wisconsin, and Iowa have participated to the full extent in the surprising development of the north-west. The remarkable healthfulness of the climate of that region seems to more than compensate for its rigors, and the fertility of the new soil leads men eagerly to contend with and overcome the harshness of the elements. The energies thus called into action have, in a few years, made the States of the northwest the granary of Europe, and that section of our Union which, within the recollections of living men, was a wilderness, is now the chief source of supply in seasons of scarcity for the suffering millions of another continent.

"Looking cursorily over the returns, it appears that the fifteen slaveholding States contain 12,340,000 inhabitants, of whom 8,039,000, are whites, 251,000 free coloured persons, and 3,950,000 are slaves. The actual gain of the whole population in those States from 1850 to 1860, was 2,627,000, equal to 27.33 per cent. The slaves advanced in numbers 749,931, or 23.44 per cent. This does not include the slaves of the District of Columbia, who decreased 502 in the course of the ten years. The nineteen free States and seven Territories, together with the federal District, contained according to the Eighth Census, 19,201,546 persons, including 27,749 Indians; of whom 18,936,579 were white, and 237,218 free coloured. The increase of both classes was 5,595,603, or 41.24 per cent. No more satisfactory indication of the advancing prosperity of the country could be desired than this general and remarkable progress in population. North and South we find instances of unprecedented gains, as in the case of Illinois, just adverted to. In the southwest the great State of Missouri has increased by the number of 500,000 inhabitants, which is within a fraction of 74 per cent. It is due to candor to state that the marked disproportion between the rate of gain in the north and south respectively, is manifestly to some extent caused by the larger number of immigrants who settle in the former section, on account of congeniality of climate, the variety of occupation, the dignity wherewith respectable employment is invested, and the freedom of labour."

"In the interval from 1850 to 1860, the total free coloured population of the United States increased from 431,449 to 485,005, or at the rate of 12.33 per cent. in ten years, showing an annual increase of one per cent. This result includes the

number of slaves liberated and those who have escaped from their owners, together with the natural increase. In the same decade the slave population, omitting those of the Indian tribes west of Arkansas, increased 23.39 per cent, and the white population 37.97 per cent., which rates exceed that of the free colored by twofold, and three or fourfold, respectively. Inversely, these comparisons imply an excessive mortality among the free colored, which is particularly evident in the large cities. Thus, in Boston during the five years ending with 1859, the city registrar observes: 'The number of colored births was one less than the number of marriages, and the deaths exceeded the births in the proportion of nearly two to one.' In Providence, where a very correct registry has been in operation under the superintendence of Dr. Snow, the deaths are one in twenty-four of the colored; and in Philadelphia during the last six months of the census year, the new city registration gives 145 births against 206 deaths among the free colored. Taking town and country together, however, the results are more favorable. In the State registries of Rhode Island and Connecticut, where the distinction of color has been specified, the yearly deaths of the blacks and mulattoes have generally, though not uniformly, exceeded the yearly births—a high rate of mortality chiefly ascribed to consumption and other diseases of the respiratory system.

"Owing, among other causes, to the extremes of climate in the more northern States, and in other States to expulsive enactments of the legislatures, the free colored show a decrease of numbers during the past ten years according to the census, in the following ten States: Arkansas, Florida, Indiana, Maine, Mississippi, New Hampshire, New York, Oregon, Texas, and Vermont.

"The free colored have gained 11,000 in Ohio, 3,000 in North Carolina, and 9,000 in Maryland. In the latter State the prejudice against this class appears to exist only to a limited extent, and constituting as it does 12 per cent. of the whole population, it forms an important element in the free labor of Maryland.

"With regard to the mean duration or expectation of life among colored persons in different localities of the country, reference may be made to some comparative tables published in the census report to Congress in 1852. The returns of 1860, when cast into the same form, would, doubtless, exhibit similar results. In a simple statement, when viewed apart from the liberations or manumissions in the southern States, the aggregate free colored in this country most represent *nearly* what is termed "a stationary population," characterized by an equality of the current of births and deaths.

There are now in the United States about 4,000,000 slaves. They have advanced to that vast number from about 700,000 in 1790. The rate of progress of this class of population has been somewhat more fluctuating than can be easily accounted for. Why, for example, they should have increased over 30 per cent. from 1820 to 1830, and only 23 per cent. during the next decade, does not appear from any facts bearing upon their condition during this period. It may, perhaps, be attributed to the large emigration to Texas, prior to 1840, which, doubtless, exerted no small influence upon the ordinary progress of the slave population in the United States during that decade. There is no importation nor emigration of slaves into or from the country, and it would seem that they should be subject to no cause of increase or decadence except what nature decrees. This law is that of gradual and steady increase, and under it the total number of slaves in 1860 should have

been 4,130,000, had they gained at the same rate as during the preceding ten years.

"It is important to observe the growing disparity between the pace at which the white and colored races are advancing in this country. While the whites, from 1850 to 1860, gained 38 per cent., the slaves and free colored increased somewhat less than 22 per cent., and the total increase of the free colored and slaves for 70 years was but 455 per cent. against 757 per cent. for the whites."

"According to the best estimates, the total population of the United States at the close of the present century will be about a hundred millions. All observing persons will perceive that the relative increase of the whites exceeds that of the colored, and that the disparity is gradually becoming more and more favorable to this part of our population. Leaving the issue of the present civil war for time to determine, it should be observed, if large numbers of slaves shall be hereafter emancipated, so many will be transferred from a faster to a slower rate of increase. In this case, nine millions of the colored, in the year 1900, appears a large estimate. Of these a great portion will be of mixed descent, since in 1850 one ninth part of the whole colored class were returned as mulattoes. In regard to emigration, the number colonized by the American Colonization Society and its auxiliaries during the past ten years, has averaged about 400 per annum, besides the Africans captured on several slave ships. The total number of colored emigrants sent to Liberia from 1820 to 1856 inclusive, is stated at 9,502, of whom 3,676 were free born."

(Continued next week.)

For "The Friend."

Diary of Samuel Seft.

(Continued from page 123.)

"Seventh month 1st, 1780. Bodily pain bath of late attended. The sufferings which are sustained in this respect, being unfelt by others, are much unnoticed and uncomiserated by them; but they are known to Him, who is touched with a feeling of the infirmities both of the saints, and of the most vile and abject of his creatures, who are alike the works of his hand: 'for all things were created by him and for him. Oh! may my afflictions in the flesh be sanctified by Him 'who suffered without the gate,' whose head was crowned with thorns, whose hands and feet were pierced."

"20th. I went to London. At times I was favoured to look towards the God of patience and consolation, but the want of due resignation barred the influences which proceed from him; 'for what doth let will let, until it be taken out of the way.' During this dispensation I considered the propriety of the apostolic injunction, 'Remember them who are in bonds, as bound with them, and them who suffer adversity as being also in the body;' 'bear ye one another's burthens, and so fulfil the law of Christ.' A practical adherence to these precepts, next to the grace which is sufficient and soul-saving, would be as the helm of human life; it would alleviate the diversified cup that is handed forth to mortals; but how deficient am I therein; how deficient also are others.

"30th. Pretty early at the Park meeting, a degree of solemnity clothed my mind, not without some presentations for a public ministry, which, on proving, appeared immature. How suitably adapted are the following precepts, not only to me, but to all who at any time appear in the ministry. 'Be more ready to hear, than to offer the sacrifice of fools.' 'Be not rash with thy mouth to utter any thing before God.' And when thou speakest, let thy words be few.' 'Be slow to speak.' All true and profitable ministry arises from the ability

which the Spirit gives in a rightly exercised understanding; as it is written, 'I will pray with you standing; and with the understanding also.' 'None succeeds not from the ability which the Spirit giveth. But what is nonsense? Here it may be difficult to draw a line. 'For the preaching of the cross is, to them that perish, foolishness;' and 'the foolishness of God is wiser than man.'

"Eighth month 1st, 1780. In the week-da meeting at Horslydown, something opened by way of ministry; but waiting under the opening, silence seemed most advisable; and after long sitting, meeting closed lively. I had rather refrain from speaking, when perhaps I might have spoken with a degree of profit, than at any time to speak unprofitably. There are, comparatively speaking, but few ministers left amongst us; yet frequent many words are uttered. The following sentiments contained in the Apology of that skillful minister of Christ, Robert Barclay, is therefore, I think worthy of the observation of all concerned. 'For we doubt not, but assuredly know that a meeting may be good and refreshing, though from the sitting down thereof to the rising up a word may not be outwardly spoken; though the life may have been so known, as that words might have been acceptable speech, and that from the life.' Barclay's Apology 6th edition, p. 360. The above is not referred to as an insinuation that the ministers now among us are of a dissimilar disposition from Barclay, as the brethren of that day, but rather as a caution to myself and others, than as a censure upon any. We are voyagers in a tempestuous ocean, stations on a sea of glass, surrounded on every side with rocks and sands;—may not therefore a little on who needeth himself to be more perfectly instructed in the way and work of the Lord, recal the attention of the brotherhood to such beacons as have been held forth by such, 'who, through faith and patience inherit the promises.' There is a spirit of worship and introversion of spirit, which exceed outward ministrations. In it, honey is imparted from the Rock—Christ."

"Tenth month 8th, 1780. At the afternoon meeting, Truth measurably prevailed in silence. I have often been fearful lest, in our society, by man reason, and the works of a mere moral or creaturely righteousness, should be substituted in the place of the law of faith and the new creature work; for according to the testimony of our true learned and deeply experienced friend, Isaac Pennington, 'God is all in redemption; God doth all as fully therein as in creation; it is a new creation; yet the creature quickened and renewed in unity with him in its operations.' Pennington Works, vol. i. p. 526. All boasting of supposed rectitude and self-ability is excluded by the law of faith; if the most perfect compliance with its requisitions was attained, the reward would be of debt, but of grace only; but every deviation from the line of duty merits death, and that condemnation which is most justly and rightfully the sinner's portion; as it is written, 'The wages of sin is death.'"

"Eleventh month 9th, 1780. I walked by St. George to Shad Thames, with some desires after those comforts which are in love, and those consolations which are in Christ. 'May the Beloved souls come into his garden, and eat his pleasant fruits.' 'The fruits of the Spirit are love, gentleness, meekness, temperance and faith.' The indeed are not profitable to God, nor meritorious man; but the most minute or inconsiderable mort merits, either in mind or body, even to the giving a cup of cold water, when performed by the languages of Divine Life, are accepted; and the creature receives an answer of well done, through his

gave himself to God for us, as an offering and sacrifice, for a sweet-smelling savour."

"Twelfth month 1st, 1780. In the Monthly Meeting, the Quarterly Meeting's Queries were answered, and those present reminded of 'the bleating of the sheep and the lowing of the oxen.' The estate of our society was lamented, and the manifold deviations which appear, in conformity to the world, in speech, behaviour and apparel, and in respect to the antichristian yoke of tythes, were in high love and tenderness reproved.

"The week-day meeting was held in silence: this expression occurred, 'Their spot is not a spot of his children.' Variance, wrath and animosity are the spots of an enemy, and his children, whom his diabolical features are impressed, he will, in the multitude of the Lord's mercies, be fully purged from them! I afterwards received a letter from a minister in our Society, expressing a desire of being a castaway. 'Thus deep calleth to deep.'"

"First month 1st, 1781. Since the commencement of the former year, the messenger on the horse has arrested many, who, respecting age, are nearly my equals; their lot is forever fixed; they all remain 'in a land of pits and drought,' without any fightings, within are fears.' I may not expect, from my age and various infirmities, that the days remaining will be few and evil, but may not the spirit of prayer depart from me, that the travail of my soul may be increased, and death is swallowed up in victory. Amen."

"Second month 6th, 1781. In a meeting for discipline, my mind was oppressed under a sense of the present not sufficiently esteeming the sufferings of Christ, without the gates of Jerusalem, nor joining fellowship with him in them; and of a dark, oppressive spirit, that would trample upon those precious testimonies of the cross, delivered to George and others, against bad-honour, the heathenish pollution of days and months, the unchristian language of you to a single person, and the calling of men, master, contrary to the express prohibition of our blessed Lord, Matthew xxiii. 10. 'Be ye called of men, master, for One is your Master, and Christ.' Some well disposed Friends may, perhaps, have strengthened these liberties by laying great a stress on externals; 'for in Christ Jesus, every circumcision availeth not uncircumcision, nor a new creature; and if those called Quakers acted according to this rule, they would neither wear any gay clothing, nor give flattering titles to men, in dress, and expense and exactness in dress, sumptuous and costly furniture, comport not with the dress of a crucified Saviour; who was himself the most perfect pattern of plainness, and did not deprecate to lay his head."

"28th. Wherein the course of the present month the cloud rose, apparently no bigger than a man's hand, which hath thickened so as to darken the face of heaven and pour down torrents of displeasure upon my poor soul. I have been broken by sin, and my wounds have been abundantly multiplied, but the great Superintendent of mercy 'doeth all things well,' his judgments are righteous altogether; we have all sinned and fallen short of the glory of God; and manifold have been the iniquities of my youth, and more advanced years: the Lord correcteth our transgressions with the rod, and will not suffer our lives to go wholly unpunished. Blessed are they whose sins are recalled to their remembrance, and go before them to judgment, that the transgressors may be made white, and purged by the blood of the covenant. This day I again perused Joseph Ball's account of the dying sayings of his father-in-law R. Reynolds, who had been near forty

years a minister in our society and in his last illness was freshly awakened to a sense of sin, and brought to trust in Christ alone for salvation, who was made sin for us, 'that we might be made the righteousness of God in him.' The great sin of our deceased friend appears to have been too great an attachment to, and assiduity after, the things of this world; that is not my fault; mine have been manifold."

"Third month 21st, 1781. This day I have entered into the 63rd year of my age,—an awful event; to many it hath proved the last of human life; perhaps before another I may be added to that number; but days and times, signs and seasons, are in the hand of the great Proprietor of the universe, who made the sea and the dry land, and man as a monument of his mercy.

"23rd. This day, that exercise has been maintained which is the essence of prayer, and which our Lord intended, when he said, 'Watch ye therefore and pray always, that ye may be accounted worthy to stand before the Son of Man.'"

"Fourth month 25th, 1781. The spirit of prayer hath this day been obstructed by unnecessary converse, which it ought not to have known. 'If any man doeth the will of God, he shall know of the doctrine; and again, 'if any man be a worshipper of God, and doeth his will, him he heareth;' hence it appears, that doing the will of God is necessary to render prayer acceptable. The will of God is our sanctification; the sanctification of our hearts and mouths, as it is written, 'Lo, this hath touched thy lips, thy iniquity is taken away, thy sin is purged.' Iniquity is not only to be taken away by remission and non-imputation, but sin is to be purged by real renovation; in order to our becoming the sons of God without rebuke. 'In your patience possess ye your souls,' was the command of the great Master to his immediate followers, and remains obligatory on us; not only in the case of national and public calamities, but also in respect to those domestic iniquities, which 'arise not out of the dust.'"

Clouds.

Selected.

The central cloud region I consider as including all clouds which are the usual characteristic of ordinary serene weather, and which touch and envelope the mountains of Switzerland; they may be considered as occupying a space of air ten thousand feet high, extending from five to fifteen thousand feet above the sea. These clouds, according to their elevation, appear with great variety of form, often partaking of the streaked or mottled character of the higher region, and as often, when the precursors of storm, manifesting forms closely connected with the lowest rain clouds; but the species especially characteristic of the central region is a white, ragged, irregular, and scattered vapor, which has little form and less color. But although this kind of cloud is, as I have said, typical of the central region, it is not one which nature is fond of. She scarcely ever lets an hour pass without some manifestation of finer forms, sometimes approaching the upper cirri, sometimes the lower cumulus.

The originality and vigor of conception in cloud forms, give to the scenery of the sky a force and variety to less delightful than that of the changes of mountain outline in a hill district of great elevation; and there is added to this a spirit-like feeling, a capricious, mocking imagery of passion and life, totally different from any effects of inanimate form that the earth can show. The minor contours, out of which the larger outlines are composed, are indeed beautifully curvilinear, but they

are never monotonous in their curves. First comes a concave line, then a convex one, then an angular jag, breaking off into spray, then a downright straight line, then a curve again, then a deep gap, and a place where all is lost and melted away, and so on; displaying in every inch of the form renewed and ceaseless invention, setting off grace with rigidity, and relieving flexibility with force, in a manner scarcely less admirable, and far more changeful than even in the muscular forms of the human frame. Nay, such is the exquisite composition of all this, that you may take any single fragment of any cloud in the sky, and you will find it put together as if there had been a year's thought over the plan of it, arranged with the most studied inequality—with the most delicate symmetry—with the most elaborate contrast, a picture in itself. You may try every other piece of cloud in the heaven, and you will find them every one as perfect, and yet not one in the least like another.

Stand upon the peak of some isolated mountain at day break, when the night-mists first rise from off the plains, and watch their white and lake-like fields as they float in level bays and winding gulfs about the insulated summits of the lower hills, untouched yet by more than dawn, colder and more quiet than a windless sea under the moon of midnight. Watch when the first sunbeam is sent upon the silver channels, how the foam of their undulating surface parts and passes away; and down under their depths the glittering city and green pasture lie like Atlantis, between the white paths of winding rivers: the flakes of light falling every moment faster and broader among the starry spires, as the wreathed gorges break and vanish above them, and the confused crests and ridges of the dark hills shorten their gray shadows upon the plain. Wait a little longer, and you shall see those scattered mists rallying in the ravines and floating up towards you, along the winding valleys, till they couch in quiet masses, iridescent with the morning light, upon the broad breasts of the higher hills, whose leagues of massy undulation will melt back and back into that robe of material light, until they fade away, lost in its lustre, to appear again above, in the serene heaven, like a wild, bright, impossible dream, foundationless and inaccessible, their very bases vanishing in the unsubstantial and mocking blue of the deep lake below. Wait yet a little longer, and you shall see those mists gather themselves into white towers, and stand like fortresses along the pronouncements, massy and motionless, only piling with every instant higher and higher into the sky, and casting longer shadows athwart the rocks; and out of the pale blue of the horizon you will see forming and advancing a troop of narrow, dark, pointed vapours, which will cover the sky, inch by inch, with their gray network, and take the light off the landscape with an eclipse which will stop the singing of the birds and the motion of the leaves together; and then you will see horizontal bars of black shadow forming under them, and lurid wreaths create themselves, you know not how, along the shoulders of the hills; you never see them form, but when you look back to a place which was clear an instant ago, there is a cloud on it, hanging by the precipices, as a hawk poises over his prey, and then you will hear the sudden rush of the awakened wind, and you will see those watch-towers of vapour swept away from their foundations, and waving curtains of opaque rain let down to the valleys, swinging from the burdened clouds in black bending fringes, or pacing in pale columns along the lake level, grazing its surface into foam as they go. And then as the sun sinks, you shall

see the storm drift for an instant from off the hills, leaving their broad sides smoking, and loaded yet with snow-white, torn, steam-like rags of capricious vapour, now gone, now gathered again; while the sun, seeming not far away, but burning like a red-hot ball beside you, and as if you could reach it, plunges through the rushing wind and rolling cloud with headlong fall, as if it meant to rise no more, dyeing all the air about it with blood. And then you shall see the fainting tempest die in the hollow of the night, and you shall see a green halo kindling on the summit of the eastern hills, brighter—brighter yet, till the large white circle of the slow moon is lifted up among the barred clouds, step by step, line by line; star after star she quenches with her kindling light, setting in their stead an army of pale, penetrable, fleecy wreaths in the heaven, to give light upon the earth, which move together, hand in hand, company by company, troop by troop, so measured in their unity of motion, that the whole heaven seems to roll with them, and the earth to reel under them. And then wait yet for one hour, until the east again becomes purple, and the heaving mountains rolling against it in darkness, like waves of a wild sea, are drowned one by one in the glory of its burning. Watch the white glaciers blaze in their winding paths about the mountains, like mighty serpents, with scales of fire; watch the columnar peaks of solitary snow, kindling downwards, chasm by chasm, each in itself a new morning; their long avalanches east down in keen streams brighter than the lightning, sending each his tribute of driven snow, like altar-smoke, up to the heaven; the rose light of their silent domes flushing that heaven about them, and above them, piercing with purer light through its purple lines of lifted cloud, casting a new glory on every wreath as it passes by, until the whole heaven—one scarlet canopy—is interwoven with a roof of waving flame, and tossing, vault beyond vault, as with the drifted wings of many companies of angels; and then, when you are bowed down with fear and love of the Maker and Doer of this,—tell me who has delivered His message unto men!—*Ruskin.*

Extracted from "The Friend."

Luther had many struggles to maintain at the very entrance of his career. But contests with leaders of society, and academical disputes, are of little account to the christian. Human teachers imagine they have gained the noblest triumph, when they succeed in filling a few journals, or a few drawing-rooms, with the noise of their systems. Since it is with them a mere question of self-love or of party rather than of the welfare of humankind, they are satisfied with this worldly success.

These labours are accordingly like smoke, which after blinding the eyes, passes away, leaving no traces behind.

It is not so with the christian: he thinks not of a party, but of the salvation of souls. He therefore willingly neglects the brilliant contest in which he might engage at his ease, with the champions of the world, and prefers the obscure labours which carry light and life to the cottages and homes of the people.

This was what Luther did, or rather following the precept of his Divine Master, he did this and left not other things undone.

At the time he was combating with inquisitors, university chancellors and masters of the sacred palace, he endeavoured to diffuse sound knowledge on religious subjects among the multitude. This is the aim of many of the popular works he published about this time, such as his "Sermons on the Ten

Commandments," and his "Explanation of the Lord's Prayer for simple and ignorant laymen."

Who would not be pleased to know how the reformer addressed the people at this period? We will therefore quote some of the expressions that he put forth "to run through the land," as he says in the preface to the latter work.

"When thou prayest," said he, "let thy words be few, but thy thoughts and affections many, and above all, let them be profound. The less thou speakest the better thou prayest. Few words and many thoughts is christian: many words and few thoughts is heathenish.

"External and bodily prayer is that buzzing of the lips, that outward babble which is gone through without any attention, and which strikes the eyes and ears of men; but prayer in spirit and in truth, is the inward desire, the motions, the sighs which issue from the depths of the heart. The former is the prayer of hypocrites and of all those who trust in themselves: the latter is the prayer of the children of God who walk in His fear."

Then passing on to the first words of the Lord's Prayer, "Our Father,"—he expresses himself thus:—"There is no name among all names, which more inclineth us towards God, than the name Father. We should not feel so much happiness in calling Him our Lord, or God or Judge. By this word, "Father," the bowels of the Lord are moved; for there is no voice more lovely or more endearing to a father than that of his child.

"Who art in heaven."—He who confesses that he has a father in heaven acknowledges himself a stranger upon earth. Hence there arises an ardent longing in his heart, like that of a child who dwells far from his father's country, among strangers, among wretchedness and mourning. It is as if he said,—Alas, my Father! thou art in heaven, and I thy unhappy child am on the earth, far from thee, in the midst of danger, necessity and tribulation.

"Hallowed be thy name."—He who is passionate, envious, an evil-speaker, a calumniator, dishonours that name of God in which he was baptized.

"Thy kingdom come."—Those who amass wealth, who build sumptuous houses, who seek all this world can give, and pronounce this prayer with their lips, resemble large organ-pipes which peal loudly and incessantly in the churches, without either speech, feeling or reason."

Further on, Luther attacks the then very popular error of pilgrimages. "One goes to Rome, another to St. James; this man builds a chapel, that one endows a religious foundation, in order to attain the kingdom of God, but all neglect the essential point, which is to become His kingdom themselves.

"Why goest thou beyond the seas in search of God's kingdom? It is in thine own heart, that it should be found.

"Thy will be done."—It is a terrible thing to hear this prayer offered up! Where in the church do we see this will of God performed? * * One bishop rises up against another bishop, one church against another church. * * And yet each party exclaims that their meaning is good, their intention upright; and thus to the honour and glory of God, they altogether perform the work of the devil.

"Give us this day our daily bread."—Wherefore do we say 'our bread?' Because we pray not to have the ordinary bread that pagans eat, and which God gives to all men, but our bread, ours, who are children of the heavenly Father.

"And what is this bread of God! It is Jesus Christ our Lord. 'I am the living bread which cometh down from heaven and gives life to the world.' For this reason, (and let us not deceive ourselves), all sermons and all instructions,

that do not set Jesus Christ before us and tear us to know him, cannot set before us the bread and nourishment of our souls. * * But what is it, then, to know Jesus Christ? say thou, and what advantage is derived from it? reply:—To learn and to know Jesus Christ is understand what the apostle says,—'Christ made unto us of God, wisdom and righteousness, and sanctification and redemption.' Now this we understand if you feel and acknowledge your own wisdom to be a condemnable folly, your own righteousness a condemnable iniquity, your own redemption, a miserable condemnation; if you see that you are really before God, and before all creatures, a fool, a sinner, an impure, a condemnable man, and if you show not only by your word but from the bottom of your heart, and by your works, that you have no consolation and no salvation remaining except in Jesus Christ. Thus believe is no other than to eat this bread for heaven."

—

The Shakers' Barn at Lebanon.—The crowing glories of all the societies, or families, are the great Shaker barns. Several of the families Lebanon, had extensive and good ones, and Hancock there is one that has been often described as something very superior. It is built of stone, circular, a hundred feet in diameter, with a stable on the ground floor all around, and cartway around the second story, with a great hayrack in the centre. The north family at Lebanon occupied some twenty detached buildings for barn purposes, some of which were decaying and the whole inconvenient, and not in the usual order of Shakers. It was determined to build a new barn to take the place of all the old ones, and it has been done, and the result is the most complete, perhaps in the world. I have never seen or heard of anything equal to this barn, which was planned by Elder Frederick, after visiting every other large barn that he could, so as to avoid errors and avoid improvements. This barn is one hundred and ninety-six feet long, fifty feet wide, five stories high; the walls of good flat, quarried stone, five feet thick at the foundation, carefully laid in lime mortar, cement pointed outside, and plastered inside; roofed with tarred paper, cement, and gravel. It also has three wings—wooden buildings—each form four sheds about one hundred feet long upon the east and west side of two cattle yards, on the south of the main building, with lofts for straw or grain connected with the barn. The lower store of the barn is a manure cellar, and at the west end is level with the ground, so that carts can be driven in and out with ease. The next story is the stable, which is on a level with the yard, the cor standing with their heads towards the centre, with a passage between supplied with water pipes at cocks. In this passage roots, cut feed, or water can be given in iron feed boxes, which swing on pivot into the passage. Behind the cows the floor drops a couple of inches, a space of three feet, at back of that rises again. The depression is to hold the manure. On the rise behind are iron rails upon which cars run into the west end and over a space about twenty-five feet wide, and discharge their loads, the rails and turntable being so contrived that the manure is well distributed with little labour. The idea is entertained of making the whole cellar into a liquid manure vat, which could be distributed by its own gravity upon the lower part of the farm, or sent higher up by water power that drives the mill not far distant. The cows are all fastened in their stalls at evening, in summer, and all at one remove; they are driven in all together, and each one takes

place where her name is printed overhead, and in by a pull of a cord all the movable stanchions are closed. They are opened by a reversed motion, and all the cows hurried out in a drove, so they never make a deposit upon the floor. They are left a few minutes to do that in the yard, before sending them to the pasture. There are six large chimney ventilators from the rear of the stalls to the roof. The floor above them supports great haymows, between which is the floor for feeding hay, which is sent down to the cows through tubes; and these, when empty, assist ventilation. There are openings from this floor into straw lofts over the sheds, and also to the stercoraries for roots and grain. The next floor is the drive-way for loads of hay, sixteen feet wide all one hundred and ninety-six feet long, with ample space at the west end to turn around. This opens upon a public road, and is but little above its level, so that loads really come in easily to the top of the barn. Over this floor is a fifth story, only the width of the floor, to give room for work, and ventilation and light. Half of the windows are glass, and half slatted blinds. The hay is nearly all thrown down, not pitched upon the load. In case of need the large space at the end could be filled; but it is thought that it will be necessary, except with corn, which can be mowed there and thrown down a spout into a large, dry granary over the western shed. Altogether, I look upon this as the most complete barn in the county, and well worthy of a visit by any one who may want to build, or who may desire to plan a very large barn so as to afford uncommon facilities, and calculated to afford them for a great length of time. It is true there are not many situations convenient as this for the purpose. The cash value was about \$10,000, and probably, estimating the labour of the people at a fair price, \$5,000 more; but they consider it money and labour well appropriated.—*N. Y. Tribune.*

ENTIRE SUBMISSION.

Thy ways are not as our ways, His thoughts are not as our thoughts, He sends us sore with cruel thorns where we have stooped for flowers; Oh! 'tis from the oft pierced heart those precious drops distil, 't is many a life, else all unblest, with healing balm shall fill; 't is give, oh give the flower to those who pray it so many a life; I would choose to have the thorns with Thee, dear Lord, with Thee.

Judgment man in ignorance, he seeth but in part, 't is trust in our Maker, God, who searcheth every heart, 't is every wrong and every woe, when put beneath our feet, 't is stepping-stones may help us on to His high mercy seat; 't is teach us still to smile, O Lord, though sharp the stones may be, 't is remembering that they bring us near to Thee, dear Lord, to Thee.

Wretched and rough the path we tread, e'er haunted as we go, 't is piteous sights of wretchedness and piteous sounds of woe; 't is eagerly for happiness we look on either side 't is find all pleasures time can give, leave us unsatisfied; 't is make me of those blessed ones, from earth's vain troubles free, 't is cease constant souls rest every hope in Thee, dear Lord, in Thee.

Bitter is the cup of life, we fain would drink no more, 't is let this cup but pass from me, 't is anguish we implore; 't is days and months, and years roll on, and let 'tis asked at length,

When was it that our souls put on new majesty and strength? All is revealed. The March-draught no longer we would flee, 't is hid in wisdom to our lips, by Thee, dear Lord, by Thee.

Our nearest and our dearest go—go from us one by one; Where now are those who walked with us 'neath youth's unclouded sun? Sadder than separation, sadder than death, came change, And our once blooming Paradise is now a desert strange;

Yet in this desolation I ask but faith to see That nothing can divide us now from Thee, dear Lord, from Thee.

From the "Derbyshire Eagle."

"I GATHER THEM ALL."

BY J. WESLEY CARHART, D. D.
See what a harvest is crowning the earth,
Extensive and fair—
Of varied fortune, and name, and birth
The millions are.
"I gather them all."

Many are white with the frost of years—
Many with woe—
Many bedewed with sympathy's tears
That ceaseless flow.
"I gather them all."

Many are bowing their pensive forms
Like ripeing grain,
Swayed by the fitful, passing storms,
Of grief or pain.
"I gather them all."

Many are bright as the early flowers
In perfect bloom—
Many are losing their God-like powers
And nearing the tomb.
"I gather them all."

Many are young, and free, and gay,
With beaming eye—
Many are aged and passing away
To yonder sky.
"I gather them all."

What a harvest is his—what a harvest of men,
Now gathering in!
Ah! tell me who's gathering this harvest, and when
Shall we cease from sin.
"I gather them all."

Ah! tell me what resper the sickle shall thrust?
Who conquereth?
Who tramples the millions of living to dust?
"I gather," says Death,
"I gather, them all."

From "The Leisure Hour."

The Spider Family.

(Continued from page 139.)

When we consider the gummy material with which spiders construct their lines and webs, and the rough hairy covering (with a few exceptions) of their bodies, it is somewhat surprising that we do not find them always stuck over with fragments of the minute fibres which they produce. This, indeed, would happen did they not take careful precautions to avoid it. They are very assiduous in keeping themselves clean. Spiders which appear to a careless observer as resting idly, in nine cases out of ten will really be found slowly combing their legs with their mandibles, beginning as high as possible on the thigh, and passing down to the claws. The flue which they thus comb off is regularly tossed away.

A wonderful structure is composed by a sort of spiders, natives of the tropics and of the south of Europe. One of these "mason spiders," as they have been justly termed, found in the south of France, usually selects for her nest a place bare of grass, sloping in such a manner as to carry off the water, and of a firm soil, without rocks or small stones. She digs a gallery a foot or two in depth, and of a diameter (equal throughout) sufficient to

admit of her easily passing. She lines this with a tapestry of silk, glued to the walls. The door, which is circular, is constructed of many layers of earth, kneaded and bound together with silk. Externally it is flat and rough, corresponding to the earth around the entrance, for the purpose of concealment; on the inside it is convex, and tapestried thickly with a web of fine silk. The threads of this door-tapestry are prolonged, and strongly attached to the upper side of the entrance, forming an excellent hinge, which, when pushed open by the architect and in-dweller, shuts again by its own weight. A similar nest is constructed by a large black spider in Australia. Mr. Hodgson thus describes it:—"The nest is built in a cylindrical form, two feet deep in the ground; the inside is beautifully round, and bound by webs, of the finest texture, gradually thinner towards the base. The lid is fastened on by strong webs spun by the 'mason,' and is as hard as bone, level with the soil; it is raised or shut at the choice of its occupant, and is very frequent on the plains of Australia. The inside is neatly finished and quite smooth."

Though spiders require atmospheric air for respiration, yet one species is aquatic in its habits, and lives not only upon the surface but below the surface of the water, contriving to carry down with it a sufficiency of air for the support of life during a considerable period of time. Its sub-aqueous nest is a sort of diving bell, and constitutes a secure and most ingenious habitation. This spider frequents slow-running streams, canals and ditches, where she may often be seen living in her diving-bell, which shines through the water like a little globe of silver. In the fen-ditches of Norfolk is found a very large spider, which forms a raft for the purpose of obtaining its prey with more facility. Keeping its station upon a ball of weeds, about three inches in diameter, probably held together by silken cords, it is wafted along the surface of the water upon this floating island, which it quits the moment it espies a drowning insect. The body thus seized, it devours at leisure upon the raft, under which it retires when imminent danger threatens it.

Of the hunting-spider, Evelyn has given a quaint account. "Of all sorts of insects," says he, "there is none has afforded me more diversion than the *venatores* (hunters), which are a sort of *lupi* (wolves) that have their dens in rugged walls and crevices of our houses—a small, brown, and delicately-spotted kind of spider, whose hind legs are longer than the rest. Such I did frequently observe at Rome, which, espying a fly at three or four yards distance, upon the balcony where I stood, would not make directly to her, but crawl under the rail, till, being arrived to the antipodes, it would stall up, seldom missing its aim; but if it chanced to want anything of being perfectly opposite, would, at first peep, immediately slide down again, till, taking better notice, it would come the next time exactly upon the fly's back; but if this happened not to be within a competent leap, then would this insect move so softly, as the very shadow of the gnomon seemed not to be more imperceptible, unless the fly moved, and then would the spider move also in the same proportion, keeping that just time with her motion as if the same soul had animated both these little bodies. Being arrived within the sphere of her reach, she would make a fatal leap, swift as lightning, when she never quitted hold till her belly was full, and then carried the remainder home." There is a small hunting-spider very common in our own country. Its back is striped with black and white, like a zebra.

Among the artifices resorted to by some spiders for their protection, the following practised by a large *Epeira*, of Brazil, is one of the most curious. When disturbed, standing in the middle, it violently jerks the web, which is attached to elastic twigs, till at last the whole acquires such a rapid vibratory movement that even the outline of the spider's body becomes indistinct. Edward Jesse, in his "Recollections of Natural History," informs us that at Hampton Court and East Mousley, he has discovered a spider which uses the same peculiar mode of preserving itself from its enemies. "In the day-time," he says, "this spider is motionless, at some spot on the ceiling of the room, but it remains in the centre of three fine threads, which it has thrown out, one end of each of which has its termination at the place where the spider is resting. On touching one of these threads ever so slightly, the spider instantly disappears. At first I thought that it had suddenly let itself fall to the ground, but after a short time I saw it in its original position. On disturbing it a second time I was enabled to ascertain that by means of its two fore-feet, which alone suspended it from one of the threads, the insect spun itself round with so much rapidity as to become perfectly invisible. This lasted for about half a minute, when I again saw the spider hanging on the thread by its two feet." The body of this spider is small and round; it has rather longer legs than those we commonly find in houses.

The care which insects take in depositing their eggs, and the provision which they lay up in many cases for the larvæ, are universally known. It is not common with them, however, to pay much personal attention to the eggs when laid, nor to have any communication with their young. But spiders are among the exceptions. They carry about their nest or egg-bag, which they protect with the greatest care; and even after they are hatched, the young ones are carried about on the mother's back.

In the article of food, there are some curious differences among the tribes of insects, as much in the manner as in the matter and quantity. Caterpillars will consume more than twice their own weight of leaves in a day. Some larvæ which live on flesh will in the course of a day grow to be two hundred times heavier; others again are extremely abstinent. A mite will live three months, or more, although glued down to a piece of glass. Edwards, a correspondent of the "Banffshire Journal," relates that having unwittingly sealed up a spider in a glass-case of stuffed birds, from which he desired to exclude the air, he was astonished to see the creature, which had made a web in one corner of the case, and placed itself in ambush, remain there, almost motionless, for the space of a year and more, and all this time without food. When the narrator furnished the account, the little spider seemed quite well and lively.

"Frogs, cats, and other animals," says a French observer, "are affected by natural electricity, and feel the change of weather, but no other animal more than myself and my spiders." Several other naturalists have corroborated the fact that spiders are greatly influenced by atmospheric changes; and on that account they have termed them "living barometers." If the weather is likely to become rainy, windy, or in other respects disagreeable, spiders fix the terminating filaments on which the whole web is suspended, unusually short. If, on the other hand, the terminating filaments are made uncommonly long, the weather will be serene, and continue so at least for ten or twelve days. If spiders be totally indolent, rain generally succeeds; though their activity during rain is certain proof

that it will be only of short duration, and followed by fair and constant weather. Spiders usually make some alterations in their webs every twenty-four hours: if these changes take place between the hours of six and seven in the evening, they indicate a clear and pleasant night. Sailors assert that when gossamer alights on the rigging of a ship, fine weather will prevail.

With the metaphysics of spiders I shall not interfere; I will, however, say a word to show that they do not proceed by a blind impulse, but that they accommodate themselves to varying circumstances. In the beautiful geometrical web of the garden-spider, many guys are required to keep it tense, and to prevent it from being blown away by the wind. These, however, cannot be fixed by any invariable rule, as they depend on the forms and distances of the various supports. Moreover, it is easy to see that they are distributed always according to the necessities of the case. If the position of a branch be altered, or a support taken away, a new guy is carried out to some convenient part; and when it comes to blow, the spider may be seen strengthening his "standing rigging" exactly at the places where his building is in want of most support. T. A. Knight, in his "Treatise on the Culture of the Apple and Pear," introduces this anecdote:—"I have frequently placed," he writes, "a spider on a small upright stick, whose base was surrounded by water, to observe its most singular mode of escape. After having discovered that the ordinary means of retreat are cut off, it ascends the point of the stick, and, standing nearly on its head, ejects its web, which the wind rapidly carries to some contiguous object. Along this the sagacious insect effects his escape; not, however, till it has previously ascertained, by several exertions of its whole strength, that its web is properly attached at the opposite end.

It has been said that man is the only animal that makes war on his own species; but insects, who outdo us in so many things, vie with us in that species of policy too. Spiders seem peculiarly gifted with this human propensity. M. Heaumont, who distributed about five thousand of these creatures in different cells, dividing them into parties of from fifty to two hundred, found that although they were well fed upon flies and other dainties, the stronger and more ferocious soon devoured the weaker; and they kept on at this kind of cannibalism until they had almost literally destroyed each other, for only one or two were found in each cell.

Several species of spiders are venomous; but I never heard of a well-authenticated case where death had been caused by their bite or sting. Schenck, and other old writers, tell us of the strange effect of the bite of the tarantula, a species of spider found all over the south of Italy, and that the wound could be cured only by music and hard dancing. This belief, however, does not prevail at the present time; the inhabitants of the city of Tarentum have never witnessed any circumstance of the kind; and the Neapolitans do not fear the tarantula's bite, for any of them will hold it in his hand without hesitation. The fable may be founded upon the fact that the heat and insalubrity of the climate produce certain nervous affections, which are soothed and comforted by the charms of music.

Quicksilver Mines in California.—Among the inexhaustible resources of California, quicksilver is one of the most interesting and profitable, for the simple reason that the cost of mining and extracting the metal from its ore, the cinabar, is the least expensive of all the costly and valuable ones, such as gold, silver, and copper. The yield of

quicksilver is from 75 per cent. down to 25 per cent., and the mode of separating is quite simple.

The New Almaden mine has sixteen furnaces producing daily one hundred flasks of seventy-five pounds of quicksilver each. There are numerous other cinabar mines, and the likelihood is that quicksilver will soon form an important item of export.

Cinnabar, when ground fine, is called vermilion. It was made an article of traffic, by the Ind along the coast, as their red paint. From thence the early white settlers of California learned the locality.

Musings and Memories.

THE SPIRIT'S TEACHING.—A SKETCH OF C. H. STEINHOFFER.

C. H. Steinhoffer, tired of the oppression, temporal and spiritual, which he felt in his native land, began to look towards America, as a desirable retreat for himself and children. He had previously married, and as one who in all things desired that his way might be directed of the Lord he was favoured in this connexion also. In the year 1819, he left his beloved wife with three children, and sailed to America, to look after homes for them there. On the passage the ship encountered an equinoctial storm, of so violent character that many vessels were lost in it. For three days they were tossed by wind and waves the sails were taken from the masts, and the upper part of the masts were also taken down. Ever thinking that the captain thought could be spared was thrown over. The pumps were broken, and the bailing which could be done was not sufficient to relieve the ship, which settled on one side. A this time the captain took a farewell of all, saying "we must all perish." C. H. Steinhoffer was preserved above fear. The God whom he had deavoured faithfully to follow in the time of a parent security, was felt to be near in this season of danger, administering comfort and hope. The captain giving orders to his men to cut off the mast they approached them with their axes to fulfil the command. On seeing this, Steinhoffer was struck with fear, and he beckoned to the captain to stop them, as he did not think it was according to the Lord's will. The captain directed the cabin boy who could understand German, to enquire of the doctor, for so he was called, what he meant. He had withdrawn to his berth, and opening the book his mother's present, he read the passage in Luke ch. 8, 5th verse, where Jesus said, "fear not, on believe." He went with the book open in his hand to the captain, and giving his belief of what would be right, the cabin boy translated for the captain what he said. This put that officer to a stand. He knew not whether to use his own judgment, or to be directed by the doctor. At last he pulled out his watch, and said to the boy, "tell him I now eleven o'clock, I will wait one hour. If, at twelve o'clock the wind does not change it must be done." This relieved the mind of his anxious passenger. He felt assured from the impression on his mind, that their heavenly Father would cease his mind to cease by that time, and so it proved. At noon the wind had changed, and the sun shone broken through the clouds. The captain and his men were overcome with gratitude, and kneeling others on the deck, gave thanks to the Lord Most High for the great deliverance. A week after the ship was in safety at its port of Philadelphia.

At the end of three years, C. H. Steinhoffer returned to his family and diligently prosecuted a study of medicine. Having perfected himself therein in the year 1824, he, with his family

crossed the mighty ocean, and took up their residence in Tioga County, Pennsylvania, where a settlement of Germans had been formed. The mission proved too healthy to render his profession a lucrative one there, and so in the year 1828 removed to Baltimore in Maryland. Here he remained for seven years, following his profession, and endeavouring to honour his Heavenly Father in faithful obedience to his requirements. Whilst residing there he was called on to manifest his love to his Creator by a cheerful surrender of his loved wife, who was taken from him to the mansion prepared for her in heaven, as one of them who had loved the Lord Jesus Christ in sincerity. Coming tired of a city life, and of associating with empty professors of religion around him, he sought a farm in Harford County, Maryland, and in leaving Baltimore, he retired with his six children to this quiet country retreat. From the singular path in which he had been led, he was enabled to speak of the sure mercies of our Heavenly Father, the ever present Helper of his people and trusting children. He delighted to share to those around him, that we had the same God for our God who had spoken to the saints of old, whose wonderful works were recorded in the Holy Scriptures, and that the immediate revelation of his will to the children of men had not ceased. He was in limited circumstances as to the treasures of this earth, yet he was rich in faith, and believed that the Lord would provide for his children if they only were faithful to him. He often prayed fervently that the Lord might cut off their lives, rather than that they should be allowed to forsake him.

As he lived in the Lord's fear, so he died in his fear, and we trust that now, with faith confirmed by certainty, he magnifies the Lord's grace which led him and led him all his life long. His children have all passed away in their youth save one, who, by endeavouring, through the Lord's assistance, to be obedient and faithfully following the leadings of the Holy Spirit, whilst patiently labouring to walk in the path of duty, and with her husband, to rear her children in the Lord as lambs of Christ's fold.

The Orange-Tree.—In the garden of a man of faith, Gotthold was shown a young orange-tree bearing fruit, part of which was almost ripe and green, and still small and green. He was told that in warm countries, such as Spain and Italy, where it attains to its full height and perfection, the orange-tree is found, so to speak, continually serving man; much as ripe and half-ripe fruit, and even blossom, may all be seen upon it at one and the same time. He thereupon replied: It would be strange were it not for the severity of the cold in winter, when they burst the bud, and are gradually adorned by nature with leaves, and flowers, and fruit, you may already find the leaf and fruit upon which they intend to gain our love and admiration in the year to come. In harvest, too, the foliage drops off, these remain as the hope of the following summer, and can be recognized and distinguished by the skillful gardener. From inanimate creatures let us learn our duty. Nature continues in incessant action; and having received from her omnipotent Creator the command to minister to man with her fertility, she ceases not, but works, germinates, and produces succession leaves, flowers, and fruits to the utterance of her ability. And why should we not do the same, seeing that God has not only made and sustained, but even watered us with the blood and life of his dear Son, to the end that we may bear the fruits of love and gratitude both to him and

our neighbor? There can be no doubt that in all the plants of righteousness which He has planted, there is an ever active and prolific power; for, in the remarkable words of the Apostle, "As many as are led by the Spirit of God they are the sons of God." (Rom. 8: 14); and again, "The love of Christ constraineth us." (2 Cor. 5: 14). When they have performed one work of love, or borne one fruit of righteousness to the glory of God and the service of the brethren, they are already in spirit bearing fresh blossoms and pondering on others. Be it summer or winter, never do you find them without good fruit, or, at least, never without blossoms, leaves, and fruit-buds; by which I mean holy and sincere desires and resolutions to advance God's glory, and be serviceable to mankind. They are *partakers of the Divine nature*, (2 Pet. 1: 4); and have the spirit and the mind of Christ, (1 Cor. 2: 16.)

Jesus, my Lord, without thee we can do nothing. Abide thou in me, and I in thee, (John 15: 5); and then never shall I want either fruitfulness or fruit.—*Gotthold's Emblems.*

The inward revelation of the will of God.—It is my belief, that the inward revelation of the will of God to man by the operation of his Holy Spirit, is the only ground of hope of having our understandings opened, availing to see into the mystery of the redeeming love of God, in and through Jesus Christ our Lord. It is only by a due submission to the inwardly revealed will, that we can perceive and feel the advantage and efficacy of the sacrifice of our dear Redeemer on Calvary's mount, where I believe he tasted death for every man.—*George Witley.*

THE FRIEND.

FIRST MONTH 3, 1863.

We have entered upon another year. That which has just closed has been an eventful one; wherein the stability of our government has been severely tested and the great interests of the nation sorely shaken, causing the gloom of its latter days to stretch its shadow over the prospect of its successor, just ushered in.

The divisions of time have other than mere chronological value. As one apportionment fades into another, and we commence a new measure of the invaluable gift, the mind naturally reverts to the striking events that have marked the year just gone, and in recalling their succession realizes the rapidity with which time passes away. If our views are clear and our feelings right respecting the great object, for which a brief existence here has been bestowed upon us, the inquiry will hardly fail to present itself, how far that object has been attained by the renewing of the heart, and we been brought to love God supremely and our neighbour as ourselves? An inquiry which can be rightly answered, only through the aid of Him who searcheth the heart, and showeth unto man what his thoughts are.

Each one has a work to do for him or herself, and for his or her generation. The continuance of a generation is short. That to which we belong and to which we owe service, like ourselves, is quickly passing away, and the performance of our duty will not admit of lingering delay. The warning voice of the new year sounds loudly in the listening ear, whatsoever thy hands find to do, do it with thy might.

Little has taken place in the affairs of our distracted country during the past twelve months,

that can minister to the self-reliance of the statesman, or gladden the heart of the christian. The confident predictions, repeatedly put forth, of an early termination to our desolating war, have proved untrue; blood and treasure have been poured out without stint, but without effecting the object aimed at; while the whole aspect of the political horizon, overcast as it is with portentous clouds, may well make those on whose shoulders authority and responsibility rest, as well as those who are longing for the peace and quietude of our beloved country, look forward with anxious foreboding to the developments of the year we have just entered on.

Blind as we are to the future, and unprovided with any means for discovering the events to which it will give birth, we are yet prone to harass ourselves with attempts to penetrate its secrets; and often burden our spirits with not a little self-inflicted suffering, by the anticipation of calamities that never occur. It may be so on the present occasion, and those who live to see the end of this year may then have to rejoice that when the "re-buke" seemed most severe, and the "shaking" most likely to overturn that which remained, help and deliverance were brought about in a way unsought and unlooked for by those who have been the principal actors in the dreadful convulsion. He who looks upon the passing events in our country's history merely with the eye of human reason, and seeks to forecast the results of its present struggle by calculations respecting sectional strength and resources, or by the working of political schemes and combinations, may readily involve himself in inextricable perplexity; may foresee unavoidable dangers that excite his fears; may destroy his hopes and paralyze his energies by the unwelcome conviction of the incapacity of the means he has relied on to ward off or to surmount the disorganization and suffering that attend the nation and threaten its future existence. But the believing christian views all these things in a different light; judges of their present effects and future consequences by a different law, and through all, recognizes a controlling Power that disposes of man's plans and efforts in a way to bring about its own designs. While participating more or less in the weal or woe of the living, moving world with which he is necessarily brought in contact; sharing in the burdens indispensable to the support of the government that gives him protection, and rejoicing in every just measure and every righteous gain that adds to its stability and strength, his dependence for its preservation and prosperity is upon the interposition and protection of the Almighty; knowing full well that it is He who buildeth up and supports, or casteth down and destroys the kingdoms of the earth.

If ever one of our fellow-countrymen who professes to acknowledge the all-wise and all-powerful Jehovah as the upholder and ruler of the universe, could be brought truly to believe in this great truth, and to act in accordance with its teachings, we might enter upon the new year with a well-grounded assurance of a speedy termination to our country's heavy affliction. Let our readers see to it that they set the example.

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 18th ult. The British Government has offered, with the consent of the great Powers, to cede the Ionian Islands to Greece. President Lincoln's message to Congress is mainly discussed in relation to his scheme for the liberation of the slaves, and the English papers, almost without exception, pronounce his scheme to be impracticable. The London Times calls it "a labored substitute for the edict of September, and the dream of a very weak man." A general meeting of the Atlantic Telegraph Company was held at London on the 12th. PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Dr. Johnson and Mary Knowles.

In Boswell's Life of Johnson, there is a brief notice of a conversation between the Doctor and L. Knowles, relative to a young woman—whose name is not there given—who had changed her religious opinions, which called out the Doctor's usual overbearing dogmatism and ill manners. As narrated by Boswell, the assertions of Johnson show that he knew very little about the spirit and use character of the christian religion, and that with all his learning, he had failed to discover that persons may be rightly guided by a Light, far clearer and more certain than human reason.

In looking over the Common-Place Book of a relative, some time since deceased, I found the following extract from a letter written by Anna Seward—who was present when the conversation alluded to occurred—to Boswell, giving some account of it and the previous circumstances. I think it will interest the readers of "The Friend."

Extract of a Letter from Anna Seward to Boswell, on the subject of Dr. Johnson.

You ask me for the minutes I once made of a certain conversation which passed at—Dilly's—a literary party, in which Dr. Johnson and Mary Knowles disputed so warmly; as you seem to have an idea of inserting this dispute in your future meditated work of the life of Dr. Johnson, it is necessary something should be known concerning the young person who was the subject of it.

Miss Jenny Harry *was* (for she is now no more) the daughter of a rich planter in the West Indies; he sent her to England to receive her education at the house of his friend—, where an ingenious Quaker lady, M. Knowles, was a frequent visitor. He affected wit, and was perpetually rallying M. Knowles on the subject of her Quaker principles, in the presence of this young, gentle and ingenious Jenny Harry, who, at the age of eighteen, had received what is called a proper and polite education, without being much instructed in the nature and grounds of her religious belief.

M. Knowles was often led into a serious dispute of her devotional opinions upon these visits to Barn-Etous. You know with what clear and graceful eloquence she speaks upon every subject, for antagonists were shallow theologians, and op-

posed only idle and pointless raillery, to duty, and long-studied reasoning, on the precepts of Scripture, delivered in persuasive accents and harmonious language. Without any design of making a proselyte, she gained one. Jenny Harry grew very serious, and meditated perpetually on all which had dropped from the lips of her Quaker friend, till it appeared to her that Quakerism was true christianity. Believing this, she thought it her duty to join, at every hazard of worldly interest, that class of worshippers. On declaring these sentiments, several ingenious clergymen were employed to talk and reason with her; but we all know the force of first impressions in theology, and M. Knowles' arguments were the first she had listened to on this important theme. This young lady was reasoned with, and threatened, in vain; she persisted in resigning her splendid expectations, for what appeared to her the path of duty. Her father, on being informed of her changing her principles, wrote her that she might choose between an hundred thousand pounds, and his favour, if she continued a church-woman; or two thousand pounds and his renunciation, if she embraced the Quakers' tenets. She lamented her father's displeasure, but thanked him for the pecuniary alternative, assuring him that it included all her wishes in point of fortune. She soon after left her guardian's house, and boarded in that of M. Knowles, to whom she frequently observed, that Dr. Johnson's displeasure (whom she had often seen at her guardian's, and who had always been fond of her) was amongst the greatest mortifications of her then situation; and once she came home in tears, and told her friend she had met Dr. Johnson in the street and had ventured to ask him how he did, but that he would not deign to speak to her, but passed sorrowfully on. She added, "You and he are to meet soon in a literary party; plead for me."

You remember our all dining together at—Dilly's, and the conversation after dinner, which began with M. Knowles' saying—

"I am to entreat thy indulgence, Doctor, towards a gentle female, to whom thou used to be kind; and who is unhappy in the loss of that kindness; Jenny Harry weeps at the consciousness that thou wilt not speak to her."

"Madam, I hate the odious wench, and desire you will not speak to me about her."

"Yet, what is her crime, Doctor?"

"Apostasy, madam, apostasy from the community in which she was educated."

"Surely, Doctor, the quitting one community for another, cannot, in itself, be a crime, if it be done from a motive of conscience. Hadst thou been educated in the Romish church, I must suppose thou would have abjured its errors; and there must have been merit in the abjuration."

"Madam, if I had been educated in the Romish church, I believe I should have questioned my right to quit the religion of my forefathers; well, therefore, may I hate the arrogance of a young wench; that sets herself up for a judge of theological points, and deserts the religion in whose bosom she was nurtured."

"I hope she has not done so; I hope the name of christian is not denied to sectaries."

"If the name is not, madam, the common sense is."

"I will not dispute that point with thee, it would carry us too far; suppose it granted, that in the eyes of a simple girl, the weaker arguments appeared the strongest, her want of better judgment demands thy pity, not thy anger."

"Madam, it has my anger, and always shall have it."

"Consider, Doctor, she must be sincere; what a noble fortune has she sacrificed?"

"Madam, madam, I have ever taught myself to consider that the association of folly cannot extenuate guilt."

"Alb, Doctor, can we suppose the Deity will not pardon a defect of judgment, (if such it should prove), in the breast where the desire of serving him, according to his ideas, in *spirit and in truth*, has been a preferable consideration to that of worldly interest?"

"Madam, I pretend not to set bounds to the mercies of the Deity; but I hate the wench, and shall ever hate her. I hate all impudence, but the impudence of a chit's apostasy, I nauseate."

"Alas! Doctor, Jenny Harry is the most timid creature breathing. She trembles to have offended her parent, though far removed from his presence. She grieves to have offended her guardian, and perhaps she grieves yet more to have offended Doctor Johnson, whom she loved, admired and honoured."

"Why, then, Madam, did she not consult the man she pretended to love, admire and honour, upon her new-fangled scruples; if she had looked up to that man with any part of that respect she professes, she would have supposed his ability to judge of *fit and right*, at least equal to that of a raw wench just out of her primer."

"Ah, Doctor! remember it was not among the wise and learned that Christ selected his disciples. Jenny thinks Dr. Johnson great and good, but she also thinks the Gospel demands a simpler form of worship than that of the established church; and that it is not in wit and eloquence to supersede the force of what appears to her a plain and regular system, which cancels all typical and mysterious ceremonies as fruitless and even idolatrous, and asks only simple obedience and the homage of a devoted heart."

"The homage of a foot's heel you should have said, madam, if you will plague me about this ridiculous wench."

"Suppose her *ridiculous*, she has been religious and sincere; will the gates of heaven be shut to ardent and well-meaning folly, whose first consideration has been that of apprehended duty?"

"Pshaw, who says it will, madam?"

"Then, if heaven does not shut *its* gates, shall man shut his heart? if the Deity accepts the homage of such as sincerely serve Him under every form of worship, Doctor Johnson and this little, simple girl will, (it is to be hoped,) meet in a blessed eternity, whither earthly animosities must not be carried."

"Madam, I am not fond of *meeting fools any where*, they are detestable company; and while it is in my power to avoid conversing with them, I shall certainly exert that power: and so you may tell the odious wretch, who you have persuaded to believe himself a saint, and whom soon I suppose you will convert into a preacher, but I will take care she does not preach to me."

The loud and angry manner in which he thundered on these replies to his calm but able antagonist, affrighted us all, except yourself, who gently, not sarcastically, smiled at his injustice; I remember you whispered me, "I never saw this mighty lion so chafed before."

Effects of Trees on Climate.—The sun robs the soil of its moisture, and the wind robs it of its heat, the two elements that have an important bearing on the resulting crops. Now, it is well known that forest belts retard the rapid sweep of the wind, and hold it in check; if you close the doors and windows on the lee-side of a house, and open those to the windward, the effect is but slight; now open the opposite door, and you have a strong current, that will at once reduce the temperature of the room; close the door, and the equilibrium is restored. Just such is the effect on a large scale, where broad belts of woodland cross the wind's path, for it should be borne in mind that wind, like water, has weight, and is checked in its progress by rough and uneven surfaces; it cannot pass over high mountains, and its onward sweep is comparatively slow over extended forests, while on the smooth surface of the prairie we see the reverse. A fact so plain should have long since attracted the attention of the farmers, and suggested a remedy. During the spring-months we have two currents of air that generally combine, and as one or the other becomes the controlling one, we have a sudden shifting from the south-west to the north-west. The cold current coming from the north, following the base of the Rocky Mountains until it meets the trade-winds of the south, both are then deflected in an easterly direction; and in a few days after the first of April, the steady flow of the trades are too much for the northern antagonist, and we have an almost uninterrupted flow of south-west wind, yet always continuing, mixed with it, the cold current that has travelled along the base of the mountains, charged with the dampness of melting snow, and the keen frosty air of the Arctic belt.

Thus the south-west wind, until the summer has travelled far north, is always more or less cold or damp, and when it has an uninterrupted sweep over the newly-sown grain, robbing the soil of its heat, cannot otherwise than have a tendency to check its growth. To check this effect, we must plant our wall of timber across its pathway, which will be on the west sides of our fields, with a wing to the east from either point. This will arrest the progress of the wind from all westerly points; but we should be the most particular to guard the south-west side, as from that point we have the most constant currents. A single row of trees has a wonderful effect in checking the force of the wind, and a belt two rods in width will entirely check it, and it will go over. In all sheltered nooks we observe with what vigour the grass, seed, and grain come forward, in all cases ripening several days in advance of that exposed to the winds. Nor does the effect stop with only maize—the quantity and quality are always improved. In the fruit crop this effect is always the more decidedly apparent, and so much so has this become apparent to cultivators of fruit, that it is generally conceded that shelter must be had from

the winds by timber belts, close planting of low-headed trees, or high board fences; but the latter has no beauty, is expensive, and should never take the place of timber belts, so full of life and beauty.—*Chicago Tribune.*

The Message to Ephesus, in its Bearing on Gossiping.

For "The Friend."

Amid the wondrous beauty and fervour of description of the Patmos vision,—he that "saw the heavenly city," did not forget to transmit to the various christian churches of the earth, the important messages sent to them by Him who "holdeth the seven stars in His right hand." And one of the most beautiful of these, is the loving and tenderly-reproving message to the church of Ephesus:—"These things, saith He that holdeth the seven stars in his right hand, who walketh in the midst of the seven golden candlesticks; I know thy works, and thy labour, and thy patience, and how thou canst not bear them which are evil: and thou hast tried them which say they are apostles and are not, and hast found them liars: and hast borne, and hast patience, and for my name's sake hast laboured, and hast not fainting." How encouraging is this! Every time that these have laboured for his name's sake, is known to Him who, amid the glorious light of the heavenly city, has not for one moment forgotten those who, walking in the oft-times overclouded pathways of earth, are striving to labour for him there. Not one little labour of love forgotten if it bear the inscription, "for his name's sake."

After this precious acknowledgment that all is known to Him, follow the tender words of reproof: "Nevertheless, I have somewhat against thee, because thou hast left thy first love." How touching is this! and how many of us there are at the present day, who deem ourselves belonging to the one great christian church, whose members are recognized of God, wherever they are found,—who, in reading these words to Ephesus, can acknowledge, "to us was the word sent as well as to them."

It is written, "By your fruits ye shall know them." And one of the sweetest fruits of a first love to Him who loved us, and gave himself for us," is that charity which "thinketh no evil," and therefore cannot speak evil of a neighbor;—that love which, in view of past forgiveness, increaseth day by day. And the christian thus warmed into new life and thoroughly awakened, leaves "those things which are behind," and presses forward; and with the increase of this love it flows forth to his fellow-beings also. And little can he who singeth at heart the new song of the kingdom, enjoy the many discordant voices that are continually telling of a neighbour's faults, taking a pleasure in pointing out to the world the many deficiencies that are on every side, and which, they who see them in others, forget to look for at their own door. And want can be more clear than that those who do listen to, and take part in, this speaking ill of a neighbour, have "left their first love." Where is there a stronger proof that the seducing pollutions of this earth have been yielded to; that the love of a wicked world is crowding from the heart, that "love of Christ that passeth knowledge?" Said, indeed, will it be for us, if at the last day we should, on this account, hear the solemn words:—"I have somewhat against thee, because thou hast left thy first love."

How is it, why is it, that the Lord has this record against so many in our society? Why is it that the habit of gossiping has become known abroad as an almost incurable evil in many, many of its members? We cannot say that it is because God

has withdrawn himself from us, but must we not acknowledge that we have withdrawn ourselves from him?

One of the early directions of the apostle to his brethren was—"Whatever ye do, in word or in deed, do all in the name of the Lord Jesus"; and how totally in opposition to this is the habit of gossiping—for where is the man or woman young or old, who, in gossiping about another could say that they did it in the name of the Lord Jesus? How different is this from His own beautiful example. He sought not to expose errors in others, but to draw forth the good in them. He did not turn away from any to tell to others, their evil ways, their failing or shortcomings; but with gentleness and love, he won them from the evil of their ways.

We cannot but acknowledge—one and all of us—that we have sinned against God in this thing for in his sight we feel that we have not been, in the past, sufficiently careful not to talk against others ourselves, nor have we been continually on our guard, lest we should speak of them and their affairs in a way that would afford room for gossip; and there is another very important question to which we can give but a negative answer,—Are we continually guarding against *listening to evil* of others?

And now, upon the threshold of the new year let us listen further to those words of reproof:—"Remember, therefore, from whence thou art fallen; and repent and do the first works, or else I will come to thee quickly, and will remove thy candlestick out of his place, except thou repent." And though we may find it a hard thing to break off from the evil of our ways, yet God's grace is sufficient for every time of need; and as we see his blessing day by day, and hour by hour, and resolve that as we are strengthened by him, both for the coming year and for the future, "whatsoever we do in word or in deed," we will "do all in the name of the Lord Jesus," we will be cheered by the beautiful closing promise of the message to Ephesus:—"To him that overcometh will I give to eat of the tree of life, which is in the midst of the paradise of God."

Twelfth mo. 29th, 1862.

For "The Friend."

Preliminary Report of the Eighth Census, 1860.

(Continued from page 138.)

The excess of males in the population of the United States is a striking fact, as reported for the year 1860. It is probable that the destruction of human life in the war would now show a different state of things in this respect.

"The excess of male population in the United States, compared with that of the other sex, presents a marked difference with respect to other countries. While in the United States and Territories there is an excess of about 730,000 male in more than 31,000,000 of people, the females of the United Kingdom of Great Britain and Ireland outnumber the males some 877,000 in a population of little more than 29,000,000. This disparity is the result of many causes. The emigration from the mother country of men in the prime of life and the large demands of their military, naval and marine service, seem to account for some proportion of the excess of females; while immigration from all parts of Europe, our small military and naval service, and the few losses we have sustained from the contingencies incident to a state of war, have served to exhibit a larger male population, in proportion, than can be shown in any country of the globe.

"The great excess of males in newly-settled ter-

teries illustrates the influence of immigration in affecting a disparity in the sexes. The males of California outnumber the females near 67,000, or but one-fifth of the population. In Illinois the excess of males amounts to about 92,000, or one-twelfth of the entire population. In Massachusetts the females outnumber the males some 37,600. Michigan shows near 40,000 excess of males; Texas, 36,000; Wisconsin, 43,000. In Colorado the males are as twenty to one female. In Utah the numbers are nearly equal; and while in New York there is a small preponderance of females, the males are more numerous in Pennsylvania."

As regards Slavery among the Indians, we learn the following:—

"A new element has been developed by the present census, viz: that of the statistics of negro slavery among the Indian tribes west of Arkansas, comprising the Choctaw, Cherokee, Creek, and Chickasaw nations; also the number of white and free coloured population scattered throughout these tribes; all of which, with an estimate from the most reliable sources of the whole number of aborigines, will be found appended to the population tables. By reference to this table it will appear that the Choctaws held 2,297 negro slaves, distributed among 385 owners; the Cherokees, 2,504, held by 34 owners; the Creeks, 1,651, owned by 267 Indians; and the Chickasaws, 917 to 118 owners, so, under all the circumstances of slavery everywhere, the servile race is very unequally distributed, and will appear to be the case with the Indian tribes. While one Choctaw is the owner of 227 slaves and one of the largest proprietors own 638, averaging early 64, the slaves average about six to each owner of slaves in that tribe, while the Indians number about as eight to one slave."

From the information given relative to the escape of slaves, it would appear that the number ascending during the last decade, was much less than has been represented.

"The number of slaves who escaped from their masters in 1860, is not only much less in proportion than in 1850, but greatly reduced numerically, the greatest increase of escapes appears to have occurred in Mississippi, Missouri, and Virginia, while the decrease is most marked in Delaware, Georgia, Louisiana, Maryland and Tennessee."

"That the complaint of insecurity to slave property by the escape of this class of persons into the free States, and their recovery being impeded, whereby its value has been lessened, is the result of misapprehension is evident, not only from the small number who have been lost to their owners, but from the fact that up to the present time the number of escapes has been gradually diminishing to such an extent that the whole annual loss to the southern States from this cause bears less proportion to the amount of capital involved than the daily variations which in ordinary times occur in the fluctuations of State or government securities in the city of New York alone."

"From the tables annexed, it appears that while near escaped from their masters 1,011 slaves in 1850, or one in each 3,165 held in bondage, (being about $\frac{1}{3}$ of one per cent.) during the census year ending June 1, 1860, out of 3,949,557 slaves, we escaped only 803, being one to about 5,000, or at the rate of $\frac{1}{5}$ of one per cent. Small and inconsiderable as this number appears, it is not preceded that all missing in the border states, much as any considerable number escaping from their owners in the more southern regions, escaped into the free States; and when we consider that in the order States not 500 escaped out of more than 1,000,000 slaves in 1860, while near 600 escaped in 1850 out of 910,000, and that at the two pe-

riods near 800 are reported to have escaped from the more southern slaveholding States, the fact becomes evident that the escape of this class of persons, while rapidly decreasing in ratio in the border slave States, occurs independent of proximity to a free population, being in the nature of things incident to the relation of master and slave."

"It will scarcely be alleged that these returns are not reliable, being, as they are, made by persons directly interested, who would be no more likely to err in the number lost than in those retained. Fortunately, however, other means exist of proving the correctness of the results ascertained, by noting the increase of the free coloured population, which, with all its artificial accretions, is proven by the census to be less than 13 per cent, in the last ten years, in the free States, whereas the slaves have increased 231 per cent., presenting a natural augmentation altogether conclusive against much loss by escapes; the natural increase being equal to that of the most favoured nations, irrespective of immigration, and greater than that of any country in Europe for the same period, and this in spite of the 20,000 manumissions which are believed to have occurred in the past ten years. An additional evidence of the slave population having been attended from year to year, up to the present time, with fewer vicissitudes, is further furnished by the fact that the free coloured population which, from 1820 to 1830 increased at the rate of 36 1-5 per cent, in 1840 exhibited but 20 4-5 per cent. increase, gradually declining to 1860, when the increase throughout the United States was but one per cent. per annum."

There is much suggestive of reflection upon the probable change which comparatively few years will make in the state of our country as regards the location of its population, in the following remarks upon the change of representation in Congress.

"It will be perceived that the preponderance of representation is rapidly but steadily advancing westward, and that regions unorganized and with scarcely a civilized inhabitant in 1790, now form populous states, with a larger representation than was enjoyed by all the States at that time. The increase of population and, as a consequence, of representation in the new States of the west is prominently illustrated by a comparison of the representation of Illinois, Indiana, Iowa, Michigan, Ohio, and Wisconsin, under the census of 1860, with that of Virginia, Massachusetts, Pennsylvania, New York, North Carolina, Maryland, and Connecticut, the six States having the largest representation respectively. Under the census of 1790 Virginia had nineteen representatives, the largest number of any of the original States under the first census. Her representation is reduced under the census of 1860 to eleven, while Ohio, which was admitted into the Union in 1802, has nineteen representatives. Indiana, admitted into the Union in 1816, has the same number of representatives as Virginia; and Illinois, admitted into the Union in 1818, has fourteen representatives under the new apportionment. Massachusetts, with a representation of fourteen under the census of 1790, is reduced to ten under the new census. Pennsylvania and New York, the one with thirteen representatives and the other with ten under the first census, notwithstanding the immense resources of those two great States, have, under the census of 1860, the one thirty-one and the other twenty-three representatives. The ratio of increase in population in those two States since the census of 1850 was 25.51 per cent. in New York, and 25.71 per cent. in Pennsylvania, while in Illinois the ratio of increase during the same period was 101.04 and in

Indiana 86.83 per cent. The probability is, therefore, should the ratio of increase of population continue in the States of the west as indicated by the census of 1860, that in the course of three or four decades New York and Pennsylvania, now the two most powerful States, may yield to some of their younger sisters, as Virginia, sometimes, not inappropriately, termed the mother of States, first yielded to them, and has now yielded to two new States carved out of territory originally her own."

"North Carolina, under the census of 1790, had ten representatives; Maryland eight, and Connecticut seven. These three States have under the census of 1860, (the first, seven; the second, five; and the third, four representatives,) an average representation of sixteen instead of twenty-five, as under the first apportionment. Thus the power of the old States declines, while that of the new States west of the Alleghenias increases more rapidly than they lose. Iowa, admitted into the Union in 1846, Michigan in 1837, and Wisconsin in 1848, have six representatives each under the last apportionment—two more than Connecticut or Maryland, and only one less than North Carolina. And here it must be borne in mind that the ratio of representation under the census of 1790 was one representative to every thirty-three thousand of representative population, while it is fixed by the last census at one representative for every 127,000."

After giving a table exhibiting the relative mortality in the great natural divisions of our country, ranging from 0.93 in "The North Western States," to 1.51 per cent in "The Lower Mississippi Valley," the report says:—

"The conclusions from the census, thus briefly stated, appear entirely accordant with the topography of the country, and illustrate how far the human system has power to withstand the influence of diverse temperatures and climates. Leaving out the Allegheny region, and its extension through the Catskill and White mountains to Maine, the surface of the populated States nowhere rises more than a few hundred feet above the sea level. The extent from north to south, through twenty degrees of latitude, presents an agreeable interchange of hill and valley, rivers, woods, and plains; most happily situated between the rigors of the polar and the flaming heat of the tropic regions. Hence, with the exceptions indicated, a considerable uniformity might be expected in the prevailing rate of mortality; and such is, in fact, the result of the census. There appear no marked deviations on a large scale from the common standard, or mean of the two enumerations in 1850 and 1860, except in the divisions already specified, where climatic causes of a diverse nature are plainly in operation."

"The first division, comprising the *great Atlantic plain*, was remarked by the early explorers in America on account of its uniform level over a length of a thousand miles along the coast, and extending from fifty to one hundred miles inland. The sea and shore meet, for the most part, in a mingled series of bays, estuaries, and small islands rising just above the tide. The low grounds in summer abound in miasm, and a single night's exposure in the rice-fields of Carolina, is said to be very dangerous, and carefully avoided. But away from the cypress swamps and marshes, there is generally a sandy soil; and the aggregate mortality is found by the census to rise above, though not much above, the general average of the whole country. In every few years, however, it is well known that the low portions from Norfolk, southward and extending around the Gulf of Mexico, are visited by epidemic disease, when the mortality rises much higher than the ordinary amount."

"In respect to the second division it may be ob-

served, that while the low valley or trough of the Missouri river, for example, is five miles in width, the alluvial tract of the Mississippi is often from forty to fifty miles in breadth. On each side of this river plain are the line of bluffs, which are very steep, and in some places rise two or three hundred feet in height. The river is described as coursing its way between these bluffs, so called, here veering to one side; there, to the other, and occasionally leaving the whole alluvial tract on one side. The annual flood commences in March, continuing two or three months. During this time the river plain is submerged to the not unusual depth of fifty feet below the junction of the Ohio river, the additional depth decreasing to ten or twelve feet at New Orleans. The lateral overflow is principally on the western side, and covers an area from ten to fifty miles wide. A periodic inundation of such vast dimensions will rank among the grandest features of the western continent. Towards the last of May the water subsides, leaving the broad alluvial plain interspersed with lakes, stagnant pools, and swamps, abounding in cotton-wood, cypress, and coarse grass. The flood leaves also a new layer of vegetable and animal matter exposed to fermentation and decay under the augmenting heat of the summer sun. When, in addition to this, the air becomes unusually damp during the hot season, the conditions of epidemic disease, according to medical authority, are fully present. What the Roman poet expressively termed the 'cohort of fevers' then advances upon the human race as it were in destructive conflict; the abundant alluvial matter decomposing under a high temperature, with occasionally a more humid and stagnant atmosphere. These are stated to be the conditions by which the mortality of the lower Mississippi valley has reached the high rate indicated by the census. The portion embraced in the foregoing classification was terminated on the north with the county of Cape Girardeau, for the reason that the hilly country in that vicinity is connected with a rocky stratum traversing the beds of both the Mississippi and Ohio rivers. From this great chain southward to the Gulf of Mexico is an extent of between six and seven hundred miles. The entire valley according to geologists, may have been once an arm or estuary of the ocean extending inland from the Gulf of Mexico. The present influence of so large an area of alluvial matter must pervade the adjacent borders to a certain undefined extent.

The third division, or *Alleghany country*, is exhibited by the statistics as a region of great salubrity. It consists of high ridges running nearly parallel with the sea-coast through an extent of nine hundred miles, with a breadth varying from fifty to two hundred miles. The ridges are generally well watered and wooded to the summit, and between are extensive and fertile valleys; they are known as the Blue ridge, Alleghany ridge, North mountain, Cumberland ridge, and others. The region has been termed an elevated plateau or water-shed, whence the rivers flow eastward to the Atlantic and westward to the Mississippi and Ohio valleys. The ridges being for the most part about half a mile high, appear to exercise no other influence on the climate than what is due to mere elevation, thus securing a pure atmosphere and other conditions favourable to the growth of a healthy and vigorous population.

"On the *Pacific coast* the seasons of the year have an entirely different type from that of the eastern United States. A cold sea current apparently cools down the temperature of summer, so that July is only 8° or 9° Fahrenheit warmer than January, and September is the hottest month.

From this cause, Indian corn fails to come to maturity, although wheat and other cereals, as well as orchard fruits flourish in fine perfection. The elastic atmosphere and bracing effect of the climate have been remarked by settlers from all quarters of the globe.

"In the northwestern States a continental, as distinguished from a sea, climate prevails with wide extremes of temperature. In the northeastern States, also, the thermometer ranges through more than a hundred degrees from winter to summer, yet the year appears generally healthy. Without entering into further details on this or the other divisions, enough evidence has been offered to show a certain correspondence between the physical features of the country and the mortality returns of the census."

PAINFUL DISCIPLINE.

Selected.

Sustain me, Lord, and let me neither shrink
Nor scorch the rod of painful discipline.
The cup my Father gives me I would drink,
And bend my will submissively to Thine.

I know the cross is needful, and I know
In love, and not in wrath, Thou chastenest;
The sufferings Thy children undergo,
But fit them sooner for eternal rest.

Our days are numbered; God alone can see
The end from the beginning—He alone
Sees on the wide plains of futurity
The fruitage of the seeds our hands have sown.

Let us walk softly, for our God we hear
Much precious seed committed to our trust;
Watered with tears, and enriched with due care,
It will spring forth in beauty from the dust.

Deep are the chastenings that our spirits need,
To wean them from the idolatry of earth;
Our flesh must tremble, and our hearts must bleed,
Ere life can yield us fruits of any worth.

Are there not idols which usurp the throne
Where God alone should sit? How many a heart
Bows down, if not before a god of stone,
Before a living, breathing counterpart.

Some cherished hope or some perplexing care
Follows our worldly hearts wherever we go,
And ghost-like, hounds the holy house of prayer,
When we would gladly turn from all below!

Oh, pity us, kind Father, and forgive
The weakness of our flesh, which overpowers
Our fleshly sensations, and do Thou receive,
For Jesus' sake, these sinful hearts of ours.

Raise our affections higher, let us find
Enough to satisfy our souls in Thee,
And help us to resign with willing mind
Whatever tempts us to idolatry.

The Dove on the Cross.

Selected.

HELP IN TIME OF SICKNESS.

O Thou God, who hearest prayer
Every hour and every where!
Listen to my feeble breath;
Now I touch the gates of death;
For His sake whose blood I plead,
Hear me in the hour of need.

Hear and save me, gracious Lord!
For my trust is in Thy Word;
Wash me from the stain of sin,
That Thy peace may rule within,
May I show myself Thy child,
Ransomed, pardoned, reconciled.

Thou art merciful to save!
Thou hast snatched me from the grave!
I would kiss the chastening rod,
O, my Father—now my God!
Only bid not my true face,
God of all-sufficient grace!

Leave me not, my strength, my trust!
Oh, remember I am dust,

Leave me not again to stray,
Leave me not the tempter's prey;
Fix my heart on things above,
Make me happy in Thy love.

A Million and a Billion.—We are perpetual hearing of millions, and of how many millions it will require to do this or that. We have a good idea what a million of dollars will do, but we very much doubt whether one person in a thousand has a correct idea of the quantity or number contained in a million. For instance if you would ask a person how long it would occupy him to put down a million dots with a pen, upon a sheet of paper, he will generally tell you something so far from the fact as to be laughable. Permit us, therefore, to say, for we have tried the experiment more than once, that it would occupy an expert penman about fourteen days, supposing him to work bank hour (that is, six), incessantly, doing nothing but putting dots on the paper, or dipping his pen in the ink. This will give our readers some idea of the quantity or number contained in a million.

Let any one try it, by laying his watch on the table, close to the paper, and work for ten or twenty minutes, then add and multiply. But what is a million compared to a billion? It is a mere nothing. What, then, is a billion? A very short answer will suffice for a very long story. It is a million times a million. But who could count 10 No man! A quick bank teller can count 16 or 170 a minute; but let us suppose he could go as far as 200. Then, one hour would produce 12,000, a day 288,000, and a year, or 365 day 105,120,000. Let us suppose, now, that Adam at the beginning of his existence, had begun to count, had continued to do so, and was counted still, he would not now, according to the usual supposed age of our globe, have counted near enough. For, to count a billion, he would require 9520 years, 34 days, 5 hours, and 20 minute Now, supposing we were to allow poor Adam 1 hour daily for rest, eating and sleeping, he would need 19,024 years, 60 days, 10 hours, and 4 minutes.—*Investigator.*

Hawk and Pigeons.—The following appears some time ago in the "Magazine of Natural History." A young sparrow-hawk was brought up by the writer's brother. This was rather hazardous, as he at the same time had a large stock of fancy pigeons, which, in consequence of their rarity and value, he greatly prized. It seems, however, that kindness had softened the nature of the hawk, or the regularity with which he was fed rendered the usual habits of his family unnecessary to his happiness; for, as he increased in age and size his familiarity with his pigeon friends increase also. Whenever the pigeons came to feed, which they did oftentimes from the hands of their owner, the hawk used also to accompany them. At first the pigeons were shy of course; but by degrees they got over their fears, and at so confidently as if the ancient enemies of their race had sent no representative to their banquet. It was curious to observe the playfulness of the hawk, as his perfect good nature during the entertainment for he received his morsel of meat without any that ferocity with which birds of prey usually take their food, and merely uttered a cry of lamentation when the carver disappeared. He would then attend the pigeons in their flight round and round the house and gardens, and perch with them on the chimney top or roof of the mansion. At night he retired with them to the dove-cot; and though if some days he was the sole occupant of the place the pigeons not having relished this intrusion at first, he was afterwards merely a guest there; for

never disturbed his hospitable friends, even when his young ones, unfeigned and helpless as they were, offered a strong temptation to his appetite. All the household were on terms of acquaintance with him; and there never was a bird which seemed to have won such general admiration. He was as playful as a kitten, and literally as loving as a dove. One morning he was found drowned in a tub of water, from which he had once or twice been extirpated before, upon assuming a delirious condition by cries that told he was in distress. There was great lamentation when he died, throughout the family; and it was observed by more than one person, that that portion of the fore-cot in which he was wont to pass the night, was for some time unoccupied by the pigeons with whom he had lived so peaceably.

For "The Friend."

BIOGRAPHICAL SKETCHES

of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 112.)

"Seventh day the 1st of Eighth month, 1772. We had a sweet sitting in the family. On First day the 2nd, we went one mile to Sheffield meeting. It is a large town, and a pretty large meeting-house. There were more Friends than at any other places, but the house was chiefly filled with others. Aunt had a large open time, and John Woolman also. We dined with John Barlow, who has two pretty daughters. At three we went to the meeting, which was much crowded; many went away, and others stood out of doors. John Woolman was very large and lively, but too deep or many of them. Aunt was much favoured in prayer. After she concluded, John stood up again, and spake most affectingly to the youth. Wherever we go, there is such a thronging after us, we are no time but when in bed, for retirement.

"Second day the 3rd, we spent at our lodgings. Many Friends in the afternoon came to see us, and we had a remarkable sitting. Some of the youth, I hope, will ever remember it. Third day the 4th, spent the morning in agreeable and edifying conversation. After dinner, took leave of this greasable family to go to High Flat, twenty miles. Our landlord, John Barnard, his daughters Mary and Deborah, Deborah Birbeck, John Aldam, Joseph Hedly, and Isaac Radcliff, went with us. We were received kindly by Joshua Marsden; his wife resembles Sarah Yaraal, and they made our short stay there very agreeable. Fourth day the 5th, we went to their meeting, which was large for a country meeting and quiet. Here we again met John Woolman, who had a fine time, and aunt also, although she was short. We dined at Edward Dickinson's, close by the meeting house. After dinner John and aunt had a seasonable and amusing time with the young folks and a few others. It was a solemn parting time indeed. He then went to Haddonfield, and we to Hollingshurst, twelve miles, to the house of Samuel Empson. We had bad roads, but beautiful prospects. Our kind friends Joshua Marsden, Mary Bernard, Deborah Birbeck, and John Aldam, accompanied us. On fifth day the 6th, with the above Friends, we went about four miles to their meeting held in a Friend's house, a mile short of Wakefield. The room was full, but it was a hard, heavy time, and aunt a sufferer with the sufferers. She stood up twice, the only time she has done so in this land. Towards the last she was encouraging to them. Here we took leave of our kind Friends; the good girls it was sorry to part with. We were now quits among strangers. We dined at Wakefield, and a

Friend's son went with us to Leeds, taking us to the house of Joseph Arthington. He and his wife were from home, but their two daughters took us in a kindly, and their free, pretty behaviour, rendered it more agreeable than I expected, from their gay appearance. Their mother is a plain kind woman. Sixth day afternoon, went to see a Friend, where we found divers others. On our return to our lodgings, called on Mary Storr, who is the only public Friend in this city, although a large one, and a larger number of Friends belonging to the meeting, than that at Sheffield. The meeting-house stands near the river Aire, which runs through the town, and is navigable for shallops and sloops. The meeting-house is a good one with a large court and field belonging to it, which renders it an airy place. At Mary Storr's house we had a comfortable sitting. We dined on Seventh day at Samuel Elam's. His wife is a kind young Friend, although a gay Londoner. As we went to our lodgings we stopped to see the Infirmary, and the Cloth market, a stately building.

"On First day the 9th, the morning meeting was large, and the people quiet, although many of them not of us. Dear aunt was strengthened to stand an hour and a half. It was a favoured time, and aunt, although much spent, attended that held in the afternoon, which in all respects, exceeded that in the morning. We refused many invitations, returning to our lodgings, where above twenty came to be with us, chiefly young people. They sat with a solidity which manifested that their minds had been well seasoned that day, and aunt had in due season food for them well relished.

"Second day 10th, Samuel Elam and John Fothergill, Jr., grandson to our worthy Friend John, went with us to Bradford, nine miles, to Joshua Walkers, and Joseph Jackson encouraged aunt to appoint a meeting there, which she did. He met her at the meeting, Third day, 11th of the month, which was a favoured time. We dined at our lodgings, then went to see John Hustler and his wife Chrisbiana, three miles. On Fourth day 12th, we went seven miles to Rawden week day meeting. Our old friend, Joseph Jackson, went with us. It was thought large, although less than 120 present. It was a heavy time at first, but at length Phoebe Marshall and Christiana Hustler, recommended the people to mind their own business, and not expect others to do that for them which properly lay on themselves. After a time aunt stood up in life and power, and the meeting concluded in prayer, having proved a very satisfactory meeting. Let me remember that at this meeting I was fed without labouring, and a remarkable one it was to me. I expect a plunge. We dined and took tea at Benjamin Head's; a number of Friends were there. On Fifth day 13th, we went with our Joseph Jackson to Geldersome meeting, five miles. This was a larger meeting, chiefly of other sects, and though a labouring people, not a sleeper among them. Aunt was favoured, and they were solidly affected. Benjamin Head concluded in prayer. We dined at John Dickinson's, and lodged also. On 6th day 14th, Joseph Jackson returned with us to our lodgings at Bradford, and in the afternoon went with us to an ancient Friend, the mother of our kind landlady. Dear aunt, who has been dipped all this day into a suffering state, here found it, and was led to speak to it, in a very extraordinary manner. Our good friend, Joseph Jackson now took leave of us. He is much such another good Friend as William Hicketts. We were sorry to part with him.

"Seventh day 15th, we took our leave of our kind friend, Joshua Walker, his wife, son, and daughter Elizabeth. Their house was a good

friendly inn. We started for Marsden, having two guides, Jethro Riley and William North, obliging young Friends. We passed through Bradford, Bingley, Highley, all market towns, and dined at an inn called the White Bear. While the horses were getting fed, we went to see the canal which is being cut from Liverpool to Leeds. It here passes under a large bridge. Our way from this was a turpice road, very hilly, but with delightful prospects. One hill was so high we thought to walk up it. Being tired, I leaned on the fence to rest, and as I was looking at the many fine improvements around me, home came into my mind.—Oh how glad I shall be to see it, if my dear — and other particular connections, hold fast their integrity. If not, I had rather not see it again. About seven, we reached the house of our dear friends Richard Marriott and wife Tabitha, 28 miles.

We were much wearied, but good quarters are well riding for. Ninth day 16th, we walked to Marsden Meeting, which was larger than many country meetings, and aunt was favoured lively to exhort the people. In coming hither we had a full view of Fenio Hill, said to be the highest in England, and mentioned by George Fox. We spent the afternoon at ———, with little or no satisfaction. Fourth day afternoon were at John Ecroyd's. Here I spent some time conversing with his daughter, about 13 years of age, on a slate; she can write a good hand, and shows a capacity and aptitude for learning, but can neither speak nor hear. She has been taught to spell with her fingers, and can tell her mind, to them that can understand. She has a brother, a fine boy, who has the same impediments. Cecily and Mary Dilworth of Settle, were with us. On Fifth day 20th, we were at Marsden Monthly Meeting, where we met Martha Williams, of South Wales, and her companion Sarah Stevenson of Wiltshire, who were visiting the churches. They dined with us at Richard Marriott's.

"On Sixth day 21st, after taking leave of the kind family at Edgemoor in Lancashire, we went with Richard Marriott to Salterford in Yorkshire, 8 miles. It rained hard most of the way. We met with a kind friend near the meeting-house, who refreshed us. At the meeting were more than we expected in such weather, the greater part of whom were not Friends. It was a larger house than many we have been at, and was quite full. Here I had to admire the wonderful goodness of the Almighty to the meaneast, poorest, most ignorant part of mankind, that they, as well as the rich should be left without excuse; my poor aunt was singularly instructive. Her language was so adapted to the lowest capacity,—and so powerfully uttered, that the people became affected and solidly quiet, though at first so unsettled, that she was forced to desire their attention. Aunt stood till she appeared faint. After meeting, our kind friend, Richard Marriott, left us in the care of Thomas Wilson and wife—a pretty young couple, who kindly took us home with them, to a small town called Thornton, 2 miles. It was on the side of a high hill, overlooking a beautiful fruitful valley. There are but twelve Friends in this town, and the only public Friend belonging to the meeting, George Dawson, is aged 82 years. Our kind young landlady is granddaughter to our valuable Friend, Mary Slater.

—♦—

British War Expenses.—In 1835, the cost of our army, navy and ordnance combined, was less than £12,000,000; in 1850 it had increased to £15,300,000, and now to nearly £30,000,000 a year. France spends £5,000,000 a year on her navy, we £13,000,000; and yet we are told that

we are greatly behind that terrible power in naval preparation. We have more than 900,000 men in our army and navy, and are paying for them thirty millions a year, or nearly £600,000 (£8,000,000) a week, £100,000 every working day, £4,000 every hour in the twenty-four, £68 every minute, or £1 every second of every working day in the year; an amount which in two years exceeds the value of our entire British and Colonial fleet of merchantmen.—*London Patriot.*

Review of the Weather for Twelfth month, 1862.

The 1st day of the past month was cloudy, with some rain; the 2nd and 4th were clear, and on the 3rd there was a slight sprinkle of snow. About 10 o'clock on the morning of the 5th, snow commenced falling again, and continued until evening, by which time four or five inches had fallen, and as there was little or no wind, it was very evenly distributed over the ground; but in the night the wind raised, and by morning had blown the snow into drifts. The clouds cleared away about 1 o'clock on the morning of the 6th, thus, affording to those who happened to be awake, a fine view of the total eclipse of the moon, which lasted from a little after midnight until near four o'clock, A. M. From the 6th to the 15th inclusive, a period of ten days, the weather was very clear and pleasant for the time of year, with the wind mostly from the west and south. There was some rain on the 16th, and snow on the 17th, with white frosts on the 17th and 19th. On the 20th the weather was clear, and the thermometer did not rise above 26° at noon, being 16° in the morning and evening, and on the morning of the 21st it had sunk to 9° above zero, and in the afternoon of that day there was a light fall of snow. The remainder of the month with the exception of two clear days, the weather was cloudy, with some rain on the 26th and 30th, and the last day of the month and year was a wintry one, as it snowed pretty much all day. The temperature was highest at noon of the 15th, being 60°, and lowest on the morning of the 21st, being 9°; the average temperature for the month was about 37°; the amount of rain and snow-water was .78 inches.

J. Middletown, Delaware Co., Pa.,
First mo. 1st, 1863.

Culture of Hyacinths in Glasses.—The Hyacinth is the bulb most usually grown in winter in the house, and when properly treated will bloom more finely and the flowers will continue much longer than to the open air. Culture in glasses and in pots are the most usual methods of growing this beautiful plant in the house.

In culture in glasses the largest bulbs should be selected, as it must be borne in mind that in this method of treatment, the whole sustenance of the leaves and flowers comes from the body of the bulb, as nothing in the way of nutriment is derived from the water. In selecting Hyacinth glasses the darkest coloured should be chosen, as the roots of all plants shun the light. The water used should be rain water. Place the bulbs on the glasses and pour in water until it just touches the bottom of the bulb. Now set the glasses away in a dark, cool place, where they may remain for several weeks, or until the roots have reached half way to the bottom of the glasses. When this is the case, remove them to a situation where they will receive a moderate amount of light, and as soon as the leaves show a healthy colour, they may be placed in their final situation, which should be where they can receive the greatest amount of light and plenty of fresh air. The top edge of the lower sash of a window is frequently used for this purpose, and is a good situation, for here they get the greatest quantity of light, and are kept cool by the air which will always creep in where the two sashes meet. The water will need to be changed about once in two weeks, and this should be done without removing the bulbs, as there is danger of the roots being injured in returning the bulbs to the glass after removal. It will sometimes occur that a slimy matter will collect around the roots. When this is the case, the bulbs must be carefully removed, and the roots washed with gentleness and the utmost care. The glasses should be washed out before replacing the bulbs, which operation must be conducted with judgment and much caution, or the roots will be broken and the plants suffer. The water used in refilling the glasses should always be of the temperature of the room. It is recommended by way of stimulant to the plants to dissolve an ounce of guano in a quart of rain water, and put one teaspoonful of this solution in each glass once a fortnight, after the flowers begin to appear.—*Country Gentleman.*

has been expressly recorded for our instruction. Without vainly undertaking to speculate upon the crowding changes, physical and spiritual, which will usher in that Divine order of things, we may safely assume that revolution and progress, if they shall then survive, will be nothing more or less than the working and expression of an unswerving and ever-expanding state of perfection. The enthusiasm of futurity will then, indeed, be withdrawn and a new era of everlasting happiness dawn upon all who shall have walked by the true faith, and held fast the true hope, and pursued the true love through the darkness, and dangers, and conflicts of time.

This great revolution is certainly the one ever which demands our constant attention over and through all particular changes, being that to which they are all tributary as parts of a whole. Such particular changes, therefore, as are obviously typical of that general one, become especially interesting to us as natural mementoes of that which we have but too much need to be reminded of. The rotation of the seasons is an impressive emblem of the ever-moving, and yet ever-restricted and ever-recurring variety of human experience as developed in the history, either of individual or of social life. The era, therefore, arbitrary as it must be, at which we agree for the sake of uniformity to compute that a new year has commenced its course, is one full of profitable suggestion to the reflective mind. As accountable and fallible beings, we then seem to be especially called upon to review and correct our accounts, in anticipation of that final settlement, at which "the Judge of all the earth" will preside, and to which all nations and generations of men will be witnesses.

The contemplation of that awfully grand and surely impending event is well fitted to impress all deeply with the conviction that our destination like our origin, is, so far, one. In the blindness of self-conceit, and in the distracting utility of diverse lusts, we are indeed prone to forget the divine and fraternal ties of duty, and to seek to carve out a career of individual independence even "as gods, knowing good and evil" for our selves, and using the gifts of creation as in our own right, and for the purpose of private pleasure, profit, or glory. Hence alienations, divisions, discord, and at last open fightings, inevitably ensue. "The charity, or love, which begins at home," which is born of faith, and nourished by hope, is the only effectual antidote to this insinuating and deceptive poison of selfishness. As that Divine grace finds place in our hearts, we will neither seek nor wish for any separation from our fellow beings, short of that in which all our differences and all our agreements will be forever absorbed when the Son of man shall separate the souls of all nations "one from another, as a shepherd divideth his sheep from the goats."

The condition of a community being merely reflected aggregate and average of the individuals composing it, public events may often be prudently regarded as the evidence of tendencies in private practice which may have been previously unsuspected. In the confusion which now so conspicuously prevails in the church and in the world, can we not discover a warning to enter into the closet of our own hearts, and examine into the state of the account, by which we may "know our selves" by the aid of Him who "is in us, as we are," or be reborned? "Head-work may guide our hands into a plausible conformity with the labors and views of our fellow-men, but heart-work alone can guide both our heads and our hands in harmonious obedience to the pure and progressive dictates of Truth. May the New Year

The New Year.

As change and time are inseparable elements of individual experience, so revolution and progress are allied facts, by which the guidance of Divine Providence is manifested in the collective history of mankind. As the phenomena of physical life are found to be maintained only at the expense of a continual death of the constituent parts of living organisms, and as the lapse of time itself is known only by the changes which we are in the habit of imputing to its agency, so do we find all social progress to depend upon gradual but continual destruction and reconstruction of outward institutions. What time and progress and vitality essentially are, we need not expect availingly to know, until our eyes may be opened to behold the realities of eternity, as our feet become planted upon the immutable foundation, which, through the mercy of God in Christ Jesus, has been laid in Zion, as a refuge from the fatal ravages of sin. When the last times shall indeed have passed over us, and the company of the redeemed shall realize that "as in Adam all died, so in Christ all are made alive," the earth will doubtless be released from the participation in its Master's curse, which

The God of Elijah still liveth, and is to be found of them that still diligently seek Him; and is nigh unto them that call upon Him.

ood became the herald of the ever new and
vine order in which a just subordination and
e-operation shall increasingly triumph over
e hostile influence of confusion and competition,
wever speciously these may be often disguised as
moters of peace and prosperity!

Singing Sands and Sounding Mountains.—
ousands of years ago, the pillars of Memnon
re famed for giving musical sounds. Sounds
e those of bells have been heard at different
altitudes, to come from the depths of the ocean,
nd now we hear of musical mountains, and sing-
g sands.

Five such localities are already on record.
The first is Dschebel Nakus—Bell Mountain—upon
the peninsula, Sinai, on the shores of the Red Sea,
fifty-westward of the city of Tor. The cele-
brated traveller, Setzen, of Oldenburg, was the
first European savant who ascended it. He found
it consisting of a brittle white sand-stone, covered
on two sides with loose sand. This sand, when
brought into motion, produces the sound. The
traveller, when ascending, passed over this region
of loose sand, and he soon discovered that the
noise it made in gliding down the slope became by
degrees louder and louder. When he reached the
summit, such a frightful sound was heard that it
shook the whole mountain, and he himself became
dizzy in the highest degree.

Some time afterwards this same mountain was
visited by Gay, of Oxford, and more recently

—Ward, both Englishmen. They give very
early the same account of this phenomenon. All
attribute the cause to the fact that the sand glides
on the bare mountain sides. Ward heard at
first only a feeble tone, like that of the flute;
gradually it became strong, like that of an organ,
and the whole bill began to vibrate. The sound
came louder in proportion to the quantity of
sand set in motion by the steps of the traveller. . .
Alexander Burns visited, in 1837, a singular hill
which was the Rey Rawan—this moving mountain—
which is also about four thousand feet high. Its
surface is an incline of about forty degrees, covered
by a layer of sand, surrounded by a still deeper
order of lime and sand-stone. Gliding down on
this sand, it emits a loud, hollow tone, similar to
that of a great drum. This was already known
in the fifteenth century. A third mountain of this
kind is the "El Bramador," the yelling, barking
mountain in Chili, in regard to which Charles Dar-
win made similar observations.

Charles Mayer, in his book, "Toward Sacra-
mento," mentions another to exist in California,
and recently a fifth locality of this kind has been
discovered by Hugh Miller, upon the small island
of Egg, on the western coast of Scotland. Accord-
ing to Miller, a geologist of great renown, a stratum
of oolite exists on that island. This sub-
stance, when reduced to sand, becomes a white,
heavy mass. Miller observed, that on every step
he took, the sand gave a peculiar musical sound.
It is, however, not proven that oolite sand alone
reduces sounds. The above-mentioned — Ward
says that the friction of the sharp-edged grains of
oolite sand, exposed to the rays of a tropical sun,
gives the resonant quality of the sand. We
must leave the investigation of this matter to
scientific men, being confident that they will ex-
amine the mystery. To the musician it must be
an interesting musical curiosity.

Decrease of Slave Traffic.—Eight slavers were
captured by British cruisers, and their human
carcasses landed at St. Helena, from the 1st of January
to the 4th of August, 1862. The nationality

of these slavers was unknown, being found without
papers or colors. At the time of seizure they had on
board twenty-eight hundred and ninety-two males,
and nine hundred and fifteen females; making a
total of three thousand eight hundred and seven
souls. On a cutter of seventy tons, was found two
hundred and three victims. Since our rigid en-
forcement of the laws against this nefarious prac-
tice, the execution of Captain Gordon, and the
right of search treaty with Great Britain, the
United States flag is rapidly disappearing from
the seas to which it has so long been proscribed.
But the growth of legitimate commerce and the
spread of civilization and christianity, by means
of settlements such as compose the Republic of Liberia,
are the most reliable and economical means to
effectually stop the illicit and inhuman traffic.

Connecting the Mediterranean and Red Seas.—
The canal connecting the waters of the Mediter-
ranean and Red Seas across the Isthmus of Suez,
is steadily progressing. Water is now let in as far
as the centre of the isthmus. Reservoirs are built
at distances of two hundred meters along the whole
line, capable of containing water for the use of fifty
thousand men. M. de Lesseps is the engineer and
manager of the enterprise.

Peacemen respected in War.—It is remarkable
that a settlement of Quakers near Mount Vernon
has remained unmolested during the entire war,
though alternately included within national and
rebel lines. Their semi-weekly meetings have been
regularly continued, sometimes a rebel picket
pacing in front of the building, and perhaps a Union
sentinel having the same beat the next week. They
have remained undisturbed both in property and
in person.—*Advocate of Peace.*

THE FRIEND.

FIRST MONTH 10, 1863.

We give below the proclamation of President
Lincoln, declaring those heretofore held as slaves
in the States and parts of States designated as
now in rebellion, to be henceforth and forever free.

What may be the final effect of this exercise
of authority on the part of the President as Com-
mander-in-Chief of the army and navy of the
United States, time alone can determine; but as
a document of great historical interest, we wish
to preserve the proclamation in our columns. Every
true lover of his country would rejoice, should
slavery be brought to a termination by this means,
provided it does not give rise to violence and blood-
shed on the part of the poor blacks. How the
slaves are to obtain the means for subsistence if
turned loose and left to themselves, is a question
left for circumstances to determine.

We regret the invitation to them to enter the
army and navy, as they have almost uniformly
shown themselves to be a peaceable people and
unwilling to engage in war.

THE EMANCIPATION PROCLAMATION.

"Whereas, On the twenty-second day of Sep-
tember, in the year of our Lord one thousand
eight hundred and sixty-two, a proclamation was
issued by the President of the United States,
containing, among other things, the following, to
wit:—

"That on the first day of January, in the year
of our Lord one thousand eight hundred and
sixty-three, all persons held as slaves within any
State, or designated part of a State, the people

whereof shall then be in rebellion against the
United States, shall be then, thenceforward and
forever, free, and the Executive Government of
the United States, including the military and naval
authority thereof, will recognize and maintain the
freedom of such persons, and will do no act or
acts to oppress such persons, or any of them, in
any effort they may make for their active freedom.
That the Executive will, on the first day of Janu-
ary aforesaid, by proclamation, designate the States
and parts of States, if any, in which the people
therein, respectively, shall then be in rebellion
against the United States, and the fact that any
State, and the people thereof, shall, on that day,
be, in good faith, represented in the Congress
of the United States, by members chosen thereto
at elections, wherein a majority of the qualified voters
of such State shall have participated, shall, in the
absence of strong countervailing testimony, be
deemed conclusive evidence that such State and
the people thereof are not then in rebellion against
the United States."

"Now, therefore, I, Abraham Lincoln, Pres-
ident of the United States, by virtue of the power
in me vested as Commander-in-Chief of the Army
and Navy of the United States in time of actual
armed rebellion against the authority and Govern-
ment of the United States, and as a fit and neces-
sary war measure for suppressing the said rebel-
lion, do, on this, the first day of January, in the
year of our Lord one thousand eight hundred and
sixty-three, and, in accordance with my purpose so
to do, publicly proclaim, after the full period of
one hundred days from the day first above men-
tioned, order and designate as the States and parts
of States wherein the people thereof respectively
are this day in rebellion against the United States,
the following, to wit: Arkansas, Texas, Louisiana,
(except the parishes of St. Bernard, Plaquemines,
Jefferson, St. James, Ascension, Assumption, Ter-
rebonne, Lafourche, St. Martin, and Orleans, in-
cluding the city of New Orleans,) Mississippi, Ala-
bama, Florida, Georgia, South Carolina, North
Carolina, and Virginia, (except the forty eight
counties designated as West Virginia, and also the
counties of Berkeley, Accome, Northampton, Eli-
zabeth City, York, Princess Anne, and Norfolk,
including the cities of Norfolk and Portsmouth,)
and which excepted parts are for the present left
precisely as if the proclamation were not issued.

"And, by virtue of the power and for the pur-
pose aforesaid, I do order and declare that all
persons held as slaves within the said designated
States and parts of said States, are, and hence-
forward shall be, free; and that the Executive
Government of the United States, including the
military and naval authorities thereof, will recog-
nize and maintain the freedom of said persons.

"And I hereby enjoin upon the people so de-
clared to be free, to abstain from all violence,
unless in necessary self-defence, and I recommend
to them that in all cases, when allowed, they labour
faithfully for reasonable wages. And I further
declare and make known, that such persons,
of suitable condition, will be received into the
armed service of the United States, to garrison forts,
positions, stations, and other places, and to man
vessels of all sorts in the said service. And upon
this act, sincerely believed to be an act of justice,
warranted by the Constitution, upon military
necessity, I invoke the considerate judgment of man-
kind, and the gracious favour of Almighty God.

"In witness whereof I have hereunto set my
hand, and caused the seal of the United States to
be affixed.

"[L.] Done at the city of Washington, this
the first day of January, in the year of our Lord

one thousand eight hundred and sixty-three, and of the independence of the United States of America the eighty-seventh.

"By the President: **ABRAHAM LINCOLN.**
W. H. SEWARD,
"Secretary of State."

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 25th ult. The Liverpool markets for cotton and bread stuffs were nearly unchanged. Consols, 92½. The Liverpool *Journal of Commerce* says that the Government has issued orders that the Alabama should be warned from all British ports, and notice is given that if any more British privateers be fitted out, the Government will at once declare war against the Alabama. The *Shipping Gazette*, however, contradicts this statement, and says, "We are sure the Government does not consider itself justified in stopping the cruise of the Alabama." Another steamer of great speed had been purchased for the Confederate service, and was being fitted up at Glasgow. The London correspondent of the *London Star* says there is some doubt that the distressed condition of the French manufactures inclines the Emperor to listen more attentively to Sidiell, the Southern Commissioner, than he otherwise would. It was rumored in Paris that as soon as the French obtain any decided success in Mexico, the Emperor will order home the troops.

A Turin Telegram of the 18th says: The Italian Government respectfully declines further negotiations with France respecting the Roman question at present. A frightful accident had occurred on the Eastern railway, Portugal. A bridge gave way while a train was crossing it, causing the death of about one hundred men, and the wounding of many others.

Great ravages have been caused by inundations in Holland. A dyke had given way in the vicinity of Amsterdam, destroying much property.

The Greek trouble question appears to be settled, by the treaty of Florence, Italy, and England. There was no doubt that the British Government had determined to abandon the Protectorate of the Ionian Islands in favor of Greece.

The absence of snow in some parts of Russia was causing inconvenience, and apprehensions were felt for the safety of the wheat crops.

THE UNITED STATES.—*Slave Emancipation.*—The President of the United States on the 1st inst., issued his Proclamation, announcing that in accordance with the terms of a Proclamation put forth in the Ninth month last, all persons held as slaves in certain designated States and portions of States, are and shall hereafterward be free, in all ways excepting the government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons. The slaves so declared to be free, are enjoined to abstain from all violence, unless in necessary self defence, and the President recommends to them, that in all cases they should accept the government of the United States. The number of slaves upon whom the declaration of emancipation is intended to operate, is probably about three millions.

The Public Debt.—The loan of \$182, which fell due on the first of this year, amounting to \$2,800,000, has been directed to be paid in gold.

The Pirate Alabama.—No fewer than eighteen vessels of war were now engaged in the search for the Alabama, but not one of them can compare with the privateer in point of speed.

Missouri.—The Governor's message has been sent to the Legislature. On the subject of emancipation, the Governor says he has long been convinced that the material interests of Missouri would be advanced by substituting free labor, and recommends a plan by which the children of slaves, from and after the passage of an act, shall be free, but to remain under the control of their mothers until arrived at certain age. He proposes to be paid for the diminished value of slave mothers. Both Houses have passed a resolution asking Congress to grant to the State all the rebel property that has been, or may be confiscated to the United States, to be applied to indemnifying the loyal citizens for the losses which they have sustained during

Philadelphia.—Mortality last week, 234. The mean temperature of the Twelfth month, 1862, was 36°. The highest was 64° and the lowest, 9½°. The mean temperature of the year 1862, was 54½°, which is about one degree higher than the average of the preceding thirty-seven years. In the last month, 1,165 inches of rain fell. The total for the year was 45 inches.

The Loss of the Monitor.—The iron clad vessel Monitor has foundered at sea south of Cape Hatteras, with the loss of forty of her crew.

The Atlantic Coal Trade.—The quantity sent to market from the Pennsylvania coal regions during the year 1862, amounted to \$2,701,154 tons, being 214,948 tons more than in the previous year. The greatest quantity shipped in any year was in 1860, when the amount sent forward was 8,450,058 tons. The trade commenced in 1820, in which year, 965 tons were sent to Philadelphia.

Corn for Fuel.—The Dalzell steam mills at Atlanta, Illinois, are now running with corn for fuel, instead of wood, that article being cheaper and more easily obtained than either coal or wood.

Chicago.—A carefully taken census of the city of Chicago, just completed, shows that the population during the past two years has increased 27,768. In 1860, it was 109,262. Now it is 137,030.

Virginia.—The main portions of the two hostile armies near Fredericksburg, remain apparently inactive, though it is presumed some movements have been made by one or the other. On the 2nd inst. a large detachment of their cavalry made a dash into Dumfries, and captured some public stores and sutler's wagons. It is believed that a considerable portion of Lee's army has moved up the Rappahannock, and there have been some indications of an intention on the part of the rebels to cross the river.

The Mississippi River.—New Madrid was abandoned by the U. S. forces, but troops have been sent to re-occupy it. The report of the taking of the batteries at Port Hudson was premature. At the latest dates the rebels still held the place. Vicksburg has been attacked by a detachment of the rebels on the 22d inst. They were ultimately, his troops landed on the left bank of the Yazoo river, ten miles above its mouth, and advanced toward Vicksburg. The rebels soon met them, and a fierce conflict ensued. The next day the battle was resumed, and other positions of the rebels were carried by Sherman's rebel forces, and their position was so weakened from Vicksburg, they represent that four successive attempts to force their lines were defeated, with heavy loss to the Union troops in killed, wounded and prisoners, and that they had sent in a flag of truce for permission to bury the dead. A despatch from the same source on the 20th ult., said, one day later, says that the rebels had cut and shut down the Yazoo and Texas railroads, far as Delhi, had been destroyed by Sherman's army. Gen. Banks was expected to aid in the capture of Vicksburg, but through some unexplained delay, had not arrived in season. The result of the conflict was not certainly known at the time of making this report.

Tennessee.—A letter from Barboursville, Ky., says that Colonel Carter did not attempt to capture Knoxville but, going eastward, cut the Tennessee and Virginia railroad, lessening the chances of the rebels to augment their forces from Richmond, which, if it is supposed, they are attempting to do. On the 20th ult., Gen. Rosecrans left Nashville with 50,000 men, and 120 pieces of artillery, and moved upon Murfreesboro, (about thirty miles south east of Nashville) where the main rebel army, commanded by Generals Johnston, Bragg, and Hardee, was strongly posted. Severe fighting occurred on the 29th and 27th, and also on the 20th, followed by a general engagement on the 31st, in which the rebels, though suffering terrible losses, appear to have had the advantage, and occupied the ground held by the Federal troops when the battle began. On the 1st inst., the attack was renewed by the rebels, who were repulsed, and on the 2nd inst., the Federal forces regained the ground they had lost, the rebels retiring before them. The latest dispatches state, that Gen. Rosecrans occupied Murfreesboro, and that the rebel army had retreated to Tallahoma, forty miles to the south-east. The conflict prolonged through five days, was a desperate one, and the aggregate of killed and wounded is frightfully large. That of Rosecrans' army has been estimated as high as 8,000 or 9,000 men.

The West.—Many collisions between the opposing forces, are reported at various points, all attended with some bloodshed, but apparently without important results.

The Minnesota Indians.—The House of Representatives in Congress, has passed a bill annulling all treaties with the Sioux Indians, and extinguishing the Trust Fund of those tribes. It appropriates \$1,500,000 of the fun for the relief of sufferers by their depredations. A reserve of 100 acres of land is to be set apart for each of the Indians who endeavoured to prevent the mass acre; \$50 to be paid each, and their land stocked as provided with agricultural implements.

West Virginia.—Contrary to the general expectation in the United States finally determined to sign the bill for the admission of West Virginia as a new State. It therefore forms a new member of the Union.

RECEIPTS.

Received from J. Favett, Agt., O., for Edw. Bonas \$2, vol. 35, Edw. Bonas, Jr., \$2, vol. 35, Jan. 1 Stanley, \$4, vols. 32 & 33, Richd. B. Fawcett, \$2, yr 35, Anna May, \$2, to No. 21, vol. 35, Pawtucket, \$2, to No. 19, vol. 36, and Jos. Warrington, \$2, to No. 17, vol. 37; from H. Knowles, N. Y., for Geo. C. Carpenter, \$2, vol. 36; from Lydia Hayes, Pa., per N. K. \$2, to 36; from Wm. Llewellyn, O., per E. H., \$2, to No. 4, vol. 36.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent.—JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

NOTICE.

A well qualified Female Teacher wishes a school. N. particular as to location. For information inquire at the office of "The Friend."

MARRIED, at Friends' Meeting House in Smyrna, Chango Cook, N. Y., the 6th of Eleventh month, 1862 HOSKIE COLLINS, of Brofield, Madison Co., to MARY I. PORTER, daughter of Nathaniel and Bathsheba Smith, the former place.

At Friends' Meeting House, West Grove, Chester Co., Pa., on the 11th of Twelfth month last, ALLEN P. CORBETT to LYDIA C. HROMES, daughter of the late Samuel Engles.

At Friends' Meeting House in Germantown Twelfth month 4th, 1862, JOHN H. BENTING, of Darby, ANSABECLA C. OGBORN, of this city.

At Friends' Meeting House, Arch Street, Philadelphia, on the 11th inst., THOMAS HENRY, of Greenock Cumberland Co., N. J., and CAROLINE B., daughter Horatio C. Wood.

DIED, the 29th of Sixth month, 1862, BATHSHEBA SMITH, wife of Nathaniel P. Smith, in the sixty-third year of her age, a member of Smyrna Monthly and Particular Meeting. A week previous to her decease, she was taken alarmingly ill, and such was the severity of her disease, that she lay for frequently remaining eight days before the close of her life, she said to her six daughter, who was carried to her room and sat weep by her side, "dont weep for me, I shall soon be at rest in Jesus." She was of a quiet and retiring disposition and bore a protracted illness with christian fortitude and resignation.

Her residence in Smyrna, N. Y., JANE AY SMITH, daughter of Nathaniel P., and Bathsheba Smith in the forty-first year of her age, a member of Smyrna Monthly and Particular Meeting. Of a well ordered life and conversation, she was endeared to all who knew her. Her disease reduced her very low, in which state she lingered for four times, frequently remarking, "It was willing to go at any time, that she saw nothing her way, and expressing a hope that she was not deceived. On being brought to the bedside of her six mother, she said "how precious it would be if we could go together." She afterwards observed, "I do not know how long I am to last, but I am suffering enough, I desire to be patient and wait a Lord's time." She quietly passed away the 7th of Ninth month, 1862, and is no doubt at rest with her Saviour.

Her residence in Smyrna, N. Y., TWELFTH MONTH 13th, 1862, at Orange, N. J., FRANCES W. BUZY, in the nineteenth year of her age formerly a resident of Philadelphia.

For "The Friend,"

Preliminary Report of the Eighth Census, 1860.

(Continued from page 148.)

The statistics relating to the deaf and dumb are very interesting to those who have made the subject one of observation and study, but the following is all we think worth while to extract for the general reader.

There are 14,269 deaf-dumb reported as living in 1860, or one to every 1225 of the inhabitants.

"In this, as in other departments of vital statistics, we find, in any large district, a remarkable degree of uniformity from one period to another, showing that the prevalence of deaf-dumbness, as of other afflictions of mortality, is regulated by general laws. The proportion in the population of Russia, as we have seen, varied less than a sixth part in twenty-one years; and that in the United States, according to our census returns, has only varied about one-tenth part in thirty years."

"The white race appears from our census returns to be much more liable to deaf-dumbness than the black, and of course the free coloured, which has a larger admixture of white blood, is more liable to that infirmity than the slave population; on the other hand, it is supposed that the coloured population is more liable to blindness than the whites. This greater prevalence of deaf-mutes, after allowing for errors in the two enumerations of 1830 and 1840, which appear to have arisen from accidentally placing figures in the wrong columns, manifested in every one of the four enumerations on 1830 to 1860, and in the returns from every State. The general average of the census of 1860 gives only one slave deaf-mute to every 4,900 slaves, whereas there is one to every 1,925 among a free population. In 1850, excluding, as already observed, the 'deaf,' there was returned one deaf-mute to 2,152 whites, one to 3,151 free coloured persons, and one to 6,034 slaves. The small proportion returned among the slaves may be due, in part, to less care and particularity in making the enumeration; but it is difficult to believe in a carelessness so general as to count for so great a discrepancy as is here shown. It seems, therefore, safe to assume that the coloured race is less liable to deaf-dumbness than the white race; and such, according to the testimony of missionaries, seems also the case with the Mongolian population of China as compared with Europeans."

Of blind, we learn there were 11,125 reported as being among free white, and 1,510 among the slaves.

The following is the "Comparative portion of blind persons to the whole number of inhabitants in Europe and in the United States: Great Britain and Ireland, (1851,) 1 in 950 France, (census of 1836,) 1 in 1,360 Belgium, (1831,) 1 in 1,316 Level portions of the German States 1 in 950 More elevated portions of Germany Prussia, (average of census in 1851, 1834, and 1837,) 1 in 1,401 Alpine regions, (1831,) 1 in 1,500 Sweden 1 in 1,091 Norway 1 in 482 United States, (1850,) 1 in 2,470

"The remarkable fact is given by this table that the blind in the United States but little exceeds *two-fifths* of the number in Great Britain and Ireland, and are less than *three-fifths* of the number in France, in proportion to the populations of those countries."

There are 23,999 reported as insane in 1860.

A brief but interesting review of the progress of improved treatment of the insane in Europe and the United States is given, and the following paragraphs are well worthy of note.

"Inasmuch as mind can be perceived and studied in its manifestations alone, its essential nature cannot be understood. It is consequently impossible to reduce to a positive demonstration any answer to the proposition whether insanity is really a disease of the mind itself, or merely the effect of corporeal disorder. Much has been written upon the subject, especially by the psychologists of Germany. Among the physicians making insanity a specialty in the United States we know of no one who believes it to be a disease of the spiritual part of our nature. They are unanimous in the opinion that it is the result of corporeal impediments to the free evolutions of the operations of the mind, as irregularity in the movements of a watch may be the effect of some small substance placed among the internal works, and thus preventing the gradual but continual development of the elasticity of the main spring. The watch indicates false time, but the spring is unimpaired. The insane man talks incoherently and fantastically, but his spiritual being is in its normal condition. The fact that a single portion of appropriate medicine has more than once entirely cured a paroxysm of violent mania is, perhaps, of itself a sufficient proof of the truth of this theory; for is it not absurd to suppose that the essential structure or nature of the spirit can be reached and modified by a cathartic?"

"The disposition to degeneracy, in some form, in the off-spring of marriages of cousins, or others near of kin, has long been known, but comparatively recent investigations in both Europe and the United States, and particularly those of M. Deyry, in France, and Dr. Bemis, of Kentucky, have more fully illustrated the subject and more satisfactorily demonstrated the fact. It is very clearly proven that stertid attacks, and that bodily malformation, tubercular consumption, spas-

modic diseases, epilepsy, blindness, deafness, idiocy, and insanity follow in the off-spring of such marriages much more frequently than in matrimonial alliances between the parties to which there is no traceable affinity by blood. Researches have not hitherto been sufficiently extensive to demonstrate the comparative proportion, but it is sufficient for the purpose of the philosopher, the philanthropist, or the statesman that the predominance of those unfortunate results in the marriages of cousins and other near relatives is placed beyond a reasonable doubt."

A glowing account is given of the Products of Industry.

"The returns of manufactures exhibit a most gratifying increase, and present at the same time an imposing view of the magnitude to which this branch of the national industry has attained within the last decennium.

"The total value of domestic manufactures, (including fisheries and the products of the mines,) according to the census of 1850, was \$1,019,106,616. The product of the same branches for the year ending June 1, 1860, as already ascertained in part and carefully estimated for the remainder, will reach an aggregate value of *nineteen hundred millions of dollars* (1,900,000,000.) This result exhibits an increase of more than *eighty-six* (86) per centum in ten years! The growth of this branch of American labor, appears, therefore, to have been in much greater ratio than that of the population. Its increase has been 123 per cent. greater than that even of the white population by which it was principally produced. Assuming the total value of manufactures in 1860 to have been as already stated, the product *per capita* was in the proportion of sixty dollars and sixty-one hundredths (\$60.61) for every man, woman, and child in the Union. If to this amount were added the very large aggregate of mechanical productions below the annual value of five hundred dollars—of which no official cognizance is taken—the result would be one of startling magnitude.

"The production of the immense aggregate above stated gave employment to about 1,100,000 men, and 285,000 women, or one million and three hundred and eighty-five thousand persons. Each of these, on an average, maintained two and a half other individuals, making the whole number of persons supported by manufactures four millions eight hundred and forty-seven thousand and five hundred (4,847,500), or nearly one sixth of the whole population. This was exclusive of the number engaged in the production of many of the raw materials, and of food for the manufacturers; in the distribution of their products, such as merchants, clerks, draymen, mariners, the employes of railroads, expresses and steamboats; of capitalists, various artistic and professional classes, as well as carpenters, bricklayers, painters, and the members of other mechanical trades not classed as manufacturers. It is safe to assume, then, that one-third of the whole population is supported directly and indirectly, by manufacturing industry.

"These general facts, therefore, plainly indicate that, in point of productive value, and far-reaching

industrial influences alone, our manufactures are entitled to a front rank among the great interests of the country. Indeed, the collection and classification of facts relating to the material progress of the people periodically entrusted to the Census Office, furnish in general, valuable milestones in the pathway of the nation's greatness. But among the facts so collected, none are more instructive—none have more numerous or intimate relations to every department of the public economy, to the general welfare of the people, domestic, social, industrial or moral—than these records of their productive capacities in the automatic and handicraft arts. However uninteresting to many, the details are full of instruction to the statist. As the mountain rill, minute and inappreciable in its source, is constantly swelled by other streams, and goes on widening and deepening in its course until it is swallowed up and loses its identity in the ocean, so these streams of knowledge, pouring in towards a common reservoir from every factory, hamlet, town, and State, appear at length to be merged in one vast and useless aggregate, devoid of either individual, local, or general interest. But the great collection of truths which they serve to swell may bear up the ark of a nation's hopes and confidence. The result may form a subject of national pride and gratulation, and may, like the ocean itself, become impressive to all nations from its grandeur. The mental eye may also follow back each separate stream to its source, and dwell with pleasure and instruction upon the scenes fertilized, refreshed, and gladdened in its progress. Such emotions of pride and pleasure cannot fail to be generally awakened by the evidences which a just appreciation of the wisdom of Congress has enabled the proper department to accumulate and classify, with greater accuracy and completeness than heretofore, of the progressive development and present stature of this important interest. The subject is grand in its outlines; but contemplated in its pervasive influence upon the welfare of the whole people, the dry and repulsive skeleton of mere facts and figures, presented in the official tables, gradually takes on the form, substance, and habiliments, and becomes animated with something of the life, activity, and beauty of a living economy. The statistics of looms, spindles, and factories, of furnaces and forges, of steam engines and sewing-machines, and of a thousand other instruments of creative industry, become the representatives of almost every form of national and individual happiness, exertion, aspiration, and power.

"The mechanic arts—particularly in our country, where they are most diffused, and all but universal—appear to contribute more directly than any others to the general comfort and improvement of the people. All others are dependent upon them for the principal agents and instruments of their success. They are scarcely more subservient to the primary wants of mankind than to the higher ministrations of taste and refinement. The acquisition and diffusion of knowledge, the means of intercommunication and transportation, the comforts, enjoyments, and security of the fireside, and even the honour and integrity of the nation itself, are dependent upon the skill and enterprize of the manufacturer and the mechanician; but the results of their labours are, from their nature, less obtrusive or obvious to the general apprehension than some others. The annual movements of our immense crops of grain, cotton, and other bulky staples, are easily appreciated. The pulsations of commerce may be counted by a superficial observer in the arrival and departure of ships, and upon the records of the custom-house and the exchange; but in the hands of the manufacturer a modicum of crude material

undergoes a process of division, transformation, and elaboration, and then silently and unobtrusively disappears—diminished in bulk, but augmented, it may be, many hundredfold in value—in the ordinary channels of distribution, where it is often indistinguishable from its foreign rival. It is only stock that the nation decennially takes its account of stock that any approximate idea is obtained of the value of this item in the general account.

"And who can justly estimate the influence upon the general happiness and prosperity—upon the progress in civilization of the sum total of effective labour, capital, and skill represented by such an aggregate as we have stated? What an amount of fixed capital—of labour, enterprize, ingenuity—of resources, material and immaterial—involved in the creation of nearly two thousand millions worth of manufactures in a single year! The addition of nearly one thousand millions to the annual product of domestic manufactures—an amount almost equal to the total home consumption thereof in 1850—implies also vast additions to the permanent wealth of the Union and to the elements of a progressive civilization. The increased support given to agriculture, commerce, and the mining interests by the consumption of hundreds of millions of dollars worth of raw material, and to hundreds of thousands of men, women, and children, who would have been otherwise unemployed, or forced into competition with the farmer and planter, instead of being consumers of their produce, form but a part of the benefits conferred upon the community at large. The independence and security contributed by the large body of intelligent manufacturers and mechanics capable of ministering to every want, whether of supply or defence, cannot be overestimated. As might have been expected from the revelations of the census, the country has been able to lean with confidence upon this arm of its strength in the trying emergency which has put the nation in armour for the defence of its dearest interests.

"It is a gratifying fact, shown by the official statistics, that while our older communities have greatly extended their manufactures, the younger and more purely agricultural States, and even the newest Territories, have also made rapid progress. Nor has this department of American industry been cultivated at the expense of any other. There is much reason to believe that it affords the safest guarantee of the permanency and success of every other branch. Evidence bearing upon this point is found in the manufacture of agricultural machines and implements, which is one of the branches that shows the largest increase in the period under review. There is little doubt that the province of manufactures and invention in this case has been rather to create than to follow the demand. The promptness of Americans to adopt labour-saving appliances, and the vast areas devoted to grain and other staples in the United States, have developed the mechanics of agriculture to an extent and perfection elsewhere unequalled. The adoption of machinery to the extent now common in farm and plantation labour furnishes the best assurance that the development of agriculture or manufactures to their utmost, can never again justify the old charge of antagonism between them in regard to labour, or injuriously affect either by materially modifying its cost or supply.

"The total value of agricultural implements made in 1860 was \$17,802,514, being an increase of 160.1 per cent. upon the total value of the same branch in 1850, when it amounted to the sum of \$6,842,611. This manufacture amounted in New England to over two and three-quarter millions of dollars—an increase of 65.8 per cent. In the

middle States the value was nearly five and a half millions, having increased at the rate of 122.2 per centum. In the western States where the increase was most extraordinary, the value of implements produced was augmented from \$1,923,937 to \$7,955,545. The increment alone in those States was, therefore, only a fraction less than the production of the whole northern section of the Union in 1850, and was greater, by 313 per cent. than their own manufacture in that year. In each of the States of Ohio and Illinois, which are the largest manufacturers in the west, the value of the product exceeded two and a half millions dollars, being an increase in the former of 382, and in the latter of 235 per cent. in ten years. Michigan, Indiana, and Wisconsin increased their production of agricultural implements 1,250, 386 and 201 per cent., respectively. While in some of the southern States there has been a decrease, in Virginia, Alabama, and Louisiana the increase in this branch has been large, and in Texas, which reported none in 1850, agricultural implements of the value of \$140,000 were manufactured in 1860. The whole value produced in the southern States in the latter year (including cotton gins) was \$1,582,483, exhibiting an increase of over 101 per cent. in the last decade.

To the Association of Friends for the Instruction of Poor Children :

The Managers Report:—That the schools under their care, have been in regular operation during the past year, and have been visited twice a month by committees appointed for the purpose.

The number of scholars in the infant department continues large, and it is very pleasant to the managers to note the diligence and good order of most of the pupils, many of whom have made very commendable progress during the past year. The visiting committees, knowing what a difference there is between a mere repetition from the book by memory, and a clear understanding of the meaning of the lesson, have repeatedly exercised the scholars by asking questions concerning the lessons, different from those in their books, to see how far they understood what they were saying the result has been nearly always gratifying, the questions being answered promptly and correctly. There is a feeling of life and activity in the school which authorizes the managers to express the belief that the scholars are receiving valuable instruction, which will be of use to them in future. The order of the pupils has been quite as good as could have been expected from children so young. The number of scholars on the roll at the time of the last annual report, was one hundred and sixteen, since then fifty-four have been admitted, ar seventy-two names have been stricken from the list for various reasons; making the number this time, ninety-eight. The average attendance during the year, has been about seventy-three, at the total number registered is two thousand or hundred and seventeen, of whom three hundred and seventy-seven are re-admissions.

There has been no material change in the size of the girl's school since our last report; in the Fourth month last, owing to the very crowded condition of the lower room, eleven of the larger or more advanced girls were transferred to this school. The number of names now on the roll is fifty-seven, and the average attendance during the year was thirty-three and a fraction. The course of study pursued by the girls is very similar to that in use a year ago. Both in this and the lower room, the appearance of the scholars has been improving and becoming. Both schools continue under the care of the same teachers as last year.

The library attached to the girl's school is much used by the pupils: during the year, six hundred and fifty books were taken out by them, only two of which were lost. The whole number of books in the library is about three hundred and fifty; these are of a very miscellaneous character and comprise storey books, books of history, travel, and natural history, with a considerable number of works of a moral and religious nature. It was suggested in a former report to the Association, that any of the members who might have suitable books, which were no longer wanted in their families, should add them to our collection; we now renew the suggestion, and invite contributions from the members of the Corporation, and also, from all the interested Friends who may see this report.

The managers cherish a lively interest in theelfare and progress of the schools, and they would visit more frequent visits from Friends interested in the cause; believing that such visits would not the least retard the progress of the scholars, while the visitors would be amply repaid for the expense expended. There are among the pupils many really intelligent children, whose prompt and correct answers, and diligent attention to their studies, are very pleasant to visitors, and if we consider the difficulties in the way of improvement, which most of them have to contend with,—ignorant parents, who are unable to assist them in their studies at home, careless and illiterate companions, and the weight of popular prejudice against the colored race, we must admit that the real persistent effort has been exercised by the more advanced portion of the scholars, to perform what they have readily accomplished, and the habits of application thus acquired, cannot fail to bring forth good fruit in future years. There is also much to interest the visitor in the youngest class of scholars, to whom the first rudiments of study are being imparted. A number of these are learning the alphabet, while others are just beginning to spell, and it is both curious and instructive to mark the efforts of these young children to master their simple lessons. Both schools will be found open from one o'clock in the morning until three in the afternoon, on every day of the week, except First and Seventh days.

Application having been made by several young men, members of our religious Society, for the use of one of our school-rooms during one afternoon each week, for the purpose of instructing private girls in sewing and cutting out work, the privilege was granted them, it being understood that the applicants are to be responsible for the safekeeping of the room and furniture. The upper room is occupied by them for the purpose, and every fourth-day afternoon a considerable number of girls receive instruction in plain sewing. Signed by direction and on behalf of the Board Managers,

JOHN E. CARTER,
Clerk.

Twelfth month 25th, 1862.

Officers of the Association.

Clerk.—WM. SMEDLEY, JR.; *Treasurer.*—BEEZ JENKINS.

Managers.—Israel H. Johnson; Mark Baldwin; Jos. S. Elkinton; Caleb Wood; John M. Etherell; Thomas Elkinton; Benjamin H. Pitt; Jabez Jenkins; J. Wistair Evans; John Ether; John B. Garrett, and John W. Cadbury.

A holy life makes a man wise according to the vine wisdom, and wonderfully enlarges his experience; and the more humble his spirit is, and the more subject and resigned to God, the more

wise he will become in the conduct of his outward life, and the more undisturbed in the possession of himself.—*Kempts.*

—♦—♦—♦—

Strong Characters.—Strength of character consists of two things—power of will and power of self-restraint. It requires two things, therefore, for its existence—strong feelings and strong command over them. Now it is here we make a great mistake; we mistake strong feelings for strong character. A man who bears all before him, before whose fury man's domestics tremble, and whose bursts of fury make the children of the household quake—because he has his will obeyed, and his own way in all things, we call him a strong man. The truth is, that is the weak man; it is his passions that are strong; he, mastered by them, is weak. You must measure the strength of a man by the power of the feelings he subdues, not by the power of those which subdue him. And hence composure is very often the highest result of strength. Did we never see a man receive a flagrant insult, and only grow a little pale, and then reply quietly? That is a man spiritually strong. Or did we never see a man in anguish stand, as if carved out of solid rock, mastering himself? Or one bearing a hopeless daily trial remain silent, and never tell the world what enkindled his home peace? That is strength. He who, with strong passions, remains chaste; he who, keenly sensitive, with manly powers of indignation in him, can be provoked, and yet restrain himself, and forgive—these are the strong men, the spiritual heroes.—*F. W. Robertson.*

For "The Friend."
The Eighth Annual Report

Of the Managers of the Home for friendless coloured children, is now given with feelings of satisfaction mingled with anxiety. With satisfaction that another year of usefulness has been granted to the Institution, and with some anxiety as to its future, now that it has been deprived of the services of our valued matron, Sarah Luciani, to whose labours it was so deeply indebted; a very sudden stroke of death during her brief visit to the country having removed her from the post she had held since the establishment of the Home.

During the whole summer of 1862, she had remained with the children without relaxation of any sort, though her health had not been so good as in former years. An undefined anxiety arising apparently from the unsettled state of public affairs, combined with the exhibition of cruel prejudice against the people of color, made her hesitate to leave her charge. She put aside every entreaty urged to induce her to leave the city, until after the fall elections had taken place, when, her mind being relieved by no serious outbreak having occurred against the coloured people, she decided that the time had come when she might take some rest; our excellent teacher having resumed her place, and a faithful sister offered to take her post.

She did not know that the final rest so near at hand; yet some indistinct consciousness perhaps of the great change, led her to express the hope that her final illness might not be one that would confine her to her bed, and to say but a short time before her death—"I should like to be buried in a rural place."

So sudden was the close, that one brief prayer was all she uttered. She expired with the words, "Lord, have mercy on me!" Her remains lie buried in the ancient grave-yard of Caln Meeting.

These details will interest those who have known the daily life of this earnest woman. About eleven

years ago, she devoted herself to the instruction of a number of coloured children in Bedford street, taken from the most destitute of their class in that neighbourhood. The rent of the room was paid by the Abolition Society; her services were remunerated for a very small compensation.

A few friends became interested in her labours, and shared her anxiety to find a home for some of the more utterly destitute among her little class; children without a place to lay their heads when night came, except in some haunt of vice.

For these she laboured—and in time others were raised up to do what she could not do—provide a home for them. It was a poor place; yet here when she was made its matron, she exerted that energy and practicalised that economy which made the small means entrusted to her care, go so far in providing comfort and plenty for the destitute.

She shrunk from no exertion; she declined no labour however repulsive, which was necessary for the relief of these neglected children. Surely "the blessing of Him that was ready to perish," has come upon her, and we may reverently believe "her record is on high."

During 1862, 19 children were admitted into the Home, and 16 were placed out. Eleven remained at this time. Three of these were brought by the police and rescued from circumstances of great misery. 112 children have attended the school, though 52 only are on the roll, the attendance being irregular. The school is in good order, the children showing much interest, and many improving rapidly. 37 of the children partook of the annual dinner with great pleasure. Not only did these enjoy the plentiful repast, but several dinners were sent out to those who could not come. One little fellow asked for a piece of chicken for his sick brother who has since died, but was then able to enjoy the treat his brother's thoughtfulness obtained for him.

We trust our country friends will remember how much good they may do by contributing vegetables, apples, &c. Our resources are small, unless those interested in the friendless coloured child will contribute from their abundance to his support. We shall be glad to receive second-hand clothing or shoes at the Home, 708 Lombard street, which is now temporarily under the care of E. Flannigan, the sister of Sarah Luciani.

In order to avoid all unnecessary expense, the report is not published this year as usual; hence all detail of subscriptions and donations is necessarily omitted, but we return grateful thanks to those who have hitherto aided us.

E. C. COLLINS, *Secretary.*

ZION.

Selected.

"Glorious things are spoken of thee, oh, City of God."

PSALM, LXXXVII. 3.

Glorious things of thee are spoken,
Zion, city of our God!

He, whose word cannot be broken,
Formed thee for His own abode.
On the Rock of Ages founded,
What can shake thy sure repose?
With salvation's walls surrounded,
Thou shalt smile at all thy foes.

See the streams of living waters,
Springing from eternal love,
Well supply thy sons and daughters,
And all fear of want remove:—
Who can faint while such a river,
Ever flows their thirst to assuage?
Grace, which like the Lord, the giver,
Never fails from age to age.

Round each habitation hovering,
See the cloud and fire appear!
For a glory and a covering,
Showing that the Lord is near:
Thus deriving from their banner,
Light by night, and shade by day,
Safe they feed upon the manna,
Which he gives them when they pray.

Blest inhabitants of Zion,
Washed in the Redeemer's blood!
Jesus, whom their souls rely on,
Makes them kings and priests to God.
'Tis His love His people raises,
Over self to reign as kings,
And, as priests His solemn praises,
Each, for a thank offering, brings.

Saviour, if of Zion's city,
I, through grace, a member am;
Let the world deride or pity,
I will glory in thy name.
Fading is the worldling's pleasure,
All his boasted pomp and show;
Solid joys and lasting treasures,
None but Zion's children know.—

Amen.

REPLY TO "NO SECTS IN HEAVEN."

Selected.

No sects are in heaven—'tis true, it is true—
The soul that comes thither is fashioned new,
And the terms are plain that best please
In the mercy of God and His sovereign grace—
The abyss of death is not passed indeed,
By baptismal font, or hook, or creed.

There's no clothing in heaven, and yet it is clear,
That mortal man clothe themselves decently here—
There's no cross in that world—and yet we all know,
That the way of the cross is the sure one before;
For none ever reached the celestial abode,
Who refused the chastisement he found on his road.

Our blessed High Priest who arose from the dead,
While He journeyed on earth had no place for His head;
None bore His reproaches, all shrunk from His shame,
His visage was marred, and rejected His name—
And it ever must be that His chosen and true,
Must tread the same path He thus brought to their view.

The Holy Redeemer has given His call,
Not to this one, or that one, but freely to all—
Yet it is not declared that the highway He cast—
Which leads to the kingdom of glory at last,
Consists in our clothing—our eating of meat—
In our wearing of this, or refusing to eat—

Yet the Lamb without spot who fulfilled the great plan,
Of saving the souls of regenerate man,
Wore a plain seamless garment, 'twas woven throughout,
It was homely and simple there was not a doubt—
And His faithful Apostle, magnificent Paul,
Has shown how rare dress is becoming to all.

If Christ in His mercy has called me away,
From the court only outward—in secret to pray,
Let me dare not to think I may turn from the call,
Or suppose that one path is intended for all,
Lest while I refer to a singular here,
My title to heaven may never be clear.

The Roman, and Grecian, the Parthian and Mede,
May worship in spirit though differing in creed—
And those who the pride of this life have denied,
In the land of the blessed may 'walk side by side';
But none ever put Jesus' righteousness on,
Who was not unclothed of all good of his own.

While Paul at Ephesus encounters the beast,
He calls John the beloved, to serve it as a feast,
And if at His call we are serving aright—
We shall through His mercy walk with Him in white;
No sects are in heaven—but out one is there,
Who has not the white linen raiment to wear.

Pennsylvania Anthracite.—The annual tables of the coal trade show the amount mined and sent to market during the year 1862 to be 8,270,154 tons. The progressive development of the business which had its beginning in 1820, is well shown by comparing the shipments at intervals of every five years. Thus in

1820	the quantity shipped,	was 365 tons.
1825	" "	" 34,898 "
1830	" "	" 174,764 "
1835	" "	" 560,758 "
1840	" "	" 865,314 "
1845	" "	" 2,023,052 "
1850	" "	" 3,392,604 "
1855	" "	" 6,626,288 "
1860	" "	" 8,450,053 "

Although the natural tendency to grow and expand, has been somewhat checked the past two years, there seems no reason to doubt that the coal trade must go on steadily increasing for many years to come, unless calamities arise even greater than have yet befallen the country.

Diary of Samuel Scott.

(Continued from page 120.)

"Fifth month 19th, 1781. Mental prayer and reading the holy scriptures have of late been practised; it is true that the bare "letter killeth," but a diligent, and I think almost a daily, attention to these sacred records is the duty of all; not so much with a view of immediate satisfaction and sensible comfort, neither with a view of laying up any stock in our memory, but in a dependence on the Spirit that quickeneth. The ministers in our Society are particularly recommended to be conversant in them, by the Yearly Meeting—1702 and 1706. Nevertheless they ought to have no treasury but the Divine gift,—the well of water springing up into everlasting life."

"28th. In a meeting for discipline, I sat in pain and bowedness of spirit, under a sense of formality and libertinism being too prevalent in our society, some resting too much at ease in the form, and a pretty punctual compliance with it; and others trampling on the Witness in themselves, and the precious testimonies of Truth, in respect to speech, behaviour, and apparel; esteeming them little things, or the productions of enthusiasm. Thus hath the outward court been trodden under foot by the gentiles. Instead of inquiry, 'what shall we do to be saved,' a language hath been substituted by the formalist and libertine: 'The temple of the Lord, the temple of the Lord, are these; what shall we eat, what shall we drink, and where-withal shall we be clothed?'"

"Seventh month 1st, 1781. Our worthy friend Sarah Crawley, of Hitchin, attended both meetings. In the evening, our friend W. S. of this town, very suddenly departed this life. I attended his funeral, which was large, on the 8th. When I heard of his decease, he having been for some months indisposed, I became doubtful whether I had not been deficient in the visiting of him, and waiting for the renewal of Divine help and counsel. It is certainly a duty to visit the sick, and sit with them;

but in such sittings words have been expected, and they have been, perhaps, too frequently uttered in a customary manner amongst us, as well as others.

"13th. Unprofitable disputations grievously prevailed; we should never speak anything but truth; and frequently no advantage accrues from speaking of what we most firmly believe to be the truth; speaking often is folly, when in silence there is strength."

"20th. Before dinner, in Morgan's Walk, will feebleness, and amidst interruptions, these ejaculations were inwardly uttered; Lord, sanctify; purify; that I may be perfected in holiness, according to the measure of my faith in Christ! This day and yesterday have been spent pretty satisfactorily, although not without defects. In the midst of bodily and mental pain, may my looking be more and more unto Him who was made perfect through sufferings; not as to the purity of his own nature, for he was the immaculate Lamb who kneels no sin, but in respect to the appointments and designations of the Father, for the redemption of man kind through him, and that he might be the more gloriously opened as a fountain, not only to the house of David and the inhabitants of Jerusalem but to the whole race of Adam, for sin and uncleanness."

"Eighth month 31st, 1781. After a deeply exercising night, in which the alarm of death was as loud within as the tempest without, I wrote on a fresh copy of my will, which I design to go speedily executed. I have nothing to boast of, but many backslidings bitterly to bewail; nevertheless since I have possessed some outward substance, I have been desirous to expend it in the most equitable manner I could, and that my fellow-creature both professor and profane, might partake of the benefit; and my own reputation, as an individual hath been pretty much absorbed in the consideration of my religious profession, that none might have any cause to reproach the blessed Truth, as having a narrow, illiberal, and selfish tendency."

"Ninth month 14th, 1781. It hath long been my judgment, that the circulating of reports, which in any wise, have a tendency to depreciate other is inconsistent with our christian duty; the mortifying our natural propensities, in that respect, certainly a branch of the Cross of Christ, as compatible with his spirit and precepts. Great indeed, even in this particular, is the prevalence the law in the members against that of the mind and of corrupt propensity over a more rightly formed judgment."

"Eleventh month 20th, 1781. Myself and wife dined at Youngsbury; after dinner I had so discourse with D. Barclay concerning that excellent man and skillful minister of Christ, his grandfather and the elaborate Apology he wrote for the Christian Divinity: his memory I much esteem, if the evangelical testimonies contained in that work and the distinctions between the doctrines of truth and Calvinistical and Pelagian errors. May no professing with us, forsake 'the fountain of living waters,' who thus speaketh; 'If any man is thirsty let him come unto me and drink;' and turn aside to the corrupted channels of carnal reason a creaturely power; for if so, 'the strong shall be low, and the maker of it as a spark,' when the Lord shall shake terribly the earth, and exalt his own begotten Son, as the refuge of the poor, a 'stronghold of the daughter of Zion.'"

"25th. 'What shall I render to the Lord, all his benefits? I will take the cup of salvation and call upon the name of the Lord.' In an intervention of the heart to God, in mental supplication, and the breathing of the Spirit, which must intercession with groanings which cannot

tered," consists the essence of all acceptable prayer and praise."

"Twelfth month 23rd, 1781. I was desirous of attending the Quarterly meeting at Hartford, but was prevented by indisposition from going thither until this day. On the journey, I was favoured with some renewed convictions of the beauty and excellence of waiting upon the Lord in sin; in it consists the very essence and marrow of prayer, of which, words the most fully spoken, are only a signification. Upon a mature investigation of the New Testament, I can perceive no obligation on believers to keep the first day of the week. By Divine direction, the seventh was ordained as a sabbath to Israel after the flesh, whilst the first tabernacle was yet standing; and the transgressors of the divine command were to be judged with a legal and rigorous severity; but when 'the Word was made flesh,' and magnified as the glorious rest and hiding-place of his people, and the apostle Paul contending for the liberty of the gospel, and prohibiting the saints in Christ Jesus from judging one another, in respect of an holy day, or the new moon or the Sabbath days; which, says he, 'are a shadow of things to come, but the body is of Christ.' Nevertheless I greatly disapprove of travelling on the first day of the week, and of neglecting our religious assemblies for divine worship; it being highly conducive to a proper discharge both of divine and moral duties, that one in the seven should be peculiarly appropriated sacred purposes."

"First month 31st, 1782. This day we made a fast, consistent with our Lord's direction: although in every respect literally so; I would maintain spirit of hospitality and becoming liberality towards all, but the feasts of our Lord's institution be the most satisfactory to those who are desirous of being his disciples."

"Second month 6th, 1782. Unprofitable discourse prevailed. 'The tongue is an unruly evil, full of deadly poison, which no man can tame.'

"11th. As my fathers were, so am I, a sojourner here, and my days are passing over more swiftly than a weaver's shuttle; 'this is my infirmity, but I will remember the years of the right hand of the Most High,' his wonders which have been of old; 'and Him who is an high priest for us, after the order of Melchisedek;' in whom death is swallowed up in victory.' May my desire and hope of salvation be in him, although I am a dwarf in Israel, and far short of having attained a proper growth, in the measure of the nature of the fulness of Christ."

"Third month 31st, 1782. It is written in the scripture, 'Let every one that nameth the name of Christ depart from iniquity.' How few among the various sects in Christendom are concerned in that so to do! Notwithstanding their appointed sins and feasts, their loud boastings of justification by Christ, and pompous praise of virtue and moral rectitude, in their hearts they regard iniquity."

"Fourth month 5th, 1782. Walking in the range, and parts adjacent, and reviewing scenes in places with which I had been acquainted in my youth, I became profitably recollected in spirit, in a sense of the promised Seed, by whose mediatorial influence I have been preserved to this day, when many of my contemporaries are unaccountably stationed in regions unexplored by us; we are on this side Jordan. May I, together with many brethren, be concerned, as at the eleventh hour of the day, with much spiritual travail and great searchings of heart, to seek, as treasure in a field, 'Christ in us the hope of glory,' who was delivered for our offences, and was raised

again for our justification;' being according to the flesh of the seed of David; but who is God over all blessed forever. And as our ancient friend, George Fox, used to testify concerning him, 'Christ Jesus the true seed, both in the male and female; the head of the body, the church!'"

For "The Friend."

Review of the Weather in Iowa, for Twelfth month, 1862.

Having been interested in comparing the review of the weather in Pennsylvania for Eleventh month, published in "The Friend," with some account of the same during the same time, kept in Cedar County, Iowa, I was induced to believe that a similar opportunity might also interest others, which is my principal object in offering the following.

The first ten days of the past month were clear and the wind generally from the westward; the temperature and altitude of barometer during that time was not noted sufficiently accurate to warrant a place in the table below. I intend more accuracy during the present month. On the first eight mornings early, mercury ranged from 20° above to 2° below zero. The 9th and 10th were quite warm for the season, mercury rising at noon on the 9th to 44°, and on the 10th to 55°. The barometer up to this time, varied but little from 29.25. The 11th was cloudy, and temperature about 44°, with an east wind, and barometer falling; rained moderately all day on the 12th, and again on the 23rd; no fall of snow during the month, and none yet this winter, except one or two light snows in the Eleventh month, which soon disappeared.

A. F.

Springdale, Cedar Co., Iowa,
First month 1st, 1863.

Days of the Month.	Temperatures.				Max. Height of Clouds in Feet.	Direction of Wind.	Circumstances of the Weather for Twelfth Month, 1862.
	7 A. M.	3 P. M.	8 P. M.	Mean.			
1	48	59	56	52.7	SE	Cloudy, raised all day moderately.	
2	48	40	54	38.5	SW	Cloudy, windy, calm in the evening.	
3	36	40	34	37.6	SW	Cloudy and drizzly.	
4	22	34	28	28.7	W	Mostly cloudy, clear at night.	
5	23	34	20	26.6	SE	Flying clouds, a brisk breeze.	
6	22	37	31	29.8	S	Clear, very slight breeze.	
7	28	36	30	31.4	SE	Clear, a breeze.	
8	26	30	30	28.7	SE	Clear, a breeze.	
9	38	46	37	40.3	SE	Cloudy, a breeze, a little sleet r. n.	
10	38	46	37	40.3	SE	Cloudy, a breeze, a little sleet r. n.	
11	42	46	31	39.6	SW	Cloudy, a breeze, a little sleet r. n.	
12	32	36	48	35.9	N. E. S. E.	Cloudy, raised all day, stiff breeze.	
13	36	46	38	39.8	SE	Clear, slight breeze.	
14	26	42	44	28.9	NE	Cloudy and cloudy, slight breeze.	
15	26	38	32	29.4	SE	Clear, a breeze.	
16	28	34	26	29.3	SE	Cloudy, clear night, slight breeze.	
17	26	30	48	29.1	SW	Clear, a breeze.	
18	32	32	31	29.96	SE	Cloudy, slight breeze.	
19	28	24	32	29.96	SE	Clear, very slight breeze.	
20	31	38	28	29.67	SE	Clear, a brisk breeze.	

For "The Friend."

To the Editor:— I send the following extracts from letters received from a dear friend, visiting Europe some time since, for insertion in "The Friend" if thought suitable. Written for a home circle in the haste and absence of care, incident to the crowded time of a tourist, they may be of little value to the general reader, but the glimpses they give of scenes in other lands, seen through a fresh medium, may afford some interest to the younger readers of the journal, and I therefore transcribe them, having on this ground obtained the consent of their author.

"GLIMPSES OF THE OCEAN.

Ship T., _____, 1861.

* * * * * Some fifteen miles outside the cape the pilot left us, bearing with him our cape letters, and all worth noting, up to this date. 'Good riddance!' said the captain, almost before he was out of hearing. The steam tugs also

were soon after dispatched, which he seemed equally glad to get rid of; then with wonderful rapidity the yards were strung with sails, and all the sails were set. And now we are rapidly losing sight of land; the wind has risen, and with the increased rolling of the ship we are as rapidly losing command of our equilibrium.

To those not having a true love of the ocean, or who suffer under that bane of all enjoyment on a sea voyage, sea sickness, four weeks in a sailing vessel, is probably monotonous and wearisome, but for many who escape the above named misery, which seems likely to be my favoured case—the ocean has a peculiar and ceaseless charm. There is also much interest in observing the grace and regal dignity in the motions of the stately ship, and the operations of captain and crew, in their apparently perfect command of her, with the numerous little incidents from day to day, many of them peculiar to the life they lead, and novel to us. So that, though there are but six first-cabin passengers beside ourselves, I think I need anticipate no weary days. Few of us indeed, I believe, under any ordinary circumstances, but may find ample sources of interest, 'if but our watchful eyes would seek them' in the incidents, the blessings, the 'beauty all around our paths.' * * * * *

"_____ strong south easter, promising a gale to night. Our noble vessel is under full sail, pitching and tossing from bow to stern, and at the same time rolling from side to side, so that it is impossible to stand for an instant without 'holding on,' and even the captain and crew are reeling about like drunken men. How grand, how awfully beautiful is the inky sea with its foam crowned, towering billows. The whole ocean seems to me like a vast basin, filled, as basin never yet was filled, not level with the brim, but with a wonder of waters, capable of flowing up as well as down, there remaining, deep, massive, and as if our ship were tossing in the hollow of it, the huge billows, half mast high, rushing ever down its sides, and seeming as if they must inevitably engulf us; but suddenly they sink, almost softly, when they near the hull of this, our present home—one of the most majestic of man's architectural triumphs—as she sits apparently as lightly on the water, as the little stormy petrels, by which we are surrounded, when occasionally they rest from their almost ceaseless flight. Gracefully she mounts the next bounds to the brink of the mighty basin,—and lo! her bowsprit already pierces the sky! will she leap the verge? and plunge—where? into illimitable space beyond? it was but a moments' thought; back she sinks into the vortex, there to encounter another rushing pile of waters with such force she cannot at once rebound, and with the shock she trembles throughout as a very little thing! And such she truly is! skimming over the surface of this 'glorious mirror, where the Almighty's form glasses itself in tempests.' And this deep, awful basin, wherein she now safely rocks amid the rush and clash of these armies of wild dark waves, is it not as the hollow of 'His hand who taketh up the isles as a very little thing?' And thus, oh thus, may we trust we are in his keeping here, as on land where no danger seemeth!

"_____, Oh what a night was last! not that I really felt alarmed, nor did I even rise from my berth to inflate our life preservers, which I had intended always to do before going to sleep, and which has never yet been done. But I did feel, I trust, a deep and solemn sense of our utter helplessness, and dependence on the merciful protection of an overruling Providence. The whole night through was the wind howling in the sails almost like the explosion of artillery, in grand con-

with the deep bass of the never ceasing dash and roar of the waves; sometimes attended by a fearful rushing and clashing sound, as though the vessel must be engulfed, while she creaked and groaned with the strain, as if her timbers all around my head might be splitting asunder. Then would come a tremendous thump, I know no other word to express it, as from some solid body as heavy as the ship, which made her shudder from end to end. All this, accompanied by the shouts of the captain and mates, the tramp of the heavy footed sailors, immediately above on the wooden deck—sounding as if a drove of oxen might be about breaking through on our devoted heads—with their long drawn ‘Oh ho!’ ‘Haw ye!’ &c., as they were ever making some change in the rigging, it is not surprising that sleep was banished from our eyes. To say nothing of the incalculable bodily sensations we were passing through while laboriously holding on to the berth, to avoid the rather less desirable alternative of being tossed out upon the floor. The extraordinary rolling and plunging made one feel as in a delirium; from side to side, up and down: now my couch, which was anything but one of repose, seemed suddenly to sink from under me, leaving me suspended in air; then, if I might credit the evidence of my sensations, I was whirling round and round. I thought I was pretty well qualified to appreciate the sensations of a bird perched on the outermost twig of a tree during a gale. This morning the captain acknowledged we had a heavy gale during the night. But ‘were in no danger, no more than on land;’ so much madam, for such a gale would have blown the roof off your house. Give me plenty of sea room, and I fear no storm in such a ship as this.

“—————, To day is perfectly lovely. How gloriously beautiful is the ocean, its heaving, tossing, ever restless waves! No longer black, neither its wonted green, nor yet any blue I have ever seen in sky, or any other water: as true as the brightest cerulean, but deep, dark, intensely rich. And that broad dazzling path of the sun, from the horizon to our very feet, burnished silver? No! I may not compare any thing earthly with its splendour. With truth for once, may I use the trite expression, an ‘ocean’ of enjoyment have I here of which I never weary.

“Many other pleasant sources of true enjoyment in this, our life at sea, of which I might speak—whether reading, writing, watching the sports of various fishes and birds, the little stormy petrels, now darting hither and thither through the air, now, when weary, resting on the dancing billows so far, far away from most of their feathered kind; the beautiful brilliant *nautilus* sailing there too, splendid gems are they, set in the dark waves, white coronal, &c.—you can imagine as well as I can tell you. But will you have quite a different sketch? For see, here now comes smiling towards me, in the person of one of our fellow voyagers, another daily source of pleasure, of which I may also say, I never weary. With what a charm some circumstances are invested, which is due in part to the rare time and place in which we meet them. Thus, one of the passengers, a lovely little *fair blue eyed* French boy, about four years old, the very embodiment of content and quiet happiness, might banish mere ennui or weariness from almost any heart. His very presence seems like the song of birds, and the perfume of flowers

“Telling the home-sick mariner of the shore” — and making him almost

“deem,

“He hears the rustling leaf and running stream.” Dear little Leon! he is about and among us from

morning till night, and we never witness an act of disobedience, or a peevish look or tone. Not that he is dull, on the contrary, he is rather an uncommonly bright boy. Not understanding English he can talk but little to any but his parents, and his mother being generally sick in her berth, he is dependent on no one, but is ever entertaining himself with his very limited sources of amusement. Yet his sometimes earnest, wistful look betrays pent up boyish thoughts, that would fain have vent; as when trotting up to me just now, that bright smile is brim full of something claiming sympathy; it cannot be restrained; ‘Parlez vous Anglais, Madame?’ ‘Oui!’ ‘Al vous parlez Francois!’ ‘Non, mon cher petit garcon, je ne parle pas Francois.’ But having spoken a few words, it is difficult for him to believe I cannot understand him, so he rattles on, I nod and smile, and this is our conversation. It is a delight and occasions many a laugh to all to see his gambols with a huge St. Bernard’s pup, half as big again as himself, a very small, beautiful black spaniel, his own pet, and a piece of rope. With the rolling of the ship, down they all come together, tangled in a heap with the rope, then up springing again nearly as quickly as the dogs, with a merry laugh, talking to them in French the while, he is off for another frolic and scramble. What a spirited, lovely picture they make! Ah, the tiny black spaniel, with his glossy, waving hair, and long silken ears, in the arms of the fair little immortal, to whom he has rushed for protection from the sometimes too rough frolicking of Swiss, the great, good natured pup, a noble looking fellow as he stands near, gazing wistfully at his companions: he gets into a kind of ecstasy over his little plaything, a mere foot ball for his paw, and is longing for another romp. Leon is never boisterous or obtrusive in his mirth, and is, withal, a grave, thoughtful looking little fellow, excepting when he occasionally rings out a merry peal of uncontrollable laughter, which is as the music of sweet bells above the dash of the ocean. Scintillations they seem, from the perpetual sunshine of his happy spirit, while his gentle smile, more like the tender moonlight, is ever ready from his loving heart, for all who kindly notice him. Last evening, weary perhaps, of his almost uninterrupted trot throughout the day, and his many ‘rough and tumble’ on the hard deck with his favourites, he devised for himself a new entertainment. Mounting the top of one of the companion ways for a rostrum, he thence delivered a long oration, for the benefit, apparently, of some steerage passengers sitting opposite him, but to the great amusement of all; and while he poured forth words with true French volubility—quite unlike his usual self, by the way—with all the fervour and gesticulation of a genuine little orator, occasioning many a hearty laugh to his audience—though they could not understand a word—until his usually soft, tinted cheeks glowed with heightened colour, it was accompanied only by his gentle, bland smile; not once compromising his dignity by any outburst of boyish laughter. But in thus exhibiting to you one of the bright phases of our limited sphere of social enjoyment, I have been led, I fear, to dwell too long on the attractions of the pet of the ship.

“————— On deck but for a short time this afternoon. A dark, gloomy day, but still a grand sea. All below—many laid on the shelf, sea-sick—and the captain, crew, and Leon, the little French boy. He, too, sick enough to pine for fresh air; all his spirit for gambolling with the great pup and tiny spaniel is gone, quite gone—his ringing laugh is hushed! There he sits in the drizzling rain, pensive and alone, doubled up on the seat, holding on with his feeble night, as our noble vessel

pitches and rolls like a log; the dark sky above the darker waters raging all around him. An now they come, the huge, black waves, like wa steeds with flowing manes, and “necks clothe with thunder,” rushing to battle! Will they spend their power upon our frail bark, and lay her prostrate, helpless? No! they fall, and softly sink under her keel, their dark crests breaking into gleaming white foam the while—softly as a graceful Ethiopian maiden, her face radiant with smile might curtesy at the feet of a child upon whom she had rushed with mock violence to alarm: a again and again, as the threatening billows the sink away at our feet, can, I almost fancy, I hear in their murmur, “I only did it to frighten you! This appearance, when looking down upon the water, of the fierce waves gently falling under the vessel’s keel, occasioned by her so quickly an lightly rising upon them, is a peculiar and interesting feature to me.

“————— Beautiful day. But old ocean been very much wrought up by the prevalence of big winds for many hours, we may not—as many of us have found to our sudden and rather dreche discomfort—with impunity, approach with reach of his arms, even while at play; havin been rather unceremoniously swept from the deck by his majesty to more lowly, less presuming quarters. But making a merit of necessity, have, in spite of his thus spurning us and washin us from before him like grains of sand, enjoye him to the full: seated or propped on the back of the lounge at the stern-windows, I have had a fir opportunity, which otherwise I might not have sought, of gazing from quite a new point of view upon his sublime waste of waters. While th vision is thus more on a line with the surface the ocean, the waves look more towering high when on deck, and the distant, paler-hued sea near the horizon, with often a broad belt of sh above, forms a fine back-ground. The sun is ev and anon breaking through heavy masses of cloud and brilliantly lighting up far-off portions of th sea which appear—oh, what can I say!—as some subterraneous action might have been bring up to its surface, a vast volume, a lake of liquid silver, whose dazzling, surging billows can be distinctly seen even from afar, where the dark sun rounding waves—now in the shadow and levelled by *dim* distance—cannot. Then the wonderf beauty, the indescribable effect, of those ever rol ing by immediately before the stern-window rearing high their dark fronts in bold relief at sharp-out outline, of every form of mountain pea against this glittering back-ground of sunny se and fleecy sky. Now the distant silver lake ove leaps its shadowed margin, pours into the wake our ship, then right on it comes, up to the vester! a broad stream of intense light, with u leaving, clashing billows, and sharp glancin rows, thick as hail, almost too intense to look up And now a more equal light overpreads the wid wide ocean, with only here and there the dlow dark shadows gliding o’er, as we oft-times i them over green valleys and wooded hills, ne ‘home, sweet home!’ at our country home far-off, beautiful S. I And now I think I will s no more on this absorbing theme—the Ocean.”

For “The Friend.

On reading the following testimonies concerni two ancient Friends, I thought some of our d Friends in this day, advancing and advanced years, who, from one cause or other, feel troub and afflictions to increase upon them, might t a little fresh courage, and be incited, notwithstai their discouragements, still to press forward

good way, and thus retain their greenness and idleness of spirit to the very close of life,—then, the end which "crowns all," a glorious fruition it be theirs.

The following is from a testimony of Uwehlan Monthly Meeting, concerning Samuel John, who departed this life in the Tenth month, 1766, in the eighty-seventh year of his age."

"It was his lot to pass through divers baptising afflicting circumstances, (occasioned by the adact of some who ought to have been a count to him in his declining years,) which he bore with becoming patience, and retained his openness to the land, appearing in a sweet comely frame of mind; he often expressed himself in a deep, sensible and affecting manner to those who visited him during his last weakness, which continued a considerable time, being confined at home through bodily infirmity and old age, near two years before his decease."

"New-Garden Monthly Meeting, gives the following testimony concerning John Smith, who deceased about one week after the above, in the fifty-sixth year of his age.

"Though in the decline of life, he met with some exciting occurrences, yet he bore them with a good grace of christian fortitude, looking over them to that which is invisible, having an eye to the recompense of reward.

"The last place of his residence was within the limits of New-Garden Particular Meeting, which he carefully attended when able; the Lord being pleased to preserve him as a fruitful branch, fresh and green, which was manifested by his conversational, solid deportment in meetings, and particularly his ministry, a sweetness of spirit, and lively sense of truth, apparently attending him to the end."

THE FRIEND.

FIRST MONTH 17, 1863.

Almost every American periodical which we receive, announces that its price is to be raised, or size reduced, or, that finding its receipts will not defray the expense of conducting it, it is about to be discontinued. This arises from the increase in the price of paper, which, within the past three months, has advanced quite an undred per cent. Thus, printing paper, which a few months ago could have been bought for ten twelve cents per pound, is now selling for twenty twenty-four cents a pound.

There is an advantage in this, so far as it cures or destroys the publication of the trashy "literature," which in its heretofore wide circulation has tended greatly to vitiate the taste of its readers, and too often to pollute their minds and debase their morals. But from the number of religious journals that have been, or will be commenced to discontinue, as well as the obstruction it presents to the publication of works of merit, there is little doubt that the public is suffering great by it.

In common with others engaged in a similar labor, "The Contributors to The Friend" feel the sure of increased expense in the issuing of a weekly journal; and were pecuniary considerations alone to influence them, would be ready to announce to their patrons that its days were numbered. But while desirous that its subscribers should pay expenses, pecuniary emolument not been an object with "The Contributors," they have they ever derived any from the publication of their journal. The object for which they laboured during the last thirty-five years, and

for which they are striving still, is to promote the interest of our religious Society, by furnishing to the rest of its members who are subscribers to The Friend, an interesting and instructive miscellany, conveying sound literature and entertaining knowledge into the family circle, while it inculcates christian morality, and upholds and illustrates the religion of Christ as professed and expounded by Fox, Penn, and Barclay.

With this object kept constantly in view, "The Friend" has been maintained through good report and bad report; never missing or delaying a number since its first publication in 1827; and has received the approbation and support of a large portion of a generation of Friends in this land now nearly gone, and very many of that at present on the stage of active life. Is there less reason, or may we not say less necessity, for its publication and wide circulation now than heretofore? Is less reason for promoting improvement; less cause for contending for the faith, once delivered to the saints? We appeal to all our readers whether they ever knew a period when such a journal, if rightly conducted, could be of more use than now? Is it a time when the religious world may be said to stand in trembling expectation of a renewed mighty struggle between truth and error, involving once more the acceptance of the scriptures as being written by holy men of old as they were moved by the Holy Ghost, or their rejection, as cunningly devised fables, imposed upon the credulity of ignorant men. It is a time when attacks upon long cherished principles and practices, made by many who possess strength and influence, are shaking different denominations of christian professors to their centre; and when the indications are multiplying, of the people seeking to rid themselves of useless forms, and to become possessed of more of the spiritual fullness of the gospel.

In our own beloved Society, what marvellous changes have been effected within the last few years, and are being still urged forward: changes which in some places have betrayed the Society from the high position it once occupied, and which show conclusively that its distinguishing principles and practices must yet be contended for and defended, or it will go on losing all that has heretofore characterized it, or be merged in other religious denominations. Its principles of church government and its organization, which received so severe a shock by the acknowledgment by other Yearly Meetings of the separate meeting in Ohio, are yet to be vindicated and re-established, and the effort to be made for restoring harmonious intercourse, under right authority, between the respective co-ordinate bodies.

The last thirty-five years have been years of controversy and severe trial in our religious Society in this land, and they have left it peeled and shorn of its strength. What the next equal period may exhibit among us as a people, Omniscience only can foresee. Are we ever to be re-united, striving together for the hope of the gospel as believed in by our forefathers? So long as any feel conscientiously bound to maintain the old faith, disunity and controversy will continue, until those who have adopted the new faith have ceased to propagate it, or have gone off to more congenial professors. Would that we could discover more signs that the dreadful desolations and suffering with which the Almighty is now scourging our country, were inclining the members of the Society everywhere, to examine the foundation on which they are individually building, and to give a practical exhibit of the principles we profess, by striving in christian love and sincerity to search out and remove the causes of declension

and division. Whatever further trials may attend the shaking, which Friends as well as others are undergoing, we are disposed to hope that a better day is dawning upon them, and that there are those preparing here and there, who shall yet stand as saviours upon Mount Zion, and be made instrumental in turning back the captivity of our people, and restoring the places that lay waste.

The course which "The Friend" will hereafter pursue will be in accordance with that which it has always pursued. Having no party to serve, no private interests to advocate, its conductors will continue to labour for the promotion of the welfare of our religious Society, by endeavouring to keep the readers of their journal informed relative to those matters of high interest to which we have alluded, and by furnishing them with the usual amount of literary and scientific reading.

To enable the Contributors to do this without much loss, it is necessary that the number of our subscribers should be increased; and we appeal to those who kindly act as agents for us, to those who now take our journal, and to all our friends in the different Yearly Meetings, to make an effort to add as many names as they can to our subscription list. If each one will consider it his or her business to procure at least one more name, it may double our receipts, and thus meet the increased expense attending the publication. With a little exertion, we believe a much wider circulation can be given to "The Friend," and the Contributors be relieved from any fear of becoming involved in debt by it.

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 2d inst. The English revenue accounts show an increase during the year of £2,392,000. The *London Times* thinks that this proves conclusively that cotton is not king, and it would be far better for England to keep all her cotton operations on public pensions till they are absorbed in other mercies, than vary one point in her national policy. A great meeting of the working men of Manchester was held at Free Trade Hall on the 31st ult., for the purpose of passing resolutions in support of the Union cause, and agreeing on an address to the President of the United States. The Mayor of Manchester presided, but not in his official capacity. Resolutions were passed, expressing sympathy with President Lincoln and his colleagues, in their endeavours to suppress the rebellion, and high satisfaction at the Proclamation of Emancipation, and other measures tending at once to give freedom to the slave, and restore peace to the American nation. The Mayor was requested, and undertaken to transmit the resolutions and address to the President, with the hearty salutation of the meeting, and with the expression of its earnest wish that England and America may ever remain knit together in the most intimate and fraternal bonds.

It is asserted that two of the Great Powers are not in favor of the Ionian Islands being ceded to Greece, on the ground that if the present Protectorate ceased, they would become a permanent focus of insurrection. The uncertainty as to the future King, was giving rise to disorder in various parts of Greece. A great popular demonstration occurred at Athens, on the 30th, the crowds shouting for Prince Alfred, and asking for the English Special Envoy to be refused the throne on the part of Alfred, at the same time committing the Greeks to sympathy and good will of England. The annual stock taking of cotton in Liverpool developed an excess of over 100,000 bales over the estimated quantity. This attracted much attention, and depressed prices nominally, to the extent of half a penny, but as the market was closed on the 1st inst., the effect was not finally tested. Breadstuffs firm but quiet. Provisions very dull.

UNITED STATES.—The *Public Finances*.—The following is a synopsis of the bill reported from the Committee of Ways and Means, to provide means for the support of the Government.

Section 1 provides for the issue of 900,000,000 of dollars, in twenty years six per cent. bonds, the interest payable half yearly in coin, and may be sold for lawful money, certificates of indebtedness, or interest-bearing Treasury notes; provided that the whole amount of bonds and notes issued under this act shall not exceed

THE FRIEND.

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

Geographical Distribution of Plants and Animals.

Some plants appear capable of adapting themselves to almost any climate; thus, many ferns and mosses are common to both Europe and America, and numerous European weeds infest the fields and woods throughout the United States, to the exclusion, in some instances, even of the native weeds of the soil. The spores of cryptogamous plants, too, are so light that they are easily borne by atmospheric currents across mountains and seas, and this accounts for the wide distribution of the same species over the European and American continents; but the European weeds which everywhere present themselves to the eye in America, are certainly the result of commercial intercourse, as there is nothing in their organization to convey them to such vast distances from their native localities.

Some species of animals have also a very extensive geographical range. The musk-rat is found on the mouth of Mackenzie river to Florida. The wild mouse has an equal range in Europe. Commerce has mingled together the animals as well as the plants of the Old and New Worlds. The horse originally from Asia, was introduced into America by the Spaniards, where it was allowed to run wild, and has thriven so well, that immense herds are now found scattered over the Pampas of South America and the prairies of the West; and in the same manner the domestic ox has become wild in South America. Many animals, such as the dog, the different kinds of poultry, and several singing birds, seem to be capable of living in almost any climate, and are fostered and encouraged to associate with man, on account of the pleasure and service which they afford him. Many such welcome creatures have followed him; as for instance, the rat and the mouse, as well as a multitude of insects, including the house-fly, the cockroach, and those which live on the vegetables which we cultivate, as the white butterfly, and the Hessian fly.

The generality of animals and plants are not, however, so flexible in their constitutions. Each geographical and climatal region is occupied by one species not found elsewhere; and each animal flourishes best within certain limits, beyond which it does not range. It is the same with plants. Comparatively speaking, vegetable cosmopolites are few in number. The great number of plants are very exacting as to the conditions of their develop-

ment, and will only put forth foliage, flowers, and fruits in a certain soil, and under certain definite conditions of heat, light and moisture. In this respect, the animal and vegetable world are governed by the same laws. Even man is no exception. It is true that he is found in every part of the earth, yet he is subject to the same laws of geographical distribution as the plants and animals over which nature has given him dominion.—The Esquimaux within the snowy wastes of the Arctic Circle, and the negro living in the burning climate of Western Africa, are varieties of the human race, differing widely from each other in organization and outward appearance. They appear to be indigenous to the countries in which they are found, and are confined to them by the operation of the same laws which have restricted to the polar landscape dwarf birches and willows, and to the tropical, the tall and graceful form of the cocoa-nut palm and the tree-fern.

Tropical countries may be truly regarded as the paradise of trees and flower. The intense heat and light of the sun, combined with the humidity of the atmosphere, cause the rapid development of a rich and varied flora. There are no wintry winds, falling snows, or hard frosts to blight the magnificent vegetable beauty with which these regions are overpread. The forests of the tropics, instead of being composed, as in temperate climates, of a small number of trees with deciduous leaves, presenting the same wearisome monotonous aspect, exhibit a much greater variety of arborescent forms, which, clothed with perpetual verdure, are covered throughout the year with fruits and flowers in different stages of growth. The grasses are ligneous and gigantic, some of them equal in height to the trees of temperate climates; immense woody vines of fantastic and ever-varied form elevate themselves to the summit of the tallest trees, with the leaves and blossoms of which their foliage and flowers are often beautifully intermingled. In place of mosses and lichens, which grow on the stem of the trees in the temperate zones, the colossal trunks of these tropical trees are covered with the most gorgeous epiphytellar air-plants, which perfume the warm atmosphere with their powerful fragrance, presenting such a dense mass of vegetation as to be almost impenetrable even to the explorer with axe in hand. The tall and elegant palms and tree-ferns, with their magnificent bouquet of gigantic and pendulous fronds, tower far above the rest of the trees, and are seen afar off on the ocean, generally the first objects which present themselves as the traveller approaches the shores of tropical countries.

The development of animal life is equally luxuriant. The principal types of it are represented on the most magnificent scale. An astonishing variety of birds with the most brilliant plumage, make the forests vocal with their melody. We need only refer to the tribe of humming birds, which number no less than three hundred species. Here reside the noble lion, the beautiful though ferocious tiger, the largest of the cat tribe. This is the home of the great pachydermata, or thick-skinned animals, the elephant, the hippopotamus,

and the tapir. The reptilia assume their largest and most dangerous forms. Immense crocodiles, tortoises, and serpents frequent the rivers, marshes, and moist woods. The seas teem with crustaceans and every order of molluscous animals. The shores are covered with their shells, which, in these sunny regions acquire the most rich and variegated hues. The insects are as brilliant as they are numerous. There can be no doubt whatever that all the rich colouring which is spread over animal life, as well as vegetation, in tropical countries, is to be attributed to the brightness of the sun's rays. Tropical birds for example, reared under an artificial temperature in cold countries, never acquire that brilliancy of plumage which distinguishes them in their native haunts.

As we pass from tropical into temperate climates, the heat decreases, the rays of the sun become more oblique, and consequently less vivid; in a word, all the exciting causes of vegetation gradually diminish in intensity. The tall and graceful palm tree, the banana and plantain, the cotton tree and sugar cane, are no longer visible. Vegetation is despoiled of its magnificence and variety, and takes a humbler and simpler form. Accordingly, we find that plants with ligneous and persistent stems are fewer in number, and that there is a greater predominance of such as are herbaceous, and which therefore perish annually.

Plants with herbaceous stems have precisely the same growth, as far as it goes, as those which are ligneous and persistent. Any one can speedily convince himself of this. There is visible on the cross section the same concentrical disposition of the matter of the stem into pith, wood and bark, and the same development of branches in the axils of the leaves. But the heat is not spread through a sufficient number of months, and the period is too short for the plant to run through all the phases of its development. The whole process is therefore stopped in its first stages, and the stem with its branches and flowers dies down to the ground, and disappears from the earth's surface on the approach of winter. In other instances, where woody matter is deposited in greater abundance, the leaves and flowers perish, but life remains passive in the stem. The cold has arrested the vegetable machinery, but produced no disarrangement of its parts; on the contrary, a section of the autumnal bud shows beautifully the young embryo leaves and the undeveloped internodes of the next year's growth, already formed in them, and but awaiting the return of the warmth and brightness of the sun, to come forth out of their hybernaculum, and again exhibit the same vital movements.

There is this difference between the branches of herbs and ligneous plants; the former develop from open buds, one or two generations of them being formed during the first season, and perishing, thus exposed, before the first frosts of autumn; but the branches of ligneous plants advance no farther than the embryonic condition the first season, and remain thus, protected through the winter in closed buds, developing the second season into life and verdure with the first breath of spring. The seed and ovum in vegetables, and in the

lower forms of animals, is but a retreat into which exhausted vitality retires for a season, in order to recover its wonted energies; it also affords a shelter for the young embryo during the prevalence of those conditions which are unfavourable for its development. Accordingly, we find that the seeds of many early flowering annuals germinate again in autumn, as the light and heat of the sun are then much the same as in early spring. A little family of plants is thus seen growing around their aged and dying parent. In some instances, the individuals of this family arrive again at an adult state, and flowers as well as leaves appear; generally, however, the germinating seeds can only produce leaves, the approach of cold weather arresting all further development. These appearances in nature are deserving of a greater share of attention than has hitherto been allotted to them. All practical gardeners and botanists are acquainted with many plants which flower in spring and again develop in autumn, on a return of similar conditions of light, temperature and moisture.

That the vegetable machinery would still continue in motion, and simply stops in consequence of the decreasing heat and light of the sun, is evident from the fact that plants which are annual and herbaceous in temperate climates become ligneous perennials in the tropics. The castor-oil plant, (*Ricinus communis*), for example, in Pennsylvania, puts forth large peltate-palmate leaves, and grows from three to eight feet in height, flowering and perfecting its seeds, but is destroyed by the first frosts of autumn. In the happy regions within the tropics, its stem is ligneous and persistent, and it grows into a powerful and lofty tree. It is the same with plants belonging to the natural orders Euphorbiaceæ, Labiate, Leguminosæ, Hypericaceæ, Boraginaceæ, Rubiaceæ, Polygonaceæ, and Compositæ. These very plants which we tread under our feet in England, with us so herbaceous and perishable, in tropical countries take a ligneous and persistent form, and elevate themselves majestically into the air. Excepting on the mountain summit, snow never falls on any part of the tropical landscape, and the traveller wanders amid the arborescent forms of Leguminosæ, Euphorbiaceæ, Labiate, and Boraginaceæ; or, if he be in the island of St. Helena, reposes beneath the shade of forests of Solidago, Soechus and Echinum. The herbaceous and perishable annual has become transformed into the ligneous and enduring perennial. The plant whose humble growth and delicate beauty drew our admiration, as it grew at the foot of some tall oak or wide-spreading beech tree, is now itself one of the noblest trees of the forest. Development has gone on, and we see the result of the influence of a continuity of warmth and brightness in the majestic form which now stands before our eyes.

The fauna of a temperate climate, like its flora, presents the same picture of arrested development and temporary suspension of the powers of life during the winter months. We have a considerable number of animals of graceful form, animated appearance, and varied colours, though they are less brilliant than those found in tropical countries. There is a much greater amount of uniformity among them. The reptila are much reduced in size. The lizard and viper take the place of the gigantic crocodile and boa constrictor; the tortoises are small, and of medium size; all classes of molluscs are represented, but their shells are devoid of that beauty which characterises the shells of tropical climates; the patient camel and dromedary, the half-reasoning elephant, the beautiful zebra and tiger, are replaced in temperate climates by the horse and ass, the dog, the wolf, and wild-cat.

All creatures which store up provisions—such as the squirrel, marmot, beaver, and bee—are peculiar to the temperate regions. It is obvious that such instincts would be out of place in tropical countries, where vegetation presents herbivorous animals and insects with an abundant supply of food at all times.

On the approach of cold weather, the trees drop their leaves, with the exception of the pine, fir, and other coniferæ, and a few dwarf evergreens; the insects retire, and the animals which live on them either migrate to other countries, or pass the winter in a state of torpor, from which they only awake in spring. This is especially the case with the birds, which are nearly all migratory in their habits. The most beautiful species come to us from the sunny south, and disappear on the approach of winter.

In proportion as we approach the polar regions, the trees become stunted and dwarfed in their growth, the number of genera and species is still further diminished, the oak, walnut, chestnut and elm are replaced by dark and sombre forests of coniferous trees, among which pines and firs are the most prominent. Still farther north, these plants disappear, and are succeeded by dwarf birches, willows, and the polar blackberry (*Rubus arcticus*); finally, the last lingering remnants of vegetable life are seen in the form of mosses and lichens, the excessive rigours of the climate preventing any higher indications of vegetable life.

The animals in the arctic regions are few in number, and their tints are as dusky as the northern heavens. There is not a single bird with brilliant plumage, nor a fish with various hues. The most conspicuous animals are the reindeer, white bear, white fox, polar hare, walrus, and various seals. There are immense flocks of prodigious and aquatic birds, gulls, cormorants, ducks and geese, all belonging to the lowest orders. Reptiles are altogether wanting. The articulates are represented by numerous marine worms and minute crustaceans. Insects are rare and of inferior types. Molluscs are sparsely scattered in the adjacent seas along with a few star-fishes and echin. We must not omit the whales, which are, however, the lowest of all the mammalia. This assemblage of animals is decidedly inferior to the temperate and tropical faunas.

The geographical distribution of animals is intimately associated with that of the plants, for herbivorous animals can exist only where there is an adequate supply of vegetables suitable as food, and the carnivorous prey upon the herbivorous races. Hence it is that the fauna of the earth presents the same ever-varying aspect as its flora.

There is a remarkable similarity between the plants and animals which cover a hemisphere from the equator to the poles, and those which clothe the sides of a tropical mountain from its warm and sunny base to its cold, snowy, ever-frozen summit. The species, genera, and even families of both plants and animals growing in the country surrounding its base, may be entirely different from the vegetable productions of Europe; but here elevation acts in the same manner as increase of distance from the equator. In proportion as we ascend the mountain, the climate becomes cooler, the fauna and flora lose their tropical character, and European genera, and even species analogous, if not absolutely identical with those of the temperate climates of Europe, present themselves to the eye of the astonished observer. As we approach the limits of perpetual snow, the top of the mountain may be said to reach a polar climate, and accordingly, the vegetation is wholly cryptogamous, and similar to that within the arctic regions.

M. Mirbel has therefore very properly compared the terrestrial globe to two immense mountain whose bases are united at the equator, and whose summits are the arctic regions around its north and southern poles.—*Chambers*.

BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

SARAH MORRIS.

(Continued from page 149.)

"Seventh day 22d, spent part of the day writing and visiting the few Friends in the town. On First day took leave of our ancient Friend [George Dawson] and his wife. His fatherly notice was very encouraging to aunt. I noticed his words: 'Go on! I believe thou wilt be soon remembered, and will get safe home.' Thomas Wilson and his wife, our kind landlady, and divers others, went with us to Shipton, seven miles, where we were kindly received by David Bins and wife, who live in the house where David Hall, the worthy Friend, lived. It was a rainy day, yet the meeting was large, most of the Friends from Lotherdale were there. Two of Rachel Wilson's sisters were there also, who came sixteen miles the morning to see us, hearing we were to be at the meeting. Aunt was greatly favoured, and the meeting was in general solid and attentive, an sitting so for some time longer than common, an rose again with a few words of comfort to a doubtful mournful state present. We dined at David Bins', and then went to Fairfield, eight miles. Two Friends went with us, and to my surprise landed us at a great house, which we were admiring for its size and ornaments,—thinking it so an ancient seat of some nobleman. Aunt had just said 'Well! no Friend lives here!' when, behold, we were stopped, and a Friend came kindly to us and helped us to alight. He proved to be an old bachelor, Ebenezer Jackson, who possessed it by title of a relation, who was not a Friend, but by birth. The house was old-fashioned, but grand and fit for a Duke. He treated us kindly an with a friendly deportment. There are no women about the house but servants, nor a face we have ever seen.

"Second day 24th, we went to the meeting which was near. There were only twenty-three persons including servants and ourselves. A poor sleep, thoughtless company. Aunt found it hard enough. After dinner, although it was a rainy day, we went to Knaresborough, twenty-six miles. It was a hilly road and quite night when we got to Abraham Ogden's. He and his wife receive us kindly, which was some compensation for our toils, and a mercy from the Divine Hand.

"Third day 25th, we went to their meeting. It was large for them, there being about forty, an aunt was greatly favoured therein. We dined at our lodgings. Several Friends came to see us, an unexpectedly aunt was filled with something very seasonable for them; in a very lively manner she distinguished between the several states present. It was a favoured season I hope to all. Fourth day 26th, aunt had a bad cold, swelled face, an was very poorly, but it being a fine morning, an feeling clear of this place, for Friends are few, an most of them were with us in the family sitting, she chose to go to Thirsk, eighteen miles. Takit leave of our kind friend, whose house is the headquarters here, we mounted and got to Robt Proud's [at Charlton] about 12 o'clock, where we were very kindly received, and staid three or four hours. Aunt being very poorly, and it being judged best that she should be near the meeting-house, Robert went with us to the town and to

ged at John Barker's, who are kind friends. Here we got what was suitable for aunt. Thus passed three laborious conflicting days, within and without. Fifth day 27th, their week day meeting. Aunt's face was still swelled and she poorly, yet she went to it. It was large, and there were some solid friends in it. It was a quiet silent time to some, and a laborious one to others, until aunt was brought on her knees to crave of the Almighty his appointing power. The meeting ended, I believe, unprofitably to some. I was fully confirmed. My dear afflicted aunt was in the King's hospital. We dined at our lodgings, spent the afternoon with a widow—a Friend in the ministry—and then went to our friend Robert Proud's, where aunt rested well that night. On Sixth day 28th, we dined just by with the widow of Joseph Taylor, a pretty Friend, who with her two kind daughters, helped me. Our guide from Knarborough had been George Knowles, 85 years of age, a hearty old man.

On Seventh day 29th, Robert Proud and a wife, David Armstrong, went with us to Wendendale, thirty-seven miles. Most of the way was the side of a hill overlooking a beautiful valley. At Banbridge, a village where are a few Friends, we were stopped, and told that Rachel Wilson had waited there three days for us. She was still at a Folly's a little way off. They sent for her and we met us at William Robinson's, much to our satisfaction. At supper Rachel appeared in prayer.

First day the 30th, we went to Asgarth general meeting, which was crowded, many not Friends being there. Aunt had a favoured time, and Rachel Wilson and Elizabeth Robinson also. We dined near the meeting, and after a tender parting with Robert Proud, E. Robinson and David Armstrong went back with us to Laybourn, where we were kindly received by Lydia King. She is a sister to Esther Hoskins and lives with her brother Ebenezer Bickerdike, who is now in a childlike state with the palsy. Here we lodged and next day had a meeting, which was satisfactory, I believe, to all, although most present were not members of our Society. After dinner, taking leave of our loving friend E. Robinson, we returned to Robert Proud's, thirty-seven miles, and had rain all the way.

Ninth mo. 1st, we went to an appointed meeting at Thirsk, where aunt had a favoured time. We dined at John Barker's, where Rebecca Taylor, Mary Ellerby, (the only public woman Friend here), and some other kind Friends, parted with us in much love, and we returned to Charlton and spent the evening with the two families, Taylor's and Proud's, and had a solid sitting with the young people of both houses. To-day, the 2d, went with Thomas Proud and Richard Adamson to Helmsley Blackmoor, a small irregular town, 18 miles. It was a very hilly road. Robert Proud accompanied us up the first hill, which was considered the worst. It was a mile long and very steep, and with the help of our friends, we walked up in one hour. Our horses, although good, could not get the chaise up in less than three quarters of an hour. Then our fatherly friend, Robert Proud, took a tender leave of us, and we set forward. It was a rough road and very uneven for nine miles between two high hills. It at last ended by the side of a rivulet, over which is a good bridge. Whilst our horses were resting, we went on and viewed the ruins of an abbey built by the side of the river, as hidden a place as the old friars could have wished for their deeds of darkness. By half-past two we reached Helmsley, where we were coolly received, but kindly entertained.

"On Fifth day the 3d, we went six miles to a meeting at Kirby Moorside. It was more to satisfaction than poor aunt expected, who found it hard work. We dined at Caleb Fletcher's, who was a very kind Friend. We met here a kind good looking Friend, Roger Heart of Pickering, who conducted us before night nine miles to his house and to his good wife. Now let me be thankful for the mercies of this day, in which way has been made where there seemed to be none. 'Wonderful are thy works, O Lord! Thy ways are past finding out. Thou hast made the crooked paths straight; and rough ways smooth; and ordered better for us, than we could have contrived.' Our landlady and Daniel Snowden went with us to Kirby Moorside. He is uncle to Leonard Snowden. Sixth day the 4th, a rainy day. We went to the meeting which was pretty large, and the company mostly Friends. There were many of them solid, and it was a favoured meeting. We returned to our lodgings, aunt had a bad cold, and her eyes were sore, and though some of the Friends came to see her, yet she was too poorly for much satisfaction. There are but two families of Friends in the town, which is large and irregular like Thirsk, and though smaller is pleasant. Seventh day the 5th, we took leave of our kind landlady Hannah Heart, who is fit to be the mistress of a great household of Friends. Her kind husband went with us nine miles to Malton, a pretty town. Here are but two or three families of Friends who live in the town, but there are many belonging to the meeting who live some miles from it. Here we were kindly received by the widow Fairbank and her niece. Good quarters!"

For "The Friend"

"Even so must the Son of Man be lifted up."

I have been instructed in comparing the memorable words of our Blessed Lord to Nicodemus, (given in John iii. 14, 15,) with the account of the circumstance to which His words refer. Numbers xxi. 8, 9.

We there learn that, when those bitten of serpents, in their wilderness journey, looked (doubtless with an eye of faith) upon the brazen serpent, which Moses lifted up, they were healed of their wounds, and lived. How simple and beautiful this lesson taught us by the lip of Truth! Does He not say unto us, "Look unto me, and be ye saved, all the ends of the earth," when He tells Nicodemus, "As Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up: that whosoever believeth in Him should not perish, but have eternal life.

What a mistake would these poor, wounded Israelites have made, had they attempted in some other way to rid themselves of the sore bite of the serpent,—how worse than useless any delay, or abiding under that painful dispensation, when by looking in simple faith upon the brazen serpent, (God's appointed means,) they could at once be healed, and live! So may any poor soul now—(made sensible by the Holy Spirit, of the deep rankling wounds of Satan, of which, unless some remedy be found, it must die,) look with the eye of living faith unto the slain Lamb of God, and live, being healed of the bite of the serpent, and also know in its own blessed experience, that "God is just," and the justifier of him which believeth in Jesus.

The soul that thus, through Divine Grace, has been permitted to lay its sins on Jesus, may come without fear to receive from its Father's hand whatever discipline or chastening he may see needful for its further sanctification and growth, and may in rejoicing, or suffering, according to the will of

God, commit its keeping "unto Him in well doing as unto a faithful Creator."

Manufacture of Artificial Stones Instantaneously without Burning.

Although moulded blocks of cement and dry clay have been used for building, nothing but burned brick has been or is employed to any extent. A new and most remarkable artificial stone,—one which is perhaps destined to supersede brick and cut natural stone,—was brought under the consideration of the British Association for the Advancement of Science, at Cambridge, by Professor D. T. Ansted, F. R. S. In a paper read by him upon artificial stones for buildings, he stated that, during experiments made in the laboratory, for the purpose of preserving building stones from decay, by Dr. Frankland, Professor Hoffman, —Abel and himself, (all distinguished chemists,) being members of a government scientific committee, they were waited upon by —Ransome, who astonished them by his discoveries in this line. He saturated the surface of a stone with the silicate of soda, (liquid flint), and then applied a solution of the chloride of calcium, when a rapid double decomposition was effected, and an insoluble silicate of lime was left within the pores of the stone. Common salt was formed on the outside by the chlorine of the chloride of calcium uniting with the soda of the silicate, and when the salt was washed off, a hard silicate of lime was left as a coating. Ransome then made small blocks of various forms, by mixing sand and silicate of soda (liquid quartz) together, forming a plastic mass, which was then moulded, and while still moist these moulds were dipped into the chloride of calcium. To the surprise of all the chemists present, those moulded articles were found to be almost instantaneously converted into perfectly hard and solid blocks, which were apparently quite durable. The members of the committee then moulded some of these blocks themselves, and performed the experiments as successfully as Ransome.

The above described composition forms a new artificial stone, which, apparently, can be manufactured economically in almost every part of the world. Stones made in this manner have been tested as to their strength in forming the bed of a steam engine in the Great Exhibition, and they have also been used in building two of the new stations of the Metropolitan Railway in London. Professor Ansted stated that this material seemed to combine cheapness with durability, and resistance to the action of the weather, to an extent hitherto unknown. The transverse strength of a stone thus made, 4 by 4 inches, resting one inch at each end, upon iron supports, and leaving 16 inches clear space between, was equal to 2122 pounds. A bar of Portland stone of the same dimension, similarly tested, broke with 759½ pounds upon it. Its adhesive power was also found to be superior to Portland, Bath, and French (Caen) stone. A four-inch cube of it sustained a crushing weight of 30 tons. Ransome, in the presence of the British Association, manufactured some of these stones in a few minutes. They were composed of pieces of limestone and sandstone mixed with liquid silicate of soda, and formed into a plastic condition, placed in moulds, then dipped into a solution of the chloride of calcium. The silicate of soda was formed by digesting flints in a steam boiler under pressure containing alkali, (Hardinge's process undoubtedly.) These artificial stones were then handed around, for the astonished men of science to examine.

This moulded stone is a very remarkable inven-

tion, and it deserves universal attention. The decay in any stone buildings may be arrested by the same method of treatment, namely, by washing the stones first with a solution of the silicate of soda, then with chloride of calcium. It will undoubtedly require the experience of several years to test the durability of such stones, but as far as chemical science affords a basis for passing judgment upon them, they appear to be indestructible. By this process moulded artificial stones of a great variety of forms and of any size may be manufactured, so as to obviate the immense expense and labour of quarrying and cutting rock in the old and usual modes to obtain blocks for building purposes.—*Scientific American.*

Rainy-Day Thoughts.

"FARMING DON'T PAY."

At last neighbour Jones told me so the other day, during an old-fashioned talk which we had. In the course of the conversation he said, "Farming don't pay, for here I have been working for twenty years, and can make but four per cent. on my capital, while there is Jim Smith who went to town and began business with the same capital, who makes ten per cent.; at least he says so." But Jim Smith did not tell him that he spent at least six per cent. of the ten for house rent, food and raiment. Now, I know my neighbour Jones "like a book," and know that he and his wife, by dint of economy, always contrive to have a small balance on their side of the store account, and so the four per cent. is all clear gain. Jones has raised a large family of boys, and about four years ago the eldest got just such ideas into his head as his father now has, and go he did. The farm was mortgaged to supply him with capital. The idea was that his business would make him twenty-five per cent. It even did more, it made him seventy-five; but his creditors at the end of the second year had to be satisfied with twenty-five per cent. of their claims.

The second son got the idea that farming paid better out west where land was cheaper; so he went out to Illinois, with a capital of two thousand dollars, and his father now tells me that he owns a farm, and can raise eighty bushels of corn per acre; but Jones did not tell me that his son would be glad to get twelve cents per bushel for his corn at the nearest railroad station.

The other three boys are imbibing just the same notions as their elder brothers, and when old enough will think that "farming don't pay," and will want to get at something else. Jones says he only makes four per cent.; but I will guarantee that if he had everything to buy he would not be able to keep his family on four per cent. more, so it is but fair to suppose that he actually gets eight per cent.

I know there are some cases wherein city merchants make more than eight per cent., but if we take ten of them we will find that from the start the ten have not averaged eight per cent. for the first ten years they were in business. Then there are other things connected with business life in our cities, which should be taken into consideration. There is the worry of notes which must be met, or a loss of credit will ensue. Of this the farmer knows but little; he knows when his crops can be sold, and can make his purchases or draw his notes (which should be few and far between) to suit, or he can borrow of a neighbor for a month or two; but if a good contractor he can always buy for cash, for he always sells for cash or very short credit. I know that as a general rule a farmer cannot afford to pay more than three per cent. rent, but he must consider that he gets his house-rent and

food free, and if an economist, can have a balance due him from the storekeeper.

The fact is, that taken in the long run, farming will pay as heavy a per centage as most other kinds of business. You say that merchants get rich faster, and you can point to men who commenced on little or nothing, and could now buy out nine or ten common farmers. Admitting this, I would call your attention to the fact that where one is successful, the other nine fail. It is a very rare thing for a farmer to fail in business, and to do so he must be a poor one, or else send his sons to town to go into business, instead of bringing them up to the more certain pursuit of their father.

Let us now try and discover why neighbour Jones' sons don't like farming, and want to set up some business in town. While on the visit above alluded to, I took an inventory of my neighbour's small library of well-thumbed volumes. I found it to consist of a Bible, Bunyan's Pilgrim's Progress, Sewall's History, (our neighbour Jones is a consistent member of the society of Friends,) and sundry bound volumes of tracts. These, he told me, were all the books in the house, and his boys didn't care for reading, so he did not get any more. He had no newspaper except one taken by one of the boys, and this one of a kind which do more damage to our half-grown boys than anything which could be put into their hands. Here, then, was the secret reason why the boys did not like reading, and did not like farming. They worked hard all day, and had no pleasant intellectual employment to look forward to at the end of their day's work. In this point we have by far too many Joneses, who, from a system of false economy, will work all their lives for the purpose of leaving their children "something to commence with," and not spend one tith of it in order to enable their children to properly enjoy life. How can farming be otherwise than dull to a smart lad when he is led to suppose that there is no science or skill about it, but that he must follow in the old beaten track of his forefathers, and be allowed to suppose that one step from this track is the same towards certain destruction.

To parents I would say, educate your children, for it is the only legacy you can leave them that may not be snatched away by ill fortune. Nor should you be content with giving them a good education, but give them good reading matter, good agricultural journals, and let them read and think for themselves, and discover that instead of being dull, an agricultural life opens as wide a field for the intellectual faculties as any other branch of industry.

The fact is, that the time is coming, and in some sections now is, when agriculture will be a science, and will require a man having not only a good education, but also having the ability to apply it to the best advantage. The man who looks upon the life of an agriculturist as a humdrum one, which may be filled with little or no education, will find himself left behind by the next generation. Who can candidly consider the progress made in agriculture by the present generation, and not expect and hope for much from the next? The best proof which can be given of our country's progress in agriculture, is the increasing number of agricultural journals; even a weekly paper, to keep up with the demands of the times, must have its agricultural column or page.

Place before your children that kind of reading which is calculated to elevate your calling, and above all things do not tell them "it don't pay," and you will not have to complain of their "not liking farming."

Too many of our farmers adopt a system of false

economy in the education of their children, which in the end is anything but economy, and of great disadvantage to the children. Take neighbour Jones as an example: His boys work upon the farm until of age without any remuneration except clothes and board, and with little or no encouragement, and are continually reminded that farming is a poor business, and of course they wish for some other business, which they are not at all fitted for.

But I have allowed my Thoughts to run away with my pen this wet day, and will hasten to transcribe myself your friend, — German, Td.

Selected for "The Friend."

"Now that thought and authority are at open issue upon many questions, may not some amongst us, ever ready to judge those who are without, let us to hear the solemn declaration of the Apostle that judgment must begin at the house of God! I is so easy to be orthodox in creed and statement, as safe to rest in a traditional belief, that many decorous christian fails to perceive the sure though invisible connection between the lip confession and life-denial of a merely outward profession, and the broader form of denial by which all such profession is derided. Yet between Christ mocked and Christ rejected, there is but a step,—who shall as how easily it is taken— or how quickly we may pass from the hollow homage, the "Hail Master," which mocks our Lord, to the smiting and buffeting of open outrage? When Christ is invested with but the show of sovereignty, the reel is placed in his hand may be quickly taken, as by the soldier to smite his head. This reel is nominal christi anity; a strange slip of a degenerate vine; hee wealth whose blighting shadow a poison-growth cubeliff never fails to root itself!"

Manufacture of Postage Stamps.—The design for the stamps are first engraved on dies, taken up on rolls, and then transferred to a large steel-plate by the process of multiplication, the hardened roll being applied successively to every portion of the surface until the dies of 200 stamps are made. The plate being now hardened, goes to the printing room. The process of printing is very simple: the plate being inked, then laid in the press the moistened sheet placed on it, the roll passes once over it, and 200 postage stamps are printed at one operation. A weak oil is used, so that if stamp may not be saturated, as the paper is not so highly sized as that used for bank notes. Cyanine gives the red color to the 3-cent stamp, ultramarine the blue to the penny stamp, chrom green the tint to the 10-cent stamp, while the 12-cent denomination is printed on brown, the 12-cent in black, and 24-cent in purple, the 30-cent orange, and the 50-cent in intense ultra-marine. From the press the sheets of stamps go to the drying room, where they are piled in canvas covers, frames, or racks, so arranged that each day's work and even each man's task is kept by itself. The go next to be gummed, labor which is entirely performed by girls. The sheets are laid in piles, in down; each girl has a copper basin of gum, and soft fat brush, with which she finishes a sheet with a few strokes. Each girl gums 1,000 sheets, 200,000 stamps in a day.

The gum used for this purpose is prepared by one man only, who keeps the formula of its manufacture a profound secret. The gummed are placed in racks similar to those used in the drying-room, and piled up in the room for half a day, or a day and a half, as the atmosphere may be more or less dry, and when thoroughly dried, are laid between pasteboard leaves and subjected to powerful pres-

re. The sheets are now cut in halves, so as to give 100 on a sheet, and are then taken into another room, where the holes between the stamps are perforated by machinery. This operation is performed by passing the sheets, first in one direction and then across, between two sets of narrow rollers on shafts, the upper set being furnished with small steel punches, and the other perforated with holes or dies to correspond. The operation is instantaneous, the whole eleven rows of holes being made at once. The cylinders are adjustable on shafts, so that stamps of any size can be perforated by the same machine.

The stamps are now finished, the only remaining duty of the attendants being to count and inspect them, after which they are placed in the safe and sent in packages wherever government directs, each machine worked by a girl for twelve hours, perforates 10,000 stamps a day, one way, or half that number if the holes are made in both directions. Last year the Post-office Department used 16,000,000 postage stamps of all denominations, while this year the increase will not fall far short of 20,000,000.

Of all the denominations of stamps the red, or cent ones, are most in demand, about three times as many of them being used as of the penny stamps. Next to the penny, the ten cent denomination is most in request; next, the 12-cent, then the 21-cent and so on, the 90-cent one of course being required less than any other. Stamps being really representatives of so much money, the greatest care is taken to guard against dishonesty on the part of the workmen, and so perfect is the system of checks that the loss of a single penny stamp is detected with absolute certainty.—*Exchange paper.*

For "The Friend."

The following letter was sent to Rebecca Collier after a meeting in London, with a paper of sweetmeats, and another for her companion, Rachael Brachon. J. Locke was at the meeting and took particular notice of them. It was also said King William the 3rd was there inognito:—

My Sweet Friends,

A paper of sweetmeats by the bearer, to attend our journey, comes to testify the sweetness I found in your society: I admire no converse like that of the christian freedom, and fear no bondage like that of pride and prejudice. I now see that acquaintance by sight cannot reach that height of enjoyment which acquaintance by knowledge arrives unto. Outward hearing may misguide us, but internal knowledge cannot err. We have something here of what we shall have hereafter, to know as we are known: and this, we with other friends, were even at the first view partakers of; and the more there is of this in the life, the less we need inquiry of what nation, country, party or persuasion our friends are; for our own knowledge is more sure than another's is to us. Thus we know when we have believed. Now the God of all grace grant that you may hold fast that rare grace of love and charity, that unbiased and unbounded love, which if it decay not, will spring up mightily as the waters of the sanctuary, higher and higher, till you, with the universal church, swim together on the ocean of Divine love. Women, indeed, had the honour first to publish the resurrection of the Spirit of Love, and let all the disciples of Christ rejoice herein, as doth your partner,

JOHN LOCKE.

Gray's Inn, Nov. 21st, 1696.

The christian cannot rejoice but through suffering, nor abound but through previous abasement.

For "The Friend."

"Glimpse."

London, ———, 1861.

"My dear — and —: Yes, here we are in the heart of this great modern Babylon—London. * We came from Liverpool by the line recommended by — as passing through some of the finer parts of England, and it was certainly a beautiful ride, taking it altogether, though through a country which, as regards the natural features, to an American, appears very tame. The charm of its greenness—which I suppose continues throughout the whole of the months from early spring until winter—was not particularly impressive, as it is not any more brilliant and lovely, than that of our own country when we left it—and than it always is in the spring and Sixth mo. The trees, of which there are many more than we expected to see, add much to the beauty of the scenery: disposed every where about, singly or in clumps; occasionally in avenues and groves, or what we would call a small wood, crown the low hills in some comparatively few places. But they are generally small, and not often so spreading as we should expect trees to be, which I suppose are invariably *planted*, and therefore have had plenty of room allowed them to grow: it is probable they were generally young. The hedges are also a very pretty feature, dividing the ground everywhere into small fields. But they are not nearly so beautiful as we had supposed: by far the greater portion of them being ragged and poorly kept. The towns and small villages throughout the whole route are so numerous, that we have left the outskirts of one for but a few miles, before we enter those of another; yet during these intervals there are so few houses to be seen, that one is almost disposed to query, as he is passing through a country, the whole of which bears evidence of having been under cultivation, where do the people live, who are farming these lands? There was to me absolutely a feeling of solitariness, in these parts of this thickly populated island. There is, in fact, almost an entire absence of the inviting, comfortable, beautiful homesteads, which are almost everywhere to be seen on the farms in the older of the U. States. The farmers here are seldom if ever the owners of the land they till and dwell upon, and their habitations are so small and insignificant, you would take them for those of the poorer classes, being often half or quite hidden by the little trees, or some low hill, and scarcely arresting attention, while those of the really poor class are so extremely small, you would hardly suppose them to be dwellings at all. Having heard so much of the perfection of English farming, I confess I was disappointed in observing such a large extent of the country, field after field, apparently thrown out in natural grass, with many weeds; and almost completely overspread with a golden mantle of butter-cups. We saw but one or two fields of our beautiful, delicious red clover, though it was in full bloom in those places.

"We were charmed with the fine finish of the railroad; so very much more perfect than those of our vast country, which, of course, is reasonably to be expected, where wealth so abounds, and labour is so cheap, and the field of labour as a mere garden-spot compared with an extensive plantation. Where the road is cut through the rock, the sides are chiselled off, almost smoothly enough for a house-wall; and when through the soil, near the towns, they are often substantially walled to the top, and elsewhere the high banks, level sides and embankments are invariably covered with beautiful grass, and crowned or bordered throughout the whole distance with a fine, well-kept hedge. I

have said the route was beautiful, and so it is: but there is so much sameness, that after passing over from five to ten miles, it seemed a repetition, again and again, of the same thing, and one became weary of saying, 'This is very pretty; 'How very pretty this is!'

"Notwithstanding what little I have said unlooked-for want of care in some things, the general effect in the appearance of the country is quite the reverse, being that of great neatness and care. Its beauty, indeed, consists chiefly in this, there being nothing in it to kindle enthusiasm as in the grand features of our own country; we have, however, as yet seen very little of England, and we know that for such a little spot of earth, the scenery is beautifully varied.

"Of London I it is useless to speak much, of course. I might be here for many weeks, and be able to afford you, by any description of mine, no better conception of most of its institutions, &c., than you have already received from various other sources. I may simply say it is a vast wonder,—a complication of wonders, the greatest of which is the *how* it is ever supplied with necessities, not to name comforts and luxuries. You will, however, I suppose, wish some glimpses through my eyes, and impressions of such places of interest as we shall be enabled to visit.

"——— Yesterday we passed at the Zoological gardens; and a day of extraordinary interest it was to me. But how can I give you any adequate idea of it? It far exceeded our expectations. The wonderful numbers and variety of animals from almost all countries, the extraordinary forms and size of some—the exquisite beauty of others, are almost bewildering. Those huge Leviathans, the rhinoceros and hippopotamus,—to begin with some of the largest specimens—just think of seeing them sporting in the water, as in their native climate! Each was in its own enclosure in different parts of the garden. The former had gone into his pond to take a bath, when we first saw him; and the keeper was trying to get him out that he might be more distinctly seen. And most curious was it to observe the unwieldy creature evidently disposed to disappoint him, be mischievous and frisky; banging the water with his great, uncouth head, and making it fly in masses enough for an artificial cascade, in every direction. This he would do every time the keeper spoke to him or cracked his whip; deliberately walking out only when his own good pleasure came, for exhibiting himself on land; and, indeed, we should have been very sorry to have missed his first performance. But the two hippopotami! who could convey to another the effect upon one's mind on first seeing such creatures? heard of, having seen representations of them from our earliest childhood, but in those juvenile days, almost deemed a mere myth or antediluvian. They, too, were in the water; there they lay, their island-like backs and heads just a little above the surface, generally so still they looked like masses of black rock; and then they were gone!—as the water closed noiselessly over them—to appear again in a few seconds. The keeper said the wind was too cool for them, and on such days they liked to keep in the water and sleep. But finding we were strangers and anxious to see them,—'Come, Jack!' says he, 'haven't you had sleep enough!'—the huge creature immediately grants a boarse reply, and raises slowly his great goggle eyes streaming with water. But he does not seem disposed to come out of his bed, until the keeper goes to procure some fresh cut grass, which movement they seem to comprehend. For look! the mighty dark vision goes into a reality;—slowly upheave their enormous

shapeless bodies, and actually those great feet, so unfitted for such locomotion, *walk up steps* under the water, land themselves, and then—oh dear! the way those awful, inconceivable, out-of-all-proportioned heads and mouths and horrid teeth, go in pursuit of, and shovel in the grass, no tongue can tell! They look altogether like living personifications of some hideous heathen divinities.

“With these, in what peculiar and striking contrast—its size, from its towering height, though slender proportions, impressing you as equally great, and more imposing, but in the very opposite extreme—stands the giraffe—the majestic, regal giraffe! How dignified, how aristocratic, its movements, as slowly also, but not because *unwieldily*, it bows or elevates its head while daintily it feeds on the same kind of fare. What seeming refinement is there in its full dark eye, and tenderness, which makes one feel almost like loving it. There are three fine specimens: one of them having a beautiful, colt? call? it be called, in ignorance of the proper name,—which, unlike the young of domestic grazing animals, is more symmetrical in its proportions than the parents.

“What an amazing number and variety of birds, from the gigantic ostriches, the great condors—jumping about on both feet at once, in the most grotesque manner while quarrelling over their chunks of raw flesh—with the numerous intervening grades of size, marvellous for *outré* shapes, or exquisite beauty of form and plumage, down to those of almost the smallest varieties! And the water-fowl—the wonderful variety and beauty of some of these: the beautiful queently pelicans! yes, their inelegant beaks and pouches notwithstanding. Some white as snow—some a delicate violet—others a blush or a lemon color. We were present when many of the animals were fed; and it must be admitted these last-named birds were not very queently in their department at their ‘table d’hôte.’ Large quantities of fish about the size of our finest perch were thrown into their ponds, and an exciting and curious scene it was to see them rush violently when one accord into the water, dash over their long necks as if they were striving to break them, smack down the sides of their heads on the surface, making the water splash and fly all around them, and then scoop into their pouches three or four fish at a gulp,—which, in their intense eagerness lest they may not get their full share or more, go down their throats cross-ways, and all manner of ways. Then njih onto choking, they run out of the water, and jump about flapping their wings on their breasts, striving to force the fish down: but no, it will not do—there they remain sticking out in all directions. So with another gulp they must be brought back into the pouch, for a more scientific arrangement, until finally the swallowing of them is accomplished.

“I have not yet mentioned that these grounds which are very extensive—being included in Regent’s park—and are laid out in the most beautiful manner with fine, well-kept grass, walks, and carriage-ways, and adorned with trees, shrubs, and flowers in great variety, are well worthy of a visit for the sake of the walks and drive there, if there be no other attraction. And there being such ample space for each variety of this vast collection of animals—of which there are generally several specimens—to have a sufficient separate grassy enclosure, the enjoyment of the exhibition of them, is altogether unalloyed by the feeling of their being poor, melancholy prisoners, as is the case with many, perhaps most, in ordinary menageries. Even the savage carnivora, of which there is a magnificent collection, as well as of the huge birds of prey, were such fine, large, high cages, all open

to the fresh air, and from which they can see the sky, the sunshine, the grass and trees, they are probably nearly as happy as in their native wilds. The bears have deep pits, some with an artificial tree to climb, and the polar bears having water to bathe in, seem to thrive without their native ice. It was delightful to see the numerous, gentler, offensive tribes, the grazing animals, &c., quietly feeding and enjoying the fresh moist air in their green enclosures. The kine, from nearly all countries, some of them beautiful, some curiously formed creatures, others with their mantles of long hair sweeping the ground so as quite to hide their feet. The graceful deer tribe, the camels, dromedaries, the elegant, wild-eyed zebra, and the lordly elephant, &c., &c.

“The aquatic birds have beautiful little lakes—with water-plants and pretty little islands crowned with shrubs—where they wade, dive and glide about. The queen of these, the graceful swan, floats there; a nice variety of them followed by a family of dove-colored cygnets; and ever and oft the mother raises her black velvet head and throat to the blue sky, and sends forth her maternal love song in sweet flute-like notes. So like this musical instrument is it, that at a little distance I should have really mistaken it for a flute or flagolet. A great variety there is of the stork, white, dove-colored and varied in form, from different countries,—and the flamingo. These long-necked, long-legged families are singularly gawky creatures, and sometimes most outre and fantastical in their movements. It might seem, yesterday, they were making a voluntary exhibition of themselves for our express benefit, like a set of rope-dancers. The way the flamingo balanced itself on one of its pipe-stem stilts—when one might suppose it would have been glad of double the strength of understanding, instead of diminishing by one-half the slender proportion vouchsafed to it—folding the other close under its wing, and shooting its long, flabby foot and ankle out behind, then twisted its marvellous-looking neck, not quite like a rope, but very like a serpent, and coolly laid up its head sideways on the top of its shoulders as though it did not belong to it, fixing one queer-looking white eye on us with a look which seemed to say, ‘There—what do you think of that?’—was—well it was perfectly, imitatively droll! But the storks—who can give a picture, anything approaching the reality, of the outlandish manner in which they throw their long legs out right and left, and jumped and danced upon them, while they thus formed an acute angle, back and forth towards each other, with nodding heads, out-streak flapping wings and occasionally an extra kick up! It was so inexpressibly comical that—and another grave-looking spectators, again and again, laughed aloud. And I—well never mind. Some persons are not habitually under such wholesome control as others. But there was real and allowable enjoyment in a good, healthy laugh at the untaught gymnastics of these happy creatures, while thus giving vent to the exuberance of their joy.

“Then there is the aquarium, how wonderful and beautiful are the specimens there. Those various forms,—among many others—of mysterious animal life, so nearly resembling vegetable productions, which I had seen represented in painting; but never expected to behold the reality. The exquisite beauty of the sea anemones—their clustering florets, with circumference equaling that of the damask rose, the corolla light and feathery, of pure white, delicate rose, and lemon color, &c., ever expanding and closing, bowing and raising their beautiful heads. But dear me, how I have been stringing words together; and I really thought

it would be almost useless to say anything. True what I have said, is but as a touch upon the subjects named—while there is a multitude of other to which I have not even referred,—like the pointing of a wand, to where opens a scene of enchantment. It was almost too exciting a day. The crowd and variety of interesting objects, the extremes of the wonderful, the terrible, the beautiful, the comical, thronging my brain, from the hippopotami and savage carnivora, to the stilted flamingoes and storks, kept me long awake the night. The jigs of the latter—so overpoweringly funny—were ever wreathing themselves over the assembly, until they overcame my nerves, and I laughed with my head on my pillow, till I cried. Now what would my grave solid friends think of this weakness? Well, I believe I could name some of them, who had they witnessed those scenes would have sympathised with me, and shed as many tears as I did.

“—Since writing the foregoing, we have visited the British museum, the houses of parliament, Kew gardens, the Crystal Palace, &c. Of each of these it may be said, as of the Zoological gardens, they are splendid triumphs of power and enterprise, that power which wealth commands with the abundant aid of which, and the cheapness of labour, British perseverance accomplishes to such perfection whatever it undertakes. We can form no conception in America of such displays of magnificence and unparing expense, and no description can give any adequate idea of these places, any more than it can of such venerable piles of extraordinary interest as Westminster Abbey, the Tower, &c., &c., which we have also visited. Much as we have always heard of the museum, we walked through its labyrinth of noble halls and galleries—in themselves alone objects of high admiration, and well worthy of a visit—with feelings of silent amazement. We may hear of their length, the breadth of such places and institution: the many acres they cover—many details of their contents, the arrangement, the ornamental fish, &c., but the mind does not seem to take full hold of such descriptions; we cannot, or do not even half comprehend or appreciate them, until our eyes behold them. At least, it is so with my self, and on first witnessing them, I am impressed with wonder almost as great as if I had never heard of them. Indeed, I am weary of the on little word ‘wonderful! wonderful!’ which is ever involuntarily, and I hope audibly, escaping my lips, as one after another, we visit, and my mind is dwelling upon these objects of thrilling interest so totally unlike any thing we have in our own young country, or can have for generations to come and such as some of them, never. *En passant*, you I doubt not, will become weary of my use of this word, and of the beautiful word beautiful. But you must endure them, for in so many cases, do others from my limited vocabulary, so well express what I think or feel.

“We could spare but one day for the museum; this time—expecting to return to London several times before leaving the country—and though we made it a long day, it sufficed but for a mere passing glance at by far the greater portion of the vast gathering of objects, of almost every conceivable description and interest, ancient and modern. We first entered the library, and in the department appropriated to ancient documents, manuscript books, and the earliest printing, autograph of kings, queens, and other distinguished personages, we soon became so riveted, we found as time was rapidly passing, we should, if we yielded to inclination, spend the whole day among this extraordinary collection. Many of the manuscript

many centuries old—were extremely beautiful, both penmanship and illuminations; evincing that the most exquisite pains, and extraordinary amount of time, must have been bestowed upon them. There is one small volume, a gem of its kind, executed by Lady Jane Grey. Among the autographs are those of Edward IV, Edward V, Richard III, Henry VII, Henry VIII, Catharine of Arragon, Anne Boleyn, Lady Jane Grey, Mary I, Mary Queen of Scots, and Elizabeth, Charles V, Justus Adolphus, and manuscripts by Sir Walter Raleigh, Hampden, William Penn, Newton, Lock, Crammer, Earl of Essex, Wolsley, Burgh, &c., &c.

Next to this department in interest, are the antique remains. The Egyptian, the Assyrian, those on Heracleum and Pompeii, the Elgin marbles, &c. An astonishing assemblage presents as we go, here—there—into a succession of grand galleries; eliciting almost involuntarily, as we pass along, the exclamation, "There seems no end to these!" We are almost overpowered by the magnitude of the display; both as regards the amazing numbers and the great size of some of the specimens, any of which are in an excellent state of preservation, though carrying the beholder back thousands of years: until, while gazing, we stand lost in thought, almost forgetting where, or who we are. A week would be little enough to devote to these departments alone; even for the uninitiated, asking no pretension to being well-versed in ancient lore. And for the rest of the stupendous collections in this magnificent institution, a month could hardly suffice to go over them even superficially; the zoological department would require at least a week. So that to spend but a day there, simply bewildering; though surely it was an astonishingly interesting kind of bewilderment."

(To be continued.)

For "The Friend."

Unbelief in the historical truth of the Bible, owed by one of the dignitaries of the national church in England, has called forth many reviews and criticisms of the book in which he has published his folly to the world. The developments made by this work, and by "Essays and Reviews," published two or three years ago—all written by men occupying high stations in that church, did all put forth to destroy faith in the Scriptures—being the product of Divine inspiration—show unhesitatingly how unavailing extensive learning and elegant training, even at Oxford and Cambridge, tend to make men christians, or of themselves in any wise to prepare them for the sacred office of ambassadors for Christ. Although set forth in such high sounding language, and covered up in seemingly devised systems, these publications and e controverisy to which they have given rise, reveal the fact that *Deism* has acquired a stronghold within the church of which the Queen of England is the head, and that a powerful effort is now being made by not a few of its ministers, to remodel and disseminate opinions which, if embraced, must destroy all christian hope and confidence, and lead to the darkness of infidelity.

It is no marvel that such fearfully poisonous oil should be produced at places where, and among a class of men who have made high scholarship and intellectual greatness objects of idolatry, before which all are expected to bow down and yield their homage. The people have been taught to call such men Master, and when they have "taken orders," Reverend and Right Reverend, whose lips speak knowledge, and from whose mouth they should seek the law, and well it will be if they are not betrayed by some of them into

daring impiety or hopeless despair. There is no virtue in ignorance, but the query of Zophar must still be answered in the negative, "Canst thou by searching find out God? canst thou find out the Almighty unto perfection?" "For the wisdom of this world is foolishness with God," and "the Lord knoweth the thoughts of the wise that they are vain." The christian may well rejoice, as did his Master when personally upon earth, that it has pleased the Almighty Father to hide the mysteries of his kingdom from the wise and prudent and to reveal them unto babes. The sooner all religious professors come to see and practically believe that the Holy Scriptures cannot be rightly understood or fulfilled but as they are opened and applied by the Holy Spirit, and hence, that, though by this means they are able to make wise unto salvation, they are nevertheless not the primary rule of faith and practice, the sooner will they rightly feel the necessity for seeking for the guidance of that Divine light, be relieved from the misconstruction and confusion of conflicting commentators, and their dependence be removed from the wisdom of the schools or the study of the letter, to prove the old and new testaments being written under the immediate inspiration of the Almighty.

The following extracts from a letter published in the (London) Record, referring to the work, by the episcopal bishop of Natal, of which we first spoke, are highly interesting, as showing how unbelief may be entertained by those who have been canonically ordained and occupying the position of ministers to the people; and the only means by which such unbelief can be truly removed and the heart prepared to receive the glad tidings recorded in the scriptures.

"SIR:—You will observe, in a recent article, that the public is becoming accustomed to the strange vagaries on the Bible, which men of learning and high position in the church seem so constantly falling into.

"I should be glad to express, through the medium of your columns, what appears to me the secret of all this; and I rather desire to do so, because I am myself a monument of the delivering power and mercy of God in this very matter.

"It is very noticeable that almost all the men who have thus notoriously erred from the way of the truth, are men of some kind of eminence in natural ability. * * * * *

"I remember when I first began to read the Bible (and I thought I was sincerely seeking the truth), I was miserable because I could not believe it; I dared not reject any statement I found there; but I could not fully believe it was true. * * *

"My own history was just this: I had read and studied deeply in mathematics; had mastered every fresh subject I entered upon with ease and delight; had become accustomed, (as every exact mathematician must do,) to investigate and discover fundamental differences between things which seem to the uninitiated one and the same; had seen my way into physical astronomy and the higher parts of Newton's immortal 'Principia,' and been frequently lost in admiration of his genius till St. Mary's clock warned me that midnight was past three hours ago. I had, in fact, (as we say) made myself master of dynasties, and become gradually more and more a believer in the unlimited capacity of my own mind! This self-conceited idea was only flattered and fostered by eminent success in the Senate House, and by subsequently obtaining a Fellowship at Trinity, and enjoying very considerable popularity as a mathematical lecturer.

"It would have spared me many an hour of misery in after days had I really felt what I so

often said, viz., that the deeper a man went in science, the humbler he ought to be; and the more cautious in pronouncing an independent opinion on a subject he had not investigated, or could not thoroughly sift. But, though all this was true, I had yet to learn that this humility in spiritual things is never found in a natural man.

"I took orders and began to preach, and then, like the bi-top among the Zulus, I found out the grand deficit in my theology. I had not the Spirit's teaching myself, and how could I without it speak? 'in demonstration of the Spirit and of power?'

"In vain did I read Chalmers, Paley, Butler, Gausson, &c., and determined that, as I had mastered the all the other subjects I had grappled with, so I would the Bible, and that I would make myself a believer. I found a poor, ignorant old woman in my parish more than a match for me in Divine things. I was distressed to find that she was often happy in the evident mercy of the Lord to her, and that she found prayer answered, and that all this was proved sincerely by her blameless and harmless walk amongst the neighbours; whilst I, with all my science and investigation, was barren and unprofitable and miserable—an unbeliever in heart, and yet not daring to avow it, partly from the fear of man, but more from a certain inward conviction that all my sceptical difficulties would be crushed and leaped over by the experience of the most illiterate christian.

"I was perfectly ashamed to feel in my mind like Voltire, Volney, or Tom Paine. I could claim no originality in my views; and I found they were no comfort, but a constant source of misery to me.

"May we not compare this kind of state to that which God speaks of in Jeremiah xix: 'Thy tribesmen hath deceived thee, and the pride of thine heart!' And observe what follows: 'Hear the counsel of the Lord.' Surely the least of the flock shall draw them out.'

"It may now be asked, how I came over to view Divine truth differently. I desire to ascribe all praise to Him to whom power belongeth; I desire to put my own mouth to the dust, and be ashamed, and never open my mouth any more, because of my former unbelief. I cannot describe all I passed through, but I desire with humility and gratitude to say, I was made willing in a day of Christ's power. He sweetly melted down my proud heart with his love; he shut my mouth forever from envying at any difficulties in the [Holy Scriptures]; and one of the first things in which the great change appeared was, that whereas before-time preaching had been misery, now it became my delight to be able to say, without a host of sceptical or infidel doubts rushing into my mind: 'Thus saith the Lord.' Oh, I am quite certain no natural man can see the things of God; and I am equally certain he cannot make himself do so. 'It was the Lord that exalted Moses and Aaron,' said Samuel; and 'By the grace of God I am what I am,' said St. Paul; and so, in a modified and humble sense, I can truly say.

"It used to be a terrible stumbling-block to me to find so many learned men, so many acute men, so many scientific men, infidels. It is not so now. I see that God has said, 'Not many wise men after the flesh, not many mighty, not many noble'; I see, as plainly as it is possible for me to see any thing, that no natural man can receive the things of the Spirit of God. Hence I expect to find men of this stamp of intellect coming out boldly with their avowed unbelief in the [Holy Scriptures.] The only answer I can give to them is, 'God has in mercy taught me better;' and never do I sing

those beautiful words in the well-known hymn, but I feel my eyes filling with tears of gratitude to the God of all compassion:—

“ Jesus sought me when a stranger
Wandering from the fold of God.”

“ So it was with me; so it must be with any one of them if ever they are to know the truth in its power, or to receive the love of the truth that they may be saved.

“ I feel very much for the young of this generation, remembering the conflicts I passed through in consequence of the errors of men of ability. I hope the Lord will graciously impress on any hearts the serious truth of these words, ‘ Not by might, nor by power, but by my Spirit; and ‘ The wisdom of this world is foolishness with God.’ My own way of explaining it to myself and others, when required to do so, is by saying, ‘ It is not the mind, but the affections, which receive true religion.’ “ Knowledge puffeth up, but charity edifieth.”

“ A FORMER FEL. OF TRIN. COL., CAMB.

“ Wymeswold Vic., Loughborough, Oct. 15, 1862.”

George Fox, being brought before several priests, was asked by one of them “ whether he was grown up to perfection?” To which he answered, “ What he was, he was by the grace of God.” “ This is,” replied the Priest, “ a modest and civil answer,” “ But,” continued he, in the words of the Apostle John, “ If we say that we have no sin we deceive ourselves, and the Truth is not in us.” And asking what he said to that, George Fox returned with the words of the same Apostle, “ If we say that we have not sinned, we make him a liar, and his word is not in us.” “ Moreover,” he said, “ Christ came to destroy sin, and to take away sin.” There is a time for people to see that they have sinned, and there is a time for them to confess their sin, and to forsake it, and to know the blood of Christ to cleanse from all sin!” After some more reasoning, the Priest said, “ We must be always striving,” to which George Fox returned, “ That it must be a sad and comfortless sort of striving, to strive with a belief that we shall never overcome; and he told him also, that “ Paul, who once cried out because of the body of death, did also thank God, who gave him the victory; and that he said ‘ there is no condemnation to them that are in Christ Jesus:’ so that there was a time of crying out for want of victory, and a time of praising God for the victory;”—Swell’s *History of the People called Quakers.*

The fair and candid enquirer will not reject the truth, when it forces itself on the mind with a clear and convincing evidence.

THE FRIEND.

FIRST MONTH 24, 1863.

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 9th inst. It was reported that the rebel government had appointed an agent in England to obtain a loan. Four steamers were being fitted up at Liverpool for the rebel service, and a number of vessels were being blocked in the Channel. The *London Globe* says that the efforts of the ministry towards economy have been successful to a considerable extent. Taken with the increased income, the Chancellor of the Exchequer’s budget, will be very favourable. Parliament was to meet on the 9th proximo. The Liverpool cotton market was quiet. American flour, 22s. 6d. a 28s. 6d.; wheat advancing; red western, 9s. 10d.; 10d.; red southern, 9s. 10d. a 10s. 6d.; white, 10s. 6d. a 12s. per 100.

The number of workmen in the cotton manufacturing districts of France out of employment, is now said to reach three hundred thousand, with no prospect of relief from their state of absolute destitution.

The present winter is terribly severe in Russia. The cold is said to be most intense, and not a flake of snow. In St. Petersburg, owing to the glass frost, it was almost impossible for either horses or pedestrians to keep a footing in the streets. The ice was so dry that it was broken only with difficulty.

UNITED STATES.—The Finance.—A joint resolution has passed Congress to provide means for the immediate payment of the army and navy. It authorizes the Secretary of the Treasury to issue on the credit of the United States, one hundred million dollars of demand notes, in denominations of less than one dollar. The notes to be issued, are declared a legal tender for all purposes except duties on imports. The U. S. Secretary of the Treasury says, in answering a resolution of Congress: There has been obtained since July last, from all sources, \$288,304,618, exclusive of the receipts from customs, &c., making the total \$325,000,000 in round numbers. There has been paid to troops \$70,825,588.77; to the Quartermaster’s Department, \$1,140,482,486.27; to the Commissary Department, \$30,017,492.83; to miscellaneous accounts, \$31,836,209.22. The President of the United States, in referring Congress that he had signed the joint resolution above referred to, expresses his regret that it has been found necessary to authorize so large an additional issue of U. S. notes, when their circulation, and that of suspended banks together, have become already so greatly redundant as to have a most injurious effect on prices. He calls the attention of Congress to the power referred to, to express his regret for the country, and advises that bank issues should be checked by a reasonable taxation of their circulation.

Slave Emancipation.—A bill is before the U. S. House of Representatives to aid Maryland in the abolishment of slavery, which appropriates ten millions of dollars for that purpose. Another bill appropriates \$200,000 to the purchase of slaves in West Virginia, and also provides \$200,000 for the deportation and settlement of the freed men. The amount paid for the liberation of slaves in the District of Columbia, will be about \$900,000, and the number freed, nearly three thousand.

Virginia.—The belief is general, that a large portion of the rebel army near Richmond, has been withdrawn, and either taken to Richmond or sent to Tennessee. Letters from the U. S. Army of the Potomac, state that movements of the troops had taken place. Some of the forces, it is stated, had crossed the Rappahannock, both below and above Fredericksburg.

United States.—The U. S. Army of the Potomac. Gen. Banks had been in command for a month, but none of his plans had as yet transpired. Most of the troops had gone up to Baton Rouge. The rebels were encroaching upon the lines of the U. S. army at Donaldsonville, but no danger was apprehended. On learning of the disaster at Galveston, Admiral Farragut sent a fleet to recapture the Harriet Lane, and if possible, destroy the rebel gunboats.

Arkansas.—The U. S. Army, which was repulsed at Vicksburg, Miss., proceeded to the Arkansas River, the land forces being commanded by Gen. McClelland, and the naval, by Com. Porter. On the 13th inst., an attack was made upon a fortified place called the Post, Arkansas, about sixty miles above the mouth of the river. The rebel works were carried by storm, and a large number of prisoners taken. Gen. McClelland, in his dispatch says, the number is estimated at from 7,000 to 10,000, together with a large amount of stores and munitions of war. The rebel loss in killed and wounded, was about 550 men.

Missouri.—The latest accounts from Springfield, state that the rebel army was in full retreat to Arkansas. They sustained a loss of about 300 men in the attempt to capture Springfield. But few of the Federal troops were killed or wounded.

Tennessee.—Gen. Bragg has been succeeded by Gen. Longstreet in the command of the rebel army of the West. The latter army corps was at Shelbyville; and it was supposed would make a stand there, and be reinforced by 30,000 men from Virginia. The rebels were making daring forays, and were in communication with the north, and cut off his supplies. A force of 4,000 men under Gen. Forrest, had attacked the relief and store-ships coming up the Cumberland river, and succeeded in capturing five steamboats laden with valuable stores, and the gun-boat, *Edie*. They burned them all in the river, and then burned, after being robbed of valuables. Several bridges on the Louisville and Nashville Railroad have been destroyed by the rebels. Gen. Morgan, with 8,000

men, is reported to be again in Kentucky. Disparat from Nashville state, that it was apparently the intention of the Federal generals to recede, and to concentrate the Federal army was cut off the supplies and retire Many deserters from the rebels were daily coming in to the Federal lines. An entire regiment of about 200 men deserted, and gave themselves up at an outpost of Murfreesboro.

South Carolina.—The Richmond papers contain Jefferson Davis’s message to the rebel Congress. He says that the operations of the War Department have been the main satisfactory; he denounces the Emancipatory proclamation of the President of the United States, informs the congress, that it is his intention to depart to the Federal States, and the commissioners of the United States that may hereafter be captured, our forces in any of the States embraced in the proclamation, that they may be dealt with in accordance with the laws of these States providing for the punishment of criminals engaged in exciting servile insurrection to the Federal States. He says, “ The advent of peace will be hailed with joy. Our desire for it has never been concealed, but earnest as has been our wish for peace and great as have been our sacrifices and suffering during the war, the determination of this people has, on each succeeding month, become more unalterably fixed to endure any suffering and continue any sacrifice, however prolonged, until their right to self-government, the sovereignty and independence of these States, has been triumphantly vindicated and established. Some important dispatches from Jeff. Davis and Secretary of State, to Mason, Slidell, and others in Europe, have been captured by the blockading squadron. These dispatches give important facts and details in regard to the condition of the rebels.

New York.—Mortality last week, 467; of which were males and 206 females, and 208 were children under five years of age. There were 76 deaths of consumption; 31 of croup, and 31 of diphtheria. **Washington.**—The following were lost: 720; children under five years of age, 113. Of consumption, 41; cr 11; diphtheria, 8. The bark Achilles, loaded with flour for the suffering operatives in England, has cleared Liverpool. She takes out 5020 barrels of flour, worth cost \$35,000.

Wheat, &c.—The following were the quotations on the 19th inst. **New York.**—Specie in the N York banks, \$37,581,484. Premium for gold, 47 a per cent. Money easy at 5 a 6 per cent. on call. 1 change on London, 162½ a 163; U. S. 7.30 Treas. notes, 101½; U. S. 6 per cent 1881, 95½ a 96. Stocks generally continue to advance with the depreciation of the currency. **Canada.**—Toronto, 72½; Ohio, 74; shipping brands, \$7.20 a \$7.35; Baltimore, \$7.20 a \$6.60; Chicago spring wheat, \$1.34 a \$1.42; red winter, \$1.53 a \$1.58; white Michigan, \$1.60 a \$1.65; yellow and mixed corn, 83 cts., a 85 cts. **Philadelphia.**—Superfine flour, \$6.25 a \$6.37; extra, \$6.50 a \$7. red wheat, \$1.53 a \$1.55; white, \$1.75 a \$1.80; 90 cts. a 95 cts.; old yellow corn, 84 cts., a 85 cts. a 87 cts. a 80 cts.; oat, 62 cts. per 32 lbs.; clover at \$6.87 a \$7.00; Timothy, \$2.00 a \$2.25; Flax seed, \$3.00 per bushel.

RECEIPTS.

Received from N. P. Hall, O, \$2, vol 36; from J. Hall, O, in full to No. 52, vol 30, from Bartram Kater, N. J., \$2, vol 35.

NOTICE.

“ The Society for Supplying the Poor with Soap has opened its house on Griscoon St., (late Geo Court.) and is delivering soap to the indigent every day, except the first of the week.

The Society does not employ a collector, but depends on the voluntary donations of the benevolent, which has been gratefully received. **Jerusalem**, Baker, 313 Fourth St., or Thomas Evans, 817 Arch St.

FRIENDS’ ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSHUA H. WORTON.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, and a quarter cent; any part of the United States, for three months, if paid in advance, six and a-half cents.

Diary of Samuel Scott.

(Continued from page 157.)

"Fifth month 22nd, 1782. At dinner we were expectedly visited by our ancient friend Thomas Arley; probably the last time: he appearing to be much emaciated, and his countenance languid and pale; but attended with a fresh and lively sense of vital and experimental religion. Retiring with us from some company who were present, he expressed himself, in much tenderness of spirit, to the following effect: 'Oh my dear friend! I have lately passed through many fiery trials and deep hardships, such as I have never before fully experienced: the secrets and concealed sins of my former life, even many which had passed unnoticed, have been brought to light and set in order before me. I have been laid more low than ever before the Lord; and so humbled in a sense of my own unworthiness, that I could stoop even to the measure of my fellow creatures. But I hope these severe dispensations have been for my further purification and meekness for that rest and glory, which will be the fruition of sanctified spirits to all eternity.' In the year 1776, I was introduced to personal acquaintance with him, by a worthy minister in our own Society, and esteem the same one of the blessings of my advanced years, for which I am accountable to the Author of every good gift; he lived some years in the neighbourhood of Hartford, and left a sweet savour behind him, both among rich and poor. It was my lot to suffer much from him in my natural disposition, and also in some points to which he was much attached; but he sought not so much to promote the intellectual part of religion, as the life of righteousness, and the experimental knowledge of the cross of our Lord Jesus Christ; which crucifies to corrupt propensities of fallen nature, and reduces the fruits of the Spirit, which are love, peace and joy in the Holy Ghost."

"Sixth month 10th, 1782. This day, unexpectedly and unthought for by me, I had a conference with a warm Calvinist, who seemed to lay an insurmountable stress on the peculiar tenets of that sect; and to be too much a stranger to that meekness and benignity, which peculiarly characterizes the religion of Him, who came not 'to destroy men's lives but to save them.' I asserted Christ to be only means of salvation and 'the Lord our righteousness'; both in respect to his meritorious and propitiatory transactions in the flesh, and his

being revealed within, as the hope of glory. To the former part of the proposition he heartily assented; but appeared too great a stranger to the mystery which had been hid from ages and generations, 'but is now made manifest to the saints.' I spoke only the words of truth and soberness, as they are set forth in the Holy Scriptures, Robert Barclay's Apology, and the writings of other faithful men: but I fear neither myself nor friend were sufficiently baptised into an inward and immediate feeling of the things which were spoken.

"11th. As I was walking in the evening, agreeably with what was expressed in the conference of yesterday, in a degree of the immediate feeling, the language of our worthy friend, Isaac Penington, was inwardly uttered; 'None but Christ; none but Christ, can my soul say, from a sense of my continual need of him.' Not only as He was a propitiation without me, but as a light within me: 'for in him was life, and the life is the light of men.' And not only by the report of what he hath done for them, without them, but by his immediate presence and saving help, are the souls of the desolate and distressed led, at seasons, to trust in Him, who for their sanctification, "suffered without the gate."

"Eighth mo. 19th, 1782. First day. Being low in mind, and indisposed in my health, I spent the forenoon in Tooley street; and in my retirement received a renewed conviction, that 'what is to be known of God is manifest within,' by the immediate revelation of Jesus Christ: for, although the invisible things of him may be understood by the things that are made, yet these exterior demonstrations of his eternal power and god-head are rather adapted to the reasoning, than the feeling, part in man; and being objects of the understanding, rather than the heart, can never afford a soul-satisfactory evidence to deep, inward, exercised seekers. The Holy Scriptures, being written by the inspiration of God, are profitable for doctrine, correction and instruction in righteousness; that the man of God may be furnished to a good work. Yet they are of themselves a dead letter, and unable to give life, only as they are opened by 'the Spirit that quickeneth'; and then they are precious, inestimably precious, beyond all words which have been written: a single sentence of them, so imparted, being much more profitable and edifying to the inward man, than long and elaborate discourses, or the voluminous productions of men. When in a state of darkness, distress, and uncertainty, our attention ought therefore to be inwardly turned to Him who 'hath the key of David'; who, in the days of his flesh, commiserated the poor and distressed among the people, inviting them on this wise: 'Come unto me, all ye that labour and are heavy laden, and I will give you rest.' The doctrine taught by some, that the Scriptures are the only rule of faith and practice, and may be sufficiently understood by the light of reason, is therefore equally erroneous and uncomfortable."

"Eleventh mo 2d, 1782. 'What shall I render to the Lord for all his benefits!' In the 64th year of my age, and amidst great desolations, both

of flesh and spirit, I humbly hope the gentle attractions of heavenly love are measurably drawing me to the Lord Jesus Christ; the great Prophet and High Priest of his people; who declared in the days of his flesh, 'No man can come to me, except the Father, which hath sent me, draw him.' 'And he that cometh unto me, I will in no wise cast out.' How ignorant are mankind of the great 'mystery which hath been hid from ages and generations.' Many are indeed professing faith in the coming of Christ, and his death and sufferings; and some, likewise, of his being an inward teacher, and true light which lightens every man, who have no more experimental knowledge of these important truths than either Jews or heathens. They may have, indeed, at times, experienced the convictions of the Spirit of Truth for sin, and heard his voice, 'Behold, I stand at the door and knock'; but they have not desired the knowledge of his ways; and therefore having eyes, they see not; having ears, they hear not; neither do understand the things which belong to their peace. Oh! that I had the tongue of an angel, and a voice to extend from 'pole to pole,' to declare 'the unsearchable riches of Christ:' but 'I am a child, and cannot speak,' my 'strength is to sit still.'"

"24th. This day, visiting an ancient and long-acquainted friend, she expressed convictions for sin, and particularly for having been too much at ease. The Friend, likewise, although far advanced in years, signified the being now afraid to die; which I was well pleased to hear, for all have abundant cause to be so, yea, to tremble at the king of terrors; excepting such as are complete in Him who is the Head of all 'principality and power.' Oh my dear friend, 'By their fruits ye shall know them,' said the blessed Jesus; 'he that abideth in me, and I in him, bringeth forth much fruit:' the branches whereon no fruit is found, are therefore in a withering state, and in danger of being cast forth. Nevertheless, our dependence ought not to be so much on the fruit, as on Him who is the vine; the Root that beareth us: that in all things we may grow up into Him who is the Head, even Christ; our wisdom, righteousness, sanctification and redemption. Amen."

"First mo. 1st, 1783. We dressed more meat than custom, and distributed a great part of it among our poor neighbours. We are told by the apostle Paul, that 'with such sacrifices God is well pleased.' May this year, or that part of it which may be my portion, be increased with the increase which is of God, viz, an inward exercise and travail of spirit towards him, and acts of benignity towards my fellow-creatures. The former is essential to salvation; the latter are good and profitable to men, and adorn the doctrine which is according to godliness; but when trusted in as a compensation for secret sins, and a covering for the errors of the heart, they are 'filthy rags.' Only 'in the name of the Lord will we set up our banners.'"

"Second mo. 10th, 1783. Fresh cause for self-condemnation was this day administered. What cause is there for condemnation to them who are

in Christ Jesus, may some say. It is true, there is none; but who are in Christ? those who walk not after the flesh, but after the spirit.' But whilst the law which is in our members, and the motions of sin which are thereby, bring forth fruit, there is death and condemnation. The language of—no condemnation to them who are in Christ—I fear, frequently proceeds rather from speculation than sensation; and is the dictate of a vain hope, by which the creature speaketh peace unto itself, and propheth deceit. There is, indeed, a being baptized into the death of Christ, and following the Redeemer through the bloody process of his sufferings, before there is an experience attained of being 'complete in Him who is the Head of all principality and power; and risen with him into that dominion in which he dieth no more; and in which those who believe, are dead, indeed, unto sin, but alive unto God, through Jesus Christ our Lord.'

"Third mo. 8th, 1783. This week some deliverance from evil hath been graciously experienced. As the day of my departure draws nigh, may I daily experience an increase in the fruits of the Spirit; in no wise esteeming them 'the works of righteousness which I have done;' but as marks of His gracious assistance and acceptance, 'who worketh both to will and to do of his good pleasure; and justifieth his own works both for and in his people; according to that which is written, 'Ye see, then, how that by works a man is justified, and not by faith only.' They err, therefore, not knowing the scriptures, nor the power of God, who teach that the works of the Spirit influence not the justification of the saints; but that they are dross, dung, and filthy rags. Was not Abraham, our father, justified by works, when he had offered his son Isaac upon the altar? 'Was not Rahab, the harlot, justified by works, when she had received the messengers, and sent them out another way?' Even the giving a cup of cold water, in the name of a disciple, is justified before God. The coming of the Lord Jesus in the flesh, his sufferings, and blood-shedding on the cross, and the work of the Spirit, were, in the eternal council of God, essentially necessary for the salvation of sinners. Manifold are his works; in unerring, unsearchable wisdom, hath he made them all.

"9th. Great and inexpressible hath been the mercy and loving-kindness of the Lord, more particularly in my advanced years, by drawing me in spirit to his Son the Lord Jesus Christ; that I might be justified freely by his grace, through the redemption which is in him; according as it is written, 'every man therefore that hath heard and learned of the Father cometh unto me.' What a ludicrous wooley garment may some say; and what contradiction betwixt the sentiments of the present day, and the remarks on yesterday, in which the doctrine of justification by works is asserted. I answer, to me no contradiction appears; the holy men of God, who spake as they were moved of the Holy Ghost, having declared that 'a man is justified by faith,' and that 'by works a man is justified, and not by faith only;' and they respectively had the mind of Christ."

(To be continued.)

Longitudinal Rivers.—A river that runs east or west crosses no parallels of latitude; consequently, as it flows towards the sea, it does not change its climate; and being in the same climate, the crops that are cultivated at its mouth are grown also at its sources; and from one end to the other of it there is no variety of productions—it is all wheat and corn, or wine, or oil, or some other staple. Assorted cargoes, therefore, cannot be

made up from the produce which such a river brings down to market. On the other hand, a river that runs north or south crosses parallels of latitude, changes its climate at every turn; and as the traveller descends it, he sees new agricultural staples abounding. Such a river bears down to the sea a variety of productions, some of which some one or another of the different nations of the earth is sure to want, and for which each one will send to the market at its mouth, or the port where they are distributed over the world. The assortments of merchandize afforded by such a river are the life of commerce. They give it energy, activity, and scope. Such a river is the Mississippi, and the Mississippi is the only such river in the world.

The Girdle.—To lose the girdle and give it to another, was among the Orientals, a token of great confidence and affection. Thus, to ratify the covenant which Jonathan made with David, and to express his cordial regard for his friend, among other things, he gave him his girdle. A girdle curiously and richly wrought was, among the ancient Hebrews, a mark of honour, and sometimes bestowed as a reward of merit; for this was the recompense which Job declared he meant to bestow on the man who put Absalom to death: "Why didst thou not smite him to the ground, and I would have given thee ten shekels of silver and a girdle." The reward was certainly meant to correspond with the importance of the service which he expected him to perform, and the dignity of his own station as commander-in-chief. We may therefore suppose it was not a common one of leather, or plain worsted, but of costly materials, and richly adorned; for people of rank and fashion in the East wear very broad girdles, all of silk, and superbly ornamented with gold and silver, and precious stones, of which they are extremely proud, regarding them as the tokens of their superior station, and the proof of their riches.—*Late Paper.*

For "The Friend."

Reflections by a young female at the age of seventeen; found amongst her papers, after her decease.

About a twelvemonth ago, I remember feeling a great resignation and sweetness. I think I then knew what is meant in Scripture by the words, "the silence of the flesh," a feeling very difficult to attain, but which I am convinced, every true christian must strive for till it is attained.

For many months past I have believed it to be my duty to do so,—to endeavour to feel a mental stillness, or a total resignation of feeling, and cessation from thinking; and in this state to wait for the influences and teachings of Divine Grace and Truth on the heart. When we attain this stillness, the Holy Spirit directs us what to do, what to pray for, and how to pray, and shows us when vocal supplication is required of us, and when secret mental prayer is most acceptable to the Father of spirits.

I have often felt anxious to know what is real religion, and have entrusted my Heavenly Guide to lead me into it, however painful a surrender of heart and life may be; for without that, there is no true and lasting peace to be found, and no preparation for the enjoyment of the Divine presence in a state of perfect holiness hereafter. I have at different times been desirous to know, whether that profession in which I have been educated, is the right one for me to retain; and whether any other form of worship, could be more acceptable to God from me. I never made use of vocal supplication on the subject, but I believe my secret prayers were accepted by Him who knew the sincerity in

which they were addressed. After waiting to instructed, my desires are at length fully answered for inward revelation assures me, that mine may be a religion of stillness, and total resignation self; that whether the feeling of devotion excite be that of prayer, praise, gratitude or adoration I must be immediately influenced by the spirit of Christ, before I can feel union and communion with my Heavenly Father, which, (whether words are used or not,) alone constitute the essence of worship. I feel convinced that whatever the outward form of worship may be, the only true and acceptable offering is a sacrifice of the heart, and more I feel of a devotional spirit, the more I feel to be still, and not to look for instrumental aid for I feel that Christ, the inward teacher and comforter, is all-sufficient, and that he is waiting to me good. In these precious moments I should find any ministry a burden that was not prompted the immediate inspiration of the Holy Spirit, and any such ministry, must break that inward stillness, in which the Divine will is shown to and heavenly consolations are administered. I often keep silence, (mentally,) that I may rest my strength; then I mount as on "eagle's wing" 'Till within the last year, I knew but little, if at all of this stillness, and my devotions consisted chief of supplication and praise, and sometimes of gratitude to the Supreme Being. Now, on a bed of sickness, perhaps of death, (being in a very precarious state,) I feel confined in the assurance that in mental silence only, is to be felt that peace and joy, and union with our Maker, which is, an ever will be, the christian's only hope and confidence, in the solemn and certain hour of dissolution.

From "The Patent Office Report," 1860.

The Consumption of Milk.

By SIBLAS L. LOOMIS, A. M., M. D.

Milk has ever been considered an excellent article of food. From infancy to age, in the civilized world, pure, sweet milk is a prime necessity, and is considered of such importance that the first object of every agricultural association has been to improve the products of the dairy.

The importation of fine English cattle, from the time Washington first brought them to the plain of Mount Vernon to the present day, may be considered a national benefit. No less important is the improvement of the native cow, as is shown by the annual reports of various associations. The efforts to improve the breed of cows have been eminently successful, but not as general as could be desired. It is as true of cows as of any other race of animals, that the breed, however good, rapidly deteriorate if not properly cared for; and it is also as true that a breed of a medium or even a poor quality, will be greatly improved by suitable care and proper attention. To these points almost every agricultural association has directed its attention, and by premiums and honours notice has been amply rewarded for its effort. While American cows fall below the English, Swiss and German, taken as a whole, they compare very favorably whenever they have had proper attention as the following statement very clearly illustrates.

The annual average, taking all the cows over a large extent of territory, is a little less than 1,800 quarts. From all available information we conclude that 1,800 quarts of milk is a fair average annual product of each cow of the present American stock, 1861.

No cow that comes below this average should be milked, yet we find many whose annual yield does not exceed a thousand quarts.

The annual average product of milk cows should be brought up to 2,200 quarts at least.

Consumption of Milk.—Milk is consumed in various modes:

1. In the manufacture of butter.
2. In the manufacture of cheese.
3. In direct consumption as food.

1. According to statistics, fifty-four per cent. of the entire produce of milk is made into butter. The manufacture of this indispensable article of food has received the attention of our best chemists as well as of our most skillful manufacturers, and is now made in a very perfect manner. It is exported in large quantities and found in almost every port in a perfectly sweet condition. It is well kept fit for table use many months.

2. The dairy of the United States also produces excellent quality of cheese, to the methods of manufacture and care of which nothing need be added to the previous reports of the Agricultural Bureau. One point, however, cannot be escaped. In thirteen States the milk used in the manufacture of cheese, is only about one-twentieth of the annual produce of milk, it being only five per cent. The cheese crop consumes only about one-eighth as much milk as the butter crop. Its use is only about one-tenth as much.

3. We find also that forty-one per cent. of the total produce of milk is consumed as food. A large proportion of this milk is consumed within a few hours after milking, but a much larger proportion, especially that for transportation, is kept a considerable time. A much greater quantity would be sold could it be preserved a sufficient length of time to get it to market.

After making all allowances, the consumption of milk as food is of much greater importance than its manufacture into cheese, and as our cities become more densely populated the difference will increase with the demand. Butter and cheese can be imported to any city, but the milk demanded as food must be produced within a comparatively short distance of the place of its consumption, unless there are railroad facilities for transportation, conveyed by wagons, fifteen miles is about the true limit of carriage; but if conveyed by steam, either by boats or cars, one hundred and fifty miles about the maximum limit.

The produce of milk as food in the vicinity of large towns and cities must always therefore attract the special attention of the agriculturist and abundantly reward his labours. It is also to be remarked, that the cost of producing milk is much more expensive in the vicinity of large cities than in the country. The price of land, and, generally, the higher prices for food and labour, both tend to increase the cost of milk, while the sloping land, which is always furnished more or less by every city, and the movement of milk before it is sold, tend to decrease the quality of the milk.

The Preservation of Milk.—In high latitudes, where the nights are damp and cool, milk can be transported for ten or fifteen miles without any special care, and be kept sweet for a considerable length of time. This enables the inhabitants of small and large towns to obtain their supplies from a large extent of territory. Competition is therefore free, and the price of milk is equitable for both parties, and so reasonable that every family finds in this cheap article of food. The preservation of milk in these latitudes is of minor importance. But as we pass southward the temperature increases, and the time that milk will remain sweet becomes less and less, till it is necessary, under present treatment, to use it almost as soon as it is milked. This, as a matter of course, limits the distance of transportation and the territory for the production of milk,

thereby raising the price beyond the reach of many. In fact, most of the milk consumed in southern cities and towns is produced within their limits or immediate vicinity. The preservation of milk for a sufficient length of time to allow it to be transported fifteen, twenty, or one hundred miles, and keep sweet for twelve hours afterwards, would be an incalculable benefit to these places, by giving a greater supply and by allowing competition to reduce the price within the reach of all.

Methods of Preserving Milk.—1. By heat.—2. By evaporation or condensation.—3. By cold and quiet.

1. **Heat.**—There are two methods of preserving milk by heat.

First. By heating it in the open air. This is very commonly resorted to under the name of scalding the milk. Several years since Gay Lussac demonstrated that if milk be heated gradually to boiling point two days in succession in the winter, and three in the summer, it would keep two months without souring.

Second. The milk is first bottled up tightly with wired corks and placed in kettles of cold water. The water is now gradually heated to boiling point when the kettles are removed from the fire and allowed to cool. The bottles are then taken out and packed for future use. Milk treated in this manner will keep for six months. It has been claimed that the addition of soda or hedge mustard has a good effect, but it is believed that the real preservative power is the heat.

By these methods the milk loses its primitive taste, and is not suitable for many purposes, nor can they be practically employed by dairymen supplying our cities.

2. **Evaporation or condensation.**—This process was patented a few years since, and consists in evaporating the watery portions of the milk till it solidifies. It is then put up in sealed tin cans and can be carried to all parts of the world. It keeps sweet a great length of time, and is used most extensively by people at sea. There are several large manufactories in Connecticut and New York, which have been in operation for several years. The particulars of the process are not known to the public.

3. **Preservation by cold and quiet.**—This is the process practised by dairymen generally, who are compelled to send their milk to market by the cars.

The process consists in cooling the milk to about 40° Fahrenheit, as soon as possible after milking, and in keeping it at that temperature, in perfect quiet, till it is ready to be carried to the cars.

The essential requisite is a spring of cold water. The quantity of water is not of so much consequence as its degree of coldness and its permanency. The water should be conducted underground the shortest possible distance to a suitable place for the location of the milk-house. This place, if possible, should be on the north side of a hill, well shaded, and so situated that the water from the tank will readily flow off. The house should be of such size and form as to admit of a tank two feet wide, and of sufficient length to hold all the milk-cans. The depth of the tank should be about four inches less than the depth of the cans. Each can should have a separate division, and the divisions so arranged that the water may pass from one to another.

The water from the spring should enter at the bottom of the first division, and from the top of the first enter the second, then from the bottom of the second enter the third, and so on, alternately entering at or near the top of one and the bottom of the next division. This secures a perfect current around each can, particularly if the top en-

trances are at the back side of each alternate division and the bottom entrances at the front side of the tank.

The tank should be so arranged as to be out of the way of any currents of air. The ventilation of the house should be only sufficient to keep the air pure. Most milk-houses admit altogether too much air. In all cases, all ingress of air to the house should be prevented as soon as a thunder-shower is seen rising, and no admittance allowed till the milk is to be removed. In clear or in rainy weather the ventilator may be open, but never in showery weather.

Ozone which is freely generated by electricity, acts energetically on milk, souring it in a few minutes, many times destroying the milk before the shower has passed over. Therefore, all air from the vicinity of thunder showers, which always contains ozone, should be carefully excluded from the milk-house.

Having prepared a place for the reception of the milk, its treatment remains to be considered.

The cows are milked in the cool of the evening, just after sunset, and the milk is strained into the cans which are to convey it to market. These cans hold about forty quarts, and when filled weigh about one hundred and twenty pounds. They are made of strong tin, and are well bound. As fast as the cans are filled they are placed in the tank, beginning at division No. 1. The cans remain uncovered, and the milk is not allowed to be stirred or even jarred.

The tank should be so constructed as to be disconnected with the building. It should rest flat on the ground, so that any jar of the building cannot disturb the milk in the tank.

In the morning the cows are milked before sunrise, and the milk placed in the cans as before. If there is a can partly full of night's milk, it must remain so; the warm morning's milk must not be mixed with the cool night's, but kept separate. In no case must a can of morning's milk stand in the tank above a night's can, for in that case the warmth of the morning's can will be distributed over the night's milk, and the process of souring initiated.

At about 3 or 4 o'clock in the afternoon the milk is to be carried to the cars. The cans are then to be filled if necessary. The milk being all cool can be mixed; in fact, there is no difference between the night's and morning's milk. No parts of cans are to be sent to market, but to be kept over twenty-four hours longer.

The cans are then placed in a wagon and a wet covering thrown over them, over which are thrown buffalo robes or other covering. At the railroad station the cans are closely packed in a closed car without anything being thrown over them, and during the night reach New York. "The rate of a night milk train when in motion is twenty miles per hour."

The cans are then taken by milk-carts and the milk is distributed to consumers. The milk, therefore, does not leave the cans till it is sold, and generally it is disposed of at a temperature nearly as low as it left the milk-house. In this condition it will keep sweet twenty-four or even thirty-six hours, and is a pure country milk, quite different in value from that peddled at a smoking temperature of 70 or 80 degrees.

The cost of transportation averages one cent per quart; the producers sell it, delivered at the station, for two cents; therefore it costs, ready for delivery in New York city, three cents per quart. Usual retail price six cents.

This process is available and practicable for all milk-men. The milk should be cool in all cases

before carting it. Milk that is not cooled commences decay a few hours after milking, and is not a healthy diet. Sour milk is not so injurious. It is milk that is in a state of change that is unhealthy.

No food should be eaten while a chemical change is going on among its constituents.

The plain suggestion, then, is to have milk cooled before it is offered for sale. Milk in the evening and peddle it in the morning, and sell the morning's milk in the afternoon.

In this manner the territory around our large towns and cities for producing milk will be greatly enlarged, and milk may become an important article of food.

The Value of the Milk Crop.—The value of the milk crop may be fairly estimated from the value of milk used in the manufacture of butter. Fifty-four per cent. of the entire crop in the thirteen States before named is made into butter; hence the value of butter forms a very correct basis for ascertaining the true value of milk.

The following is a correct statement of the value of milk per quart, the total value of the crop, together with the value of the amount consumed in each of the named States.

States.	Price per quart.	Value consumed.	Total value.
Maine	1.56	\$1,523,377 96	\$3,606,246 72
New Hampshire	1.44	1,880,753 52	2,459,289 60
Vermont	1.28	1,046,488 41	3,955,921 92
Massachusetts	1.68	2,277,334 52	4,309,438 08
Rhode Island	1.64	553,752 46	518,544 60
Connecticut	1.60	1,017,375 82	2,847,657 60
New York	1.36	7,385,216 72	27,506,291 04
Pennsylvania	1.28	7,093,060 12	15,318,522 88
New Jersey	1.76	1,933,688 29	4,396,754 24
Delaware	2.00	455,277 40	813,420 00
Maryland	1.20	1,155,437 83	2,040,400 80
Wisconsin	1.48	2,578,268 89	5,160,638 14
Virginia	1.12	4,342,284 53	6,665,440 32
Total		32,432,361 47	79,857,980 64

1. Milk is worth the most in Delaware and the least in Virginia. The small extent of the territory of Delaware, and its proximity to market, will readily account for the high price of its milk crop.

2. New York produces as much milk in value as the six New England States, together with New Jersey, Delaware and Maryland.

3. New York and Pennsylvania produce more milk than the eleven remaining States, and nearly one-third the entire crop of the United States.

4. It is remarkable that Maine, New Hampshire, Vermont, Connecticut, New Jersey and Maryland consume about the same amount in value. Pennsylvania consumes nearly as much as New York, although she produces but more than half in value.

5. The value of milk seems to be determined by its proximity to market. It cannot be transported under the present treatment like many other articles of produce.

With the above tables as a basis, it is estimated that the entire milk crop of the United States for the year 1860 exceeded \$160,000,000.

Amount consumed as food	\$90,000,000
Amount manufactured into butter	65,000,000
Amount manufactured into cheese	5,000,000

Total \$160,000,000

The above is the cost of the milk. The additional value produced by the manufacture and transportation of butter and cheese will make the value of the dairy of the United States for the year 1860 exceed \$200,000,000.

This estimate is made on the value of milk at 1.45 cent per quart. Should the common estimate of two cents per quart be adopted, the value of the dairy will be upwards of \$260,000,000.

This estimate is also made on assuming the average produce of each cow to be 1,800 quarts of milk. Should the average annual produce of cows be raised to 2,200 each, as it ought to be, the value of the dairy products of the country would be about \$320,000,000.

BE STILL, FOR IT IS HE.

Graee Does not steel the faithful heart,
That it should knock us ill;
We lean to kiss the chastening rod,
And feel its sharpness still.

But how unlike the christian's tears,
To those the world must shed!
His sighs are tranquil and resigned,
As the heart from which they sped.

The saint may be compelled to meet
Misfortunes' saddest blow,
His bosom is alive to feel
The keenest pang of woe.

But ever as the wound is given,
There is a hand unseen,
Hasting to wipe away the scar,
And hide where it has been.

The christian would not have his lot,
Be other than it is,
For while his Father rules the world,
He knows that Father is his.

He knows that he who gave the best,
Will give him all beside;
Assured each seeming good he asks
Is evil, if denied.

WORDS.

A little said, and truly said,
Can cheer Deers joy impart;
That hosts of words, which reach the head,
But never touch the heart;
The voice that wins its sunny way,
A lonely home to cheer,
Hath oft the fewest words to say;
But oh! those few how dear.
If words could satisfy the breast,
The world might hold a feast;
But words when summoned to the test,
Oft satisfy the least!
Like plants that make a gaudy show,
All blossom to the root,
But whose poor nature cannot grow
One particle of fruit.

For "The Friend."

Kew,—Sydenham.

(Continued from page 167.)

—, 1861.

"* * * Having said much of the beauty and perfection of many things in this country, I will begin with our trip to Kew, that you need not think I see every thing *couleur de rose*, simply because of the new and peculiar interest almost every thing is invested with, whether historically or otherwise. At the suggestion of some of our friends—as the pleasantest mode of going thither—we went by water to the above named gardens, one of the most charming of the many attractive places about London, in one of the numerous little steamers that are constantly plying up and down the Thames.

"I could hardly believe it, when I was first informed, that there was really no better water conveyance than these forlorn little boats. They are very inferior to our ferry-boats, with respect to comfort and cleanliness, and our large steamers which ply up and down our rivers, are elegant palaces in comparison. They are so small, there is not space for even such saloons as our ferry steamers are furnished with, and there is not so much as an awning in any we saw, to protect you from sun or rain. Being a little crowded, as is often the case, it was hardly possible to avoid

being bespattered with smut and dirty water from the mixture of the black smoke and steam deposit from the pipes; and the English, tolerating an conveyance at all, can be attributed only, I think to their exclusiveness. The rich have their equipages, in which they drive wherever they desire to go, unless it is too distant, and then they by rail road; where again their exclusiveness shown, by the fare of the first class cars—which are handsomely finished and very comfortable, being so high, that it does not suit the circumstances of many highly respectable persons to travel in them; consequently such must go in the second class, which are really very little better than our cattle pens would be if fitted up with the same kind of hard wooden seats and little contracted glazed windows. And yet how much more pleasant it often is, to travel by water, than in the bed of carriages, on the finest roads. And what a delightful change it would be, even for the rich, as how much less fatiguing, could they vary their excursions by trips on the water sometimes, in our steamers as those in America; with their fine, large, elegantly finished saloons, capable of accommodating hundreds, furnished with Brussels carpeting, with luxurious upholstered chairs and lounges; supplied with tea table, ice cream and other refreshment, and having fine upper promenade decks, for the wishing the full benefit of the scenery and the air entirely removed from dirt, disagreeable odor, smoke and steam. Well, we crept up the Thames a distance of only 12 or 15 miles, in about 1 1/2 hours and a half! which in one of our American steamers would have been accomplished in half the time, with the same detentions. That the numerous London citizens of highly cultivated minds and tastes, as capable of fully appreciating the refined and elevated enjoyment to be derived from frequent visits to this peerless spot, as any of the wealthy aristocracy who resort to it—double more so than many of them, but whose circumstances may not admit of the expense of frequent hiring a coach—should have no more desirable way of going thither than by these wretched little boats, is really incredible. Not to name the many other occasions, necessary, or for pleasure, to hourly induce crowds of respectable persons to travel up and down the river in them. The trip is rather a pleasant one, the Thames being very winding, and its shores green, with many pret trees, though they are nothing extraordinary. But the natural features are very tame, and there are very few handsome country residences. Nothing that will at all compare with the tasteful country seats, that so abound on, and in the neighborhood of the romantic scenery of our noble rivers, as often so near our large cities. No beautiful suburb such as West Philadelphia; and no beautiful villages composed largely of gentlemen's tasteful residences, and inviting cottage homes, such as often enliven their borders. But dingy, gloom little brick towns, are numerous enough. There is a very good view from the river of the splendid Westminster Palace—as the parliament houses are called—which, as it is the best perhaps that can be obtained of its whole exterior, were we glad to have the opportunity of seeing. You have see engravings of it, and as you observe, it is built in the most elaborately ornamented Gothic style.

"And now what can I say that shall give you even a glimpse of the charms of Kew? I could only our city of P—, boast, within twenty mile round, a spot possessing the same extraordinary attractions, some of us would be only too ready, fear, to steal time from our homes and spend many hours there frequently through the year, even were the means of conveyance more dismal, the way to

less inviting, by far. It is so much more extensive than I expected! So much of beauty, is there in its winding walks, its velvet sward, its lovely spongy beds and mounds, and rich profusion of elegant shrubbery, the shaded rocks and nooks of rus and other wildings, all disposed with such good judgment and refined taste; the magnificentustering and *wandering* trees, if I may thus apply such a word, in almost countless variety, the bododendrons in vast abundance in full bloom, the odorous lovely tints, the azaleas, the luxuriant masses of broad glassy leaved evergreens, such as the almas and hollies, &c., &c. All these comparatively common things, to speak nothing of the rarities from almost all parts of the world which so bound. How superb are the other varieties of evergreen! The different pines. The graceful Decatur, with its pensive branches and foliage. The stark Auracaria, so totally unlike any other tree, but the palm and fern houses are the wonders of rarity and magnificence,—perfectly unique. When standing in their crystal palaces, especially that of the palms, we might almost fancy ourselves transported to some eastern or southern clime, looking upon one of its forests of tropical trees and their plants; such is the amazing crowd, variety and lofty height of some of the specimens, o embowered are you, one is hardly aware of being enclosed in a glass house. It was to me a scene of enchantment; so wholly unlike any other vegetation. And the ferns,—the exquisite beauty, be astonishing variety, numbers, and above all the size of some of these. With bodies five or six feet in height, and some eight or ten inches in thickness, and rising with great symmetry, and gracefully curving over from these, vast clustering fronds, superb spreading plumes of from fifteen to twenty feet in length; thus forming shade trees of singular utility, under which many might shelter and rest. Many of the other greenhouses, though glowing with lovely flowers in great profusion and variety, was disappointed in fading, had not the display of rare flowers I had desired to see. There were very few, indeed, that we had not seen before—it probable it was not the season for many of them to be in bloom. The orchidæ we did not see at all; greatly to our regret, having heard there was superb collection; they were in private greenhouses, and there appeared no one there at the me who had the authority to open them.

"I cannot attempt anything that will amount to a description of the Crystal Palace. But supposing you to have been no better informed, or remember no better than myself, before I saw—which ever the case may be—about the place or its attractions, I would like you to have a little glimpse—such as I can give you in not very many words perhaps—of the *tout ensemble* which makes it a delightful resort for the multitude, as well as the intelligent of all classes, that I think must be unsurpassed of its kind, a natural attraction it has the advantage of the botanical and Kew gardens; being sufficiently elevated above the surrounding country to command quite an extensive and very beautiful view. We did not think of enquiring the number of acres enclosed in the grounds; but the extent is without limit—as I think you will perceive even from the following imperfect sketch—as are also the charming improvements. The palace alone, though having very little external ornament, is a splendid object, possessing a beauty peculiar to itself. Think of building 1800 feet in length, and 400 feet in width; central transept 174 feet, and those at each end 105 feet in height—flanked by stone towers 235 feet high, with reservoirs of water at the top—built entirely of glass, excepting the comparatively light

framework of iron, which being painted blue, gives the whole, at a little distance, a violet tint—as of an amethyst—sparkling and dazzling in the sunshine.

"You enter the palace at the South wing, after passing through a long colonnade, on one side of which is trained a variety of beautiful plants,—thence into refreshment saloons, in the basement, and ascending a fine broad flight of steps, you find you are on the main floor of the building. Here, again, you first pass through refreshment saloons—the view of which, however inviting their seats around well supplied tables, as it would rather detract from, than add to the elegance of the arrangements beyond, is closed off by the "Screen of the Kings and Queens of England." As you pass from behind this, you observe its front is a splendid piece of workmanship; its decoration being composed of niches with the statues of all the sovereigns of England, from William the Conqueror, to the present—casts from those executed for the houses of parliament—with elegantly carved tracery around them and in the interstices, and with rich cornice over all; challenging a careful and admiring inspection;—but here you find yourself in the nave of this immense fabric:—a vast, matchless bowler, a scene of singular beauty, at once opens before you, and you feel you cannot yet turn your back upon it, to examine anything in detail. Occupying the centre, and extending some 250 feet in length from where you stand, is a tastefully formed basin, a marble bordered lake we will call it,—a corresponding one being in the extreme opposite end of the nave—with rare water plants growing therein, their rich broad leaves buoyed on its surface—with large marble vases, four feet or more in diameter, standing at short intervals along its margin, filled with superb flowering plants, chiefly exotics, growing luxuriantly, and in full bloom, and a splendid glass fountain in the centre,—the one which attracted so much attention at the first national exhibition here—flinging its sparkling waters around and among its glittering crystal pendants and pinnacles. On each side the nave, near the light pillars—of which there are 2500—which support the galleries, and partially under the latter throughout its whole length, are intermingled groups of beautiful tropical plants—the tall elegant palms, the rich tree ferns, with their bowing, graceful plumes, &c., &c.,—too numerous to mention, with statues in great numbers and variety, in groups or singly; well executed models, casts from some of the finest works of both ancient and modern sculptors. Elegant vines are encircling and festooning the light columns and rafters, birds are flying from spray to spray, gold-fish are swimming and glancing about in the clear waters; overarching all, is the aerial crystal roof,—and all—trees, flowers, fountains, statues and crystal roof, are mirrored on the glassy surface of the lake below.

"On turning aside, after contemplating awhile this fair scene, more like the creation of a poet's fancy than a reality, to observe more closely the different objects of attraction as they are successively presented, one of the first which arrests our attention is the ethnological and zoological department, which two subjects are picturesquely arranged together. Among rocks, and plants indigenous to the native countries of the men and animals here exhibited, are stuffed wild beasts, and figures of savages in groups from various parts of the world, modelled from life. Here is a group of Esquimaux, there, one of North American Indians engaged in a war-dance, and there, another from mountains in South America. In this shaded nook, and under that overhanging rock, are different groups from, East, West, and South Africa,

Danakils, Negroes, Earthmen, Bojesman and Kaffres; in various attitudes, and all painted and clothed to the life—some with their faces hideously disfigured, by having their mouths slit and distorted, their ears elongated, &c. Here are some leading a camel to water, there is one attacking a tiger, and there again they are fighting with each other. And all looking so frightfully real, the sight of them almost chills one's blood.

"Branching off each side of the nave are the numerous courts appropriated to the arts, sciences, manufactures, machinery, naval architecture, novel inventions, &c., embracing a vast collection—the highly important triumphs of art and genius—things useful and curious, and things of exquisite beauty: also the French and Italian courts, with elegant and appropriate collections from each of these countries—too great a multitude to attempt to enumerate even their heads. A large portion of these courts is also appropriated to the reproduction of parts of antique temples, sculpture, &c., modelled from existing antique remains, which are highly interesting—some of them very splendid—which must have been prepared at enormous cost. There are the Greek, the Roman, the Assyrian, the Pompeian, the Alhambra and the Egyptian courts; each comprising several rooms; and conducting you to the last-named is a broad avenue of colossal sphynxes, which are considered superior works of art. The Alhambra has four or five apartments, the elegant carving of which, the brilliant colouring and gilding, its divans, fountains, &c., probably give a very fair representation on a small scale, of the pristine magnificence of that gorgeous Moorish palace. At one end of the north transept, there are two colossal figures, modelled from the statues of King Ramesses II. in the temple of Aboo Simbel in Egypt, a model of which temple is in the Egyptian court. These figures measure about sixty feet high in their sitting posture, are highly coloured, and with their enormous staring black eyes, twelve to fifteen inches in diameter, make an extraordinary and almost startling appearance. Facing these in the opposite end of the transept is the gigantic natural wonder from America—the mammoth California tree. There are also the Mediaeval court, representing the German, French and English styles of Gothic architecture—the Byzantine and Elizabethan courts, with the architecture of those periods, &c., &c. There are twelve stair-cases to conduct the visitor to and from the galleries; which are appropriated to the paintings—a large collection of both modern and ancient schools—the museum of naval architecture—having fine models of ships, steamers, &c.,—various interesting oriental works of art, manufactures, &c., &c., &c.

"The arrangements throughout are most complete; all the appointments and the ornamental finish in every part are truly elegant—as might be supposed where expense is lavished with an unsparing hand. Of the thousands of every class that are drawn thither weekly, for a day of relaxation and enjoyment, and of the whole day is quite little enough, you may be enabled, perhaps, to form some conception, by hearing a statement which was made to us. Besides the rooms mentioned for light refreshments, the palace is furnished with a public dining-room, and dining-saloon for private parties; and we were informed that the association received weekly £40 for the waste fat from joints of meat, &c., and £70 for pig slush! While, doubtless, there are thousands weekly who never dine there, but carry their lunch with them. We will now leave the interior and take another glimpse—which will be equally imperfect with, or more so, than the one just given—of the external charms, much the

more attractive to me, of this really extraordinary place of resort.

"Stepping out from the central transept, nearly the whole of the extensive grounds, sloping gently down to the foreground of the highly cultivated distant landscape—the terraced gardens immediately in front, which are in the Italian style, and also the greater part beyond, and on your left, which are English landscape style—lie mapped out before you. The English, according to our taste, much the more beautiful. The attempts to imitate nature—the soft green slopes and dells, the rich clumps of trees, winding walks and sheets of water—are very successful, and the effect is very lovely. The Italian gardens, however, though so artificial, have also a peculiar charm, and are really beautiful. The upper terrace is occupied by flower-beds—large and small, of different shapes, and cut with mathematical precision, one invariably corresponding with another on the opposite sides of the main central walk—filled with the most brilliant flowers; handsome balustrades surmounted by statues, and eight or ten antique fountains in tasteful marble basins. Thence you descend five wide flights of marble steps. On the terrace below, in the centre dividing the main broad walk which extends through the whole length of the grounds, is a large marble basin and fountain; beside which are six others, with their large elegant marble reservoirs; flowers in profusion, temples, statues, grotto cascades—beyond, rifle ground, cricket ground, bowling green, archery ground, &c.

"And now, last though far from least, as we leave the above fanciful part of the grounds, by walks twisting around knolls, among fine trees and thickets of shrubbery, the superb rhododendron in full bloom, &c., descending into beautiful rocky dells, we approach a much wider part of the garden than any we have yet seen; yet all in perfect order and keeping with the whole. Sauntering slowly along enjoying it to the full, and expecting nothing unusual, we turn round a projection of rock and shrubbery, come suddenly upon a beautiful little lake, and lo! rearing up their gigantic, awful forms on its banks and islands, or in the edge of its waters, are numerous specimens of restored extinct animals; large as life—as their colossal life! All executed with such extraordinary skill, their forms, colouring, some with their scaly coats, and placed in natural appropriate attitudes, that had such creatures still existed, I should hardly have had a doubt of their reality, even at this short distance. The effect was almost electrifying—making us feel for an instant like coming to a stand-still. There were the Megalosaurus, the Mosasaurus, and Megaterium—the latter sitting on its haunches rearing its hideous head high up in a tree, which, with its gigantic feet and claws, it seemed in the act of tearing down to feed upon—the Plesiosaurus, Ichthyosaurus and Iguanodon—some of these apparently in the act of coming out of the water—the huge frogs measuring from three to four feet across the back—those great, outre-looking, flying reptiles, the Pterodactyls, a combination of bird and beast, with enormous, long beaks filled with teeth, sitting on the top of the rocks, the skinny folds of whose vast wings were flapping in the wind so very like life,—and many others which I cannot now name. But I feel sure that nothing I can say, can convey to you any idea of the effect on the beholder at first sight, of these astounding apparitions; it seemed like the realizing of some horrible nightmare, omitting, indeed, their beautiful surroundings. Turning a little from these to another part of the banks of the lake, we are quite refreshed at

sight of a very different herd of restored fossil animals. Specimens of the extinct Tapir, some of the deer tribe—not so very large—and towering above all the colossal Irish elk. The group is very beautiful, as well as most truly interesting. They appear perfectly true to nature, their attitudes extraordinarily so. Some are lying on the green sward as in repose; some appear as quietly feeding, and others with their heads as if suddenly raised with the look of surprise and inquiry, which we so often see in our domestic grazing animals, when we come unexpectedly upon them.

"Another artificial feature and specimen of scientific skill on the borders of this interesting little lake, deservedly attracts much attention. On the opposite side from the extinct animals, rising rather abruptly from the water's edge, is an illustration of a section of the geological strata of the earth's crust, so admirably constructed in imitation of the true minerals, and arranged in their natural order, the old red sand-stone, lime-stone, &c., with the tilting,—and not omitting the break or fault occasioned by the upheaving of the earth's crust, that on first seeing the variegated face of this apparently natural rock, with wild plants growing above and around it, we did not think otherwise than that it really was natural. But on more careful inspection of the different parts on its upright surface, exhibiting the beds of iron-stone, shale and coal, it became apparent that it must be man's device. And if an unscientific beholder may presume to judge, it certainly does great credit to the scientific builders. This portion of these geological illustrations was devised and arranged under the superintendence of Professor Ansted, those of the extinct animals under that of Prof. Owen. I think all who visit Sydenham Park, must agree in pronouncing the whole of this truly unique part of it a complete success. And now, after having devoted much more space to it than I had any expectation of doing, I think we will take leave of the Crystal Palace.

(To be continued.)

For "The Friend."

A Million and a Billion.

I noticed an article under this head, published in "The Friend," bearing date first month 10th, 1863, where, I think, the author has been under a wrong impression, as regards his idea of a billion. Unwilling to permit such an error to go unnoticed, I have thus taken the opportunity to correct it. If I have been taught right, a billion is a thousand times a million, and not a million times a million, as was stated by Investigator; hence there will be a marked difference in the result, respecting the time required to count that number. Allowing a person to count 170 in a minute, and working six hours a day, 313 days (the working days,) in a year, it would require scarcely 52½ years, to count a billion, instead of 19,024 years, as given by Investigator's calculations.

A READER.

In the United States and on the Continent of Europe, a thousand million is called a billion, but in Great Britain and its dependencies, a billion is a million million. [Ed.]

"She was an example of plainness herself, and careful prudently to suppress the contrary in her children, as long as they remained under her immediate care, meekly dissuading in a moving manner, against any appearance of corruption in conversation, as well as the world's vain fashions and superfluity in dress; firmly maintaining parental authority in this steady resolution, which she never departed from, viz: that while her children were

clothed at her expense, they should submit to lay their clothes fashioned agreeable to her mind."—*From a Testimony of Nottingham Monthly Meeting concerning Dinah James.*

The turn of life.—Between the years of fort and sixty, a man who has properly regulated himself may be considered in the prime of life. His matured strength of constitution renders him all most impervious to the attacks of disease, and experience has given soundness to his judgment. His mind is resolute, firm and equal; all his functions are in the highest order. He assumes matters very over business, builds up a competence on foundation he has formed in early manhood, and passes through a period of life attended by many gratifications. Having gone a year or two past sixty, he arrives at a stand still. But athwart this is a viaduct, called the "Turn of Life," which, crossed in safety, leads to the valley of "old age," around which the river winds, and then beyond without a boat or causeway to effect its passage. The bridge is, however, constructed of fragile materials, and it depends upon how it is trodden whether it bond or break. Gout and apoplexy are also in the vicinity, to waylay the traveller, and thrust him from the pass; but let him stir up his loins and provide himself with a fitter staff, and he may trudge in safety with perfect composure. To quit metaphor: the "Turn of Life" is a turn either into a prolonged walk or into the grave. The system and powers, having reached their utmost expansion, now begin to either close in like flowers at sunset, or break down at once. One in judicious stimulant, a single excitement, may force it beyond its strength; whilst a careful supply of props, and the withdrawal of all that tends to force a plant, will sustain it in beauty and vigour until night has entirely set in.—*The Science of Life.*

Sugar from Corn Stalks.—H. A. Sheldon, of Addison county, Vermont, says:—"I took two stalks of Stowell's Evergreen sweet corn, of average size, after the cob had been taken off, pressed them (to one joint above the top ear) between rollers half an inch apart, and obtained five fluid ounces of juice of specific gravity 1.066. Two grains of quick lime were added, and the juice was boiled, strained, and evaporated to a trifle over half a fluid ounce of rich, transparent syrup. In a former experiment not weighed, it crystallized into good sugar. As I did not probably obtain more than half the juice, and allowing two square feet of land for each stalk, the result would be sixty-six gallons of syrup, or three hundred pound of sugar to the acre. The flavour of both suga, and molasses is much pleasanter than that from sorghum."—*American Agriculturist.*

Arrival of a live Gorilla in Liverpool.—By the arrival of the African mail steamer Armenian, a Liverpool, there has been brought to that port a fine male specimen of the gorilla. He appears quite docile, and amuses himself in dancing round the room at — Newby's, the eminent naturalist and attempting to sew pieces of blankets together. His skin is of an olive colour, and, as he is yet very young, only slightly covered with hair. He is remarkably fond of good living, and appears to have an especial relish for beefsteak, and nutmeg chops, and fruit. Young Gorilla is about three feet and a half in height, very broad and thick across the chest, while his arms and legs are long and sinewy, displaying great strength. He has a great habit of putting his feet into any stray boot and shoes which may be lying about, and when he is discovered in his freaks, he invariably runs for

protection to any lady who may be present. His ace, unlike the generally entertained opinion, is of fierce or repulsive looking, although the jaws are both broad and heavy. "This is the only live specimen of the gorilla, we believe, ever brought to this country.—*Leeds Mercury.*"

Many of the blessings universally desired are frequently wanted, because most men, when they labour, content themselves to complain, and rather linger in a state in which they cannot be assisted, than improve their condition by vigour and resolution.—*Rambler.*

THE FRIEND.

FIRST MONTH 31, 1863.

In the last number of the "London Friend," there are some observations relative to the conclusion come to by the Yearly Meeting of Ohio, to treat with and disown those who shall remain joined to a body that separated from it in 1854; and also of the latter, to disown those continuing attached to the old Yearly Meeting. In the course of the editorial remarks it is said:

"We take comfort also in observing, that in the minute adopted by the Yearly Meeting, of which our dear Brother Binns acts as clerk, and with which the early Meetings of London and Dublin correspond, there is a careful avoidance of irritating expressions; and, further, that no attempt is made to found the necessity for separation upon doctrinal differences, but that it is simply, made to rest in the importance of relieving "Monthly Meetings from any further responsibility for, or charge [charge] of a class of members over whom they are to exercise no control. The report presented by the committee charged with the consideration of the subject, to the other Yearly Meeting, of which George Gilbert acts as clerk, is of a very different character. It speaks of 'treating with those offenders who separated from us in 1854,' and of 'our being brought to a sense of their transgression,' and to a willingness 'to condemn the same,' as the alternative of disownment. The report also states the belief of the committee, that the separation was effected 'from an attempt to introduce sound doctrines into the Society.' It would have been a very painful thing to us if the Yearly Meeting with which we correspond, had retorted a charge of 'an attempt to introduce unsound doctrines' upon those from whom they are thus separated." * * * "The question of the need of separation, in such cases, does in fact turn upon the standard of unity which we adopt. If it was the case in the early church, and to a large extent, among the earlier members of our religious society, those who are truly united to Christ, and who acknowledge Him as their teacher, are content to bear one with another as *brethren*, in regard to such differences of view as are sure to arise upon a great variety of questions relating to faith and practice, the need for separation between which will be greatly lessened, even if it do not cease altogether. If, on the other hand, christianity be made to consist not only in holding the true great truths, but also in defining them in the same terms, and attaching the same relative importance to each, separation and division are sure to be multiplied." * * * "We presume to define the exact amount of agreement in regard to christian doctrine and discipline, which is essential on the part of those who should associate together as members of the same church; but it is evident that a great deal must depend upon whether the one or the other of the principles to which we have referred, be adopted. We have

every reason to believe that differences of doctrinal sentiment, at least as great as those which are spoken of as having led to this painful separation in Ohio, were to be found among the members of the early Church, and among our forefathers in religious profession; and also that the love and patience which they exercised towards each other in regard to such differences, was no unimportant part of the discipline by which they were enabled to bear before the world so effectual a testimony to the truth as it is in Jesus."

With the views relative to the terms of membership in religious Society here expressed, and, from the language used we must infer, approved, by the writer, because of removing all need for separation, we are at a loss to understand on what ground the separation from Ohio Yearly Meeting in 1854 can be justified, or the decision of London Yearly Meeting to correspond with the meeting then set up, be approved; though they explain why the words "offenders" and "transgression" are considered as irritating expressions; and the avowal of a belief that the separation was effected "from an attempt to introduce unsound doctrine into the Society," is referred to as a "charge" that would have been very painful had it been retorted by those who separated. Ohio Yearly Meeting was never charged with being unsound in faith or practice, nor has it been shown to have violated the discipline of the Society; how was it then that it was not "borne with as *brethren*, in regard to such differences of view as are sure to arise upon a great variety of questions relating to faith and practice?"

We have never believed separation to be the proper or an adequate remedy for the evils now affecting our religious Society, and have therefore regretted that many honest hearted Friends in different places have resorted to it, with the hope of relieving themselves, and bearing an unobstructed testimony to the doctrines and testimonies of the Society. But we cannot acquiesce in any system of religious association which would practically ignore all distinction between most of the various denominations of professing christians. If the terms of membership in our religious Society were to become so loose as to take in all those who profess to be "truly united to Christ, and who acknowledge him as their teacher," there could hardly be any such thing as *offenders* or *transgressors*, in relation to doctrine; unless indeed unitarianism once more sprung up among us; but Friends, Episcopalians, Presbyterians and all other orthodox denominations could be brought within the same pale. Part of the members might submit to baptism in water, use the bread and wine as the communion, and have a paid clergy to deliver discourses at stated periods, &c., while another part strove to maintain the testimony which our forefathers believed the Society was raised up to bear against these things, and they would only have to be "content to bear one with another as *brethren* in regard to such differences of view" "relating to faith and practice," for the Society to go on as harmoniously as such discordant constituents would admit, leaving the true gospel standard unswayed, and consequently not contended for.

But the Society of Friends never has, and we trust never will place a right of membership within it on such loose terms; nor can it admit that the doctrines and testimonies which it has declared to be the world to be inseparable from the gospel, in its fullness and its spiritual meaning, to be mere matters of opinion, to be accepted or rejected as its members may choose; nor yet its discipline and church government to be of so little worth, that

they may be violated and set at naught, without those doing so being accounted offenders.

When the leaders of those Friends who constitute the body, of which J. Binns is clerk, were about consummating the act of separation from the Yearly meeting of Ohio, several of them acknowledged that they, and those who joined with them, would be separatists, and must be prepared to meet the consequences of placing themselves in that position. They knew that the whole transaction was effected in violation of the established order and usages of the Society, and contrary to a decision of that Yearly Meeting repeatedly confirmed; themselves being parties to it, and more than once insisting upon its being maintained. This was so well and so generally known, that we believe no one of the Yearly Meetings, when considering the propriety of corresponding with the separate meeting, attempted to call it in question; nor was there, nor has there been any suspicion of unsoundness in the faith among the members of Ohio Yearly Meeting. Under these circumstances it would, therefore, have been out of place for the meetings of which J. Binns is clerk, to charge those from whom they separated, as *transgressing*, by continuing their subordination to the Yearly Meeting to which they belong; or to speak of them as *offenders*, because they did not unite with them in a separation, but endeavored to act in accordance with the discipline and order of the Society; and it is so far satisfactory that it did not do so.

But Ohio Yearly Meeting could look upon the act of separation as no other than an act of unauthorized insubordination, setting at naught, or *transgressing* essential principles of church government; and, therefore, that those participating in it were, so far, *offenders*, and believing this, as a witness for the truth and against error, it was bound to say so; and, provided christian charity were maintained, we see no reason for considering the terms employed as *irritating expressions*.

Our study of the history of our religious Society has led us to a different opinion than that expressed in the editorial, that the standard of unity among its earlier members embraced those "who were united to Christ, and who acknowledged him as their teacher," without reference to the doctrines they might hold, or to their modes of worship, the rites and ceremonies practised, &c.; being "content to bear one with another as *brethren* in regard to such differences of view;" nor yet that there were to be found among them "differences of doctrinal sentiment at least as great as those which are spoken of as having led to this painful separation in Ohio." The authorized declarations of the doctrines held by Friends, repeatedly put forth to disabuse the public mind of false charges brought against them; the epistles issued; the treatises written; the advices given; the journals published; all bear uniform testimony that the religious belief, or faith, of the Society, was fully understood, clearly defined, and inviolably maintained by it; and that its members were so united therein, that they universally spoke the same language when declaring it; and that the love and patience they exercised towards each other was not in disregard of differences of *doctrinal sentiments* existing among them, but in endeavors to build one another up in the one most holy faith, or to win those who had never thoroughly conformed their lives to it, or through weakness had departed from it.

We know of no record that sanctions the opinion of there being any such differences of "doctrinal sentiment" among them, "at least as great as those" spoken of as having led to the separation in Ohio. On the contrary, the separations

of Perrot, of Wilkinson and Sory, and of Keith, prove the inflexibility with which the faithful members maintained both the doctrines and discipline that had been promulgated and established, and that when such differences as are alluded to were attempted to be introduced, they then, as now, led to disunity, division and separation.

In speaking of doctrinal differences, as the cause of separation, we wish not to be understood as asserting that those Friends who separated from Ohio Yearly Meeting, in 1854, did so because they, as a body, were unsound in their religious profession; we have no knowledge that would warrant such an opinion. But we think there can be no doubt, that that separation, as well as others that have taken place, was the evil fruit of the dissemination of unsound sentiments throughout the Society, threatening to graft upon its acknowledged faith, opinions which it had repudiated from its origin. To the inevitable consequences of their dissemination, and endorsement, Philadelphia Yearly Meeting had long before called the attention of Friends in England, entreating them to use their influence to remove a cause so prolific of disunity, dissension, and separation.

The consequences have been sorrowfully realized, with what effect upon the original character and influence of the Society, and upon the true religious growth of the members individually, may be seen, and ought to be felt by us all. And the end, we fear, is not yet. Most earnestly do we desire that the dark and cloudy day, wherein the flock has been scattered, may close, and that all who really love the doctrines and testimonies of the gospel, as set forth in primitive Quakerism, may unite together in a zealous and harmonious effort to build up the waste places, exercising love and patience towards each other, while they "ask for the old paths, where is the good way, and walk therein."

SUMMARY OF EVENTS.

UNITED STATES.—The Army.—A bill is before the United States Senate by the Committee on Military Affairs, which provides for the organization of 250,000 men, to be raised *pro rata* in the several States from the militia. This force is to be called the National Guard, and to be subject to the President's orders.

Virginia.—On the 20th inst. Gen. Burnside issued an address to the army of the Potomac, announcing that the time of active service had arrived. About the same time a feint was made of crossing the Rappahannock eight miles below Fredericksburg, and a large division of the army was put in motion for actually crossing at a point some fifteen miles higher up the river. The violent storm of last week delayed the transportation of the pontons and heavy artillery, so as to prevent the intended surprise of the rebels at the place where the crossing was to have been attempted. In consequence of the heavy rains, the roads became almost impassable, the whole movement was abandoned, and the troops returned to their old quarters. The reports that a part of the United States forces had gone south of the Rappahannock, seems to have been erroneous. The manner in which the movement was begun and prosecuted, the orders given and countermanded, creates a doubt whether there was any real intention to cross the river. On the 26th inst. Gen. Burnside turned over the command of the Potomac to Gen. Hooker, in obedience to the orders of the President. It is understood that Generals Sumner and Franklin have also been relieved from their command of the right and left divisions of the same army.

Tennessee.—The military operations in this State remain nearly as late as articles of the rebel army were actively employed in intercepting General Rosecrans' communications with the North, and occasionally succeeded in cutting off his supplies. The rebel troops approach within a few miles of Nashville. The main body of the Confederate army is said to be at Smith's Fork six miles from Nashville. At the late battle near Murfreesboro the Federal troops killed 8,327 men, in killed and wounded, and about 2000 were taken prisoners.

Mississippi.—It is stated that another attempt to open the navigation of the Mississippi will be soon made, and that the Government has a fleet of gunboats at Vicksburg. Information has been received that the rise in the river has caused the water to flow through the canal which was dug last summer by the United States forces for the purpose of diverting the channel of the Mississippi from the Vicksburg front.

Arkansas.—The gunboats under Admiral Porter's command have captured the towns of St. Charles and Des Arc and Duvall's Bluff, "taking about 150 prisoners, two columbiads, and about 200 small arms." The boats of light draft were more than 300 miles above the mouth of White river. Five thousand seven hundred and ninety-three prisoners, taken at Arkansas post, had arrived at Vicksburg on the 13th inst. At Kansas City, 600 of the Federal troops were killed and wounded.

Louisiana.—New Orleans advices to the 8th inst., say that a report had been received that the U. S. gun boat Winona had been sunk by the South Battery at Port Hudson. It was also reported that the rebel garrison at Vicksburg had been strongly reinforced. The *Jackson Mississippian*, a rebel paper, thinks a battle at Port Hudson is imminent, and says, "We have not the slightest fears but that an attack on Port Hudson will result in another Vicksburg disaster to the invaders."

Southern Items.—The *Richmond Enquirer* of the 29th, says that the following financial scheme is before the Confederate Congress. It proposes an amendment in the constitution, legalizing the issue of legal tender notes during the war, and for five years thereafter. It also proposes the purchase of the whole cotton crop of the Confederacy, the present crop to be purchased at the rate of five to fifteen cents per pound. Flour is selling at Charleston at forty-six dollars per barrel, and at Mobile at sixty dollars. A Charleston despatch says that a steamer laden with cotton, made an unsuccessful attempt to run the blockade. The steamer and cargo were burnt.

England.—Mortality last week, 470.

Philadelphia.—Mortality last week, 284.

Massachusetts Savings Banks.—The annual return of the savings banks of the State, show the deposits for the past year to be \$8,000,000 more than the previous year. The aggregate of deposits is \$50,500,000.

The Whaling Fishery.—The *New Bedford Standard* in its editorial remarks on the whaling fleet for the past year says, "the diminution of the whaling fleet has continued throughout the year, but we hope has reached its minimum. The decrease for the year has been sixty-five vessels, with a tonnage of 23,297. The decrease for 1861 was ninety-four vessels, with a tonnage of 32,411; for 1862, one hundred and fifty vessels, with a tonnage of 55,279; twenty-nine vessels, of 8931 tons; the decrease for six years amounting to 100,140 tons, or forty-nine per cent. The total number of vessels now engaged in the whaling fleet is 353, with a tonnage of 203,162."

The Finance.—The Finance bill as passed by the House of Representatives, authorizes the Secretary of the Treasury to borrow \$400,000,000 for the current fiscal year, and \$600,000,000 for the next fiscal year, on six per cent bonds, payable after twenty-years in coin, which bonds the Secretary may dispose of from time to time, on such terms as he may deem advisable. He is likewise empowered to issue on the credit of the United States \$300,000,000 of fractional notes in lieu of the present postage currency.

The Pirate Alabama.—On the 17th inst., the U. S. transport Hatteras, a steamer of 1100 tons, and carrying four guns, was snuk off Galveston, by a broadside from a large armed steamer, which was believed to be the *Alabama*. The latter was under way to sea at night, but night coming on, the hostile steamer soon escaped.

The Markets.—The following were the quotations on the 26th inst.—**New York.**—Specie in the New York banks, \$38,540,704. Foreign exchange has advanced to 165 a 167 per cent. American gold 52 per cent. pre-emption U. S. Bonds, 1861, 85; Treasury notes, 102; Middling upland cotton, 7 1/2; Chicago spring wheat, \$1.45 a \$1.50; amber Iowa, \$1.57 a \$1.60; amber Michigan, \$1.65 a \$1.67; white Canada, \$1.95; rye \$1.00 a \$1.10; barley, \$1.45 a \$1.50; western yellow corn, 90 cts a 92 cts; round yellow corn, \$1.00 a \$1.02; St. Louis No. 2, 73 cts. for St. Louis and 70 cts. for Jersey. **Philadelphia.**—Prime red wheat, \$1.58 a \$1.60; Pennsylvania white wheat, \$1.65 a \$1.75; Kentucky white, \$1.85; rye, 96 cts. a 97 cts.; new yellow

corn, 86 cts. a 87 cts.; old, 90 cts.; oats, 64 cts. a 67 cts.; barley, \$1.50.

Foreign.—Advices from Mexico state that the French army has been again repulsed and driven back before Puebla, with great loss. It is said that about 2,000 of the French troops were killed and wounded. The prospects of the invaders were said to be discouraging. They can obtain no supplies in the country, and the communications with the sea coast were cut off by Mexican guerrillas. The small pox in its most malignant form was prevailing among the French troops in Vera Cruz.

The Liverpool Chamber of Commerce has resolved give a suitable reception to the officers of the first ship from America with provisions for the distressed operatives. The principal English Journals indignantly repudiate the recent advocacy of slavery on scriptural grounds by the *London Times*. A ship has reached Liverpool with 1700 bales of cotton from the Cape of Good Hope, produced from Sea Island seed. Another vessel brought 350 bales from Portugal. An address of sympathy to President Lincoln was receiving signatures in Birmingham. It expresses a strong belief that the Federal cause is that of humanity, religion and freedom, and earnestly hopes for its success.

The Paris correspondent of the *London Times* says that since the defeat of the Federals at Fredericksburg the Emperor Napoleon has again turned his attention to American affairs. The correspondent is informed, of good authority, that steps have been taken, or are at the point of being taken, to resume the overtures already unsuccessfully made to the London government, at this time, it is believed, with a prospect of better result.

RECEIPTS.

Received from E. Hollingsworth, Agt., O., for Jonathan, \$2 70 to No. 29, vol. 36 and 37, dist. No. Willoughby, \$2, vol. 35; from Andw. Moore, Pa., \$4, vols. 35 and 36 from Owen Evans, Pa., \$2, vol. 35; from Jesse Hall, Agt. O., for E. Sidwell, \$2, vol. 35, and for Christiana Kirk, \$2, vol. 36.

NOTICE.

"The Society for Supplying the Poor with Soap has opened its house on Griscorn St. (late Green Court) and is delivering soap to the indigent every day, from 6 o'clock to 10 o'clock."

The Society does not employ a collector, but depend on the voluntary donations of the benevolent, which we be gratefully received by Jeremiah Hacker, 316 Fourth St., or Thomas Evans, 817 Arch St.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent,—JOSUEH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Chief of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

ERRATA.

For *avably* in the twenty-sixth line from the bottom of the third column, page 166 of our last number, read *inavably*.

DEED. on the 2nd of First month, 1863, at his residence near Pennsville, Morgan County, Ohio, in the sixty-seventh year of his age, JOHN PATTEN, an esteemed member and elder of Pennsville, particular and Monthly Meeting, had been for many years, faithful in the attendance of our religious meetings, both for worship and discipline when of ability to do so, and manifested much concern and exercise for the right maintenance of all the doctrines and testimonies which were delivered to Friend to bear, and for the preservation of that love and unity which is the true bond of peace. Although his friends and relatives deeply feel their loss, yet they have a comfortable hope that his end was peace.

At the residence of her sister, Phoebe Shipk on the 10th of Fourth month, 1863, in the eighty-fourth year of her age, ELIZABETH H. CAMPSTER, widow of a dear and amiable, beloved member and elder Centre Monthly Meeting of Clinton County, Ohio, as as a shock of corn fully ripe, we humbly trust she gathered into the Heavenly garner.

WM. H. PILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

The Ancient Ways.

TESTIMONIES OF THE FATHERS OF THE REPUBLIC—WHO HAVE CHANGED?

We noticed some days ago the publication of Mr. Livermore's valuable volume, and promised to give in our columns at another time some extracts from the documents which, with singular industry and good fortune, he has been able to collect, bearing upon the general question: in what light was the negro regarded by those patriots and defenders of liberty whose wisdom and courage founded this Republic? This promise we now proceed to fulfill.

Mr. Livermore begins his volume with extracts from a message of Jefferson Davis, from speeches of Alexander Stephens, and from the infamous "Dred Scott Decision" of Judge Taney. To these he adds the replies of Judges McLean and Curtis to Taney, and extracts from George Bancroft's truly eloquent comments on the "Dred Scott Decision," in the 23d of February address before the Common Council of this city; and from Everett's New York address, July 4th, 1861.

He then proceeds to show, from numerous documents, what was the expressed sentiment of the people of the colonies, and of their leaders, in regard to the natural right of negroes; what was the real place of the blacks in society in the different colonies; how human slavery—negro slavery—was regarded by the leaders of opinion on this continent; what was thought of using negroes as soldiers during the Revolutionary struggle.

In a time like this, when the Republic is threatened with destruction by men who profess to be only Americans faithful to the traditions of our founders, it is necessary to go back carefully to the opinions of those noble men. "The Union as was" is a taking party cry, because Americans, like they continue to reverence the wisdom and purity of the framers of our Constitution and Government, are too often blind to the change which the supporters of a terrible wrong have subtly infused into the spirit of our institutions. The Union as it was" under Washington, Adams, Jefferson, Madison, Monroe, is the aspiration of every loyal American, of every faithful lover of liberty. But "the Union as it was" under the administration of Buchanan, as it had been made under the influence of the Davises, the Floyds, the Wigfalls, the Priors, the Keitts, the Hunters, the

Slidells—this Union, in which free speech was forbidden in half our bounds and threatened in the remaining half; in which the name and strength of liberty were prostituted to maintain and extend human bondage; in which a few slave-breeder and slave-drivers, grown defiant and reckless by the too long tolerance of free men, fiercely trampled upon every law guarding liberty, and sought to impose upon the whole nation the duty of guarding their slaves—this Union was not that of Washington. Its spirit was widely different from that which made us a nation powerful and glorious.

It is not slavery, but liberty, which made us great. It was not in the spirit of partial, but of universal liberty that our forefathers fought and legislated; and it is in the Free States, amid free speech, with the help of a free press, and in the hearts of free labouring men, that the just and humane spirit of the founders of the Republic has been preserved; while in the Slave States has come about a literal fulfilment of the prophetic words of Jefferson in his Notes on Virginia:—

"The whole commerce between master and slave is a perpetual exercise of the most boisterous passions; the most unremitting despotism on the one part; and degrading submissions on the other. Our children see this, and learn to imitate it; for man is an imitative animal. The parent storms; the child looks on, catches the lineaments of wrath, puts on the same airs in the circle of smaller slaves, gives a loose rein to the worst of passions; and thus nursed, educated, and daily exercised in tyranny, cannot but be stamped by it with odious peculiarities. The man must be a prodigy, who can retain his manners and morals undepraved by such circumstances. And with what execration should the statesman be loaded, who, permitting one-half the citizens thus to trample on the rights of the other, transforms those into despots, and these into enemies; destroys the morals of the one part, and the *amor patrie* of the other."

THE TESTIMONY OF THE FATHERS.

To maintain that the founders of the Government created it to perpetuate liberty and not slavery, seems like maintaining the most abject of truisms. Yet in these sad times, brought upon us by the too careless tolerance of a powerful wrong, even this must be proved; and liberty is arraigned upon the very soil which has been called her true home. What, then, did the fathers think and say on this subject?

The first article in our national creed is the keynote to all their thoughts:—

"We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed."

It has been truly said by George Bancroft:—

"The heart of Jefferson in writing the Declaration, and of Congress in adopting it, beat for all humanity: the assertion of right was made for all

mankind and all coming generations, without any exception whatever; for the proposition which admits of exceptions, can never be self-evident."

Jefferson's opinions of slavery are well-known; but it should be remembered that, strong as they were, and constantly published, they excited no opposition. He was merely expressing the public sentiment of Virginia, when he wrote, on August 1, 1774, the instruction for the first delegation of Virginia to the Congress. In this, published afterwards in pamphlet form with the title, "A Summary view of the Rights of British America," this is one of the grievances presented:—

"The abolition of domestic slavery is the great object of desire in these colonies, where it was, unhappily, introduced in their infant state. But, previous to the enfranchisement of the slaves we have, it is necessary to exclude all further importations from Africa. Yet our repeated attempts to effect this by prohibitions, and by imposing duties which might amount to a prohibition, have been hitherto defeated by his majesty's negative."

In accordance with this spirit, the second article of the "Continental Association," adopted and signed by all the members of the Congress, Oct. 20th of the same year (1774), reads thus:—

"That we will neither import nor purchase any slave imported after the first day of December next; after which we will wholly discontinue the slave trade, and will neither be concerned in it ourselves, nor will we hire our vessels nor sell our commodities or manufactures to those who are concerned in it."

This was done as the beginning of the abolition of slavery; and it was adopted by all the colonies in their separate congresses, as well as by their delegates to the General Congress. Nor was the agreement a dead letter, as—Livermore shows, by an address "To the Freemen of Virginia," by the committee of the town of Norfolk, exposing to universal contempt, "as the enemy of American liberty," one "John Brown, merchant of Norfolk," who, in the following March, was detected in smuggling slaves into Virginia from Jamaica.

It is an odd circumstance that the name of this persistent man-stealer should be the same as his, who, eighty-four years afterwards, threw all the South into a ferment by his bold dash at slavery.

Washington all his life condemned slavery, and at his death set free his slaves. One of the last acts of Franklin's life was to sign "an Address to the Public from the Pennsylvania Society for the Abolition of Slavery." John Adams wrote, a few years before his death:—

"I have, through my whole life, held the practice of slavery in such abhorrence that I have never owned a negro or any other slave."

Jefferson intended, as he wrote to M. de Meunier, to introduce in the Virginia Assembly, had he not been called to France, "an amendatory clause for the gradual abolition of slavery;" and he adds in the same note, in allusion to the matter having been put off, as inexpedient at that time:—

"But we must await with patience the workings of an overruling Providence, and hope that that is

preparing the deliverance of these our *suffering* *Orthodox*. When the measure of their tears shall be full; when their groans shall have involved heaven itself in darkness—doubtless a God of justice will awaken to their distress, and by diffusing light and liberality among their oppressors, or at length, by his exterminating thund'r, manifest his attention to the things of this world, and that they are not left to the guidance of a blind fatality."

Christopher Gadsden and Henry Laurens, of South Carolina, have left their testimony in opposition to slavery in no ambiguous terms. Laurens wrote from Charleston in August, 1776, a letter quoted by — Livermore, setting out with the words: "You know, my dear son, I abhor slavery." He proclaims to the son his intention to set free his slaves, and asks for his "concurrence and approbation, advice and assistance."

In the Constitutional Convention, Madison thought it *wrong* to admit in the Constitution the idea of property in men; and this was the prevailing opinion in the convention: Southern as well as Northern men agreeing in the expressed opinion of — Pinckney, of South Carolina, that "if the Southern States are left alone, they will probably of themselves stop importations; he would himself, as a citizen of South Carolina, vote for it;"—and of Ellsworth that "slavery, in time, will not be a speck in our country."

Gouverneur Morris, of Pennsylvania, to whom was finally committed the Constitution, to give finish to the style and arrangement of that instrument, said, in 1787, "he never would concur in upholding domestic slavery. It was a nefarious institution. It was the curse of Heaven on the States where it prevailed."

Luther Martin, of Maryland, held that the continued importation of slaves was "inconsistent with the principles of the revolution, and dishonourable to the American character."

Colonel Mason, of Virginia, said that,—
"Slavery discourages arts and manufactures. The poor despise labour when performed by slaves. They prevent the emigration of whites, who really enrich and strengthen a country. They produce the most pernicious effect on manners. Every master of slaves is born a petty tyrant. They bring the judgment of heaven on a country. As nations cannot be rewarded or punished in the next world, they must be in this. By an inevitable chain of causes and effects, Providence punishes national sins by national calamities. He held it essential, in every point of view, that the General Government should have the power to prevent the increase of slavery."

James Wilson, appointed by Washington Judge of the Supreme Court, said of the constitutional power given to Congress to prohibit the importation of slaves:—

"I consider this as laying the foundation for banishing slavery out of this country; and though the period is more distant than I could wish, yet it will produce the same kind, gradual change which was pursued in Pennsylvania."

"I am sorry that it could be extended no farther; but, so far as it operates, it presents us with the pleasing prospect, that the rights of mankind will be acknowledged and established throughout the Union."

"If there was no other lovely feature in the Constitution but this one, it would diffuse a beauty over its whole countenance. Yet the lapse of a few years, and Congress will have power to exterminate slavery from within our borders."

In 1796 St. George Tucker, law-professor in William and Mary College, in Virginia, published

a treatise entitled "A Dissertation on Slavery, with a Proposal for the Gradual Abolition of it in the State of Virginia." In his preface to the essay he speaks of the "abolition of slavery in this State as an object of the first importance, not only to our moral character and domestic peace, but even to our political salvation." In 1797, — Pinckney, in the legislature of Maryland, maintained that, "by the eternal principles of justice, no man in the State has a right to hold his slave a single hour."

CITIZENSHIP OF FREE BLACKS.

Thus much as to the faith of the founders of the Republic on the subject of human slavery.

The fourth of the Articles of Confederation declared the citizenship of free negroes in these States—"The free inhabitants of each of these States—paupers, vagabonds, and fugitives from justice excepted—shall be entitled to all the immunities of free citizens in the several States." Livermore remarks:—

"It was not by accident or oversight that negroes were included in the phrase 'free inhabitants'; for, when this article was under consideration, the delegates from South Carolina moved to amend by inserting between the words 'free' and 'inhabitants' the word 'white.' The proposed amendment was lost; only two states voting in the affirmative. In the ninth article, providing for forces for the common defence, the word 'white' was retained. The State of New Jersey, although a slaveholding State, objected to this, and made a representation to congress on the subject."

Judge Curtis said truly, as to the citizenship of black men in our early days:—

"At the time of the ratification of the Articles of Confederation all free native-born inhabitants of the States of New Hampshire, Massachusetts, New York, New Jersey, and South Carolina, though descended from African Slaves, were not only citizens of those States, but such of them as had the other necessary qualifications possessed the franchise of elections, on equal terms with other citizens."

He quotes a decision of Judge Gaston, of North Carolina, in "The State agt. Manuel," where the judge says:—

"Foreigners, until made members of the State, remained aliens. Slaves manumitted here, became freemen; and, therefore, if born within North Carolina, are citizens of North Carolina; and all free persons born within the State are born citizens of the State. The Constitution extended the elective franchise to every freeman who had arrived at the age of twenty-one and paid a public tax; and it is a matter of universal notoriety that, under it, free persons without regard to colour, claimed and exercised the franchise, until it was taken from free men of colour a few years since by an amended constitution."

—
The Largest Hotel in the World.—The Lindell Hotel, at St. Louis, Missouri, which has been recently finished, is said to be the largest building of the kind in the world. A late paper gives the following particulars in regard to this huge structure. It is eight stories in height, contains 515 rooms, 21 parlors, 27 acres of plastering, 7 acres of flooring, 32 miles of bell wire, 12 miles of gas, steam, and water pipe, 1980 yards of halls, and 800 windows. In the basement there is a railroad running the entire length, for the transportation of heavy articles, and above are two steam elevators for lifting fuel, baggage, &c., to the upper floors.

Kind words are the diamonds and pearls of everyday life.

The Words and Testimony of Thomas Getton.

The words and testimony of Thomas Getton Bandon, in Ireland, about eight hours before departure out of this life. He was weak in body, fervent in mind, and perfect in memory; tall from his mouth the 22d of the Third month, 16
"I have known the terrors of the Lord for and for transgression committed against him the time of my youth. But He that is an everlasting fountain of life and mercy, did not let me in the greatness of my wickedness, but in abundance of his pity and compassion visited and found me out, and laid hold on me by judgments, and did awaken me, even in that state and condition he found me in. He manifested his living truth, viz., Christ Jesus, the light of the world, which enlightens every one that cometh into it, of the whole stock of mankind. So the light and life being made manifest to me, it became the joy of my heart, and the life of my soul. I was brought to see that I must come to deny the world, and the glory and riches thereof, and the honour thereof, and all that that are beneath. It became a very great key to the fleshly part, which I saw I must daily let to; for when I went from that which crucified to the world, and the world to me, my enemy prevailed over me; so that I saw the words of Christ fulfilled in me, in that respect, according to his testimony, who declared on this wise: 'Whosoever doth not bear his cross, and come after me, cannot be made my disciple.' When I came to see that heavenly treasure, made manifest and revealed my soul, and kept my affections thereunto, the yoke of Christ which seemed to be so heavy I came light; even so it is unto all them that live in faithful obedience unto him, and take up their daily cross. I have known a travel towards the spiritual kingdom of our Lord and Saviour Jesus Christ; for I saw a race set before me, and I saw if I did run with all my might, it was possible for me to obtain the prize. Therein I have had exercise of my faith; for had I not believed in the object of my faith, Christ Jesus, it had been impossible for me to run that blessed race. As I was faithful and obedient to the manifestation of Christ, who is God's righteousness, which is manifested and received in the internal parts, I receive daily supplies of strength in my greatest exercise. Unto whom then shall I return the glory and the praise of this wonderful work of my salvation, or eternal happiness, but unto Christ Jesus, the great fountain of life, mercy, and truth, and righteousness! which I do desire to return at this time, and at all other times, unto Him who lives and reigns for ever, God over all, blessed for evermore."
"And now, my friends, as the Lord brought these things unto my remembrance, I could do less than declare unto you the wonderful dealing of the Lord to my soul, that all thereby might receive the instructions of the Lord, who is forerunning the sons and daughters of men, according to the greatness of his wisdom. Certainly, although the Lord never created man to destroy him yet his determination shall stand for ever; that is, the that take warning in the day of their visitation and return with all their hearts, and with all their souls, shall find the way of life made manifest, and revealed in them, which leads unto the Father who is an eternal fountain of life. But they who neglect the day of their visitation, must be shut up under darkness, until the great day of the Lord. And then they shall come to know the have rebelled against him, and must know his righteous judgments, although it be to their everlasting destruction. Here they shall see and know

at their destruction and is of themselves; and God will be glorified, even in the destruction of his enemies.

"And now it is the desire of my heart and soul, even before the Lord God Almighty, that all may be warned and awakened out of that state of 'leadenness and security which the god of this world hath brought them into, so that the righteous judgments of the Lord might be made manifest unto them; that so they may lay hold of his mercy in the day of their visitation. And as for my dear friends, who have known the gathering arm of his power to the holy habitation of our God, which is Jerusalem, which is from above, the mother of us all, warn you all in the fear of the Lord to be careful to keep your habitation, for in that consists your safety.

"While Israel kept the place wherein God ordained them to be outwardly, Balaam could not resist them, nor could any enchantment be found to prevail against them; but when the wives of their adversaries enticed them out of their habitations, how many thousands were destroyed thereby! The enemy stands without this holy habitation of the people of the Lord, to entice his people to mix with a wrong seed, and then we give our strength to our enemies, and so befall away that heavenly treasure which God hath committed to our charge. Withstanding the enemy hath prevailed over many upon this account, yet I have taken notice of the goodness of this heavenly Shepherd, and that great Bishop of our souls, who hath sought after them also, that have been scattered out of the fold by that means. Many he hath laid hold on by the crook of his judgments, and brought them back to the fold again. And behold how many have perished, to the grief of the Shepherd, and of the flock also. But oh! forever blessed and praised be the Lord, that hath kept and preserved a remnant that have faithfully followed him, who are built upon the rock Christ Jesus, whereby they stand steadfastly, showing forth the greatness of his love. They are as a city on a hill, that are seen far and near, and are become the light of the dark world, by the shining of their holy conversation; and so shining by reflection, receiving their light continually from Christ Jesus, the true light of the world. Blessed are all they who know the glory of this blessed city, and abide steadfast unto the end; for the Lord hath chosen them from Zion unto himself, that from thence his glory might be proclaimed throughout all generations.

"And now, my dearly beloved friends, whom I early salute, even in the bowels of our Lord and Saviour Jesus Christ; Oh! my love unto you all, in your expression, who have kept in faithful dependence to the Truth. Oh! the blessed satisfaction that we have found in him, when we have been gathered into his name, and there drank together in one spirit, so that our souls have been exceedingly refreshed, and we have been made partakers of the heavenly bread, which hath been broken plentifully unto us, even at the table of the Lord. Oh! never forget those blessed opportunities; but as you are kept in spiritual health, you will feel a hungering after the bread of life, day after day, and a thirsting after the water of life so. So being kept here, you are capable of the blessing of the Lord, and will see the scripture fulfilled in yourselves, which saith, 'Blessed are they that hunger and thirst after righteousness, for they shall be satisfied.' About eight hours after he had delivered this to Friends present, he died in peace the 22d of the Third month, 1682.

Often in a wooden house a golden room is found.

Geological Proofs of Divine Benevolence.

My third argument in favour of the divine benevolence is found in the arrangements for the distribution of water on the globe.

We should expect on so uneven a surface as the earth presents, that this element, which forms the liquid nourishment of all organic life, and which in many other ways seems indispensable, must be very unequally distributed, and fall entirely in many places; and yet we find it in almost every spot where man erects his habitation. And those places where there is a deficiency are usually extended plains; not, as we should expect, the mountainous regions. The latter are usually well watered; and this is accomplished in three ways. In the first place, in most mountainous countries, the strata are so much tilted up, as to prevent the water from running off. In the second place the pervious strata are frequently interrupted by faults sometimes filled by impervious matter. In the third place, the conminuted materials that cover the rocks assails, are often so fine, or of such a nature, as to prevent the passage of water; and thus much of the water that falls upon elevated land remains there, while enough percolates through the pervious materials to water the valleys and supply the streams. These carry it to the lakes and the ocean, where it is returned by evaporation in the form of clouds, and thus an admirable system of circulation is kept up, whereby this essential element is purified, and conveyed to every part of the surface where man or beast require it.

There is one recent discovery, which deserves notice here, because it depends upon the geological structure of the earth. When pervious and impervious strata alternate, and are considerably inclined, water may be brought from great depths by hydrostatic pressure, if the impervious stratum be bored through and the water-bearing deposit be reached. A perpetual fountain may thus be produced, and water be obtained in a region naturally deficient in it. An Artesian fountain of this description, in the suburbs of Paris, has been brought from the enormous depth of eighteen hundred feet!

Now, just consider that to deprive the earth of water is to deprive it of inhabitants, and you cannot but see in the means by which it is so widely, nay, almost universally, diffused, and made to circulate for purification—the most decided marks of divine benevolence. Why is it not as striking as the curious means by which the blood and the sap of animals and plants are sent to every part of the system to supply its waste, and give it greater development?

I derive a fourth geological argument for the benevolence of the Deity, from the manner in which the metallic ores are distributed through the earth's crust.

It can hardly be doubted by the geologist, that nearly every part of the earth's crust, and its interior too, have been some time or other in a melted state. Now, as the metals and their ores are usually heavier than other rocks, we should expect that they would have accumulated at the centre of the globe, and have been enveloped by the rocks so as to have been forever inaccessible to man. And the very great weight of the central parts of the earth—almost twice that of granite—leads naturally to the conclusion that the heavier metals may be accumulated there, though this is by no means a certain conclusion; since at the depth of thirty-four miles air would be so condensed by the pressure of the superincumbent mass as to be as heavy as water; water at the depth of three hundred and sixty-two miles would become as heavy as quicksilver; and at the centre

steel would be compressed into one fourth, and stone into one eighth, of its bulk at the surface. Still it is most probable that the materials naturally the heaviest would first seek the centre. And yet, by means of sublimation, and expansion by internal heat, or the segregating power of galvanic action, or of some other agents, enough of the metals is portruded towards the surface, and diffused through the rocks into beds, or veins, so as to be accessible to human industry. Here, then, we find divine benevolence, apparently in opposition to gravity, providing for human comfort.

I have said that these metals were accessible to human industry. And it does require a great deal of labour, and calls into exercise man's highest ingenuity to obtain them. They might have been spread in immense masses over the surface; they might all have been reduced to a metallic state in the great furnace, which we have reason to suppose is always in blast, within the earth. But then there would have been no requisition upon the exertion and energy of man. And to have these called into exercise is an object of greater importance to society than to supply it with metals. God, therefore, has so distributed the ores as to stimulate man to explore and reduce them, while he has placed so many difficulties in the way as to demand much mental and physical effort for their removal. Man, now, therefore, receives a double benefit. While the metals themselves are of immense service, the discipline of body and mind requisite for obtaining them is of still greater value. This is the combined result of infinite wisdom and benevolence.

If I mistake not, there is such a relation between the amount of useful metals and the wants of society as could have resulted only from divine benevolence. The metal most widely diffused, and the only one occurring in all the rock formations, from the oldest to the newest, is iron; the metal by far the most important to civilized society. This is also by far the most abundant and easily obtained. It often forms extensive beds, or even mountain masses upon the surface. All the other metals are confined almost exclusively to the older rocks. Among them, lead, copper and zinc are probably most needed, and accordingly they are next in quantity and in the facility with which they may be explored. Manganese, mercury, chrome, antimony, cobalt, arsenic, and bismuth are more difficult to obtain; but the supply is always equal to the demand. In the case of tin, silver, platinum, and gold, we find some interesting properties to compensate in a great measure for their scarcity. Gold and platinum possess a remarkable power of resisting those powerful agents of chemical change which destroy everything else. They are never oxidized in the earth, and with a very few exceptions, the most powerful re-agents leave them untouched, while platinum will not yield in the most powerful heat of the furnace. Gold, silver and tin are capable of an astonishing extension, whereby they may be spread over the surface of the more abundant metals to protect and adorn them; and since the discovery of the galvanic mode of accomplishing this, so easily is it done, that I know not but a gold or silver surface is to become as common as metallic articles.

My sixth geological argument for the divine benevolence is derived from the existence of volcanoes.

The first impression made on the mind by the history of volcanic action is, that its effects are examples rather of vindictive justice than of benevolence. And such is the light in which they are regarded by Mr. Gisborne, an able English divine, in his "Testimony of Natural to Revealed Religion."

He looks, indeed, upon all the disturbances that have taken place in the earth's crust as evidence of a fallen condition of the world, as mementoes of a former penal affliction upon a guilty race. And aside from the light which geology casts upon the subject, this would be a not improbable conclusion. Take for an example the case of volcanoes and earthquakes.

A volcano is an opening made in the earth's crust by internal heat, which has forced melted or heated matter through the vent. An earthquake is the effect of the confined gases and vapours, produced by the heat upon the crust. When the volcano, therefore, gets vent, the earthquake always ceases. But the latter has generally been more destructive of life and property than the former. Where one city has been destroyed by lava, like Herculaneum, Pompeii, and Stabia, twenty have been shaken down by the rooking and heaving of earthquakes. The records of ancient as well as modern times abound with examples of these tremendous catastrophes. Pre-eminent on the list is the city of Antioch. Imagine the inhabitants of that great city, crowded with strangers on a festival occasion, suddenly arrested on a calm day, by the earth heaving and rooking beneath their feet; and in a few moments two hundred and fifty thousand of them are buried by falling houses, or the earth opening and swallowing them up. Such was the scene which that city presented in the year 526; and several times before and since that period has the like calamity fallen upon it; and twenty, forty and sixty thousand of its inhabitants have been destroyed at each time. In the year 17 after Christ, no less than thirteen cities of Asia Minor were in like manner overwhelmed in a single night. Think of the terrible destruction that came upon Lisbon in 1755. The sun had just dissipated the fog in a warm, calm morning, when suddenly the subterranean thundering and heaving began; and in six minutes the city was a heap of ruins, and sixty thousand of the inhabitants were numbered among the dead. Hundreds had crowded upon a new quay surrounded by vessels. In a moment the earth opened beneath them, and the wharf, the vessels, and the crowd went down into its bosom; the gulf closed, the sea rolled over the spot, and no vestige of wharf, vessels or man, ever floated to the surface. How thrilling is the account left us by Kircher, who was near, of the destruction of Euphemia, in Calabria, a city of about five thousand inhabitants, in the year 1638! "After some time," says he, "the violent paroxysm of the earthquake ceasing, I stood up, and turning my eyes to look for Euphemia, saw only a frightful black cloud. We waited till it had passed away, when nothing but a dismal and putrid lake was to be seen where the city once stood." In like manner did Port Royal, in the West Indies, sink beneath its waters, with nearly all its inhabitants, in less than one minute, in the year 1692.

Still more awful, though usually less destructive, is often the scene presented by volcanic eruption. Imagine yourselves, for instance, upon one of the wide, elevated plains of Mexico, far from the fear of volcanoes. The earth begins to quake under your feet, and the most alarming subterranean noises admonish you of a mighty power within the earth that must soon have vent. You flee to the surrounding mountains in time to look back and see ten square miles of the plain swell up, like a bladder, to the height of five hundred feet, while numerous smaller cones rise from the surface still higher, and emit smoke; and in their midst, six mountains are thrown up to the height, some of them at least, of sixteen hundred feet, and pour forth melted lava, turning rivers out of their

course, and spreading terrific desolation over a late fertile plain, and forever excluding its former inhabitants. Such was the eruption, by which Jorullo, in Mexico, was suddenly thrown up in 1759.

Still more terrific have been some of the eruptions in Iceland. In 1783, earthquakes of tremendous power shook the whole island, and flames burst forth from the ocean. In June these ceased, and Skaptar Jokul opened its mouth; nor did it close till it had poured forth two streams of lava, one sixty miles long, twelve miles broad, and the other forty miles long, and seven broad, and both with an average thickness of one hundred feet. During that summer the inhabitants saw the sun no more, and all Europe was covered with a haze.

Around the Papandayang, one of the loftiest mountains in Java, no less than forty villages were reposing in peace. But in August, 1772, a remarkable luminous cloud enveloping its top aroused them from their security. But it was too late. For at once the mountain began to sink into the earth, and soon it had disappeared with the forty villages, and most of the inhabitants, over a space fifteen miles long and six broad.

Still more extraordinary—the most remarkable on record—was an eruption in Sumbawa, one of the Molucca Islands, in 1815. It began on the fifth day of April, and did not cease till July. The explosions were heard in one direction nine hundred and seventy miles, and in another seven hundred and twenty miles. So heavy was the fall of ashes at the distance of forty miles that houses were crushed and destroyed. The floating cinders in the ocean hundreds of miles distant, were two feet thick, and vessels were forced through them with difficulty. The darkness in Java, three hundred miles distant, was deeper than the blackest night; and finally, out of the twelve thousand inhabitants of the island, only twenty-six survived the catastrophe.

Now, if we confine our views to such facts as these, we can hardly avoid the conclusion that earthquakes and volcanoes are terrific exhibitions of God's displeasure towards a fallen and guilty world. But if it can be shown that the volcanic agency exerts a salutary influence in preserving the globe from ruin, nay, is essential to such preservation, we must regard its incidental destruction of property and life as no evidence of a vindictive infliction, nor of the want of benevolence in its operation. And the remarkable proofs which modern geology has presented of vast accumulations of heated and melted matter beneath the earth's crust, do make such an agent as volcanoes essential to the preservation of the globe. In order to make out this position, I shall not content that all the earth's interior, beneath fifty or one hundred miles, is in a state of fusion. For even the most able and decided of those geologists who object to such an inference, admit that oceans of melted matter do exist beneath the surface. And if so, how liable would vast accumulations of heat be, if there were no safety-valves through the crust, to read assuader even a whole continent? Volcanoes are those safety-valves, and more than two hundred of them are scattered over the earth's surface, forming vent holes into the heated interior. Most of them, indeed, have the valves loaded, and the effort of the confined gases and vapours to lift the load produces the terrific phenomena of earthquakes and volcanoes. But if no such passages into the interior existed, what could prevent the pent-up gases from accumulating till they had gained strength enough to rend a whole continent, and perhaps the whole globe into fragments? Is it not, then, benevolence by which this agency prevents so dreadful a catastrophe, even by means

that bring some incidental evils along with them.—*Hutchcock.*

From "The British Friend."

Early Friends, and what they Were—Christian Testimonies.

FUNERALS.

I will now proceed to consider some other the practices of the Society of Friends, which, common with other bodies of Christians, they called upon to observe though differing in the manner of observance. That which will next call our attention has relation to the interment of the dead. History shows us that respect for the memory of the dead was early manifested by both a lightened and barbarous nations. Mankind here never ceased to shed the tear of sorrow, or to revere the costly cenotaph, and the variety of manner which this reverence for the dead displays its may be seen in the costly monuments contain in cathedrals and our public cemeteries. The pyramids, which rear their heads with gloomy grandeur towards Egyptian skies, tell plainly of the vast amount of human energy, yea, and the sacrifice of human life, expended in the formation of a depository for royal ashes; the mummies found in Oriental tombs speak plainly of the care bestowed in the embalming of those frail tabernacles, and how imposing must have been the funeral ceremony of ancient days. It is a reasonable and laudable anxiety prevailing throughout all ages, to find places of sepulture for the dead, and we ever find both in the land of the untutored savage, and the busy haunts of civilized society, a care existing for the disposal of the remains of our departed relatives and friends.

How beautifully sensitive is the language of a patriarch to the sons of Heith, "Give me a possession of a burying-place with you, that I may bury my dead out of my sight." Look at the language of Jacob to his son Joseph, "I will lie with my fathers, and thou shalt carry me out of Egypt and bury me in their burying-place. There the buried Abraham and Sarah his wife; there the buried Isaac and Rebekah his wife, and there buried Leah." There is something peculiarly simple and touching in the direction thus given for the disposal of the remains of the departed patriarch—and how vivid is the picture of that interment as portrayed in the sacred volume. That vast casket which bore the remains of Jacob to their resting-place, the train of chariots and horsemen, and the elders of the land, "a very great company." Behold it wending its way over the plains of Egypt to Canaan, to the cave of Machpelah. There are no richly carved pillars there—there are no epitaphs of the illustrious dead—there is nothing of the pageantry of wealth—it is a simple sober train, full of mourning and lamentation. The deep sorrow of Joseph, who feigned upon his father's neck and wept, and kissed him when the vital spark departed from the temen of clay, was a far richer tribute to the memory of Jacob than the hosts of Egypt could have bestowed. The simple tear of earnest sorrow for the dead is more desirable than the parade of mourning, and the habiliments of black.

With feelings akin to that which animated the patriarchs, whom they took for their example, the Society of Friends took early care for the burial of its people, and to provide places of interment for its dead. It was no small difficulty, however that beset our early Friends in the prosecution of this object. Not only had they to contend with the prejudices arising from long-continued usage—they had to fight the battle against priest-craft and that of interference with the pecuniary inter-

so of the "church." Not on any other ground than that on which they stood could they have prevailed—they took their stand on their inalienable right to dispose of their own dead, and evinced rigid and inflexible determination to have nothing whatever to do with upholding an hireling ministry. For these views and this determination they believed they had full and undeniable Scripture warrant. Doubtless there are of your readers who are familiar with the inscription set over a graveyard at Burton, near Barsley, in the east Riding of Yorkshire, which runs thus: Anno Domini, 1657. Though superstitious minds do judge amiss of this burial-place, yet let me know hereby, that the Scriptures saith the earth is the Lord's; and I say soe is this. There're being so, and by his people set apart for the church's use or burial-place, it is as holy, convenient and good for that use and service as any other on earth is, and it is not without scripture warrant or example of the holy men of God to bury in such places; for Joshua, a servant of the Lord, and commander-in-chief, or leader and ruler of the people of God, when he died, was neither buried in a steeple-house, nor called a parish church, or in a steeple-house yard; but he was buried in the border of his inheritance and on the north side of Mount Gaash, as you may read in Joshua the 24th chap. and 29th and 30th verses. And Eleazar, Aaron's son, who was called of the Lord, when he died, they buried him, not in a parish church, nor a steeple-house yard, but they buried him in the hill of Phineas his son, which was given him in Mount Ephraim, as you may read in Joshua the 14th chap. and 23d verse. And these were no superstitious persons, but beloved of the Lord, and were all buried—and soe were they in Abram's bought field, Genesis the 23d chap. 17th, 18th, 19th and 20th verses. Though superstitious minds are unwilling to the truth to bow, who are offended at such as bury in their own inheritance or bought field, appointed for that purpose.*

Let it not be supposed that the good order observed in having set places of sepulture was acquiesced in by those around them quietly and with approval; on the contrary, our early Friends soundly they would not be allowed to retain the grounds thus devoted as resting-places for their dead, without contention and strife. In many places forcible possession was taken of their property, and their boundary walls razed to the ground. Sometimes this was effected by tumultuous assemblies of rude people, at other times by detachments of the military, as at Marlborough, where the county troop in 1660 not only pulled down the one wall of the burial-ground, but carried away and sold the gate, the timber, and the iron work.

(To be concluded.)

For "The Friend."

Westminster Palace.—The Tower, &c.

(Continued from page 174.)

1861.

* * Having spoken of the homely little town on the Thames, I ought, I think, to mention that I have taken several pleasant rides several miles out of London, and have seen some beautiful villages. Croydon is a pretty town, in the neighbourhood of which we took a charming walk. We passed through a picturesque grave-yard, enclosing a very picturesque old church, built of flint nodules found in the chalk, and having much the appearance of shell-work, which, standing on a small eminence, commands from under the deep shade of its fine old trees, a truly beautiful, and as we thought, thoroughly English landscape, realizing such descriptions as we have from Thoup-

son, Shenstone, Leigh Richmond, &c. Here, for the first time, we saw the perfection of English trees, majestic and symmetrical in form, with low wide spread branches, and rich dense foliage, elegantly disposed, singly or in clumps, about the landscape, or in rows along the fine grass bordered road where we walked. We know nothing in America of such swards as we see almost everywhere here, during our rides and walks, whether in gentlemen's private lawns, or in the large public parks. The moisture of the climate keeps them always of the richest green, and the cheapness of labour enabling the proprietors of them to have them carefully cleared from coarse grass, plantains, and other weeds, the grass becomes of a very fine quality; and being frequently shorn, and sharply cut at the edges, they remind one of green plush counterpanes or velvet carpets of various shapes, spread down upon the well rolled, smooth gravel surface. How delightful is it to roam over the parks of London, especially Hyde and St. James. Here too, is the perfection of English trees and velvet swards. Though I might have remembered from the descriptions I have read, the great extent of these, and more particularly of Regent's park, which covers some seven or eight hundred acres of ground, yet was I as much astonished as delighted, when, sauntering over it for hours, on, and on, through various windings among groves and clumps of superb trees, as well as over wide spaces where there were none, we could see no limit; and it really seemed, in some parts of it, though surrounded by a densely built part of this vast city, as if we might be quite out in the country, miles from any town.

"On — day, we visited the houses of Parliament and Westminster Abbey. The former structure, which we enter through the old Westminster hall, the only part remaining of the old houses, is built on the site where a palace has existed since the time of Edward the Confessor. The original palace had some additions made to it by William the Conqueror, and in 1097, William II. built some further additions, among which was the great Westminster hall. Injuries done by a fire in 1299, were repaired by Richard II., who altered the hall and added the present roof, which is said to be "unequaled for originality of conception and scientific construction," being the largest in the world unsupported by any interior wall or column. We were much impressed with the simple grandeur and extraordinary effect of this roof. "You find yourself in a vast edifice near 300 feet in length, having on every side only plain walls of stone, and no column or obstruction of any sort to intercept the view, and break the character of simplicity and vastness. High overhead rises the bold and hardy roof, supported by no column, but propped up with inconceivable lightness and grace, on a series of wooden groittings, springing from stone mullions in the side walls. This roof is built entirely of chestnut wood, carved all over, put together with the greatest ingenuity, and richly ornamented with the heraldic emblems of Richard II. It is almost entirely the same as it was when constructed, and yet without the impress of decay."

"On the west side of this hall are the openings into the different court rooms, and the barristers wearing their huge curled wigs, were going in and out, or walking up and down conversing with each other, or with those who probably were their clients. At the south end rose a flight of steps, nearly the whole width of the hall, leading to a landing, upon which opens the porch of St. Stephen's hall, through which is an entrance into the palace. This hall is part of the ancient St. Ste-

phen's chapel, founded by King Stephen, and with its decoration and statues must, I think, excite the admiration of every beholder. I shall not attempt a description, but merely mention some of the statues, most of which are admirably executed. Selden, Hampden, Clarendon, Walpole, Chatham, Mansfield, Burk, Fox, Pitt, Gattal, and many others.

"As there are full published descriptions of the present palace, it is needless to say much respecting it. Of its magnificence one can form no conception without seeing it. The whole exterior is so covered with elaborate ornamentation that we could hardly place the hand where it is not, on any part of this vast edifice; the river front of which, to name one item of its extent, is nine hundred feet in length, having six beautiful towers, three in each wing; beside which are the superb lofty towers, the Victoria, three hundred and thirty-six feet high, and the clock tower, three hundred and sixteen feet in height, the latter glittering with gold beside its other adorning. Most of the carved decorations, excepting the small details, are significant—as is the case throughout the building—of some leading historical event which marks the reign of each different sovereign: as for instance, a human figure, bearing a model of Westminster hall, is indicative of the reign of William II. who built it; that of Edward III., is marked by a figure of St. George and the Dragon, the order of which was instituted by him, &c., &c. But such gorgeousness as the interior, especially some of the halls and apartments we visited, the house of lords, the princes' chamber, &c., is far beyond anything I had ever thought of. The splendid fresco painting, and the carving, each illustrating historical events, or some other subject appropriate to such a building; the other profuse decorative carving of various descriptions, coats of arms, crowns, leaves, flowers, the rose, shamrock and thistle, conspicuous; rich in colours and gilding in almost every part adapted to such ornament, where the eye might rest; the deep panneling of the walls, its gilded niches, &c.; the ceiling or roof gorgeously painted, with its sculptured and gilded ornaments and pendants; the throne glowing in colours, rich sparkling stones and gold; the bas-reliefs; the numerous statues; the lofty windows filled with various designs in stained glass—in the house of lords, where there are twelve, six on either side, each light or compartment, having a representation of one of the kings, queens, or their consorts, from William the Conqueror down to the present era—the rich, yet softened tone of the light streaming through these windows over all; in short, the perfect *throng* of splendor, if I may so apply the word, crowding the whole; the effect of these many thousands of mute tongues ever speaking silently though oppressively of its grandeur, as silently we sat within this monument of man's pride, was to me, almost overpowering, and I could have wept. Will this be thought strange or weak? I think it ought not; associated as all this magnificence was with the enormous cost, and immediately in my mind with the thought of the numerous fearful looking wailing alleys of London—seeming like the haunts of the very spirit of gloom, so narrow, deep, and dark, and often descending between the besuoked dingy walls of the big buildings on either side, like crevasses in great black rocks, almost appalling to look into—teeming with a wretched, filthy, vicious population, which no tongue can ever tell, or uninitiated heart conceive.

"We next went to that deeply interesting old pile, Westminster Abbey, and I accompanied the guide through the interior. Really much more

impressive, almost awe-inspiring as is the chaste grandeur of this ancient structure; yet it seemed a rest to one's spirit after the oppressively elaborate splendor of the preceding palace, to stand within its spacious nave, and silently gaze through the vistas of its lofty columns and arches of venerable hoary stone, free from gaud and gold; or while walking amid its chapels, and mysterious congregation of England's illustrious dead, so many of whose poor remains have been for centuries past, lying buried here under their marble tombs, upon which are sculptured their effigies, life-size, outstretched as in death, or as dying, with uplifted hands; the effect of the whole in the grey light, and the stillness which reigns, stirring to their depths our strongest emotions, thus speaking so solemnly of ages gone, and the vanity of all human greatness. Some of the tombs bear evidence of their great age in the darkness of their colour and the imperfection of their execution; in the stiff and unnatural appearance of the sculptured effigies, the faces of which are all of the same stamp, having no character in them. While others, of more recent date, are finely executed, and doubtless many are intended for likenesses. I observed that of queen Elizabeth strongly resembled the portraits of her. There are twelve of these chapels, the most celebrated of which, you will probably remember, is that of Henry VII., chiefly on account of its ponderous sculptured stone roof; while standing beneath the massive pendants of which, one almost feels a sense of dread—of crushing—so astonishing does it appear, how, without any columns to support them, they are upheld in their lofty position. Yet so elegant are their proportions and carving, that you are as much impressed with their grace, as with their evident immense weight.

Among the ancient relics of the Abbey, two of the most interesting, were the stone upon which the Scottish sovereigns were crowned, and the osken chair, always used at the coronation of the British sovereigns, for how many centuries I know not, down to that of the present queen. The form of the magnificent chair, or the throne in the house of lords, which has a high peaked back, and richly angular elbows, was modeled after this rude, though not altogether inelegant piece of antiquity. I will, however, spare you further details, as I shall probably convey few new ideas to you relative to this venerable fabric.

"Similar feelings of intense interest were awakened on visiting the Tower, with those experienced at Westminster—though mingled at the former with some of a more painful character—connected with early English history, which is of course the early history of our own country. We feel that we have a claim upon all such time-honoured edifices in England; a deep rooted thrilling interest, very unlike what might be awakened in any other country, in all the great events, as well as the more ordinary,—the happy and sad, the prosperous and terrible, many of which, for centuries, have had unwritten records in all such monuments as these. Yes, as our father-land, the land of our persecuted and faithful forefathers in the church, as well as the mother country of our own dear native land.

"The Tower, is supposed to have been originally founded by Julius Cæsar, and to have been reconstructed by William the Conqueror. I do not know the extent of the great fabric itself, but the walls enclose about twelve acres. Having obtained a pamphlet describing the principal objects of interest, it is not needful to dilate upon many of them here. We felt a particular desire to see the room where William Penn was confined; but the tower, called the Salt Tower, I know not where-

fore, in which this room is situated, is occupied by some of the employees, and the warden who accompanied us, did not seem disposed to ask admission for us. We were also much interested in the apartments where Lady Jane Grey was a prisoner; and Sir Walter Raleigh—for so many years. We crept by a low door, which would not admit of standing up, into the little dark chamber—appearing in the solid masonry of the Tower, very like a cave hewn out of the rock—where the latter slept, and we looked out of the window at which he was seated, when he saw a squabble in the street below; and undertaking to describe the occurrence to one who visited him the next day, and who had been in the scene which Sir Walter witnessed, he found he was mistaken in nearly all the principal facts; which drew from him the observation to the effect, that it was preposterous for him to be writing the history of ages gone by, when he could not narrate truly the particulars of an event which had passed under his own eyes the day before. Various instruments of torture, thumb-screws, iron-bolt, &c. were exhibited. The beheading block, the axe, and the mask with which the executioner concealed his features, are all preserved; these are the same which were used in the time of Henry VIII., and were last employed in the horrible work of death in 1745, when the Scotch lords were beheaded in the Tower yard. On this deep stained block was poured out the life-blood of Sir Thomas Moore, Anne Boleyn, Lady Jane Grey, Lord Guilford Dudley, and many others. We observed that the axe had been driven down with such force, it had sunk deeply into the wood, chipping it out; and in three or four cases, either from trepidation or some other cause in the executioner, the deadly blade had gone wide of the mark and made it impress to one side. One of the most interesting rooms was in the older part of the Tower: it had been the principal place of confinement for state prisoners from the earliest time; and very many of them at different periods had inscribed upon the stone walls various devices, with their names or initials, and some the date of their imprisonment, with some further lettered inscriptions, thus striving to while away the tedious solitary hours, and transmit to posterity, some relic which should give evidence of their existence, and the unhappy circumstances under which they were placed. But ah, who can ever know the bitter sighs and tears, the long years of agony those walls have witnessed, but him, by whom the "hairs of our head are all numbered!" Who binds up the broken heart, will welcome to his compassionate bosom every penitent criminal, however great, will surely redeem them, as well as every faithful child of his, however man may persecute, and receive them into one of those mansions whose walls are salvation, and whose gates are praise.

"We had pointed out to us the room in which it is supposed the two young princes were murdered by order of Richard III. Two bodies, or the remains of two bodies, corresponding in the development of the bones to the ages of these two young scions of royalty, were discovered some years ago in the crypt of this part of the Tower, and in the full belief that they were the remains of those young princes, were removed and entombed in Westminster Abbey. The warden conducted us to the exact spot where the block was placed when Lord Guilford Dudley and afterwards his noble wife, Lady Jane Gray, were beheaded. It is now covered with flat stones, and the knowledge of the spot upon which the executions of those, too high in rank to be exposed to public gaze, took place, is carefully preserved. It is about 25 feet square, within the walls, while the less ex-

alted victims were executed on Tower hill just beyond them, now, and long since, levelled with the surrounding ground. We were also conducted to the armory, which to such a novice as I, at least, is truly an extraordinary exhibition; where are hundreds of suits of armour, with an almost countless collection of arms of various description from the earliest ages of English history, great numbers of which are arranged in fanciful devices on the roof, walls, &c. In one long apartment, a cavalcade of equestrian statues or effigies, dismounted to the life: horses and riders, both clad in armour of mail of all eras, from the early part of the 13th century down to the latest period when a horse continued to be used; the horses prancing their riders with lance and shield in hand, thence ready to rush upon their enemies. Some of them representing certain kings and other warriors, have on the very armour they are said to have worn: some of their engagements. There were several suits which have bullet holes in the breast plate showing they were worn after the introduction of fire-arms, and the manner, probably, by which they were worn as by his death.

"The whole of this exhibition, including the imposing antique exterior of the great old Tower itself, was to me indescribably stirring and impressive, there being nothing in America that can kindle similar emotions. Oh, no one, however familiar with historical events connected with it, unless there, in this vast, imposing, gloomy looking castle, treading the very floors, within the very wall, which, centuries ago, during the mighty change and fearful events of English history, have echoed to the tread of the many illustrious actors therein to the heart bursting sighs of the many whose existence there has been a weary blight, or whose blood has been drunk by the insatiate, and even now, fearful looking block and axe, can realize the feelings awakened amid such associations."

(To be continued.)

Views of Public Life.—Guizot, the French statesman, gives in the third volume of his *Memoirs* the following estimate of the insufficiency and holowness of public life. It is a modern commentary on the "vanity of vanities" of the wisest of ancient moralists:

"I have been strongly attached to political life and have applied myself to it with ardor. I have devoted to public duties, without hesitation, the sacrifices and efforts they demanded from me; but these pursuits have ever been far, indeed, from satisfying my desires. It is not that I complain of the incidental trials. Many public servants have spoken with bitterness of the disappointment they have experienced, the reverses they have undergone, the severities of fortune and the ingratitude of men. I have nothing of the kind to say for I have never acknowledged such sentiments. However violently I may have been stricken, I have never found men more blind or ungrateful, or my political destiny more harsh than I expected. It has given alternately, and in great abundance, its joys and sorrows; such is the law of humanity. But it has been in the happiest days, and in the most brilliant successes of my career, that I found the insufficiency of public life.

"The political world is cold and calculating; the affairs of government are lofty, and powerfully impress the thoughts; but they cannot fill the soul, which has often more varied and more pressing aspirations than those of the most ambitious politician. It longs for a happiness more intimate, more complete, and more tender than that which all the labors and triumphs of active exertion and public

importance can bestow. What I know to-day, at the end of my race, I have felt when it began, and its continuance; even in the midst of great undertakings, domestic affections form the basis of life; and the most brilliant career has only superficial and incomplete enjoyment if a stranger to the happy ties of family and friendship."

Animated Nature on the Cavalla, W. Africa.—Rivers are beautiful emblems of that great source of life to all creatures, and especially rivers in the tropics. Besides the innumerable tribes of insects and reptile life common in such regions, here are to be seen animals of form and size, to be found nowhere else. On a late voyage up the Cavalla river, we saw four alligators basking in the sun; and one of them was killed by one of our party and taken into the canoe. Again, snakes appeared beautifully coiled up in overhanging trees, as if to observe passing travellers. Presently a company of monkeys jump from tree to tree along the banks of the river, following and watching the hunter with an intense curiosity, as their more human neighbors were wont formerly to do. And, once more wonderful still, immediately after a heavy rain, on a high tree on the margin of the river, we saw a very large full-grown male *Chimpanzee*. He sat in a very composed manner in full view, apparently as much interested in us as we were in him. One of our party had the presumption to snap a gun at him three times, but, disgusted at such nonsense, he descended a dignified though rapid manner from the tree, and went home. The body of this creature must have been four feet long, and his bearing in every respect well entitled him to be styled a man of the woods. Next we came to a region of great birds, the country of the *Hurbo*, there is a forest of cotton trees, some 150 to 200 feet high. Here are the nests and resting place of numerousawks and palm-birds and eagles. One of these was shot by our gunner; it measured over six feet from tip to tip. One tree that we passed under sundown, was almost covered with large birds which seemed to have come to rest. Innumerable smaller birds, many unknown, we believe, to philology, of varied and often beautiful hue, and shrubs, plants, and trees, along the life-giving river, and chant the praises of Him who made, and knows, and feeds them all.—*Cavalla Messenger*.

Bear and Forbear.—If we would have life to move smoothly we must learn to bear and forbear. We must indulge the friend we love in the little peculiarities of saying and doing things, which may be objectionable to him but of little moment to us. If usefulness and all comfort may be prevented by an unkind, a sour, a crabbed temper of mind—mind that can bear with no differences of opinion or temperament. A spirit of fault-finding, an unsoftened temper, a constant irritability, little inclinations in the look, the temper or the manner, a low cloudy and dissatisfied—your husband or wife cannot tell why—will more than neutralize all the good you can do, and render life anything but a blessing.

THE FRIEND.

SECOND MONTH 7, 1863.

The continuance of the war is necessarily inviting the nation more and more deeply in debt, and the depreciation of the paper money issued by

the United States government as a legal tender, is putting up the prices of nearly every article necessary for support and convenience. Should these causes continue to act with the steadily increasing force they have assumed for the last year, there is reason to fear that many whose incomes are limited, and derived from sources that admit of no improvement, will, ere long, be brought into difficulty, if not into suffering, for want of means adequate to their most moderate requirements. Those Friends, however, who throughout this time of excitement and trial continue to maintain a course consistent with the high profession we make, besides the satisfaction of knowing that they have done nothing to countenance or promote the dreadful war in which the nation is engaged, may rest assured that the Prince of Peace, whose kingdom they are laboring to spread, is able and willing to protect and support them, and that as they are faithful to Him, he will make a way for their rightly getting through the difficulties that may surround them.

The presence of war contaminates many of the sources of trade, and brings into the market articles, which, from the manner in which they have been procured, Friends cannot deal in or use. Those of them who live in our seaboard cities, and those who come to these cities for supplies of groceries, goods, &c., have need to be upon their guard lest inadvertently they be led into the purchase of articles taken from on board of vessels seized or captured by United States vessels of war, and sold as prize goods. Cotton, sugar and molasses are most likely to be thus brought into the market; of the two latter, large quantities have been lately sold at auction in both New York and Philadelphia; but there are also other articles of common use, taken from foreign vessels seeking to break the blockade. Friends have always been scrupulous against participating in any degree or way in trading in or using goods of any kind so circumstanced; and we trust all our members will now exercise special care, so as not to be betrayed into the least violation of the precious testimony of the gospel against war, which must necessarily include abstinence from the use of its spoils or emoluments.

We earnestly commend to the serious attention of all our readers the following extracts from the Discipline of Philadelphia Yearly Meeting, the import of which we believe is embodied in the discipline of other Yearly Meetings:

"We desire that all our members may beware of being induced either inadvertently or for gain, in any manner to give countenance to the destroying practice of war.

"Many are the ways by which the unwary and the covetous may be caught. But, brethren, look beyond the surface. Behold the depth of misery into which war plunges mankind. Then putting your trust in Him who gives understanding to the simple, and provides for the sparrows, ye may avoid the pollution which is theirs who join hands with this desolating evil. Let all be careful not to seek or accept profit by any concern in preparations for war; for how reproachfully inconsistent would it be, to refuse an active compliance with warlike measures, and at the same time not hesitate to enrich ourselves by the commerce and other circumstances dependent on war.

"This meeting fervently recommends to the deep attention of all our members, that they be religiously guarded against approving or showing the least connivance at war, either by attending at or viewing military operations, or in anywise encouraging the unstable, deceitful spirit of party, by joining with political devices or associations, however speciously disguised under the ensnaring subtleties commonly attendant thereon; but that

they sincerely labour to experience a settlement on the alone sure foundation of the pure unchangeable Truth, whereby, through the prevalence of unfeigned christian love and good will to men, we may convincingly demonstrate that the kingdom we seek is not of this world—a kingdom and government whose subjects are free indeed, redeemed from those captivating lusts from whence come wars and fightings.

"As we are called out of wars and fightings, so let them be as seldom as possible the subjects of our conversation; but let an holy care rest upon us, to abide in that Power which gives dominion over the hopes and fears that arise from the concerns of an unstable world, which tend as they are admitted into the mind, to lessen the trust in that Rock which is immovable."

"A living concern for the advancement of our testimony to the peaceable kingdom of Christ, continuing to spread in many minds, we fervently desire that the members of our religious Society may carefully avoid engaging in any trade or business promotive of war; sharing or partaking of the spoils of war by purchasing or selling prize goods; importing or shipping goods in armed vessels; paying taxes for the express purpose of war; grinding of grain, feeding of cattle, or selling their property for the use of the army; that through a close attention to the motions of Divine grace, and guarding against the suppression of it either in themselves or others, they may be preserved in a conduct consistent with our holy profession, from wounding the minds or increasing the sufferings of each other; not at all doubting, that He to whom appertains the kingdom and the power, who is wonderful in working, will continue to carry on and perfect his blessed cause of peace in the earth. A solid attention to this concern is recommended to Quarterly, Monthly and Preparative meetings, and to our brethren in general; it being the judgment of this meeting, that if any of our members do either openly or by connivance, pay any fine, penalty or tax, in lieu of personal service for carrying on war; or allow their children, apprentices or servants to act therein; or are concerned in arming or equipping vessels with guns, or in dealing in public certificates, issued as a compensation for expenses accrued, or services performed in war; that they be tenderly dealt with."

SUMMARY OF EVENTS.

FOREIGN.—News from England to the 18th ult. The stock of cotton in the Liverpool market, was 395,000 bales, of which 67,000 were American. Sales of the week, 54,000 bales. *Uplands*, 25½d.; *New Orleans fair*, 27½d.; *Red wheat*, 9s. 2d.; *10s. 2d.*; *white western*, 10s. 11d.; *southern*, 11s. 2d.; *per 100 pounds*. The bullion in the bank of England had decreased 6300,000 during the week. The banks of England and France had raised the rate of discount one per cent. The Emancipation Proclamation of President Lincoln, claimed serious attention, and was variously commented on by the British press. The *Morning Post* terms it the death warrant of the United States, and says it would be a terrific act if it could be enforced, but regards it as wholly impertinent. The *Star* thinks whatever may be its immediate effect, it rings the death knell of slavery. The *Telegraph* says, the rancor and contempt of the South must be increased immeasurably, and if the measure is successful, a new military triumph has been purchased at so awful a price. Movements are on foot in Liverpool to test the public opinion, by a meeting to consider the American war and emancipation question. A similar movement is to take place in Manchester.

Among the French diplomatic correspondence just published, is a letter from the French Emperor to Gen. Forey, in which it is confessed, that the motive for the French policy in Mexico is a desire to prevent the United States from extending their authority southwards over the American continent. On the opening of the Legislative Chambers, the emperor said: "The condition of France would be flourishing if the American war

Diary of Samuel Scott.

(Continued from page 170.)

"Fourth month 5th, 1783. This day, and yesterday, I have been under strong impressions to write and transcribe a corrected abridgment of my diary, which commenced the 1st of Sixth month, '80; to me an important work, by reason of my fitness for penmanship: yet, considering the great long-suffering which hath been extended to me by a merciful Creator, it is my bounden duty to leave every secret pointing to such little services, may in any degree conduce to the spiritual improvement of my fellow creatures; particularly of the desolate and distressed among them, who are king their 'way to Zion, with their faces thithered.'"

"Fifth month 5th and 8th, 1783. I was with my worthy Friends, John Pemberton and William Matthews, from North America, at the Monthly meeting of Hartford, held at Bishop Storford; I'd also at the week-day meeting at Hitchin. In the latter, the errors of my past life being awfully called to my remembrance, I was abashed before the Dread of nations, in a remembrance of his holiness. In the week-day meeting, the preceding day at Hartford, a short testimony was delivered concerning the love of God in Christ Jesus; according to that which is written, 'Greater love hath no man than this, that he lay down his life for his ends.'"

"Sixth month 1st, 1783. First-day. Three years are now elapsed since the commencement of my diary. During the last year, both in respect to body and mind, I have been brought down to the level of the pit, and lifted up. I have been faithful in the 'unrighteous mammon;' and in respect divers moral duties and religious performances, heretofore to that which most nearly resembled the right line: but is there not an iniquity in our secret things, which needs to be purged with better prices than those which were offered under the law; and made nothing perfect as appertaining the conscience."

"9th. In the meeting for ministers and elders, several pertinent cautions were imparted, against the wisdom and will of man in the exercise of the ministry: but is there not also a danger of their being exercised in the discipline? Is it not necessary that the active moving part in man, which is always ready, should be mortified in both; and that those who are concerned in the ministry or

discipline should be reduced into the same state with those believers, concerning whom it was formerly testified, 'Ye are dead,' being buried with Christ by baptism into death?'"

"Seventh month 13th, 1783. I went to the general meeting at Hunston, in great lowness; and, on sitting down, so great was the feebleness both of mind and body, that it appeared rather doubtful whether I should survive the present day; but, after sitting some time in silence, I was enabled to look towards the Lord and Giver of life, with such an efflux of tears as hath been of late unusual. I was strengthened, and some matter was presented with freshness and demonstration; but I thought the present exercise might prove a ministration of the Spirit fully as profitable without words. A verbal ministry is at times of advantage. But it is 'God only who quickeneth the dead, and calleth those things which are not, as though they were.'"

"23rd. Not having, for many days past, either read in the scriptures, or had any portion of them renewed in my remembrance, the application of the poor leper unto the Lord Jesus, and the relief he obtained, was impressed with a degree of consolation; as was also that very gracious promise, recorded in the 24 of Hosea, 'I will give her the valley of Achor for a door of hope.' When he, who so emphatically expounded the scriptures to his disciples, withdraws his spiritual presence, by which he promised to be always with his people, the whole bible is a blank, and no part of it affords light or consolation; but, when he appears, the words which are recorded are as 'apples of gold in pictures of silver,' and as nails fastened in a sure place, by the master of assemblies, who teacheth his people to profit."

"29th. Still shut out of the scriptures; and the inward exercise of my mind so weak, as to be scarcely discernible."

"Eighth month 23d, 1783. This week has passed pretty comfortably, not much cause for condemnation having attended; nevertheless I have fallen short in respect to unnecessary words and thoughts. 'When we neither act, speak, nor think, any thing inconsistent with the Divine will,' this, says one, is 'perfect sanctification;' and this is the mark of our high and holy calling in Christ Jesus; who, himself, 'was holy, harmless, undefiled, and separate from sinners.'"

"Ninth month 25th, 1783. In the forenoon meeting, various presentations and sentiments concerning religious subjects were suggested in the early part of the meeting, and continued nearly to the conclusion: they appeared rather the progeny of the creaturely cognitive faculty, than to arise from a superior origin. 'By their fruits ye shall know them.' I intend this not so much in respect to what may be offered from without, as what passeth within; whatsoever sentiments and presentations promote dissipation, or leave the mind barely where it was before, are hurtful, or at least indifferent; but those which draw the mind nearer to God, and strengthen an inward exercise and travail of spirit towards him, are good, and to be received with thanksgiving. Every offering, ex-

hibited either internally or ministerially, is to be seasoned with the salt of the everlasting covenant. But as ministerial administrations, offered in weakness and child-like simplicity, may possibly be more acceptable in the sight of Him, who seeth not as man seeth, than some which may more nearly resemble the life and wisdom of truth, we ought to be very jealous over ourselves and our own offerings, and as cautious and tender in the judging of others, or what may be offered by them; as it is written, 'Judge nothing before the time, until the Lord come; who will bring to light the hidden things of darkness, and will make manifest the counsels of the heart; and then shall every man have praise of God.' When George Fox was sent forth to preach the everlasting gospel, and to turn men from darkness to light, many illiterate persons, both men, women, and children, were also sent forth with him to labour in the Lord's harvest-field, in which there was supposed to be many labourers, under various characters, abundantly superior to them, not only in human wisdom and acquirements, and the knowledge of the holy scriptures, but likewise in deep experience and heartfelt religion, who became jealous of them, whom they esteemed no people. Thus in various dispensations have the disciples of a crucified Saviour been esteemed as the off-scouring of the people, and the doctrine of the cross, foolishness; that by the things which are despised, and are not, might be brought to nought the things which are, 'that no flesh should glory in his presence.' In the exercise of a public ministry, even where there is a degree of rightness, and especially where those concerned may suppose themselves much behind hand in the work, through past unfaithfulness, there are many rocks, shoals, and quicksands, on which the rightly-laden vessel may be shipwrecked and suffer loss; and indeed so weighty is the work, and so diversified the dangers, that there is abundant cause for all, from the least child to the most experienced minister, to unite in a language formerly uttered, 'And who is sufficient for these things?' In the afternoon meeting, neither sun, moon, nor stars were discernible; nevertheless, just before the close, a cry from the bottom of my soul seemed to ascend to an Almighty helper, who can cause light to arise in the midst of darkness, and 'turn the shadow of death into the morning.'"

"Tenth month 15th, 1783. As I was going to the week-day meeting, a thought passed my mind concerning a state of trembling, which I esteemed to be only casual; but after having sat some little time in the meeting, the matter was unexpectedly renewed in my remembrance, with such strength and enlargement, that, comparatively, my 'brook became a river,' with a pointing to those present; but I was fearful of breaking in, hastily, upon the solemnity which seemed to attend in silence; lest, instead of increasing, I should scatter; and lost words, instead of enriching, should tend to poverty. But before the close I dropped a few sentences, with a degree of liberty and satisfaction."

"15th. The days of darkness will overtake no one who possess their souls in peace, and see no

sorrow; and, sooner or later, they will be witnesses of this unexceptionable truth, 'Man is born unto trouble.' When the Lord 'cometh up to the people, he will invade them with his troops; the strong shall be as tow, and the maker of it as a spark.' One with whom I am peculiarly connected, who has been in the possession of health and affluence, being of late attacked with a dangerous disease, occasioned the preceding remarks."

"21st. Having reproved a beloved friend with asperity for a supposed error, I suffered compunction.

"22nd. Three short testimonies were delivered in the week-day meeting. I was oppressed under a sense of iniquity. 'A wounded spirit who can bear,' was the language of one formerly. I sat bitterly bewailing my manifold deviations from the path of peace. There is a woe to them by whose offences come; but when they have been administered, it is certainly a duty incumbent to acknowledge them, and to seek with solicitude for a real reconciliation with those, whom we may suppose have been offended. In this respect I have been pretty uniformly careful, and by an acknowledgment of my petulance in the conference of yesterday, to the friend concerned, I was measurably relieved. 'In the world, said our blessed Lord, ye shall have trouble.' The Son of Man came not to send peace on earth, but rather a sword in the hearts and houses of those who are seeking to follow him in the regeneration, and to fill up that which is behind of the sufferings of Christ. But when he breaketh the yoke of their burthen, and taketh to himself his great power, and reigneth, He is experienced to be 'the Everlasting Father, the Prince of Peace;' whose dominion is from everlasting to everlasting. 'Even so; Come, Lord Jesus' come quickly. Amen and Amen."

"Eleventh month 6th, 1783. In the Park evening meeting, I was early impressed with a sense of the great benefit resulting from being inwardly gathered to Shiloh, 'the bright and the morning star,' who beareth witness of himself; 'whose witness is true,' and abundantly more strong than all the prophetic and miraculous attestations of his coming and glory; they being proposed to unbelievers, are rejected by them who continue in their unbelief. But the Spirit is an undeniable, soul-satisfying and self-demonstrative evidence, that the Son of God is come, hath suffered for our sins, and is risen again for our justification. And thus, 'the less is blessed of the greater,' in those who receive him in his spiritual appearance, as the light of the world and life of men. These truths were opened in my mind with clearness and demonstration, without the least appearance of their being intended for others."

"17th. This day I have been preserved pretty quiet and comfortable in spirit, and clear from speaking unprofitably; a great favour; 'not of works, but of grace,' which teacheth to deny all ungodliness. Oh! may the fruits of the Spirit be daily experienced; 'that instead of the thorn, may come up the fir tree, and instead of the brier, the myrtle tree;' and that the fruits of righteousness may be sown in peace,' as a testimony to that 'righteousness which is of God by faith,' even the faith of our Lord Jesus Christ, who himself was 'meek and lowly in heart;' who, when he was reviled, reviled not again. Being lame, and the weather wet, I was much within, and perused the journal of our deceased Friend, John Churchman of North America. I had read it when it was first published; but on a fresh investigation of the contents, I was impressed with a savour of some inward experiences therein contained. In page

222, I find the following passage, very necessary to be noticed by all who may have any concern in a public ministry. 'In attending the meetings as they came in course. I felt a gradual opening and strength to declare those things which before had been sealed up; being now made sensible, that every vision and opening, which the Lord is pleased to manifest to his servants, are not for immediate utterance. But the Lord, who gives judgment, should be carefully waited upon; who only can show, by the manifestation of his light, the time when.'

"19th. I thought of leaving off my diary, but remembered him, 'who against hope, believed in hope.' I am at times favoured with some sensations of 'the comforts of love,' and of 'the meekness and gentleness of Christ;' but, alas, they are soon suspended. The immediate forerunner of the High Priest of our profession, 'saw the Spirit descending from heaven like a dove, and it abode upon him.' He was not only our propitiation, but example; and as he was, so ought we to be, in this present world. Nevertheless, as in our 'flesh there dwelleth no good thing,' I am persuaded those visitations of divine good come from above, and therefore ought not to be despised; but rather received with thanksgiving, and a desire after the increase, which is of God."

(To be continued.)

Victor Emmanuel and Alexander Dumas.—The following sketch of the King of Sardinia, in the pen of Alexander Dumas:—A Victor Emmanuel, who looks like a man of about forty years of age, is frank, sincere, vigorous, temperate, an early riser, and a keen sportsman with gun and dog. He bears the fatigues of a long day's shooting better than many of the most active mountaineers, and he generally starts on such excursions before sunrise. He makes a very light breakfast, merely a piece of bread and a slice of cold meat, or cheese, which he eats like a peasant, without sitting at table; but he always makes a hearty dinner, laying aside all etiquette, without court or chamberlains. On Sunday, the day of usual reception at the palace, the doors are thrown open at eleven o'clock, and anybody who feels disposed may enter till three. If any person desires a private audience, he must apply by letter, and on the morrow, or the following day, he will surely obtain it, for Victor Emmanuel opens all his letters himself.

"One day, when out shooting, he met a peasant, who, on seeing the king bring down two partridges, right and left, with his double barreled gun, went up to him, and said, 'you shoot well, you do.' 'It was not amiss, was it?' responded the king. 'Perhaps you could rid me of a fox which steals my hens?' 'Most willingly.' 'If you do, I will give you two mutti, (seventy francs.)' 'Agreed,' said the king, 'I will come to-morrow morning with my dog, and shoot your fox.' Give me your hand on it,' said the man. The king immediately shook hands with him, and, true to his word, went the next morning, found the fox, and shot it. 'Thanks for that!' exclaimed the peasant; 'you have fairly earned your two mutti, and here they are.' The king took them, and said, 'this is the first money that I ever earned. Then tossing up the two pieces in his hand, he added, 'it is a pleasure to receive money one has fairly gained.' The next day, in exchange for the two mutti, his majesty sent a dress, necklace and earrings for the peasant's wife."

The Great Orchards of California.—It would be impossible for a stranger to form any possible conception of the extent of these orchards, the in-

mensurable crop daily gathered, or the wonderful producing power of the trees. Strange as it may appear, with all the disastrous effects of the flood which swept away and destroyed thousands of trees, burying, also, great numbers, and having many buried by drift-wood, of which more than thousand cords swept over and upon them, another thousand cords of peach-tree firewood will be made from the broken and killed trees; y with all this destruction, the crops of these orchards will far exceed any former crop. And this, too, with another singular fact, that with all the energy and attention possible, and with about seven months, the fruit often ripens faster than it can be gathered, so much so that more than ten thousand bushels will be lost in these two orchards alone. In connection with these orchards there is the Orville orchard, where about thirty men are gathering and shipping in like enormous quantities. That some idea may be formed of the magnitude of the business of these fruit orchards, there was sent from them, the second week in August from sixteen to twenty tons of peaches, apricots and plums; of which about two thirds were shipped to Sacramento and San Francisco. We spent some time in going through these orchards, and noticing the effect of the floods upon the trees. In many places the drift-sand was piled up from ten to forty feet; but where the wash was only sand a injury resulted to the trees, they were vigorous and healthy. But where the deposit was a soft clay, mixed deposit, the trees were killed. In the entire orchard, among the peaches, nectarines, pears and apples, where the deposit was sand alone, the trees were loaded with splendid fruit—the nectarines and peaches, enough to load several clipper ships, the branches breaking down with the fruit and the ground covered with the finest nectarine, we ever saw.—*California Farmer.*

From "The British Friend."

Early Friends, and what they Were—Christian Testimonies.

(Continued from page 174.)

Instances are on record, too, of the punishment of early Friends by the magistracy for inclosing their burial-grounds, among which may be named that of Edward Vivers, who in 1655 was taken from his business by order of the lord-tenant of the county of Oxford, and kept in confinement two years and seven months. Persecution is nothing more difficult to contend with than prejudices which are the fruits of early teaching and the results of priestly influence; and it is easy to understand how the inclosure of ground for the purpose of sepulture became a cause of offence to those who, apart from the sacerdotal question, had come to look upon such inclosure as something sacred, and appertaining alone to what was termed the "church."

Having, however, taken their stand upon the broad principle of the freedom of the gospel, and the consequent liberty in all things pertaining to it, our early Friends persisted in the course they had entered upon. Francis Howgill, one of the most explicit writers among them at that day, and from his early associations and pursuits, one of the best informed on ecclesiastical matters, remarks in reference to burial-grounds and burial yard, "Abraham was the first that we read of that was any place of burial in Hebron, which he bought, Ephron the Hittite for thirty shekels of silver, a there was he and his wife buried, and this was parish yard, neither did he have any priest, clerk, that we read of to receive wages and fees, &c., for ringing a bell and reading or saying a

ice over the body." And in reference to the rigin of that piece of absurdity, called consecration of graveyards, he informs us that "Urbanus, the seventeenth Bishop of Rome, was the individual who first ordained churchyards to be hallowed; and quoting Gaudensius, reminds us "that of old time they did bury their dead in their own ground, which custom was taken away by Pope Innocent II., who prohibited that any should cause themselves to be buried in unconsecrated ground." And according to the testimony of another writer, Hosius, "the custom of being buried in order near the church at last became so superstitious that they judged it needful even for their salvation." We cannot wonder that early Friends, having adopted purer christianity, forsook the practices which aving their root in Popery, had thus spread through the length and breadth of the land, and had obtained such hold on the minds of the people. With them the question of sepulture became of simple truth, and by their course of action they restored the solemnity of that most eventful eriod of our humanity, the passage to the silent ave. With Francis Howill they considered had "churchyards" in which to bury their dead, h original was superstitious, and all the ring- and singing, and the reading before and over the body, as idolatrous and superstitious, and therefore to be avoided. Thus they became prepared to adopt the counsel of George Fox, "That h Friends, who are not already provided, should heedly procure convenient burying-places, that hereby a testimony may stand against the superstitious idolizing of those places called holy ground."

We see, then, that what we are now pleased to all one of our peculiarities, was in reality in the eyes of early Friends a christian testimony. Let us be careful that in the change of expression we do not sacrifice anything of principle.

Having come to the conclusion that the Society light to free itself from all participation in the superstition which clung to the then modes of sepulture, it was not surprising to find that resort was ad to the interment in private grounds, and that any families, more especially in rural districts, set apart small detached plots on their own estates as family burial-places. Hence we find scattered up and down where Friends are now very much extant as a body, small detached graveyards, some under the care of the Society, and some that have long since passed into other hands, but which later, from reverence to the dead, are still kept in- used and unoccupied. However this mode of pulture might suit a nomadic state, it was a salary regulation on the part of the Society to dict that Friends should have well-ordered burial- grounds under the care of the body for the purposes of sepulture; and it was almost a natural consequence that with this regulation they would scard all the ceremonies and pomp that prevailed the world. Hence we find it recorded by their storian "that in the burial of the dead they did in decency, and endeavor to avoid all pomp; and the wearing of mourning is not approved by em; for they think that the mourning which is wful may be shown sufficiently to the world by a odest and grave deportment." This severe sim- plicity, which extended itself to the very grave's out, in the absence of everything like ornament on the receptacle of the corpse, was indeed great offence to the customs of the age. It called rib much animadversion from the world, and used no small amount of suffering to those who lopted it—numerous individuals were committed to prison, great persecutions were endured, and uch pecuniary loss borne, for the simple act of

attending the mortal remains of their friends and relatives to the grave. So sweeping at times were the raids upon the mourners and attenders at funerals, that instances are recorded where large bodies of Friends were swept away at once to prison. In Somersetshire in 1675, thirty-two persons were fined for being at a funeral, and had cows, corn and other goods taken from them for penalties, amounting to upwards of £82.

So offensive to the public mind was the mode of sepulture adopted by Friends, that it became a proverb of reproach "that the newly-risen Society buried its members like dogs." This accusation was not likely to lessen the sufferings of Friends, and accordingly we find George Fox, ever equal to an emergency, issuing an address from the press under the title of *Encouragement to all to Trust in the Lord*. In this document he remarks, "You see what entertainment the Lord of Glory had when he came into the world—a manger instead of a cradle; and when he went out of the world, the Scripture doth not say that he had so much as a coffin. Joseph of Arimathea wrapped his body in linen, and laid it in a sepulchre in a garden. . . . And all you that say we bury like dogs, because that we have not superstitious and needless things upon our coffins, and a white and black cloth with escutcheons, and do not go in black, and hang scarfs upon our hats, and white scarfs over our shoulders, and gold rings, and have sprigs of rosemary in our hands, and ring bells—how dare you say that we bury our people like dogs, because we cannot bury them with the pomps and glory of the world? Whereas ye do not read that Christ the Prince of Life, our Lord and Saviour, had any of these things, neither when he came into the world, nor when he went out of the world; and refused the pomp and glory of it when the devil tempted him with it; . . . therefore follow not the pomps and glory of this world at your children's coming into the world, nor bring them up in the pomp and glory of the world the time whiles they live, nor use them at going forth out of the world; but follow Christ Jesus, who is not of the world, who is your Redeemer, your Saviour, your Way, your Truth and Life, your Bishop, your Shepherd, your Priest, your Prophet—and let him rule in your hearts by faith, who will give you life abundantly, who is from above and not from below. That you may be built upon Him the living rock, and the foundation of God standeth sure. Amen, amen, saith my soul."

(To be concluded.)

Chinese Sugar Cane.—In the course of the discussion at the "Sorghum Convention" recently held at Rockford, Illinois, the following points were brought out: 1. The fact was certainly established that there is no difficulty in growing the Chinese sugar cane, the Imphee cane, and the Otaheitan, in this latitude. 2. That the successful manufacture of either or all into sirup is a fixed fact. 3. That the granulation of these kinds has been successfully accomplished, specimens of sugar having been exhibited at the Convention, proving this. 4. Taking the evidence of—Corry, of Indiana, whom we regard as a pioneer in the business, the Otaheitan will granulate and make handsome sugar beyond a peradventure. 5. That the seed from the Chinese sugar cane—which has been hitherto regarded as useless except for planting purposes—can be employed in feeding cattle, hogs, horses, etc., and also can be successfully manufactured into flour which makes a very toothsome griddle cake. It was offered in evidence, and not controverted, that an acre of cane would produce forty bushels of seed, and that that

product was equal in fattening qualities to the same number of bushels of corn. 6. That the juice of the Chinese cane, and doubtless the other qualities, without cooking, can be fed to hogs, cattle, and horses with admirable fattening results; in fact, that in this respect an acre of cane is equal to two or three of corn. This last is a very important feature, and should challenge the attention of stock raisers. 7. That the stalks, leaves and heads will make an excellent quality of paper. This fact—Smithett, in his excellent address, said had long been known and practised upon in the West India Islands, and other cane growing countries. 8. That the *bagasse*, which with our producers has been deemed useless—in fact, a positive annoyance, on account of its swift accumulation—can be made to yield excellent mauling qualities, and can also be prepared as a fuel, to the saving of large quantities of wood and coal in the season of sirup boiling. 9. The convention classified the different qualities of cane, which has never heretofore been done, into three varieties: Chinese sugar cane, Imphee cane, and Otaheitan. 10. That the quality of sirup manufactured from these three qualities is superior to that of any other offered in the market. 11. That it is superior for refining purposes. 12. That more than 2,000,000 gallons (perhaps 3,000,000) have been manufactured in the State during the past year; and lastly, that it is the most profitable crop that can now employ the farmer's skill and energies. These facts the Rockford convention has pretty surely established, and therefore in its results it has proved one of the most important conventions ever held in the Northwest.

For "The Friend."

Musings and Memories.

PROVIDENCE GOVERNING.

"He doeth according to His will."

(Continued from page 185.)

God overruleth all things. Darkness may come upon the prospects of his dear children;—a gloom so deep that they know not how, nor in which direction to take another step, and yet if they cast not away their faith,—in the Lord's own time darkness will be made light before them. Every dispensation is intended for their good. Even in earthly things, trials often prove to the advantage of the christian, and they always, if properly borne, tend to his furtherance in his spiritual journey, to his more full preparation for that blessed state, where the tribulations and probations of life being ended, his spirit shall overflow with grateful adoration and praise.

God overruleth all things. There are many instances on record, in which the hand of Providence has evidently directed his unreasoning creatures in acts which tended to the preservation of his immortal and accountable children. How contrary to the instincts of their nature, did the ravens act when with diligence, they brought from day to day, to the poor prophet by the fast diminishing brook, that portion which God sent for his sustenance. The lion, which directed by the Lord's will, slew the prophet for disobedience, who had been sent to cry out against the altar of Jeroboam, manifested that he acted not through the cravings of hunger, nor desire of slaughter, for he neither disfigured the body, which he remained to protect, nor interfered with the old prophet who came to give it a burial. The great fish "prepared" of the Lord to swallow backsliding Jonah, when the allotted period for the prophet's captivity was ended, and the Lord "spake" the word for his release, cast him forth on dry land.

On a certain occasion, when the pious John

Fletcher, then of Madeley, England, was taking a journey on horseback, a bridge he was crossing broke in. The forefeet of his mare went through to the water, but her body was kept up by the portions of the bridge still adhering together. In this position she lay perfectly still, whilst he took off his bags, containing some of his literary labours, the loss of which would have seriously inconvenienced him. John then endeavoured to raise her up, but apparently under Providential ordering, she would not make any effort whilst he remained on any part of the bridge. The moment, however, he passed on to the firm land, she began to struggle, when the bridge lost its last hold on the abutments, and with her, sank into the rushing river below. There, the parts separating, she was enabled to extricate herself, and swimming to land, she came of her own accord to her pious master.

Our readers may recollect the case of the woman Friend, who having a religious concern to hold a public meeting in Canada, through diffidence endeavoured to evade it, and came down to the St. Lawrence river to cross in the ferry-boat. Her horse, however, would not enter the boat, and after a long struggle with him, and a severe struggle with conviction in her own mind, she was conquered, and returned to town, and had the meeting appointed. It proved satisfactory, and the next day, coming to the river, the horse entered the boat without any urging. This drew the attention of the captain of the boat, who told the woman Friend to the effect, that her horse knew that her business in Canada was now done.

During the year 1820, when C. G. Steinhofner was in America without his family, whilst in one of our western towns, in the winter season, he heard of a community of religious people, about 18 miles from the place he was in, who, for some immoral conduct of their preacher, had dismissed him. Immediately he felt a great drawing of mind to visit this flock, who were thus without an earthly shepherd. The pressure on his mind was so great, and the inward call to prompt obedience so urgent, that although there was a great depth of snow on the ground, he started to walk to the settlement where these religious people lived. As he passed on, his feet became very sore, and so blistered, that before he had travelled half way to the place he aimed at, he felt almost totally incapacitated for walking, and not being able to comprehend how he could finish the journey, felt tempted to doubt whether the concern he had felt was of Divine origin. Whilst musing in pain and sorrowful doubt, he saw a man following along the road he had been travelling, riding on a horse, and leading another with a saddle on it. Immediately there was a reanimation of his drooping faith, and he was satisfied that he had been rightly led, believing that the Lord had sent that horse for him to ride. He then thought, if the horse is for me, the man will ask me to ride, even if I say nothing. So he held his peace. The traveller looked at him earnestly, but passed by, and as just before, the road made a descent, he was soon out of sight. At this, Christian felt a reproof in himself, remembering that it was a child's duty to ask for what it felt to be useful. He passed forward however, and on reaching the brow of the hill, he saw the man was making very little progress, for the horse without a rider was holding back, and stubbornly resisting all forward movement. When in his struggling with him the rider moved backward, the horse became gentle, and appeared willing to move in that direction. On seeing the situation of things, the poor foot-sore traveller endeavoured to hasten towards them, and the man on the horse seeing him rode back to meet him. He told

Christian he had better mount the horse. "I believe" he said, "I should have asked you to get on when I rode by you. My horse never acted in this way before, although I went with him 18 miles yesterday, and nine to day." After they had travelled together for a time, the owner of the horse asked Christian where he was intending to go to. On learning his destination, and the concern which was leading him there, the man exclaimed "surely the Lord must have a hand in this, and I have the right man; I started from home with this horse, on purpose to try if I could find a minister who would stay amongst us. Finding none, I was returning home disappointed." Christian's feet were very sore all that winter, but the kind man whom he had accompanied to the settlement, kept him at his house, lending him a horse to ride to their meetings as they occurred. In these meetings, Christian was often sensible of the Lord's presence, enabling him to labour amongst the people, and when he thought his duty there was accomplished, he parted with the flock in love. The remembrance of his sojourn there, was a great satisfaction to him afterwards, and a renewed cause of thankfulness and love unto Him, who had been his leader and feeder from his youth. The Lord yet leadeth his children in paths which they know not;—He is yet the Wonderful Counsellor,—and those who trust in him in living faith, he still upholds and supports in every trial, and through every difficulty.

For "The Friend."

Having received instruction in reading the following on the government of the temper, and been a little inspired to persevere in application to that source from whence alone availing help is to be obtained, I felt willing to copy it, with a hope that it may strengthen and encourage some others also.

"The most direct and the most effectual method of attaining the government of the temper, is to seek by earnest prayer the indwelling of the spirit of God. Distinguished in a high degree has been the success of some Christians, who, have combined persevering prayer with persevering effort, to acquire an habitual command of temper. A very remarkable and edifying instance of this success is presented to our view, in the character of the eminently holy and useful John Fletcher, of Madeley. 'He was meek,' says his biographer, 'like his Master, as well as lowly in heart. Not that he was so by nature, but a man of strong passions, and prone to anger in particular; insomuch that he has frequently spent the greater part of his night, bathed in tears, imploring victory over his own spirit. And he did not strive in vain. He did obtain the victory in a very eminent degree. Yea, so thoroughly had grace subdued nature, so fully was he renewed in the spirit of his mind, that for many years before his death, I believe he was never observed by any one, friend or foe, to be out of temper, on any provocation whatever.'

The testimony that Bishop Burnet bears of Archbishop Leighton might be borne of him with equal propriety: 'After an intimate acquaintance with the Archbishop for many years, and after being with him by night and by day, at home and abroad, in public and in private; I must say I never heard an idle word drop from his lips; I never saw him in any temper in which I myself would not have wished to be found at death.'—*From Treatise, "The Government of the Temper."*

Telegraphic communication with Europe.—The Atlantic Telegraph Company, notwithstanding

the failure of their attempt a few years ago, has not abandoned the scheme of laying a cable across the Atlantic. They are still agitating the matter in England, and with encouraging prospects, that the funds will be provided for another trial, in which, profiting by the experience already acquired, the perseverance will be crowned with success. In the meantime the Russian Government has engaged the construction of a line eastward from St. Petersburg to the sources of the Amoor River. The entire route of near 4000 miles has been surveyed and a large portion improved. A late paper says:

"It is understood to be the intention of the Russian Government to prolong the telegraph line to its possessions in North America, via the Behring Straits. The distance to that strait from the source of the Amoor is twenty-three hundred miles; thence to the 49th parallel is nineteen hundred miles further; and thence to San Francisco is eight hundred miles more. It is regarded as manifest that the best way to connect our country by telegraph with Europe is by the way of Behring's Strait, to which point the Russian Government will extend its telegraphic line. This narrow body of water may be crossed by a submerged cable, or crossed by steamers in summer or by sledges in winter. Its line of latitude is about the same as Archangel in Russia."

The line in operation between San Francisco and our Atlantic cities appears to work well and with less interruption than might be expected in a route of 3000 miles so large a portion of which lie through a wilderness.

Selected.

"In the Day of Adversity Consider."

This is one great recommendation of affliction that it is a time of wiser and more sober thoughts, a time of the returning of the mind inwards and upwards. A high place, fulness and pleasure, draw the mind more outwards. It is a rare thing to find much retirement unto God, much humility and brokenness of spirit, true purity and spirituality of heart, in the affluence and great prosperity of the world. It is no easy thing to carry very full cup even, and to digest well the fumes of a great estate and a great place. They are not to be envied who have them; even though the lot of the better sort of men, it a thousand to one, but they shall be losers by the gains and advancements of this world, suffering proportionally great abatements of their best advantages by their prosperity. God complains thus of his own people "I spoke to them in their prosperity and they would not hear." The noises of coach-wheels, c their pleasures, and of their great affairs, so fill their ears, that the "still, small voice" wherein God is, cannot be heard. I will bring her into th wilderness, and then I will speak to her heart, say God, of his church and people.

For "The Friend."

Aune Camm, in her dying testimony to the professors of truth, in the year 1705, says: "Walk in the truth and keep to the simplicity thereof out of heights and exaltations, under the power of the cross of Christ, by which they will be more and more crucified to the world, and baptized into Christ, and put Him on, the new and heavenly man, in whom they will become new creatures, enabled to serve God in spirit and keep to the unity thereof in the bond of peace and love, which is the god of the world is still laboring to break an discord. I have seen him at work to make breach and separation amongst Friends, and if he prevail, it will be under specious pretences of more angelical appearance than at any time before and will be a bait, taking to all that live above

ne cross and true self-denial. I would all were armed to stand their ground in the power of God, which only can bruise Satan, and preserve out of its subtle baits and snares."—*Pietty Promoted*, A. 1st, p. 324.

For "The Friend."

NINTH CHAPTER OF NUMBERS.

18th, 22nd and 23rd verses.

18th. "At the commandment of the Lord the children of Israel journeyed, and at the commandment of the Lord they pitched: as long as the cloud abode upon the tabernacle they rested in their tents."

22nd. "Or whether it were two days, or a month, or year, that the cloud tarried upon the tabernacle, remaining thereon, the children of Israel abode in their tents, and journeyed not: but when it was taken up they journeyed."

23d. "At the commandment of the Lord they rested their tents, and at the commandment of the Lord they journeyed."

From hence may every soul instruction gain,
And watch the guidance of paternal love;
When the clouds rests, within our tents remain,
And journey forward as it may remove.

Here lies our safety, here our strength's renewed,
To wait the pointing of a hand divine;
Whose best direction as our guide pronounced,
All self-dependence will teach us to resign;

Nor murmur, if the cloud should long abide,
Nor move, as we, impatient, may desire,
But in unerring wisdom still confide,
To journey on, or to our tents retire.

More, as it moves, and in its restings, rest,
On all its tokens fix a steadfast eye;
How would the flock in all their steps be blest,
Saved from their foes, and strengthened'th from on high.

What beauty would its ranks distinguished wear,
Still in their tents, or marching on their way,
As the unerring Leader should appear,
To point them forward, or command their stay.

Zion would thus in all her glory shine,
Rise from the dust, in ancient power arrayed,
And God's own presence in its life Divine,
Beneath the sacred cloud would be displayed.

For "The Friend."

THE UNBREATHED PRAYER.

Mother, the sun was in the west,
And I was on my knee,
A holy calmsness filled my breast,
I prayed for my sire and thee.

My sister, too, was on my heart,
My brother's form arose,
As I watched the orb of day depart
And sink to his repose.

But, mother, I prayed silently,
I felt too much to speak;
Another's words seemed cold to me,
My own were all too weak.

Say, mother, would that prayer arise
Unbreathed, to Heaven's high throne?
Would God my strung emotions prize?
Say, would my thoughts be known?

Or would I seek a mother there,
As speechlessly I knelt,—
Unnoticed the deep heart of prayer,
That in my bosom dwelt?

No, no, my child! thy heart was spread,
A book, before His eye,
And better than thyself, he read
The meaning of each sign.

Words may come forth in eloquence,
And meet the world's applause,
But yet may never spring from thence,
To the sky which o'er us glows.

But the simplest word, or look, or thought,
That from the heart doth rise,
Like incense up to heaven shall float,
A welcome sacrifice!

Review of the Weather for First month, 1863.

The first five days of the past month were clear; on the afternoon of the 6th, nearly half an inch of rain fell; the 7th was clear, and on the afternoon of the 8th, there was a light fall of snow. The next three days were cloudy, with heavy rain on the afternoon of the 10th, during which over one inch of rain fell. From the 12th to the 20th inclusive, there were but three clear days, and the remaining time the weather was cloudy, with some rain on the 15th and 16th. On the 21st, a north east rain storm set in, which lasted all day, and in the night the wind blew with great force; on the 22nd, it was still showery, but about noon the rain ceased, the weather, however, remained dull for the next three days; the 25th was clear, but the morning of the 26th was foggy and warm, and the weather continued cloudy all that day, and the next. There was some rain in the afternoon of the latter. From the 21st to the 27th inclusive, the thermometer was not below 34° at any time, which was rather remarkable for so long a time at this season of the year. On the 28th there was a snow storm, which lasted all day; during which, about five inches of snow fell, but as the ground was soft and wet, it did not make good sleighing; on the morning of the 29th, some snow fell, but in the afternoon it cleared off; the 30th was cloudy, with some snow in the afternoon, and the last day of the month was clear. The thermometer was highest at noon on the 15th, being 60°, and lowest on the morning of the 18th, being 16°; the average temperature for the month, was 37½°. The amount of rain and snow water during the month, was 4.01 inches. J.

For "The Friend."
Lewes Castle—Isle of Wight.
(Continued from page 182.)

"Lewes, _____, 1861.

"My dear _____ and _____,
* * * "Our dear friends, _____, upon whose kindness we have no claim whatever, but that of being fellow travellers to a better country, and whose warm, general hospitality could not be exceeded by that of a sister or brother, seem daily devising some plan for our enjoyment, while in truth, we feel we need no greater, than that of their society in their own beautiful home. They have taken us several delightful drives, through some of

the finest parts of the country in their neighbourhood, over these charming English roads, bordered by luxuriant flowery hedges, entwined with ivy and woodbine, &c., bearing evidence of care and cultivation, very superior to those we observed on our route from Liverpool to London,—and among some of the pretty neat cottages of the poor. One of these, where there was an invalid, we visited; and it was really refreshing to observe the neatness which was all about the dwelling, as well in the pretty little flower garden in front, as within, where everything wore the ornament of cleanliness and order which would grace an elegant mansion; while equally so, and truly instructive was our visit to the patient sufferer. She has been blind in one eye for many years, and is now threatened with the loss of sight in the other, and depending upon the use of her needle for a livelihood, it is of course a source of great affliction to her; though we felt assured, she would never need kind friends, who will see that all her wants are well supplied. After leaving this humble cottage, we went to see the village church. It is more than three hundred and fifty years old, built in a plain, substantial, gothic style, of flint nodules, which are found in abundance in the chalk hills, and which have a rich, pretty effect; and with its simple spire, low-arched door-way and windows, looking venerable with age, surrounded by grand old elms, grass-grown grave yard, with grey moss-covered tomb stones, it is a model of picturesque beauty of the kind. Our chief object in going there, was to see a marble tablet, placed in the wall by direction of Isaac Penington's wife, in memory of her first husband, named _____ Springett; bearing a simple loving inscription, giving an account of their marriage, his many virtues, and early death, in his 23d year.

"_____ This morning we visited the beautiful ruins of Lewes Castle, which was built by William the Conqueror, for his daughter Gundrada, and is one of the oldest in the kingdom. It stands within the town, but on a high steep mound, with sufficient trees around it, to prevent its desecration by contact with other, and modern buildings. The donjon keep, or entrance tower, standing alone, some distance from the main body of the ruins, is in a good state of preservation, and the huge stone-grooved channel where the portcullis rose and fell, is almost perfect. We pass through by a fine high archway, and by a long zig-zag path, interrupted by several flights of stone steps, embowered in trees and ivy the whole way, we attained the summit of the mound or bill on which the towers and the masonry between them stand. The walls, which are immensely thick, are built of stone, principally brought from Normandy, mingled with some flints from the neighbourhood. A poor family lives in a part of the castle, one of whom, conducted us up a narrow winding stair case—and into several little apartments containing many relics, some of the ancient Britons, warlike, domestic, and religious, which had been from time to time dis-interred in the neighbourhood—to the top, which is surrounded by a turreted parapet of four or five feet in height. This commands a splendid view of the surrounding country, with the pretty town of Lewes near our feet. But by far the most absorbing feature being that immediately around us, it was with difficulty I could withdraw my eye from its mouldering ivy-covered walls and towers. Beautiful is ivy any where, but oh, how beautiful draping such a ruin as this! Nodding in rich clusters over the parapet, elegantly entwining itself through chinks, and round the narrow windows, or where might be some more unsightly work of time, thus giving freshness and grace to

venerable decay. How thrillingly interesting was this, my first sight of a ruined castle! From its elevation on this steep high mound, surrounded by fine old trees, it is not likely ever to be encroached upon by modern buildings; and it seems to be revered by the people.

"— Since writing the foregoing, we have been to see the ruins of a Priory attached to the castle, distant about one-third of a mile from it, which was founded and endowed by Guadrada, and was for a long time, a charge of great interest to her and her husband, a Norman knight, named De Warrenne. The monks had evidently found their lines to have fallen in pleasant places, as we could yet see that the mouldering walls which marked the boundaries of their rich domain, enclosed beautiful valleys, descending to the river Ouse, and gently swelling hills, whose broadest sides lay invitingly to the south. But the mandate of Henry VIII. against the monasteries, was eagerly carried into effect in this county, and this noble creation of a princess' bounty and piety, fell a sacrifice to the fanatical zeal and cruelty of the English populace. Tradition informs, that finding the walls too strong to be overthrown by the rude force at the command of the ignorant mob that attacked them, more skillful engineers were sent for from London, who succeeded in breaking down the chapel of the Abbey and rendering the cloisters of the monks uninhabitable; but to this day the large extent of the ivy covered ruins, the walls enclosing the park, and an eminence called Mount Calvary—on which the monks every year went through a drama of the Crucifixion—show how massive and extensive were the buildings of the Priory, and give some idea of the limits to which the monkish brothers restricted themselves. It is said to have had an underground communication with the castle. Several subterranean passages have been discovered not many years since; one of which, a very narrow one, walled and arched, we explored, leading to a little circular cell, not more than four or five feet in diameter; for what purpose designed it is difficult to determine, it having no light or air but what might steal along the passage. Probably it was used as an oratory.

"When the monks found the priory would be attacked, they removed the remains of Guadrada and her husband, who had been entombed within its walls, and buried them, no one knew where; though it was always believed they were somewhere in the neighbourhood. The stone slab which had covered their tomb, having their names in full, and a pious inscription in Latin, speaking of her virtues, &c., was afterwards discovered, and taken some twenty miles distant, where it was carefully preserved as a relic. A few years ago, when they were constructing a rail road in the neighbourhood, it was carried right through the old priory, part of the ruins of which, now stand on each side the road. When the workmen were cutting into the soil the inhabitants were intensely interested. Our friend, _____, gave me an animated description of the scenes at the time, and the feelings that were manifested. Her brother and _____, were daily on the spot, with deep interest watching the operations; while many ancient relics, household treasures of different kinds, were being disinterred. When lo! they came upon two leaden cists— which soon being cleared of the chalky clay, there, in raised letters, were the names 'Guadrada, daughter of William I.' on one, and 'De Warrenne, husband of Guadrada' on the other! They were opened—and there were the bones carefully gathered, and placed within! It was quite an exciting occasion it may well be imagined. We next walked to the church, within which a beautiful little chapel

has been built—expressly for the purpose of therein entombing these mouldering remains—modelled after the same style of graceful gothic architecture as the old priory; where we saw the leaden cists which had contained these relics of mortality, and the tomb stone—with their names, their father's name, William I, and the Latin inscription, distinctly carved upon it, which for hundreds of years had been so carefully preserved,—now replaced over them. They were allowed to remain in the cists for a long time, so that all who desired it, might have the opportunity of beholding them, and when it was finally determined to inter them in the little chapel, they were once more disturbed from their late receptacles, and removed from their late receptacles, that the latter interesting testimonies to their identity might be deposited where they could be seen, if desirable, by all who visit the spot.

"Here may come in a little episode. I so often write when snatching scraps of time, and am obliged abruptly to break off, that, as I afterwards discover, I omit some things I wish to note. Thus I would fain send you a glimpse of the particularly pretty spot, where we were situated when our interesting and enthusiastic friend gave us the foregoing account. We were sitting in their charming summer-house, which—tastefully finished, and furnished, with centre-table, chairs, &c.,—circular in form, and elegantly draped with ivy, having three high glazed windows, so that, when inclined, they can sit there during the damp as well as dry weather, still having it cheerful and bright—stands on a high grassy mound, commanding from its different windows, through vistas between the noble trees, views on the one side, of the rich distant country, bounded by the undulating line of high downs, and of their own rich beautiful grounds on the other. Near the foot of the mound is a fine old cedar of Lebanon, its lower branches almost sweeping the ground, with dark shaded walks beyond. Underneath, within its stone foundation, is a grotto; and quite the beau ideal of my youth, of such delightful cool appendages to a gentleman's grounds; with walls and roof closely studded and glittering with shells and minerals of different kinds, all the sisters' own arranging—furnished with root table and chairs,—fossils and relics all in keeping. Fine shrubby, hollies, and other trees perfectly embower it without; ivy is entwining round, and peeping in at the low door; and rockeries covered with rich clustering ferns, flowering mosses and other wildings are on either side. Adjoining one of these, is a tasteful rustic gate made of interwined rows, through which you pass by a high hedge row of larch and other trees to the fields, now luxuriant with a fine growth of tares; a beautiful crop, having rich clusters of dark purple and pink blossoms resembling the sweet pea. And here, the sky-larks are pouring forth their sweet melody—telling to their loved ones, to the air all around, and to us, how happy they are, and how lovely it is—'now when the gloaming comes, low in the heather blooms,' not skyward, whither away, we have not yet seen these charming little songsters; and here, how sweet it is to stroll at sunset, after resting for awhile in the summer-house or grotto, from a ramble around the walks of the beautiful velvet lawn, with its parterres of brilliant flowers, its dense copses of calmas, hollies and other rich evergreens, and fine shade trees.

"Shanklin—Isle of Wight, _____, took a long walk this morning to the charming little village of Bonchurch. By pathways over cliffs near the sea, through almost every variety of scenery, not including mountains and waterfalls. Now, we are in a path exhibiting

at every turn, the most picturesque village beaut that the imagination of a poet could desire. Exquisite green lanes between luxuriant high hedge not trimmed stiffly, but a continued bowser of bay thorne intertwined with woodbine in full bloom, holly, ivy, and splendid clusters of the tall plum of ferns. The hedges being planted on low bank thrown up for the purpose, the elegant little pin geraniums, and speed-well, with its bright big eyes, starting from the foot run up, and their delicate hair-like stems twine in among the strong plants, thus often bedecking their lower branches with their blue and pink stars in the greatest profusion; intermingled with a white blossom—a vine which I did not know—in clusters of feathery high ness to the very top. These lanes are winding among picturesque thatched cottages, with their bonneted roofs, and hooded domes, each with its neat little garden full of fine flowers; their windows too, are filled with fancy geraniums, calceolarias, &c. Yuccas are in abundance: one of the varieties was scarlet calyx and purple corolla, is perfectly hard here, and continuing out all the year, some of them now loaded with bloom, are almost like little trees, with three or four trunks several inches in diameter, under which one could recline and find quite a comfortable shade. And the ivy, where it not? On this humble dwelling it is draping door, on that it is curtaining a window, there, has wreathed its way and is festooning a chimney, and on this again it is thrown, a splendid leafy mantle all over the gable, shooting or clustering branches at the top—a tree as well as a vine.

"And now we mount the cliff by a tortuous and as inexpressibly lovely a route as can be conceived; the scene before, around,—where one be found with more of the elements of enchanting beauty? There lies this gem of a village—Shanklin—at our feet; not only the thatched cottages, which appear as if they must be the home of lowly happiness—so neat, flowery, and we cared for, are they—but those of the more wealthy elegance, but moderate, of various styles of tasteful architecture, among beautiful trees and garden overtopping each other, at various elevations on it hill side. Beyond, the richly cultivated country sweeps away with its groves and clumps of tree until bounded by the undulating line of high chalk hills, which stretching towards the sea on our right as we now stand, their abrupt white cliffs overhang it, gleaming in the sunshine. From these the shore curves inward towards us, like the Bay of Naples on a small scale, but making a more graceful waving line, judging from the views of the latter and there sleeps the sea, the lovely tinted sea blue, violet, bright delicate green, all glowing at once in waving lines and softly mingled shades. Turn we and go over the cliffs; first on the land side. Here are wild flowery knolls and dells overhung by high rocky crags.—Onward up, looking over the cliff, so precipitous it is hardly safe to peep, I reach to pluck a little plume from a feather cluster of white flowers, and there, right under I on the sea-shore, safely walled in on the sea side is a pretty little hamlet of a dozen houses or more with their bright gardens. Onward and down over knolls and through dells again, and we enter at each turn more of these exquisite hedge-bordered lanes, by thatched cottages, and a highly picturesque ancient little church and grave-yard, in Bonchurch, more singularly beautiful than eve Shanklin—nesting among rocks and hills, carpeted with ivy; which is also climbing high over crag and tall trees, some of which meet at their top forming a close canopy over fine, smooth road whose deep shaded grassy or rocky sides, or lo

massy stone walls, are begemmed all over with the right little pink stars of the wild geraniums.

"— This morning we took another delightful ramble, over heights commanding some more extensive views than those of yesterday, and of similar charming character. This afternoon, walked to Shanklin Chine, a deep, narrow cleft in the high bluff overlooking the sea; but 300 feet in height, covered with shrubbery and ivy throughout; and down the rocks of which, here, near the base of the two opposite sides, we approach to within three or four feet of each other, there falls a very pretty cascade. It is on the property of a very intelligent old man, who, would appear, is in quite moderate circumstances, and who keeps the whole in very nice order, removing rubbish, in some places having it walked up to make it secure, with flights of steps also to insure extra safety, thus making a neat, safe pathway throughout, for which care he is willing to receive, a small gratuity from visitors, and which is doubtless, cordially awarded by all who go there, for it is well worth a visit. There are several other places on the coast, possessing the same kind of old beauty."

(To be continued.)

Human Bone Growing.—It has been demonstrated at the Hotel Dieu, the great hospital at Paris, that bone can be reproduced in the human system on an extensive scale. The periosteum, in other words the membrane which envelops the bone, is the reproductive agent. In cases where injured or decayed portions of the osseous substance can be removed, and this peel left behind, a renewing process appears to be as certain as the growth of a plant from a seed. M. Blandin, one of the surgeons of the Hotel Dieu, extracted a whole of a carious collar-bone from its exterior covering, and eight months afterward the patient upon whom the operation had been performed appeared at the hospital with a new and serviceable collar-bone, produced by the action of the membrane from which the old bone had been peeled. Nor is this all. Other surgeons have transplanted the periosteum from one living body to another, and bone has been uniformly the result of the transplantation. M. Ollier inserted long strips of this fibrous coating under the skins of a number of subjects, twisting the soft slivers around the muscles in different ways. By this means he obtained bones of a great variety of forms—circles, spirals, figures of eight, &c. In short, it seems as if the animal system might be converted into a regular bone-factory, if only supplied with enough of the raw material. Within a few days after having been cut off, a rag of transplanted periosteum becomes bone. Heretofore, in the process of retransplanting the skull, surgeons have given no particular pains to preserve intact the cranium or outer membrane of the brain; but M. Flourens, the distinguished French physiologist, has proved that this membrane contains the osseous element. He recently took a portion of the dura mater of one animal, and put it under the skin of another of the same species, and in forty days it became a small bone. Incredible as these phenomena may appear to the uninitiated, they are attested by men of the very highest scientific attainment, who have verified all they assert by actual experiment. We have only space for a partial allusion to a few prominent facts connected with the new discovery,—the details would fill volumes. The various practical uses to which this new light into nature's method of growing bone may be applied, an unprofessional writer cannot be expected to enumerate. It seems clear, however, that healthy periosteum will produce sound bone,

either in the individual to which it belongs, or when inserted by way of graft into another individual of the same genus. The amount of "thorough repairing" that may be done to the damaged osseous systems of the human family under these circumstances, we leave to the imagination of the reader.

It is in such gentle and quiet virtues as meekness and forbearance that the happiness and usefulness of life consist, far more than brilliant eloquence, in splendid talent or illustrious deeds that shall send the name to future times. It is the bubbling spring which flows gently; the little rivulet which glides through the meadow, and runs along day and night by the farm-house that is useful, rather than the swollen flood or the roaring cataract. Niagara excites our wonder, and we stand amazed at the power and greatness of God there as "he pours it from the hollow of his hand." But one Niagara is enough for a continent or a world, while the same world needs thousands and tens of thousands of silver fountains and gently flowing rivulets, that shall water every farm and every meadow, and every garden, and that shall flow on, every day and every night, with their gentle and quiet beauty. So with the acts of our lives. It is not by great deeds only, like those of Howard—not by great sufferings only, like those of the martyrs—that good is to be done; it is by the daily and quiet virtues of life—the Christian temper, the meek forbearance, the spirit of forgiveness in the husband, the wife, the father, the mother, the brother, the sister, the friend, the neighbor—that good is to be done, and in this all may be useful.

The Hens do Lay.—“A Constant Reader” writes:—“I have twenty-one hens, good layers, but they entirely ceased giving eggs in the latter part of summer. Acting upon a hint in my *American Agriculturist*, on October 1st, I sent to the soap-fat-triers, and got a 50 pound cake of scraps at one cent per pound, and placed it in a clean corner of the barn-yard. The hens, though abundantly supplied with grain, pitched into the scrap cake as eagerly as a boy would into a pound cake, though they found it hard work to get off much of the substance until after a rain had soaked it. Two weeks after the eggs began to be dropped, and now how they do lay! We have kept no account, but we must have got a dozen and a half a day for some time, as we have consumed all we could eat in the family, and have sold a surplus of ten dozen at the rate of five for a shilling, or \$3, which I enclose herewith for three copies of the paper, for myself and two friends, as named below. The eggs eaten at home more than paid for the meat (not yet half gone) and the other feed.”—*Late Paper.*

THE FRIEND.

SECOND MONTH 14, 1863.

Several petitions have been presented in the Legislature of this State, praying that an addition be made to the Constitution, or that a law may be enacted prohibiting the immigration of any mulatto or coloured person into Pennsylvania, imposing banishment on any free coloured person coming into the State after the passage of such law or enactment, and the rendition of any slave found within its limits. These petitions have been referred, in the House, to the judiciary committee, to report thereon. Although nearly all of them appear to have been got up within one county (Berks), and there is reason to believe that such a measure

will not receive the sanction of the legislature, yet it is well to bear in mind, that in the fluctuations of party policy, there are often those entrusted with the power of altering and making laws, who are not governed by the unalterable principles of right; and that though a majority of the citizens may be opposed to such a wrong, yet there are very many strongly prejudiced against the coloured race, and in an evil hour their voices may prevail.

Several of the free States have given sorrowful evidence of the will, on the part of large portions of their citizens, to yield to this inveterate prejudice, and so to shape their legislation, as to exclude this afflicted people, to keep those of them already within their jurisdiction in a state of degradation, and without the enjoyment of many of what we consider our dearest rights. It is a duty therefore for those among us who wish our country well, to be alive to this subject, and to stand prepared to do whatever may be needful to preserve the State of Pennsylvania from so disgraceful a blot.

Similar petitions, and petitions to remove all coloured persons out of the State, were presented last year to the legislature of Ohio, which being referred to the "Standing Committee on Federal Relations," that committee, after premising that "they have given the subject their most serious consideration, with a desire to give practical effect to the wishes of many of the citizens of the Commonwealth from almost every section, and proceeding from all classes and parties," makes the following statement, which, humiliating as is the acknowledgment, we believe may also be truly said respecting the feelings and views of very many within our own State.

"The negro race is looked upon by the people of Ohio, as a class to be kept by themselves; to be debased of social intercourse with the whites; to be deprived of all advantages which they cannot enjoy in common with their own class. They have always been deprived of the elective franchise in this State, and no party among our citizens has ever contemplated that they should be given that right of citizenship; and for aught that appears to the contrary, the coloured man in Ohio will not, in all future time that he may remain an inhabitant of the State, attain any material improvement in the social or political rights over that he now enjoys."

At the time the new Constitution for the State of Illinois was submitted to a vote of the people of that State, three propositions relating to the admission of colored persons within it, and the rights they should be permitted to enjoy if admitted, were likewise referred to their decision, with the following results:

For their exclusion from the State,	171,896
Against their exclusion,	71,306
Against granting the right of suffrage or office to them,	211,920
In favor of granting the right of suffrage or office to them,	35,619

For the enactment of laws to prevent them from going to and voting in the State,	198,938
Against the enactment of laws to prevent them from going to and voting in the State,	44,414

We cannot shut our eyes to the evidences frequently given, that the same intolerant spirit which is thus shown to pervade so large a class in each of the States we have referred to, is in fact among great numbers of the citizens of this State also, and that it is ever and anon urging them to take measures to have the door shut against every poor black seeking to find a home upon our soil, and to subject those already residing among us to greater indignities and hardships.

It is a striking exhibit of man's inconsistency, that so many are loud in their protestations against the sin of slavery, and in attributing the dreadful war, under which the country is suffering, to the vile passions developed and cherished by that unchristian system, while they show themselves to be indulging in the same spirit and feelings towards the poor blacks, which urge the slaveholder to maintain his course; by seeking to brand them as an inferior race, refusing to accord to them their rights as fellow-men, and using their power to debar them of the opportunity to raise themselves from the low condition into which they have been sunk by the long-continued tyranny of the imperious whites. If the dreadful crimes of the slave system at the South, and the participation in it by connivance, at the North, have brought upon the nation this dire rebellion and all its attendant evils, how can we expect that the just punishment of a righteous and offended Creator will be shortened or mitigated, if the same blinding and malignant spirit is allowed to keep up in our midst continued persecution of this portion of his children, and to assert its influence in our legislative halls, by urging the adoption of measures cruelly unjust towards the poor blacks, and inimical to the true interests of the whole State?

It would be thought almost slanderous were we to say—and we do not, indeed, believe—that knowledge is wanting among the great majority of our citizens to convince them of the iniquity of such measures; but there is a chronic apathy respecting the subject on the part of very many, which induces them to turn away from it altogether, or to withhold the efforts they should make to eradicate the unchristian prejudice against color, and to prevent the increase, or rather to promote the removal of the bonds which have so long crushed this portion of our fellow-men to the earth. In the state of public society which has for many years existed in our country, there are many brought into political life, who, in order to obtain place or emolument, are not ashamed to profit by or pander to the prejudice of the ignorant and vulgar who look upon the poor blacks solely in the light of competitors, or, of obstacles to their own enjoyment and more lavish remuneration in the different branches of manual labor. We must exercise charity in judging the acts of such as these, and use our influence to prevent their ignorance from working harm to others, trusting to time and education to show them their great mistake, and convince them that their interest and the prosperity of the country will be promoted by the accession of as many labourers as the South can spare.

In a representative government, like ours, the whole community is more or less responsible for the acts of its legislators; it is also responsible to the Almighty for the blessings of light, liberty and religious knowledge which have been conferred upon it; and if it allows measures to be adopted and carried out by those in power, which a majority of its members knows to be contrary to the Divine law of mercy and justice, it cannot rationally expect to escape the chastisement due to its crimes. Our country has been greatly favored by a long continued enjoyment of rich blessings from the hand of a merciful Providence, let us remember his declaration, by the mouth of a prophet, to his chosen people formerly, "You only have I known of all the families of the earth, therefore will I punish you for your iniquities."

SUMMARY OF EVENTS.

Foreign.—News from England to the 22nd ult. The English coast was visited with severe gales on the 19th and 20th, occasioning several disasters to shipping. The

Yorkshire, from Australia, had arrived with \$1,500,000 in gold. Two English joint stock banks had been opened in Vienna. The Liverpool markets for cotton and breadstuffs, had a downward tendency, without material change in quotations. Consols, 92½. The submarine cable between Cagayan and Japan, 200 miles in length, had been successfully submerged.

The French monthly eastern mail on the 20th, took out £340,000 sterling. It is believed that the remittances required for the French Cochin China Expedition, are large and continuous. France and England have obtained from the Chinese Government the concession of a considerable piece of ground at Ningpo. The quantity of land called the campo, upon which all the European factories are situated.

The election of the president of the Greek assembly was to take place on the 19th. The crown had been offered to the Duke of Coburg. The cars were entertained last at the present crisis should it civil war.

Three days later.—The Paris correspondent of the London Times says he has reason to know that official instructions have been sent by the French Government to Washington, suggesting that Commissioners be delegated by the Federal Government and the Southern States to negotiate a general peace, and that the war without hostilities being suspended, so they might avoid mutual concessions, and effect a reconciliation, so desirable for the interests of the world. The Paris Pays says:—"We believe we are able to state that the Government of the Emperor has addressed a communication to Washington proposing a general arrangement between the belligerents." Letters from Paris speak of the probability of an animated debate taking place in the Corps Legislatif on the affairs of Italy and Mexico, and the treatment of the press, in which considerable opposition to the Mexican war will be shown. The Emperor is reported to have sent to a member of the Chamber of Deputies the following public document the thought which dictated the Mexican expedition to me. It will be judged later by the results, and every one will see that it is one of the most important and glorious acts of my reign." A reinforcement of 6000 additional French troops has been ordered to Mexico.

Washington, 20th ult. Charleston, S. C., writing to his Government in the Eleventh month last, estimates the quantity of cotton in the South at that time, to be four and a quarter millions of bales. The consul at Savannah, writing a month later, estimates it at not over three and a half millions of bales.

Paris, 20th ult. On the acceptance, by the Duke of Coburg, of the throne of Greece, on condition that the house of Bavaria renounces its rights. It is said that Russia protests against the Duke, on account of his relationship to the English royal family.

UNITED STATES.—The Patent Office.—The annual report of the Commissioner of Patents, dated 5th Feb., 1852, contains a list of patents made during 1852, and that 3521 were granted; caveats filed, 824; applications for extension 41; patents extended 23; patents expired 648. All except 83 of the patents granted were issued to citizens of the United States. \$153,818 were received for patents, re-issues, &c., \$1,081 for copies, and the record office cost was \$2,000.

Pennsylvania.—The report of the Superintendent of the Common Schools of the State, shows that 682,182 children now enjoy the benefits of the schools. The cost of the system in the last year was \$2,778,595. The number of school districts outside of Philadelphia is 190, and the number of teachers 52,200.

The annual report of the Pennsylvania Railroad Company, states the total earnings of the road during the last fiscal year to have been \$10,204,291. The net earnings, after deducting the expenses of the road, loss on the canal, &c., were \$4,866,608.

Florida.—On the 19th ult. week 312 Tennessee—Eight hundred Federal troops at Fort Donelson, were attacked on the 5th inst., by a rebel force of 4000 men. The rebels were repulsed with a loss of 125 killed, and 300 taken prisoners. Twelve of the U. S. troops were killed, and 30 wounded. Several small engagements were reported in the neighborhood of Murray, in which numbers of them about 300 rebels were taken prisoners. Two divisions of the rebel army were recently at Shelbyville, and others between Shelbyville and Tullahoma. The rebels were making great exertions to fill their ranks by conscription. Many of the inhabitants had fled from their homes in Bedford and Murray counties, to avoid being forced into the rebel army.

Mississippi.—The accounts from the vicinity of Vicksburg, represent that the place will be probably besieged by a large land and naval force. A land force is now opposite Vicksburg in Louisiana, which, in conjunction

with the U. S. gunboats, cuts off the rebel communication with the western side of the river. The canal project has been fully adopted, and a large force will be employed upon the work, by night as well as by day until it is completed. It is found that the new channel must be wholly cut to the required width and depth, a reliance being placed on the action of the water in washing it out. The U. S. iron clad steamer, Queen of the West, recently ran by the rebel batteries at Vicksburg without any material injury. The rebel force at that place is supposed to be about 60,000 men.

South Carolina.—On the 21st ult., before day-light, two rebel rams from Charleston, attacked the U. S. gunboat Mercidita, which lay off the South channel, about five miles from Fort Sumpter. The intention in making the attack, was probably to recapture the Princess Royal which, with a valuable cargo, had been run aground some miles from Charleston. The Mercidita, however, did not, and also the Keystone State, which came to her assistance, were severely damaged by the rebel ram and about 50 men were killed and wounded on the vessels. On the approach of other ships belonging to the blockading squadron, the rebel steamers returned to Charleston. The Princess Royal, with a cargo valued at \$1,000,000 has since arrived at Philadelphia. The Mercidita surrendered to the rebels, and the officers and crew were paroled as prisoners of war. She was afterwards recaptured, and taken to Port Royal for repairs.

Louisiana and Texas.—New Orleans dates to the 20th inst. No attack had been made on Port Hudson.

Magruder, of the rebel army, had proclaimed the port of Galveston open to commerce; but Commodore Bell, U. S. Navy, issued a proclamation on the 20th, declaring Galveston, Sabine Pass, and the whole coast of Texas still under actual blockade, and warning all vessels from attempting to enter, under penalty of capture. An expedition from the Magruder fleet, on the 21st ult., captured the U. S. brig Morning Light, and another vessel, off Sabine Pass.

The Markets, &c.—The following were the quotations on the 9th inst. New York.—Specie in the New York banks, \$38,243,839. Gold, 55 a 56 premium. Foreign exchange, 170 a 171. U. S. 8s, 185½; 9½, 370 Treasury notes, 102½. The import trade has latterly fallen off. The imports of last week amounting to only \$2,043,319. The first cargo of teas direct from Japan, arrived at this port a few days since. The tea resemble the finest green of China. Speculation in real estate. An expedition from the rebel army, has been made recently, at prices as high as those obtained previous to the war. Uplands cotton, 90 cts; Western wheat, \$1.4 a \$1.72; Spring wheat, \$1.37 a \$1.39; rye, \$1.05 \$1.10; mixed western corn, 92 cts, 94½ cts. Philadelphia.—Superfine flour, \$6.50; extra, \$7.25 a \$7.50; prime red wheat, \$1.70 a \$1.73; white, \$3.10 a \$3.07 cts; oats, new yellow corn, 88 cts, a 90 cts; a 90 cts; 62 cts, 64 cts; clover seed, \$7.00 a \$7.37; timothy, \$2.7 Cincinnati.—Flour, \$6.10 a \$6.20. Gold, 53 per cent premium.

RECEIPTS.

Received from Amos Cope, Pa., \$2, vol. 36; from V. C. Cope, for E. W. Cope, Pa., \$2, vol. 36, and 5 from Amos Cope, Ill., \$2, vol. 36; from J. S. C. Cope, Ill., \$2, vol. 36; from Jno. E. Shepard, N. J., per H. C. W., \$6, vols. 35, 36 and 37.

WEST-TOWN BOARDING SCHOOL.

The Committee under appointment to visit the school at West-Town, will meet on Seventh day the 14th Second month, and attend the examination on Second and Third days following.

J. OEL EVANS, Clerk.

Second month 4th, 1863.

For the accommodation of the Visiting Committee conveyances will be at the Street Road Station on Saturday day, March 11, at 10 o'clock, and on the 12th at that leave the city at two and four o'clock.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSIAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

WM. H. FILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXVI.

SEVENTH-DAY, SECOND MONTH 21, 1863.

NO. 25.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The British Friend."

Early Friends, and what they Were—Christian Testimonies.

(Continued from page 187.)

The exposition of the practices of the Society regard to burials and mourning habits, &c., is perhaps nowhere more simply and truly set forth in that most admirable preface to the life of George Fox, written by William Penn,—a preface which will remain as a testimonial of the affection, talent, the sincerity, and friendship of one who died the departed with a love akin to that which Nathan displayed for David. "If the body of the deceased," says William Penn, in 1709, "be on any public meeting place, it is usually carried to the more convenient reception of those that accompany it to the ground they bury in; and it falls out, sometimes, that while the meeting gathering for the burial, some or other have a word of exhortation for the sake of the people re met together; after which the body is borne by young men, or those that are of the neighbourhood, or that were most of the intimacy of the deceased party; the corpse being in a plain coffin, without any covering or furniture upon it, the ground they pause some time before they carry the body into the grave, that if any one there should have anything on them to exhort the people, they may not be disappointed, and that the relations may the more retiredly and solemnly take a last leave of the corpse of their departed friend, and the spectators have a sense of mortality by the occasion then given them, to reflect on their own latter end. Otherwise they have no rites or ceremonies on these occasions, neither do the kindred of the deceased ever wear mourning—they look upon it as a worldly ceremony and use of pomp, and that what mourning is fit for a Christian to have, at the departure of a beloved friend or friend, should be worn in the mind, which is alone sensible of the loss; and the love which is alone to them, and remembrance of them, to be outwardly expressed by a respect to their address, and care of those they have left behind them, their love of that they loved."

Consistent with this view of the question as pressed by our early Friends, the Yearly Meetings has from time to time issued its advice to its members on the subject. In 1717 it counsels the Society, "in accordance with the primitive simplicity of Friends, not to imitate the world in

any distinction of habit or otherwise, as marks or tokens of mourning for the dead." So again in 1724: and in 1782, whilst renewing its advice, it presses upon ministers, elders, and overseers in particular, to tenderly advise against any such conformity to the world, in wearing mourning habits, reminding them that against these customs the Society has ever had a well-known testimony.

If any one of our testimonies is clear as to the views of early Friends, I think this testimony is one. It may be called a peculiarity; but it is based on christian simplicity and christian truthfulness, and however we may seek to designate it, it is fully entitled to a place among our christian testimonies. We are often reminded of "the beautiful burial-service of the Church of England," and we willingly acknowledge the pathos of its language, and the eloquence of its diction; but far more touching is the silent eloquence of grief amid the solemn pause over the open graves of our relatives and friends, in which language is too feeble to convey the depths of our feelings, and sorrow too deep to be expressed in words. And we need not wonder that the touching simplicity which early Friends thought fit to adopt, had far more attraction for them than the oft-repeated ritual of a church, which was alike bestowed on all who acknowledged its rule. "Earth to earth, dust to dust, ashes to ashes," has often conveyed a solemn lesson to those who stood around the grave of a departed and beloved friend or relative; but there must have been many seasons, and there must yet be many seasons, when the reflecting christian cannot but be struck with the almost open profanity with which the words of the ritual, "in a sure and certain hope of a resurrection to eternal life," are indiscriminately applied to the departed spirits of those who remains they follow to the grave. Often as I reflect on this portion of the ritual of a state church, am I reminded of the language of one of our early Friends, who, in 1679, thus expressed himself: "Is it not a sore evil to conclude so directly against Christ's own words, who saith, John v. 20, that some (not all) shall come forth to the resurrection of life, and some to the resurrection of damnation. The true spiritual man, the true Christian, who is a new creature in Christ Jesus, sees all these things, and judges them, and avoids them."

There remains now but that I should say a few words on the subject of memorials of the dead. If the early Friends were thus particular, as we have seen, in sweeping away everything that tended to lead the mind to rest itself in vain ceremonies in relation to the mere relics of mortality, it was not very likely that it would overlook anything which might help to keep alive that which it had so strenuously endeavoured to lay low. There is a beautiful simplicity in the course pursued by early Friends, which runs through all they undertook; and it is remarkable how completely every one of their testimonies is in unison with the other, constituting one harmonious whole. Neither is it compatible to break the chain without endangering the destruction of the whole. With regard to memorials of the dead, I know that there are here and

there solitary instances of monumental stones to the memory of deceased Friends. But, I believe, that throughout the early period of the Society they will be found the exception and not the rule; and, so far as I have been able to ascertain, they date from a period when the Society was but in its infancy, and when it may be supposed that the practices of the Society were neither settled nor uniform. Of one thing we are certain, that so early as 1706 the attention of the Society was directed to this subject, and it gave forth in its legislative capacity a rule on which the various meetings should act. And we are led to believe that the feeling of the Yearly Meeting must have been very decided and strong indeed to cause it to issue such a document as was then circulated throughout the body. "This meeting," it says, "doth give it as their judgment, that it is wrong and of evil tendency to have any grave or tomb stones, or monuments, placed at or over any grave in any of our burying-grounds; and that those monuments, either of wood or stone, which are already set in the burying-grounds of Friends, should be removed, and no new ones erected. And if any Friend opposes this sense and direction, he or she ought to be dealt with as disorderly."

It would seem, however, that this advice, strong as it is, did not come to be generally acted upon. Possibly there was a lingering feeling towards those things, which so tenderly touch the affectionate part within us. There is a natural tendency to cherish the memory of departed friends, and the eyes love to see some token of those who once were so closely our companions in life and so fondly beloved. We know it in the preservation of various little remembrances at home,—little favourite articles of the lost ones, which we treasure up and cherish as memorials of the past. It is a sacred feeling, but it is one, if not held in check by our better judgment, entailing upon us an expression of sorrow akin to a murmuring spirit, and may lead us into superstitious observances on the one hand, and an antagonism inconsistent with our duties as christians on the other. It was wise, then, on the part of early Friends, to cut off all outward tendency to bestow upon the memory of the departed a needless and uncalled-for recollection. In 1719 the Yearly Meeting again addressed its members on the subject; and in 1742 American Friends, among whom the practice of erecting memorials to the dead had also spread, were counselled in words to this import: "Although this meeting early signified their full disapprobation of the vain and superstitious custom of erecting monuments of any kind in memory of the dead, on or near their graves, yet, with concern, we have been informed that marks of this sort have been placed in our graveyards by some professing with us. It is, therefore, recommended to overseers and concerned Friends, to admonish the relations of such deceased persons, speedily to remove these offensive distinctions, as inconsistent with the plainness of our principles and practices; and seriously caution them strictly to examine what spirit they are of, who can thus act contrary to and oppose the declared sense of the body, both in Great Britain

and these provinces. And Quarterly Meetings and Monthly Meetings are directed to use their utmost endeavours to prevent the continuance of this evil, by removing those marks of superfluity and excess out of our burial-grounds, where those concerned in putting them there, or the relations of such to whose graves they appear, neglect doing it, after notice for that purpose; that so no cause of uneasiness may remain or partiality be justly charged upon us." It is evident, then, that the evil was not confined to our own shores; and we have further proof of this in the memoirs of John Churchman, when travelling in America in 1742. "I called," he says, "on the widow of John Browning, whose husband had been dead about a month, and she gave me in substance the following account of him: "My husband was not long sick, but said that he believed he should not recover, and charged me to endeavour that his children should be brought up in the way of truth which Friends profess; and if they inclined to have trades, to put them to real Friends, not barely nominal ones; and then said, When I am dead, bury me by father and mother, in the grave-yard belonging to our family; and thou knowest that I put a large grave-stone at my father's grave, and there is one ready for my mother's grave, which I did not put there, because I began to think they were more for grandeur than service. I sent for them from England (not at the request of my father;) they are mine; and now I have a full testimony against such formal tokens of respect; therefore, when I am buried, before the company leave the grave, inform them what my will is, and desire their help to take the grave-stone from my father's grave, and carry it out of the yard, that it may be brought home; and lay one in one hearth, and the other in the other hearth of this new house, and they will be of service there; which she promised him to observe, and told me she had complied therewith."

"How weak," adds John Churchman, "are the arguments of such as make profession with us, and plead for those marks of memorial or other tokens of distinction, set up at or on the graves of their deceased relatives! and how would they subside did they but live so near the pure Truth as to find the mind thereof, as I fully believe this our friend did, knowing that the name of the righteous will not perish, but be had in everlasting remembrance, because their portion is forevermore; having entered into that kingdom prepared for the blessed from the foundation of the world."

I was not one of those who took part in the discussion, at a late Yearly Meeting, on this very subject of memorial tablets, or stones, for the dead; but on reading the minutes issued respecting it, I have ever been at a loss to understand on what ground the conclusion was arrived at by the Yearly Meeting, having, as it clearly had, the strong and unmistakable expression of early Friends on that head; and I am free to acknowledge that it has appeared to me singular that the compilers of the volume, *Extracts from the Minutes and Epistles of the Yearly Meeting, &c.*, should have so, apparently, intentionally ignored and secluded from its pages the advice of the Yearly Meeting of 1706, to which I have referred; and I cannot but fear, that in this, as in some other things, there is a manifest retrogression of the body, and a departure from first principles. Already, it seems to me, has the small edge of the wedge, which is to divide the Society in its length and breadth, been driven in, and the cohesion of the materials must be strong indeed, even as the rock itself, if the result be not fatal to its organization. Let us hope rather that the wedge itself may be blunted, than that the Society shall fall to pieces. Perils by

false brethren was not one of the smallest of the many perils to which the apostle had to submit, and almost everything tells, that the perils of the church are ever most to be feared when they proceed from within her own borders. J. B. B.

Reform and Progress in Russia.
